**14471.** (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—(Suggested by Quest. 14145.) (1) Show that

$$q^x \equiv 1 \pmod{p}, \text{ where } x = 2^{2Q-3}, Q = q^2, p = Q \cdot 4^Q + 1 \text{ prime.}$$

(2) Show that

$$q^x \equiv 1 \pmod{p}, \text{ where } x = 2^{4Q-4}, Q = q^4, p = Q \cdot 16^Q + 1 \text{ prime.}$$

Solution by the PROPOSER.

(1) If  $q = 1$ , then  $Q = 1, p = 5$ , and  $q^x \equiv 1 \pmod{p}$ , obviously; and, if  $q = 2$ , then  $Q = 4$  and  $p = 4 \cdot 4^4 + 1 = 1025$ , which is not prime; so that in what follows  $q$  is taken  $> 2$ .

Now  $(p-1)/8Q = \frac{1}{8} \cdot 2^{2Q} = 2^{2Q-3} = x$ ; and  $\frac{1}{2}x$  is even, since  $q > 2$ .

Also  $Q \cdot 4^Q \equiv -1 \pmod{p}$ ; therefore  $Q^{2^x} \cdot 4^{4^Q} = (-1)^{2^x} \equiv +1 \pmod{p}$ ;

therefore  $q^x \cdot 2^{2^Q} \equiv +1 \pmod{p}$  ..... (A).  
But  $p = (2^Q \cdot q)^2 + 1$ , wherein  $2^Q$  is always a multiple of 16 (since  $q > 2$ ), so that 2 is an 8-ic residue of  $p$ , when  $p$  is prime (see *Messenger of Mathematics*, Vol. xxv., p. 18), i.e.,  $2^{2^Q} = 2^{2^x} \equiv +1 \pmod{p}$ .

This reduces (A) to  $q^x \equiv +1 \pmod{p}$ .

[The rest in Volume.]

**14397.** (Professor U. C. GHOSH.)—A ball, projected from any point on the rim of a circular ring resting on a smooth horizontal table, comes back to the point of projection after  $n$  impacts with the ring. Determine the inclination of the line along which the ball is projected to the radius of the ring through the point of projection, and show that, if  $n = 3$ , this angle is  $\tan^{-1}(\epsilon^{\frac{1}{2}})$ ,  $\epsilon$  being the coefficient of restitution.

Solution by J. H. TAYLOR, M.A.; and H. W. CURJEL, M.A.

Let P be the point of projection, and PA, AB, BC the first, second, and third chords of the path described by the ball. Let  $\angle OPA$  be  $\alpha$ ,  $\angle OAB$  be  $\beta$ ,  $\angle OBC$  be  $\gamma$ , &c. Then

$$\begin{aligned} \tan \beta &= 1/\epsilon \tan \alpha \\ &\text{(after one reflection),} \\ \tan \gamma &= 1/\epsilon \tan \beta = 1/\epsilon^2 \tan \alpha, \\ &\dots \dots \dots \\ \tan \nu &= 1/\epsilon^n \tan \alpha \\ &\text{(after } n \text{ reflections).} \end{aligned}$$

Also  $\angle POA = \pi - 2\alpha$ ,  
 $\angle AOB = \pi - 2\beta$ ,  
 $\angle BOC = \pi - 2\gamma$ ,

and so on.

[The rest in Volume.]

QUESTIONS FOR SOLUTION.

**14540.** (Professor G. B. MATHEWS, F.R.S.)—Prove that, if

$$Q = \sum_{-\infty}^{+\infty} q^{i(3n+1)^2} + \sum_{-\infty}^{+\infty} q^{3n^2}, \text{ then } Q^{12} = \frac{\lambda^3 \lambda' (1 + \lambda')^4}{256 \kappa \kappa'},$$

where  $\lambda, \lambda'$  are the moduli into which  $\kappa, \kappa'$  are transformed by the change of  $q$  into  $q^3$ .

**14541.** (JOHN C. MALET, F.R.S.)—If the roots  $x_1, x_2, x_3, x_4, x_5, x_6, x_7, x_8$  of the equation  $x^8 - p_1 x^7 + p_2 x^6 - p_3 x^5 + p_4 x^4 - p_5 x^3 + p_6 x^2 - p_7 x + p_8 = 0$  are connected by the relations

$$x_1 + x_2 + x_3 + x_4 = x_5 + x_6 + x_7 + x_8 \text{ and } x_1 x_2 x_3 x_4 = x_5 x_6 x_7 x_8,$$

(a) prove  $p_7 = \sqrt{p_8} (p_2 - \frac{1}{2} p_1 p_2 + \frac{1}{2} p_1^3)$ ,  
 $(Q_2 p_7 - 2 p_5 \sqrt{p_8} + 2 p_1 p_3)^2 = (Q_2^2 - 4 Q_4) (p_7^2 - 4 p_8 Q_6)$ ,

where  $Q_2 \equiv p_2 - \frac{1}{2} p_1^2, Q_4 \equiv p_4 - p_1 p_2 / (2 \sqrt{p_8}) - 2 \sqrt{p_8}, Q_6 \equiv p_6 - \sqrt{p_8} Q_2$ ;

(b) solve the equation.

**14542.** (Professor E. LEMOINE.)—Dans un triangle ABC soient G le barycentre; L, M, N les milieux de BC, CA, AB; l, m les milieux de AG, BG; D le point situ  sur LN au tiers de LN   partir de N. Pour trouver le centre de l'hyperbole de KIEPERT, il suffira de prendre le point I o  l'M recoupe le cercle des neuf points; de prendre le point H o  lD recoupe ce cercle; Hm recoupera le m me cercle au centre T cherch .

**14543.** (Professor MORLEY.)—The greatest number of regions into which  $n$  spheres can divide space is  $2n + \frac{1}{2}n(n-1)(n-2)$ .

**14544.** (Professor A. DROZ-FARNY.)—Une droite coupe une spirale logarithmique. Quel est le lieu des centres de courbure correspondants aux divers points d'intersection ?

**14545.** (Professor K. J. SANJ NA.)—Eliminate  $r$  and  $a$  from

$$\begin{aligned} x &= r (\cos a + \sin a), \quad y = 2a \cot 2a - r (\cos a - \sin a), \\ \text{and} \quad 2r &= a \{ \sec a + \operatorname{cosec} a - (2 \sec a \operatorname{cosec} a)^{\frac{1}{2}} \}. \end{aligned}$$

Hence find the locus of the centre of a circle touching a parabola and two variable perpendicular tangents. [See Vol. LXIV., p. 56.]

**14546.** (Professor NEUBERG.)—Si les angles des triangles ABC, A'B'C' v rifient les  galit s  $A + A' = \pi, B = B'$ , les c t s sont li s par la relation  $aa' = bb' + cc'$ .

**14547.** (Professor LANGHORNE ORCHARD, M.A., B.Sc.)—Show that, if  $n$  be any positive integer greater than unity,

$$\begin{aligned} 1^3 + 2^3 + 3^3 + 4^3 + \dots + n^3 - (1^5 + 2^5 + 3^5 + 4^5 + \dots + n^5) &= 4, \\ (1 + 2 + 3 + 4 + \dots + n)^3 - (1^5 + 2^5 + 3^5 + 4^5 + \dots + n^5) &= 4. \end{aligned}$$

**14548.** (Professor COCHEZ.)—Courbe  $\rho \sin \frac{1}{2}\omega + 2\rho + 1 = 0$ .

**14549.** (J. A. THIRD, M.A., D.Sc.)—K is a conic circumscribed to a triangle ABC; P is a point on it; Q is the isogonal conjugate of P with respect to the triangle; R is the point where PQ meets K again; L, M, N are the points where AR, BR, CR meet BC, CA, AB respectively; X, Y, Z are variable points, Y lying on QM and Z on QN, such that the pairs AY and AZ, BZ and BX, CX and CY are equally inclined

to the bisectors of the angles A, B, C respectively. Prove that the locus of X is QL, and that the locus of the point of concurrence of AX, BY, CZ is K.

The construction usually given for KIEPERT'S hyperbola (see CASEY'S *Analytical Geometry*, p. 442) is a particular case of the foregoing.

**14550.** (Professor U. C. GHOSH.)—A ball projected from a focus of an immovable elliptic ring, which rests on a smooth horizontal table, along a line making an angle  $\theta$  with the major axis, will rebound from the ring after one impact with it along a line inclined to the major-axis at an angle equal to  $\tan^{-1} \frac{\sin \theta [e(1-\epsilon) \cos \theta + \epsilon - e^2]}{e(\epsilon-1) \cos^2 \theta - \epsilon(1+\epsilon^2) \cos \theta + (\epsilon+1)e}$ ;

$\epsilon$  being the coefficient of restitution. Determine for what values of  $\theta$  the ball will cross the major axis after having only one impact with the ring, and obtain the equation of the envelope of the lines of rebound of the ball after one impact with the ring.

**14551.** (Professor N. BHATTACHARYA.)—If  $f(x)$  represent the coefficient of a number  $x$ , prove that

$$1 + \frac{1}{f(abc\dots)} = \left\{ 1 + \frac{1}{f(a)} \right\} \left\{ 1 + \frac{1}{f(b)} \right\} \dots,$$

when  $a, b, \dots$  are prime to one another. Prove also that the converse of this proposition is true.

**14552.** (D. BIDDLE.)—It being given that  $N = 150809$ ,  $\Delta = 7$ ,  $N = 2\Delta M + 1$ , and that its factors are of form  $2\Delta m + 1$ , prove the validity of the method of factorization employed in the adjoining example, the rule being as follows:—Take, as first divisor ( $D_1$ ), the number next below  $\sqrt{N}$  of proper form, say  $2\Delta m_1 + 1$ ; and take, as first dividend,  $M - m_1$ . These yield, as quotient and remainder,  $Q_1$  and  $R_1$ . Since divisors patently composite can be discarded, take, in succession,  $D_n = D_{n-1} - 2\Delta\mu_n$ , where  $\mu_n = 1$  or other small digit that does not carry  $D_n$  beyond the next prime (of the particular form) in descending order. Next, utilize  $(2\Delta\mu_n Q_{n-1} + R_{n-1} + \mu_n)/D_n = \kappa_n$  with  $R_n$ ; also  $\kappa_n + Q_{n-1} = Q_n$ . When  $R_r = 0$ ,  $N = D_r(2\Delta Q_r + 1)$ . [In the example, two divisors are tried which might have been excluded, namely,  $323 = 17 \cdot 19$  and  $253 = 11 \cdot 23$ ; but the final result is unaffected thereby.]

$N = 150809$	$\Delta = 7$
$10745 (\mu)$	$(\kappa) (Q) (R)$
379	28 133
337 3	3 31 301
323 1	2 33 90
281 3	5 38 74
253 2	4 42 128
239 1	3 45 0
	$2 \cdot 7 \cdot 45 + 1 = 631$ ;
	$\therefore N = 239 \cdot 631$ .

**14553.** (R. TUCKER, M.A.)—AP, AQ are vertical vectors of a parabola, and PQ is a focal chord. The circle APQ cuts the curve in A. The conormal point (of PQR) lies on a parabola, as also does the circum-centre of APQ. The intersections of (AP, QR) and of (AQ, PR) lie on the same cubic, and PR touches a semi-cubical parabola. AR, PQ intersect on a parallel to the directrix.

**14554.** (R. F. DAVIS, M.A.)—Given a conic and a circle having double contact, prove that the envelope of a variable circle, whose centre lies on the first and which intersects orthogonally the second, consists of two fixed circles.

**14555.** (G. H. HARDY, B.A.)—Discuss the distribution of the zeroes of the integral function  $\phi(z) \equiv \sin z - z = \sum_{n=1}^{\infty} (-1)^n \frac{z^{2n+1}}{2n+1}!$

in the plane of the complex variable. Prove that those which lie in the positive quadrant approach asymptotically, as their moduli increase, to the points  $a_n = (2n + \frac{1}{2})\pi + i \log \{ (4n + 1)\pi \}$ ;

i.e., that, if we surround each of the points  $a_n$  with a circle of arbitrarily small radius  $\rho$  (less than, say,  $\frac{1}{2}\pi$ ), we can determine a finite quantity  $R$ , such that all the zeroes of  $\phi(z)$  in the quadrant whose moduli are  $< R$  lie in the circles  $\rho$ , each circle containing one of them, and only one.

**14556.** (R. P. PARANJPEE, B.A.)—Trace the curve  $(x/a)^n + (y/b)^n = 1$  when  $n$  is an infinite positive integer, distinguishing the cases when it is odd or even.

**14557.** H. MACCOLL, B.A.)—Let  $\alpha =$  "If A is true, then, if B is true, C is true." Let  $\beta =$  "If A and B are both true, C is true." Show (1) that  $\alpha$  formally implies  $\beta$ , but that  $\beta$  does not formally imply  $\alpha$ . Give (2) a concrete example in which  $\alpha$  is false and  $\beta$  true. Give (3) an example in which *two-thirds* is the chance that  $\alpha$  is true, and *three-fourths* the chance that  $\beta$  is true. Definition:—The conditional "If A is true B is true" means "The chance that A is true and B false is zero." [The Proposer wishes to point out that at the end of Quest. 14498 A and B are misprints for  $\alpha$  and  $\beta$ .]

**14558.** (Rev. J. CULLEN.)—Show that the method of Quest. 14506 can be used to determine the prime or composite character of all numbers of the form  $4n + 1$  of eleven figures (or under). Apply the method to express  $3 \cdot 2^{30} + 1$  as the sum of two squares and to determine if this partition is unique.

**14559.** (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Solve  $s_n = s_a \cdot s_y, s_a \cdot s_x = s_a \cdot s_y, s_a \cdot s_p \cdot s_y \dots s_x = s_a \cdot s_b \cdot s_c \dots s_y$  where  $s$  denotes a sum of successive integer cubes.

**14560.** (ROBERT W. D. CHRISTIE.)—A gentleman's garden had Of  $a$  yards long and  $c$  yards broad.

A walk of equal width all round  
He made that took one-fourth the ground.  
Ye skilful in geometry,  
Tell me how wide the walk must be.  
*All fractions discard and integers use,*  
Or time and trouble you'll certainly lose.

**14561.** (J. J. BARNIVILLE, B.A.)—Having  $u_{n+1} + u_{n-1} = 8u_n$ , prove that

$$\begin{aligned} \frac{1}{1+1} + \frac{1}{7+1} + \frac{1}{55+1} + \frac{1}{433+1} + \dots &= \frac{\sqrt{5}}{2\sqrt{3}}, \\ \frac{1}{1+7} + \frac{1}{7+7} + \frac{1}{55+7} + \frac{1}{433+7} + \dots &= \frac{\sqrt{5}}{6\sqrt{3}}, \\ \frac{1}{5+7} + \frac{1}{29+7} + \frac{1}{227+7} + \frac{1}{1787+7} + \dots &= \frac{\sqrt{15}+1}{42}, \\ \frac{1}{11+7} + \frac{1}{83+7} + \frac{1}{673+7} + \dots &= \frac{\sqrt{15}-1}{42}, \\ \frac{1}{1+1} + \frac{1}{4+4} + \frac{1}{31+4} + \frac{1}{244+4} + \dots &= \frac{2\sqrt{15}+3}{30}, \\ \frac{1}{\sqrt{5}+\sqrt{2}} + \frac{1}{\sqrt{5}+4\sqrt{2}} + \frac{1}{\sqrt{5}+31\sqrt{2}} + \dots &= \frac{\sqrt{5}+\sqrt{3}-\sqrt{2}}{6}. \end{aligned}$$

**14562.** (J. W. MELLOR, B.Sc.)—A vessel contains equal numbers ( $n$ ) of red, white, and black balls, which have the power of disposing themselves in sets of three, such that the only possible combinations are two red and one black, two white and one black, or one each of red, black, and white. What is the probability of the occurrence of each set, (1) assuming that the black ball has an equal degree of attraction for each of the other balls, (2) assuming that the black ball exerts an equal degree of attraction for a red and a white ball, but that a black *with* a red ball has  $r$  more degrees of attraction for a white than for a red one, and similarly a black *with* a white ball has  $s$  times more attraction for a differently coloured ball?

**14563.** (R. KNOWLES.)—From a point T tangents TP, TQ are drawn to the parabola  $y^2 = 4ax$ . Prove that when the circle TPQ touches the parabola the locus of T is the parabola  $y^2 = 4a(2a-x)$ .

**14564.** (R. CHARTRES.)—If ABC be a triangle, P and Q random points, find the mean value of the  $n$ th power of the triangle PAQ (1) when P and Q are confined to the base BC, (2) when P and Q can be anywhere in the triangle. Also find the same when ABC is a sector of a circle, centre A; and deduce the former results from these.

**14565.** (SALUTATION.)—AB, CD are diameters, perpendicular to each other, of the circle ACBD; P is a point on the circumference between A and C; and, with centre A and radius AP, the arc PQR is described, meeting the circle again in R, and having CQ tangential to it. Prove that the arc PQR bisects the circle, when the radius of the latter bears to that portion of its circumference which lies between P and B the same ratio that subsists between  $CQ^2$  and the area (of the circle) lying outside the rectangle APBS.

**14566.** (R. J. DALLAS, M.A.)—If we have a set of  $n-1$  equations,  $a(1+x_r^2 x_{r+1}^2) - b(x_r^2 + x_{r+1}^2) + c x_r x_{r+1} = 0$  ( $r = 1, 2, \dots, n-1$ ), these cannot coexist with the equation  $a(1+x_n^2 x_1^2) - b(x_n^2 + x_1^2) + c x_n x_1 = 0$  unless a certain relation holds between  $a, b, c$ , when the equations are indeterminate. Find these relations for the cases  $n = 3, 4, 5, 6$ .

**14567.** (H. W. CURJEL, M.A.)—Construct with ruler and compasses a harmonic pencil O (AC, BD); the angles AOD, BOC being given.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

**6543.** (W. J. C. MILLER, B.A.)—If P, Q, R, S be random points, taken one in each of the sides of a quadrilateral ABCD, find (1) the average area of the quadrilateral PQRS, and (2) the probability that the area of such a random quadrilateral will be less than a given area.

**6544.** (CHRISTINE LADD, M.A.)—Four points A, B, C, D are selected at random on a sphere, all points being equally probable, and two small circles are drawn, the one passing through B and having A for a pole, and the other passing through D and having C for a pole. Prove that the chance that they cut each other is  $\frac{1}{16}\pi^2$ .

**6558.** (A. MARTIN, M.A.)—If an experiment succeeds in three trials out of four, show that the chance that  $n$  consecutive trials there are never three consecutive successes is  $(\frac{3}{4})^{n+1} (2 + a^{n+1} + \beta^{n+1})$ , where  $a$  and  $\beta$  are the roots of the equation  $3x^2 + 2x + 1 = 0$ .

**6573.** (ELIZABETH BLACKWOOD.)—If the four coefficients of a complete cubic equation be each taken at random between 1 and -1, find the chance (or the nearest attainable limits of the chance) that the roots of the equation will be imaginary.

**6576.** (R. TUCKER, M.A.)—An inkstand is formed of two conical frusta, placed as in the annexed cut; the vertex of the inner frustum being at the centre of the base. Given the radii of the three sections to be  $a, b, c$ , and the slant sides  $l_1, l_2$ , find (1) how much ink the bottle will hold, so that, if it be inverted, no ink will be spilt, taking as a numerical example the radii  $1, \frac{1}{2}, \frac{1}{4}$  inches, and the slant sides 2, 1 inches respectively; and (2) given the sum of the slant sides constant, construct the inkstand of maximum capacity.

**6587.** (W. E. WRIGHT, B.A.)—From a point on a curve of the second degree tangents are drawn to another curve of the second degree. Find the envelope of their chord of contact.

**NOTICE TO CORRESPONDENTS.**

It is requested that all Mathematical communications should be sent to D. BIDDLE, Esq., Charlton Lodge, Kingston-on-Thames.

**NOTICE.**—Vol. LXXII. of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price, to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

**THE LONDON MATHEMATICAL SOCIETY.**

Thursday, April 5, 1900.—Lt.-Col. Cunningham, R.E., V.P., in the Chair. Twenty members present.

Mr. F. W. B. Frankland, B.A., Fellow of Clare College, Cambridge, was elected a member.

The Misses B. M. and F. E. Cave Browne Cave and Mr. R. W. H. T. Hudson were admitted into the Society.

The senior Secretary read a letter from Mrs. J. J. Walker thanking the Society for its vote of condolence with her on the death of her husband.

The following communications were made:—

"On the Addition Theorem for the Bessel Functions," Mr. H. M. Macdonald.

"The Orthoptic Loci of Curves of a given class," Mr. A. B. Basset.

"Proof of the Uniform Convergence of Fourier's Series," Prof. Love.

"An Extension of Orthogonal and Boolean Covariants," Major MacMahon.

A paper was also received from Mr. Bromwich on "Weierstrass's Canonical Reduction of a 'Schaar' of Bilinear Forms."

Messrs. Macaulay, R. W. Hudson, Whittaker, and the Chairman spoke to one or more of the papers.

The Chairman reminded members that the May meeting would be made "special" as announced at the March meeting and subsequently by printed circular.

The following papers are promised for the May meeting:—

"The Differential Equation whose solution is the ratio of two solutions of a Linear Differential Equation," Mr. M. W. J. Fry.

"A Congruence Theorem relating to Eulerian numbers and other Coefficients," Dr. Glaisher.

**JUST PUBLISHED**

**SHADED DRAWINGS  
OF  
MODELS AND ORNAMENT  
FOR CLASS TEACHING.**

Drawn under the Superintendence of

**LEWES R. CROSSKEY,**

DIRECTOR OF THE DEPARTMENT OF INDUSTRIAL ART, THE GLASGOW AND WEST OF SCOTLAND TECHNICAL COLLEGE; ART MASTER, ALLAN GLEN'S SCHOOL, GLASGOW; AUTHOR OF "ELEMENTARY PERSPECTIVE."

Twenty-four Sheets. Superfine heavy paper, 28 inches by 32 inches. Enclosed in strong cloth-backed portfolio. Price 31s. 6d.

A NEW SERIES of Sheets of Shaded Drawings of Models and Ornament for use in Elementary, Secondary, and Science Schools, and in preparing Students for the Elementary and Advanced Model Drawing in Light and Shade Examinations of the Science and Art Department. The Sheets will be found of service in the class-room as exercises, preceding or accompanying the instructions given in Drawing from the actual objects both in Outline and in Shading. They may also be used for copying in Outline only, and for this purpose will be found of value as a means of training the Students to realize the appearance of objects in perspective, as well as conveying a knowledge of light and shade and a correct method of working.

LONDON: BLACKIE & SON, LIMITED, OLD BAILEY.

**MESSRS. BELL'S LIST.**

**BELL'S HANDBOOKS TO THE GREAT  
PUBLIC SCHOOLS.**

Crown 8vo, Profusely Illustrated, 3s. 6d. net each.

Under the above title MESSRS. BELL are publishing a series of historical and descriptive handbooks, dealing with the principal Public Schools of England. They are intended to give a short account of the foundation and history of each school, a description of the growth and present condition of the buildings, a trustworthy account of the method and routine of the educational system, and, lastly, accurate information as to the games, amusements, and non-scholastic interests which may prevail in the school.

FIRST VOLUMES OF SERIES.

**CHARTERHOUSE.**

By A. H. TOD, M.A., late Scholar of Trinity College, Oxford; Assistant-Master at Charterhouse. With 58 Illustrations, chiefly from Photographs by L. MARSHALL, Assistant-Master at Charterhouse.

[Ready.]

**RUGBY.**

By H. C. BRADBY, M.A., Assistant-Master at Rugby. With numerous Illustrations.

[Ready.]

**ETON.**

By A. CLUTTON-BROCK, New College, Oxford.

[In the press.]

**Bell's Science Series.**

EDITED BY PERCY GROOM, M.A.,  
AND PROF. G. M. MINCHIN, M.A., F.R.S.

New Volume. Crown 8vo, Illustrated. 288 pages, 4s. 6d.

**AN INTRODUCTION TO THE STUDY OF THE  
COMPARATIVE ANATOMY OF ANIMALS.**

By GILBERT C. BOURNE, M.A., F.L.S., Fellow and Tutor of New College Oxford; University Lecturer in Comparative Anatomy.

VOL. I. ANIMAL ORGANIZATION. THE PROTOZOA AND CŒLENTERATA.

In this introduction to the study of the Comparative Anatomy of Animals, the author has necessarily been guided by the requirements of the elementary examinations at the leading Universities of Great Britain. Having found by experience that beginners find great difficulty in apprehending the full meaning of the cell-theory at the commencement of their studies, he has departed from the course usually pursued in lectures and practical instruction, and, instead of beginning with the study of cells, he has taken the common frog as a type of animal organization. The general anatomy of the frog is first described in some detail: the microscopic structure of its organs and tissues is next explained, and then the cell-theory and the phenomena of the cell-division are dealt with. In this way the student is led gradually from familiar to new and unfamiliar conceptions.

In Two Parts. Crown 8vo, 4s. 6d. net each.

**GREGOROVIVS' HISTORY OF THE CITY OF ROME  
IN THE MIDDLE AGES.**

Translated by Mrs. HAMILTON.

VOL. VII. THE FIFTEENTH CENTURY.

Crown 8vo, 2s. 6d. PART I., separately, 1s.

**GRADUATED EXERCISES AND EXAMINATION PAPERS  
IN BOOK-KEEPING.**

FOR NATIONAL, INTERMEDIATE, AND PRIVATE SCHOOLS,  
BUSINESS COLLEGES, AND CIVIL SERVICE ACADEMIES.

By P. MURRAY, F.S.S.S., F.Sc.S. (Lond.), Lecturer in Book-keeping and Commercial Knowledge, Business and Civil Service College, Belfast; Author of "First Principles in Book-keeping," "Book-keeping for Competitive Examinations," "Business Book-keeping," "Advanced Arithmetical Examination Papers," "Business and Civil Service Tot Book," &c.

## UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)

*Principal*—H. R. REICHEL, M.A.

The Session began October 3rd, 1899. The College Courses are arranged with reference to the degrees of the University of Wales and include most of the Subjects for the B.A. and B.Sc. degrees of the London University. Students may pursue their first year of medical study at the College. There are special departments for Agriculture and Electrical Engineering, a Day Training Department for men and women, and a Department for the Training of Teachers in Secondary Schools.

Sessional Fee for ordinary Arts student, £11. 1s.; ditto for Intermediate Science or Medical student, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. The new Hall of Residence for Women Students in Upper Bangor—fee £31. 10s. for the session—is now open.

At the Entrance Scholarship Examination (beginning September 19), more than twenty Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition. One-half the total amount offered is reserved for Welsh candidates.

For further information and copies of the Prospectus, apply to

JOHN EDWARD LLOYD, M.A.,  
*Secretary and Registrar.*

## THE ANSTEY PHYSICAL TRAINING COLLEGE

**OFFERS** a professional Training in Swedish Gymnastics (both educational and medical) to Ladies of good education.

The Course begins in September, and lasts two years. Age of admission, 18 to 30. The work is particularly interesting and healthful, and is remunerative, there being more openings for trained teachers than can be filled.

Apply, for illustrated prospectus, to THE PRINCIPAL, The Leasowes, near Halesowen, Worcestershire.

## SEATON, DEVON (Seaside), SCHOOL FOR GIRLS.

Pupils under 12 years of age, £36 a year.

Pupils from 12 to 16, £46 a year.

Pupils over 16, £56 a year.

*No extras. Resident Governesses.*

Drawing, Painting, and Music taught by Visiting Masters.

Apply to the Principal, Miss MARY GROVER, Seaton, Devon.

## ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS IN SECONDARY SCHOOLS AND IN FAMILIES.

*Principal*—Miss M. R. WALKER. This College provides a complete Course of Professional Training for Women Teachers, in preparation for the Cambridge Teachers' Certificate. The Course includes attendance at the University Lectures on Education, in addition to Lectures delivered by the College Staff, and the Students have ample opportunities of gaining experience in Class-Teaching in Schools. Five Heriot Bursaries of £30 are offered in October. Apply to the PRINCIPAL, 5 Melville Street, Edinburgh.

**ABERYSTWYTH COUNTY SCHOOL.**—Wanted, ASSISTANT-MASTER, to teach Classics and Foreign Languages. Must have University Degree and teaching experience. To commence duties in September. Salary, £130 per annum. Applications, stating age and qualifications, with no more than six testimonials, to be sent by June 23rd, 1900, to JOHN EVANS, 6 Portland Street, Aberystwyth.

**NUCLEUS OF GIRLS' DAY SCHOOL** for disposal, in a rapidly growing neighbourhood, North London; 23 pupils. Apply—MISTRESS, 118 Queen's Road, Peckham.

## Modern Languages Holiday Courses.

Organized by the Teachers' Guild.

## ELBEUF, LISIEUX, AND TOURS. 1900.

*Commencing on August 2nd.*

Preliminary Programme gratis.

Handbook, giving full particulars, price 6d. by post, from the Offices of the Guild, 74 Gower Street, London, W.C.

## BEDFORD COLLEGE, LONDON (FOR WOMEN).

YORK PLACE, BAKER STREET, W.

### ENTRANCE SCHOLARSHIPS.

The Henry Tate Scholarship in Science, annual value £50; a Pfeiffer Scholarship in Science, annual value £48; a Reid Scholarship in Arts, annual value £31. 10s., all tenable for three years, will be awarded on the results of the Examination to be held at the College on June 26th and 27th. Candidates must be under 19 years of age on the first day of the examination.

For further information apply to the PRINCIPAL.

## THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.

*Principal*—Miss M. PUNNETT, B.A. (Lond.).

The object of this College is to give a professional training to educated women who intend to teach. In addition to the course of training, it offers the advantages of a College life and one year's residence in Cambridge.

The Students attend the Cambridge University Lectures on Teaching, in addition to those of the Resident and Visiting Lecturers, and are prepared for the Cambridge Teachers' Certificate (Theory and Practice). Ample opportunity is given for practice in teaching science, languages, mathematics, and the other usual school subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Wollaston Road, Cambridge.

## THE MARIA GREY TRAINING COLLEGE FOR WOMEN TEACHERS.

SALSBURY ROAD, BRONDESBURY, LONDON, N.W.

*Principal*—Miss ALICE WOODS.

A Full Course of Professional Training is offered to ladies who desire to become Teachers in Secondary Schools or in Kindergartens.

The Course for students preparing for the Cambridge Teachers' Certificate or for the London Teachers' Diploma begins in September or January, and lasts for one or two years. The Course for Kindergarten students preparing for the Higher Certificate of the National Froebel Union begins in September, and takes two years and one term.

Ample opportunities are given for Practice in Teaching in the School and Kindergarten of 150 pupils on the premises, as well as in other Schools.

The Winkworth Hall of Residence, close to the College, accommodates 20 students.

Scholarships to the amount of £230, from public and private sources, are annually awarded.

For all particulars as to qualifications for entrance, terms, scholarships, &c., apply to Miss ALICE WOODS, at the College.

## THE DATCHELOR TRAINING COLLEGE.

CAMBERWELL GROVE, S.E.

(In connexion with the Datchelor Collegiate School for Girls.)

Governing Body—The Worshipful Company of Clothworkers of the City of London.

*Principal*—Miss RIGG.

*Mistress of Method and Lecturer*—Miss CARPENTER.

Assisted by other Teachers and Lecturers.

This College provides a full course of professional training for Women Teachers, together with abundant opportunity for regular class teaching in a school of over 400 pupils. Special provision is made for instruction in Physiology and Hygiene, Elocution, Drawing, and Ling's Swedish Drill.

Students are prepared for the Examination of the Cambridge Teachers' Training Syndicate.

Fees moderate.

A COLLEGE HALL OF RESIDENCE is provided for Students in the Training College. Terms moderate.

A Free Studentship (Training and Residence) will be awarded in September. For conditions apply to the SECRETARY.

THE

## FROEBEL EDUCATIONAL INSTITUTE,

TALGARH ROAD, WEST KENSINGTON, LONDON, W.

*Chairman of the Committee*—Mr. W. MATHER.

*Treasurer*—Mr. C. G. MONTEFIORE.

*Secretary*—Mr. ARTHUR G. SYMONDS, M.A.

TRAINING COLLEGE FOR TEACHERS.

*Principal*—Madame MICHAELIS.

*Mistress of Method*—Miss E. E. LAWRENCE.

KINDERGARTEN AND SCHOOL.

*Headmistress*—Miss M. BOYS SMITH.

Further particulars may be obtained on application to the PRINCIPAL.

## JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

*Address*—74 GOWER STREET, LONDON, W.C.

*Registrar*—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

## JOINT AGENCY FOR ASSISTANT-MASTERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

*Registrar*—Rev. F. TAYLOR, M.A. Cantab.

The Joint Agency for Assistant-Masters and Tutors is under the management of a Joint Committee composed of representatives of the following Bodies:—

Headmasters' Conference.

Incorporated Association of Headmasters.

College of Preceptors.

Teachers' Guild.

Welsh County Schools' Association.

Private Schools' Association.

Association of Headmasters of Preparatory Schools.

Association of Headmasters of Roman Catholic Schools.

Assistant-Masters' Association.

Association of Technical Institutions.

&c.

As the Agency is not working with a view to profit, but to benefit Assistant-Masters, the rates of commission are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m., Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

### BLACKIE'S SOUTH KENSINGTON DRAWING SHEETS.

POYNTER'S South Kensington Drawing Books are well known for the artistic beauty of the models they present. In response to a frequent demand, selected subjects from this series are being issued in the form of Wall Sheets. The Sheets are printed on fine, smooth cartridge paper, 28 x 20 inches, are eyeletted, and done up in strong portfolios. The series consists of six sets of twenty sheets each. Sets I. and II., price 10s. each; Sets III., IV., V., VI., price 12s. 6d. each.

| 3. Geometric and Simple Forms—Coloured.        | 6. Plant Forms—Coloured.           |

Reduced Specimen (coloured) post free on application.

### POYNTER'S SOUTH KENSINGTON DRAWING BOOKS.

THIS Series of Drawing Books has been issued under the direct superintendence of Sir E. J. POYNTER, P.R.A. The Examples are selected, for the most part, from objects in the South Kensington Museum. Care has been taken to select objects interesting in themselves, and the best specimens of their class, so as to cultivate taste, while they at the same time afford useful and instructive Drawing Lessons. Each book has fine cartridge paper to draw on. *Illustrated Prospectus on application.*

#### SOME OPINIONS OF THE PRESS.

*The Journal of Education* says: "In execution, accuracy, and beauty, these copies have no rivals."

*The Academy* says: "Probably the best series of the kind yet published."

*The Graphic* says: "The outlines are perfect, and the descriptive letterpress all that can be desired."

*The Educational Times* says: "The work is magnificently printed on beautiful paper."

### SHADED DRAWINGS OF MODELS AND ORNAMENT.

For Class-Teaching. Drawn under the superintendence of LEWES R. CROSSKEY, Director of the Department of Industrial Art, the Glasgow and West of Scotland Technical College. 24 Sheets on superfine heavy paper, 28 by 32 inches, in portfolio. Price 31s. 6d. per set. *Prospectus on application.*

Each sheet gives a shaded drawing of some model or ornamental cast, and is intended to assist the pupil in drawing from actual models by showing methods of shading, &c.

### CLASSIC ORNAMENT.

#### Photographic Reproductions of South Kensington Casts.

Specially prepared to meet the requirements of the Science and Art Department in "Freehand Drawing and Ornament in Outline." In 4 Books. Crown 4to, price 1s. 6d. each.

*Prospectus, showing Specimen Illustration, on application.*

## Wall Maps.

### BLACKIE'S STANDARD CLASS MAPS.

Beautifully printed in colours, on strong manilla paper, 28 inches by 37 inches, and eyeletted at the four corners. In strong leather-board box. Price 16s. per set. *Reduced facsimile on application.*

#### SET A.—England and Wales.

- |   |  |

SET B.—Scotland and Ireland. *In preparation.*

## English.

**MACAULAY.—ESSAY ON CLIVE.** Edited by JOHN DOWNIE, M.A. Editor of "Macaulay's Essays on Milton and Walpole." 2s.

**DRYDEN.—ESSAY ON DRAMATIC POESY.** Edited by D. NICHOL SMITH, M.A., Editor of "Henry VIII." (The Warwick Shakespeare) and "Boileau's Art Poétique." 2s.

This is the most fully equipped edition of Dryden's famous Essay yet published. The Introduction discusses the circumstances which gave rise to the Essay, and ably summarizes it; the Notes are explanatory and critical; and an Appendix gives Sir Robert Howard's criticism of the Essay and Dryden's rejoinder.

**POPE.—ESSAY ON CRITICISM.** Edited by FREDERICK RYLAND, M.A. 1s. 6d.

**SHAKESPEARE.—KING JOHN.** Edited by G. C. MOORE SMITH, M.A. 1s. 6d.

This is the latest volume of the well-known "Warwick Shakespeare."

**MACAULAY.—ESSAY ON PITT.** Edited by C. J. BATTERSBY, M.A., Assistant-Master at Bradford Grammar School. [*Nearly ready.*]

## Blackie's Illustrated Latin Series.

Edited by Prof. R. Y. TYRRELL, Litt.D., D.C.L.

With interesting Introduction, Explanatory Notes, and Vocabularies; illustrated with Maps, Plans, and Drawings from Coins, Gems, Statues, and other objects of ancient art. Crown 8vo, cloth.

\* \* \* *Specimen copies on application.*

**CICERO.—THE FIRST CATILINE ORATION OF CICERO.**

Edited by C. H. KEENE, M.A., Professor of Greek, Queen's College, Cork. 1s. 6d.

**CICERO.—THE CATILINE ORATIONS OF CICERO. (COMPLETE.)** Edited by C. H. KEENE, M.A. 2s. 6d.

**EUTROPIUS.—BOOKS I. AND II.** Edited by W. CECIL LAMING, M.A., Classical Master in Edinburgh Academy. 1s. 6d.

This should prove the most attractive edition of this portion of Eutropius yet published. The text is printed in large type, and is lavishly illustrated with full-page and other pictures of a kind to explain the text and interest young pupils. The notes also are printed in a larger type than usual, and are very clearly and simply expressed. There is a complete vocabulary.

**LIVY.—BOOK V.** Edited by W. CECIL LAMING, M.A. 2s. 6d.

**HORACE.—THE ODES. BOOKS I., II., III., IV.** Edited by STEPHEN GWYNN. 1s. 6d. each.

*The Academy* says:—"The distinguishing feature of this new series is the illustrations. Those in the present volume are interesting and appropriate, being taken nearly all from ancient sculpture and vases. Apart from this the work is well done, Mr. Gwynn's introduction is excellent, and shows independence of thought."

**TACITUS.—AGRICOLA.** Edited by W. C. FLAMSTEAD WALTERS, M.A. 1s. 6d.

**VIRGIL.—AENEID III.** Edited by P. SANDFORD, M.A. 1s. 6d. [*Nearly ready.*]

**VIRGIL.—GEORGICS I.** Edited by S. E. WINBOLT, M.A. 1s. 6d. [*Nearly ready.*]

\* \* \* *Other volumes in preparation.*

## French.

**A SHORT HISTORY OF FRENCH LITERATURE.** By L. E. KASTNER, B.A., Lecturer in French at Gonville and Caius College, and H. G. ATKINS, M.A., Lecturer in Modern Languages at the Royal Naval College, Greenwich. 4s. 6d.

**LE SONGE D'OR, AND OTHER STORIES.** Edited by ERNEST WRECKLEY, M.A., Professor of French at University College, Nottingham. 1s. 6d.

**A FIRST FRENCH COURSE.** By J. J. BEUZEMAKER. 1s. 6d. *The Educational Times* says:—"It would be difficult to find a better French Primer."

**A SECOND FRENCH COURSE.** By J. J. BEUZEMAKER. 2s. 6d.

These well known French Courses have been provided with Keys, in response to requests from many teachers. *They are supplied to teachers only on direct application to the publishers.*

FIRST FRENCH COURSE. Post free, 2s. 6d.

SECOND FRENCH COURSE. Post free, 3s. 6d.

**MY FIRST FRENCH BOOK.** A Picture Reading Book. By MARGUERITE NINET. Printed in large type and fully illustrated. Crown 8vo, cloth, 1s.

*The Academy* says:—"Mlle. Ninet has laid the child-learners under a further debt."

*The Guardian* says:—"We can confidently recommend it."

## The Educational Times.

We referred last month to the Board of Education Minute of April 6, establishing higher elementary schools, which was important as being the first contribution of the Board to a general reorganization of systematic and continuous education under State control. These higher elementary schools appeared to be satisfactory in themselves, although the Minute for the first time authoritatively prolonged the elementary-school age, and to that extent sanctioned a certain overlapping and competition of elementary and secondary education. But the new schools are to be governed by conditions which reduce this overlapping to a minimum, and leave no doubt as to their aims and limitations. In this respect they differ materially from the older higher-grade schools, which were originally an unauthorized outgrowth of the elementary schools, and became to all intents and purposes secondary schools.

On May 3 Mr. Jebb raised in the House of Commons a very interesting discussion on the new Education Code, which has a distinct bearing on the Minute. Referring to the objections which had been raised to the block grant, especially on the ground that it was inadequate for the maintenance of the higher-grade schools, Mr. Jebb said:

If the new Code stood alone, that objection would have force. But the new Code had been supplemented by the Minute of the Board of Education, issued on April 6. That Minute made provision for establishing a new type of higher-grade school, which must be organized to give a complete four years' course of instruction approved by the Board. That course would begin from a point represented by Standard V., but would thenceforth be on a higher plane than that of the ordinary elementary school. No scholar would be allowed to remain in such higher-grade school after the close of the school year in which he or she was fifteen years old. This Minute had nothing directly to do with secondary education. It created a type of school which was to crown our system of primary education.

On the question of the age-limit Mr. Jebb was very clear and precise. Elementary education, whether ordinary or higher, is planned for a leaving age of fifteen. In secondary education there are two main classes of schools, those in which the normal leaving age is sixteen or seventeen, and those in which it is eighteen or nineteen. The pupils of such schools take up the higher industrial employments, or commerce and business, or scientific and professional pursuits. They pass on to a technical college, a University college, or a University.

A child in an ordinary elementary school had, or should have, three choices open to him—(1) To stay in that school till he had completed the standards; (2) after passing Standard IV. to pass to a higher elementary school; (3) to pass to a secondary school at the same time break. Now the higher elementary school set up by the Minute answered to the second of these choices. It was to be a higher primary school, not a lower secondary school, and so its course was planned to end at the age of fifteen at latest.

Nothing could be plainer. Mr. Jebb knew what the Education authorities had been discussing and planning; and the words which we have quoted read as if the speaker knew that a logical decision had been deliberately taken by the Board of Education. But in the meantime the Board itself had been enlarging on its Minute. Replying (through the mediation of Mr. Chamberlain) to the inquiries of certain elementary teachers in Birmingham, the Board had said that there was nothing in the Minute of April 6 to compel any higher-grade school with a school of science attached to come under the operation of the Minute, and nothing to prevent those higher-grade schools "continuing their work as at present." They may conform to the Minute or leave it alone, as they please. To quote Mr. Jebb's speech again,

There is nothing in the Minute to prevent a School Board already giving higher elementary teaching in its ordinary schools from continuing to do so. The loss which some School Boards will suffer under the block grant can be made up by a very small addition to the rate. In Leeds, for example, that addition would be represented by one-third of a penny in the pound; in Manchester, by one-eighth of a penny; in London, by one-thirty-seventh of a penny. But it has been urged that the transference of a child from the ordinary elementary school to the higher elementary is an evil in itself, as involving a break in the continuity of school life. But such a break occurs in secondary education when, at much the same age, a pupil passes from a preparatory to a higher school, and it is not found to be injurious.

Standing by itself this interpretation of the Minute is disappointing and discouraging. We had supposed that the higher elementary were to be substitutes for the higher-grade schools—that the higher-grade schools, with their advanced secondary education and their practical absence of an age-limit and their irregular constitution, were either to conform to the new type or to square themselves with the Elementary Education Acts. We shall be told to wait and see what will come of the recent action of the Local Government Board auditor, who has made a stroke for legality, and has surcharged the School Board for certain sums granted to higher-grade schools: we are assured that a court of law will presently make the existing Acts plainly understood and respected. If the Board of Education is in harmony with the Local Government Board, if it knew

and intended the consequences of the block grant, if it holds that the higher-grade schools are illegitimate, and that the higher elementary must be the real "crown of the primary," why does it say that there is nothing in the Minute with which the higher-grade schools need concern themselves? We have quoted the Board's communication to Mr. Chamberlain, and Mr. Jebb's impressions in the House of Commons. In the same debate Sir John Gorst, a member of the Board, put the matter as frankly and as plainly as he could:—

It is a statement which has been made over and over again by the official representatives of the Education Department that no School Board has any legal right to expend the school funds upon secondary education. You have, consequently, this state of things. You have School Boards who have established excellent higher-grade schools, whose work I have always spoken of in terms of the warmest eulogy; and the School Boards are now supporting these schools in an illegal manner from the school funds. What, then, is to be done? This Minute affords the opportunity of placing these schools on a legal and legitimate footing, and although there may be some higher-grade schools which will stand out and take the chance of the Law Courts—the chance of the decision of the Court of Queen's Bench being contrary to the expressed opinion of the Education Department—yet I believe the great majority of those schools have hailed with satisfaction the publication of this Minute, and that they will convert themselves into higher elementary schools so as to place their proceedings on a proper and legitimate footing.

That being so, we may wait for the decision of the Court of Queen's Bench and for the obedience of the School Boards. The main fact—and it is a reassuring fact—is that the higher elementary schools are to be the crown and limit of education by the School Boards, and that for secondary education we are to have secondary authorities.

### NOTES.

THE knighthood which has been conferred on Mr. R. C. Jebb, M.P. for Cambridge University and Regius Professor of Greek in the University, may be regarded as a tribute to education. Sundry Oxford and Cambridge professors have been knighted in recent years, some as men of science, others as distinguished in history and letters. Mr. Jebb unites various qualifications, and our readers will not need to be reminded of the many services which he has rendered during the past few years to the cause of what we may call the political organization of education. He has done much to keep the politicians well informed as to the claims of higher and secondary education, and to bring the representatives of differing views and interests into line. It would be impossible to contest his right to figure in the list of Birthday honours, and, if he is as well satisfied to be called Sir Richard as plain Professor, everything is as it should be.

THE spectacle of a Cabinet Minister lecturing a Government Department on its red-tape dilatoriness is a charming novelty in Parliamentary debate. It is true that, in his criticism of the attitude of the Charity Commissioners towards the King Edward's School (Birmingham) Bill, the Colonial Secretary spoke merely as plain Mr. Chamberlain, the Member for Birmingham, but we do not think his words were any the more palatable on that account. Brutus was not much relieved by reflecting that Antony was only "a plain, blunt man." The Bill under discussion proposes to transfer the control of the endowment of King Edward's foundation from the Charity Commissioners to the Board of Education, and naturally the Commissioners question the advisability of change. It is not clear whether

they doubt the administrative capacity of the Board of Education; but, as Mr. Chamberlain pointed out, it is somewhat unusual to find the representative of a Department opposing a Bill which has the approval of the Government. Why it should have been necessary to proceed by Bill is hardly apparent, as the Board of Education Act, by Section 2 (2), provides for the transfer from the Charity Commissioners to the Board of Education of matters relating to education by means of an Order in Council. Such procedure would be far simpler than the carrying of a Bill through all its stages. It may be, however, that the Government is advised that the administration of an educational endowment is not a matter "relating to education" within the meaning of the subsection. Such a narrow construction is, of course, possible, and, if acquiesced in, must needs lead to a lot of piecemeal legislation in the near future. It would be well to amend the subsection.

ALTHOUGH criticisms on the character of the training which our Army officers receive have of late been plentiful, no attention has been given to the equally important preliminary education of Woolwich and Sandhurst cadets on which such training is based. Of all preparations for a professional career it is difficult to conceive one more unsatisfactory. We are speaking of the majority who enter Woolwich or Sandhurst after eighteen months' or two years' coaching at an Army crammer's, and not of the minority who enter straight from school. The war has shown that mere technical proficiency in an officer is useless unless united with self-reliance, alertness, and some degree of cultivated observation and imagination, enabling him to make a shrewd guess as to the working of minds very differently constituted as compared with his own. The rough and tumble of ordinary school life, if continued until the age of eighteen, affords a satisfactory means of cultivating such qualities. The average Army candidate, however, leaves school at fifteen from the fifth form, and his real education is at an end. With an Army coach he is exclusively engaged in working up subjects for marks, with reference solely to the form of questions set in previous examinations. Pent in town or in a suburb, with surrounding influences which promote neither moral nor intellectual health, and with few opportunities for open-air exercise, he develops a supercilious conceit and a narrow intellectual sympathy which choke the growth of his general intelligence. He has, of course, many good qualities, but they exist in spite of the "education" to which he is at present doomed.

THE London School Board has again, by one of its Committees, inquired into the question of school attendance. The period tested was the last quarter of the year 1898, during which 190,919 children, or over 33 per cent., failed to make a proper attendance, and there were over 120,000, or over 21 per cent., who missed school more than three times a week. The figures are serious, and the outlook is not made brighter by the information that matters are rather worse in non-Board schools. The Vice-Chairman of the Committee is glad that Sir John Gorst has introduced a Bill increasing the maximum penalty which may be inflicted on parents of absentee children from 5s. to 20s. It is, however, doubtful whether mere penalties will succeed in bringing over parents to the side of the school authorities. The figures above given are so enormous that they are not explained

by the natural desire of poorer parents to increase the earning capacity of their families. There is a feeling abroad among the working classes that the education given in the higher standards is unpractical, and, if such an idea has become general, the matter is explained. It is a mistake to assume that the working man has not the interest of his children at heart. Sir John Gorst's recent speech in the House of Commons fortunately shows that it has dawned on the Board of Education that children in elementary schools have an environment. It is a step towards discovery that the parent is the best attendance officer.

THE higher diploma of the Alliance Française, an association for the propagation of the French language beyond the French borders, is well worth the attention of those who wish to equip themselves as language teachers in their own countries. It certifies the holder as qualified to give lessons in French (language and literature) *à l'étranger*; and its value is due to the fact that no one can be admitted to the examination without making at least fifty attendances at the *cours* arranged, in two series, by the association. The subjects to be dealt with this year are, as before, historical grammar, difficulties in modern grammar, pronunciation, diction, phonetics, modern and classical literature, French institutions, and French art. The lectures begin in Paris on July 1 and last till the end of August; admission forms, with full particulars, can now be obtained from the Secretary, 45 rue de Grenelle. Last year 500 entries were received, of which 174 were from Germans, 89 from Americans, 60 from Russians, 50 from English, and the remainder from very miscellaneous nationalities. Ninety-one obtained the higher diploma. The Alliance received the formal approval of the Minister of the Interior as far back as January, 1884, and was officially *reconnue d'utilité publique* by the President of the Republic in October, 1886. Among its past presidents have been Monsieur Ferdinand de Lesseps and General Février, Grand Chancellor of the Legion of Honour. The president for the current year is Monsieur Foncin, Inspector-General of Public Education, and the director of studies is Monsieur Brunot, lecturer at the Sorbonne and at the Ecole Normale Supérieure. The holiday courses arranged by this same Alliance, at Caen, Nancy, and elsewhere, will be familiar to a large number of our readers.

THERE is a bright freshness in the list of subjects dealt with at the Parents' National Educational Union Conference, which shows the presence of no little originality in the Organizing Committee. "The Education and Training of the Ordinary Domestic Nurse," "The Educational Aspect of Gardening," and "The Virtues of Simplicity," are titles which, by themselves, would go far to make the Conference a success. Educational discussion in England has been in the past far too technical and professional, and we heartily welcome breezes of opinion and ideas which have their origin elsewhere than among the regular furrows of educational life. It is to be hoped that the Parents' Union will continue to be loyal to its unprofessional name and origin. Prof. Bryce, in his address on "The Influence of Parents," wisely urged that such influence should be principally devoted to the development of taste, logical thought, and religious feeling. The atmosphere and silent forces of home life are in such matters more powerful

than those of school. We have left behind us the days when schoolmasters were convinced that parents could not possibly know anything about their own children.

ONLY of late has the ethical value of athletics received any practical recognition in the French educational system. It is, therefore, the more interesting to notice that a premium has been officially put on this development in connexion with the Paris Exhibition. Last March the Minister of Public Instruction addressed to the heads of secondary and of higher primary schools all over the country a circular inviting them to use the opportunity for carrying out an athletic competition to be held on a large scale at Paris on Tuesday and Wednesday in Whitsun week. The following are the principal sections:—Flat races, obstacle races, tug-of-war, high, long, and pole jumps, putting the weight, throwing the disc. To afford some standard of comparison with our own arrangements it may be mentioned that the flat race length varies from 90 to 1,500 metres; the age limits are: for juniors under sixteen, for seniors under twenty-one. For the final contests, second-class railway fare will be allowed by the State to all who take first places (excepting only in the tug-of-war), and incidental expenses will be liberally met in various ways. A tennis tournament, double and single, has also been organized, but it is open to scholars from Paris alone, the game being comparatively little known in provincial schools. The *prix régionaux* are to be medals; at Paris medals and objects of art. The technical details of the competition are being carried out by a committee consisting entirely of members of the Union of the French Societies for Athletic Sports.

MR. ARMITAGE SMITH presided on May 19 over a meeting convened in the theatre of the Birkbeck Institute by the London Association of Art Masters. Attention was drawn by various speakers to the mischief of overlapping in science and art teaching caused especially by the State-aided classes of the London School Board, established in localities where technical institutes were already in existence. The institutes appear to have lost a considerable number of students—over six hundred in a single institute—through this cause. The Principal of the Goldsmiths' Institute urged that the self-respect of students was damaged by receiving free instruction and free materials. It is certain that the institutes which charge a small fee have suffered greatly by a competition artificially fostered. If the *gratis* teaching were better than that which is paid for, the public might shrug their shoulders at the complaints of the institutes; but, of course, it is not so. There is reason, however, to hope that the grievance complained of is now in a fair way of being remedied.

## SUMMARY.

### THE MONTH.

ON May 3 the House of Commons debated the Education Code of 1900. Mr. Jebb moved that: "The proposals contained in the Code of Regulations for Day Schools and in the Minutes of the Board of Education laid before Parliament during the present session are conducive to the interests of education." His object was to provide an opportunity for a general discussion, the Government having given a day for that purpose. Mr. Jebb touched first on the new Code, and then on the Minute recently issued by the Board of Education, and his aim was to bring out

the larger aspects of these proposed changes and the principles which underlay them. The great feature of the new Code was the block grant. The first merit of the block grant was that it delivered primary education from the influence of a mercenary motive. Under the old system of payment for individual subjects there was a strong inducement to turn a school into a machine for earning the largest possible grant, irrespectively of the true educational interests of the children. After considering the effects of, and objections to, the new system of grants, Mr. Jebb went on to discuss the new type of schools established by the Board. We have dealt with this subject in our leading columns.

Mr. A. HUTTON gave a more critical turn to the debate by moving, as an amendment, that the proposals of the Government contained "provisions that are not conducive to the best interests of education." His speech, with Mr. Mather's and others, was practically a plea for the School Boards which have developed the higher-grade schools in order to secure continuous education for their ablest pupils, without letting them slip out of their control; or because the parents would not agree to their being shifted into other (secondary) schools. Sir John Gorst answered for the Government. With part of his speech we have dealt in our leading columns. Mr. Mather had charged Sir John with striking at the higher-grade schools.

The first blow [he said] was delivered three years ago, when I was a party to applying a scheme to schools of science very much like the present one. I remember that occasion very well. Everybody had been crying out for this reform, but, as soon as it was made, I am sorry to say that the managers of the schools did what many of them have done in the present case. They sat down and made calculations as to how much grant they had got under the old system, and how much they would get under the new, and every manager who found that he would get one shilling less under the new system than under the old at once opposed the change, but those who found that they would get more held their tongues and said nothing. . . . All these schools of science are going on quite as comfortably as they went on before the change, just in the same way as all these higher elementary schools will go on perfectly comfortably after this Code has come into operation. . . . The second blow which I struck at the schools of science was that there was a provision put into the "Directory" which prevented schools of science from earning double grants—from getting one from the Education Department and another from the Science and Art Department, at the same time for the same work. It was an abuse which had grown up, and it was very properly put a stop to. The third blow which I struck, according to the hon. member, was that the Local Government Board auditor, over whom I have no more control than I have over the hon. member, had sat in a judicial capacity in London, and disallowed some expenditure of the London School Board—a matter which is now before a Court of Law, and which I have no more to do with than the hon. member himself.

As we went to press last month a letter was printed, too late for comment, from Mr. Chamberlain's private secretary to the Birmingham branch of the National Union of Teachers, who had written to the Colonial Secretary expressing alarm as to the operation of the Education Board's Minute of April 6. The letter, to which we refer elsewhere, was in the following terms:—

Dear Sir,—I am directed by Mr. Chamberlain to say that he has now received the following replies to your three questions from the Education Department: (1) There is nothing in the Minute which compels any higher-grade school, with a school of science attached, to come under the operation of the new Minute. (2) There is nothing in the Minute which makes it otherwise than permissible for those higher-grade schools to continue their work as at present, and the new scheme is one into which School Boards and school managers may come, if they please, and if they will fulfil the required conditions; but there is nothing in the Minute which compels them to transform their schools into the type of school laid down in the new Minute. (3) The new Minute does not state that the new type of school must necessarily be in a totally separate building from the ordinary elementary school, and, so far as the requirement of a separate head-teacher is concerned, this requirement already applies to the higher-grade schools, referred to above, as it exists in the day schools Code, which already makes it impossible for the head-teacher of an elementary school to have any duties in a school of science, even though this latter be attached to an elementary school. Mr. Chamberlain trusts that these answers will be satisfactory.—Yours, &c., J. WILSON.

MAY 9 was Presentation Day at London University, and the Prince of Wales was present. The *Times* reports that when the Prince entered, with a procession of dignitaries, "the scene became dazzling. His Royal Highness, the Earl of Kimberley, Earl Spencer, and Sir H. Roscoe were distinguished from everybody

else by black gowns of heavy watered silk, richly embroidered with gold, the Prince being so arrayed as Chancellor of the University of Wales." Lord Kimberley as Chancellor of London University, Sir H. Roscoe as Vice-Chancellor and Lord Spencer as Chancellor of the Victoria University. Among their supporters were Mr. E. H. Busk (Chairman of Convocation), Lord Davey, Lord James, Mr. Bryce, M.P., Sir U. Kay-Shuttleworth, M.P., Sir M. Foster, M.P., Mr. Jebb, M.P., Sir A. Rollit, M.P., Mr. J. A. Campbell, M.P., Bishop Barry, Mr. Armine Wodehouse, Mr. W. H. Dickinson (Chairman of the County Council), Dr. Collins, the Chief Rabbi (Dr. Adler), Sir Owen Roberts, and Sir R. Blennerhasset. Nearly five hundred of both sexes had won degrees and honours, and about three-fourths of them were present to receive their awards—the diplomas at the hands of the Chancellor, the medals from the Prince. After the ceremony the Prince of Wales said:

No one wishes more sincerely than I do happiness and prosperity to this University. From all we have heard from the Chancellor, I think this University is in a fair way to become one of great importance, and will hold its own, no doubt, with many of the others which are of ancient origin. I am glad to think that, as the result of some difficult and, I may say, some delicate negotiations, London University has now found a home in the Imperial Institute, one in which I know you all take deep interest. We, of the Institute, are very grateful to Her Majesty's Government for all they have done in this matter, and for having facilitated the arrangements, which I hope are now complete. It only rests for me to express a fervent wish that the London University will not regret having left its old home, and will find that it has ample room for all its requirements.

ON May 10 the Scottish Higher Education Bill was read a second time in the House of Lords, where it was the subject of a good deal of criticism. Lord Balfour expressed his gratitude to those who had brought before him points which had raised difficulties in their minds, because he would thus be enabled to consider them before the Bill reached the stage of Committee. There were three main provisions round which criticism had largely centred:—(1) The constitution of the Local Higher Education Committees and their relationship to the Scotch Education Department; (2) the proposal to have a rating power for higher education in future; and (3) the method of providing and distributing the central funds which were amalgamated for the purpose of higher education in Scotland.

THERE has been a great fuss over the Birmingham (King Edward the Sixth) Schools Bill—a private Bill which proposes to transfer to local governors certain of the powers exercised under statute by the Endowed Schools Commissioners. On May 16 Mr. J. A. Pease opposed the second reading. Mr. Grant Lawson, one of the Commissioners, supported Mr. Pease, and infused fire into the debate.

As some of the clauses of this Bill were more objectionable than others, it had been his duty to get those particular clauses defeated and deleted. He had to think how he should proceed, and he had adopted the course, which he thought he was compelled to adopt, of letting the bad parts go by in order that he might stop the worst parts. He knew that, if he, as the representative of the Charity Commission, had moved the rejection of the Bill *in toto*, the members for Birmingham would have fallen upon him fiercely. They were wise and honourable, and some of them right honourable; they felt very strongly, he understood, upon this Bill, and they would have joined vigorously in that debate as the representatives of the doctrine of Home Rule for Birmingham. . . . The Charity Commissioners did not object to this property being handed over to some other authority, but they did object to its breaking loose from all control whatever. If any other body would take it over, the Charity Commissioners would be glad to get rid of it.

MR. CHAMBERLAIN, as protagonist of Birmingham, accepted this challenge. He said they had been told that there was no precedent for this Bill. If there were not, then it was their business to make one; but, in fact, there was a precedent last Session, and the course now proposed was adopted in the case of the Mason College Bill. They were dealing here with a great foundation—one of the greatest in the United Kingdom—with an income of something like £37,000. Mr. Chamberlain said that the school had been reformed again and again, until now it gave thorough satisfaction to the people of Birmingham. Surely it was not a part of the Radical creed to come in and say, with regard to such an institution: "You will be opposed by three gentlemen and a number of clerks, who will interfere in every detail."

The school had been improved again and again, and was it to be supposed that they could not alter one of the details without going to

this precious Charity Commission, who would take about six months to investigate one subject? There was a proposal to improve the higher education of girls in Birmingham, and they proposed to arrange for a transfer of property to another charity. This involved the disposal of some rent-charges and a certain amount of Consols. From first to last, there was never the slightest doubt as to the propriety of the proposal. The Commission went through all the details with an amount of red tape which would have astonished a Government office. In the interval Consols fell from 112 to 103, so that the Charity lost a considerable sum of money, all owing to this utterly incompetent body. The people of Birmingham protested; they had seen enough of it. They did not know the Board of Education, but they did know the Charity Commission, and they did not want to know it any more. Therefore, they proposed under the Bill to go to the Board of Education, which could revise or refuse their proposal. It seemed to him that the Charity Commission wanted to make the Board of Education as bad as themselves. He thought the Board of Education would not thank them.

The Bill is going through.

ON May 22 the seventh annual meeting of the Association of School Boards was held at St. Martin's Town Hall, under the presidency of the Dean of Manchester. Dr. Maclure dealt with the functions of the Board of Education, and especially with the Minute establishing higher elementary schools, and said he thought it might be assumed that the Association was in accord with the main principles of the new Code. The principle of the block grant had met with almost universal approval on the part of those who were experts, or were interested in elementary education. The most important business before the meeting was a resolution to the effect: "That the Association draw the attention of the Board of Education to the urgent need for further training college accommodation, residential or otherwise. That this Association is of opinion that more college accommodation of an undenominational character, for the training of elementary school teachers, is urgently required." Mr. Lyulph Stanley gave the resolution his warm support, insisting, however, that it was only "one of the posts on the way." The Association, he declared, wanted more than they were at present asking, but by-and-by they would demand a great deal more; namely, a great extension of training-school accommodation open to all. Other resolutions were passed commending non-county boroughs, urban and district councils, and rural district councils, as affording the best local areas for secondary education authorities, and in favour of a Government grant in the case of defective and epileptic children.

THE Master of Trinity College, Cambridge, gave his inaugural address as President of the Teachers' Guild at the annual meeting of that body on May 24. Dr. Butler spoke of specialization as a "narrow-minded giant."

Such glorious tracts of knowledge as history, biography, literature, art, and poetry were left untraversed because "it would not pay," to pursue the less fertile paths labelled "Mathematics" and "Natural Science." It was certain that before long it would be necessary to reconsider methods. The tendency would be to give weight to examinations which tested general intelligence. We should choose for our college brotherhood men who may, or may not, come to the top of any particular Tripes, but men whom we can guarantee as educated gentlemen. The slight knowledge of English shown at present by a considerable number of selected candidates was appalling. There was no substance, no arrangement, no mind apparent in what was written.

Dr. Butler concluded by stating that an insight into the life of Greece and Rome should be the patrimony of all readers.

THE Gilchrist Trustees have given to Bedford College, London, the award of a travelling studentship, to be competed for by former students of the College who hold a Teachers' Diploma and have had two years' experience of teaching. The Council will shortly announce the subjects proposed for investigation. Applications should be made not later than December 1, as the award will be made at the end of that month. The following students were presented for degrees by the Principal of Bedford College, at the University of London, on May 9:—B.A.'s: Misses K. L. McArthur (Second Class Honours in English), M. H. Scott, J. A. Abraham, E. Curtis, W. B. Cuthbertson, N. E. Smith, E. M. Walrond, and E. L. Young. B.Sc.'s, First Division: Misses S. G. Hacking, E. Pearce, and R. M. Syer. Honours candidate recommended for a Pass: Miss A. M. Raisin. Two graduates who have obtained diplomas in the "Art, Theory, and History of Education"—Misses E. D. Bishop, B.A., and E. M. Odell, B.A.—were prevented from attending.

## UNIVERSITIES.

(From our Correspondents.)

THE Summer Term that is now half through has been uneventful, and is doomed already to a tame end. "Commem." is not to be; honorary degrees, functions, balls are all deemed unsuited to "the circumstances of the country"; the Encenia is to be banished to the Divinity School, and only attended by such as cannot escape it. The Australian delegates, who would else have been made Doctors with all due pomp, have been smuggled to Oxford, labelled, and smuggled off again, with as much secrecy as so many spies.

The Classical Moderations list was a long one, and has provoked the usual comments. Every one points out that a Second loses all value when so many attain it; and every one proposes as a remedy the substitution of four classes for three. This is all just enough, perhaps; but the case of the First Class is quite as unsatisfactory. Clearly something should differentiate the class of absolutely first-rate scholars from those who are thoroughly competent scholars, but are not first-rate. At present, nothing does. The gap inside the First Class between the best and the worst man in it must be nearly as great as that between the latter and the men who get "Gulfs." To some extent, this deficiency in the Schools is remedied by the University scholarships—the Ireland, the Hertford, and the three Cravens. But these are not numerous enough for the annual crop of really first-rate scholars; and the "mentions" which might supplement them are too capriciously varied in number. Thus, for the Hertford Scholarship there were in 1899 some half-dozen "mentions," while in 1898 there was not one; and yet there can be little doubt that 1898 was the better year. Perhaps the real remedy would be to look the facts in the face frankly, and bisect the First Class into Division A and Division B. This might restore to scholars some interest in the examination's results. And, if only some day it could be ordained to take place after, instead of before, "Greats," there might be interest in its work too. The suggestion sounds topsy-turvy, but is not a new one; and might really work wonders, in saving classical study at Oxford from being a mere iteration, blind and lifeless, of ideas learned at school.

The statute making degrees of B.C.L. and D.C.L. accessible to persons who, having obtained an Arts degree in other Universities, shall come to Oxford to study law, was approved by Congregation on May 1. The scheme, in furthering which Prof. Dacey has taken a leading part, may, therefore, be regarded as adopted. It is meant to have the effect of fostering in Oxford an advanced study of law.

Most of the year's University prizes have just been announced. The English Essay goes to the Hon. R. D. Denman, Balliol, who had previously the Stanhope to his credit. Mr. E. S. Bouchier, Exeter, won the Chancellor's Latin Essay. Mr. A. C. Carré, Balliol, already a Craven Scholar, won both the Latin and the English Verse—a feat not performed since the first quarter of the century. Of the two Gaisfords, that for Greek Prose fell to Mr. H. W. Garrod, Balliol, a Craven Scholar; and that for Greek Verse to Mr. J. V. Scholderer, Trinity. Every rose, unhappily, has its thorn; and, possibly, the prize-winners of this year will specially appreciate this truth. No one can envy them the task of reciting their compositions at an Encenia held without *éclat*, or even amusement, in the cheerless shades of the Divinity School.

On May 1 Congregation accepted the preamble of a statute instituting a Geography Diploma. This, with the establishment here of a School of Geography, should give a stimulus to a study which at Oxford wanted one. The actual statute, however, is likely to be amended a good deal, so that a discussion of it might be rather premature.

HERE in Cambridge summer games are being played amid wintry surroundings, and Mafeking bonfires are welcome to warm our fingers as well as to prove our patriotic enthusiasm. Just for once the sun shone on May 14, when we were honoured by a visit from the King of Sweden, who was the recipient of an honorary degree. The whole ceremony in the Senate House was a great success. The King delighted everybody by his geniality and courtesy; incomparably the finest and handsomest man in the whole assemblage, he seemed to enjoy the fun as thoroughly as the youngest undergraduate, while picking up the points of the Orator's speech a great deal quicker than any of the crowd of assembled scholars. A guard of honour selected from the University Volunteers was on duty in Senate House yard, and the King, nimbly getting

over the rail, informally inspected the men and had a cheery chat with the officer in command. The King, with his suite, was afterwards entertained at lunch in Trinity College Lodge, and in reply to the toast of his health made a charming reply in Latin, the *ipsissima verba* being given herewith.

Illustrissime Dux, Reverendissimi et Doctissimi Rectores et Professores, gratissima certe mente semper istam, ut præ ceteris creta notandum, diem commemorabo, in qua, faustissimo sane numine, huic præclarissimæ Universitati Cantabrigiensi Gradum honorificum Legum Doctoris in me conferre placuit. Præterea liceat mihi non solum gratias vobis sincerrimas referre, verum etiam vota facere pro gloria, per secula duratura, huius Civitatis Academicæ, nec non pro prosperitate et valetudine omnium Civium vestrorum. Dixi et concludo: Vivas, Floreas, Vigeas, Alma Mater Academica!

The relief of Mafeking was celebrated in a most unusual manner. Taught by experience, the authorities had determined to start a bonfire under official auspices; the leading undergraduates were solemnly enrolled into a committee, and Midsummer Common was chosen as the site of the fiery festivities. Anything more funereal can hardly be imagined: twenty thousand people watching a large bonfire, and getting out of the way of rushes made by the more turbulent spirits of the town and University. A few fireworks served to keep the crowd from the dreaded Market Place, and a strong force of imported constables guarded the place where tradition has decreed that great events shall be celebrated by unofficial bonfire builders. Nothing happened, and the Mayor must have felt glad that his ruse was successful. It should be stated, in honour of that functionary, that he went among the crowd, and was present when the Mayoress assisted in starting the conflagration.

The fact that very considerable numbers of men have gone to the front, or have accepted commissions in the regular forces, has had a very noticeable effect on University life. The energetic poll-man, who does not consume all his energy in the search after knowledge, has a very brightening effect upon the social side of our existence. The loss of nearly a hundred and fifty of our best men cannot fail to make itself felt. The military ardour of the nation nowhere shows itself in such a practical form as in Cambridge, where enthusiasm takes the form of actual military work rather than that of reading the newspaper in an armchair and doing nothing to help. It is possible that before long the University will establish an examination in military science, as an avenue to the B.A. degree. A proposal to do the same for agricultural science is practically unopposed, and the scheme for the "military special" has even stronger grounds for commending itself to the University.

The Special Board for Classics is again on the war path; having met with a decisive defeat in the attempt to reform the Classical Tripos last year, it now suggests the addition of three more papers to the existing schedule, with a view to requiring from the candidates a better knowledge of the subject matter of the classical writers. One suggested change consists in the introduction of a set-book in the philosophical part of the examination. It remains to be seen how this new proposal will commend itself to the Senate, but it is quite certain that there is no great general sympathy with the small body of classical scholars who are constantly trying to make the Cambridge Classical Tripos a feeble imitation of Oxford Greats.

The authorities of the Cambridge University Day Training College announce that a course of lectures will, if a sufficient number of students present themselves, be given during July and August. This course will, together with the Educational Section of the University Extension summer meeting, form a six weeks' course for teachers. Cambridge is always ready to welcome these summer guests, who come to learn but remain to teach.

The Examiners for the History Tripos have been the cause of another small storm in a tea-cup. The regulations under which they examine require them to place the candidates in each class in one or more divisions; they found strict obedience irksome, so ignored the regulation. The Senate were next asked to rescind the regulation which the Senate had ratified, but that long-suffering body, by forty-four votes to thirty-four, decided that the original regulation was made for the purpose of being observed and not of being placed under the table by any examiners, however eminent.

A sudden jump in the percentage of men plucked in one particular Law Examination from about 15 or 20 to over 50 per cent. has caused ominous mutterings, and the various nominating bodies are finding an occasional thorn in their rosy beds. The Board for Modern Languages is proposing a new oral examina-

tion in French and German to test the conversational powers of the candidates: this new test is to be entirely separate from the Tripos and Special, and will be a useful thing for schoolmasters who require to know whether candidates for masterships in modern languages have this very necessary qualification in addition to a scientific knowledge of a foreign language.

Through the munificence of the Rev. Dr. Wiltshire a University Prize is to be founded for proficiency in geology and mineralogy as tested by the class list in the first part of the Natural Science Tripos.

In the matter of Mr. Goudy's appointment, to which reference has been made in a previous letter, it may now be placed on record that the Senate has definitely ratified it by a majority of 149 votes against 106.

The following awards have been made:—Tyrwhitt Hebrew Scholarships: (1) C. T. Wood, B.A., Pembroke; (2) T. H. Hennessy, B.A., Jesus. Winchester Reading Prizes: G. F. Kelly, Trinity House, and J. A. Hubback, King's. Stewart of Rannoch Scholarships in Sacred Music: E. S. Roper, Corpus, and G. W. Brewster, King's. Adam Smith Prize: S. J. Chapman, Trinity.

DURING May there have been few events of importance in connexion with Welsh education. One was the opening of the County School, Llanfyllin, Montgomeryshire, when Principal Roberts, M.A., of Aberystwyth, was the principal speaker. It is hoped that the County School buildings at Blaenau, Festiniog, and at Barmouth will be opened at no distant date. Among recently opened buildings of the kind are those at Carnarvon, commanding beautiful views of the Snowdon range and of the Menai Straits. One of the most pleasing features of most of the new County School buildings is the excellent provision made in them for the teaching of science.

It is most gratifying to find what remarkable progress secondary education is making in Wales both on the literary and on the scientific side. Already the University Colleges are beginning to profit in a marked degree from the new order of things. From the point of view of Classics, however, it is regrettable that Greek is at present but little studied in the intermediate schools. This cannot be due to an attempt simply to meet modern commercial needs, otherwise the study of German would presumably be systematically promoted. However, these developments may possibly come later, when the schools have laid down a solid foundation of culture on the basis of a thorough knowledge of the languages which the majority of the children will require in their daily life.

The end of May was largely occupied with the University examiners' meetings. Each meeting consists of the external examiner, an internal examiner representing each college, and the Vice-Chancellor as chairman. On all questions of passing or failing, or the place of a candidate for Honours, the ultimate decision in the University of Wales rests with the external examiner. The examinations will begin in the second week in June.

The Aberystwyth College Old Students' Association have decided to commemorate the late Mr. T. E. Ellis, M.P., a former student of the college, by means of a medal to be awarded to past students of the college who have made original contributions to knowledge or rendered eminent public service.

### UNSTABLE QUESTIONS OF METHOD IN THE TEACHING OF ELEMENTARY SCIENCE.

At the Monthly Meeting of members of the College of Preceptors held on Wednesday, May 16, Dr. R. P. SCOTT in the Chair, Dr. R. WORMELL read a lecture on "Unstable Questions of Method in the Teaching of Elementary Science."

In the first attempt to give a title to my lecture, I placed it as "Unsettled Questions of Method." But this on second thought seemed ambiguous. Had the questions been settled and become unsettled? Were any methods of teaching ever settled. Alas! it is too true that we are very slow in fixing even the fundamental principles, even the foundations, of method in education. We have no firm grip of anything. Even when we have thought that—thanks to a Socrates or a Plato, a Pestalozzi or a Froebel, a Payne or a Quick, a Thring or a Fitch—we had been able firmly to cement a corner stone of the structure, the Vandals have come and loosened it. When we have tried our hardest to render a few points so set that we might safely build on them we have found them slipping from under us. We are told to prove all things and hold fast that which is good. The latter part of this injunction is much needed at present if we are justified in believ-

ing that there is really a science of education. "Hold fast that which is good"—this should be written on the walls and door-posts of our schools.

#### EDUCATION HAS A SCIENCE.

If there be a science of education, it must have the characteristics of all sciences. It deals with the laws of the development of human intelligence, and no limit can be placed to the possible expansion of human intelligence. Science has no standard of excellence. It is as infinite as the wisdom of God from whom it emanated, and, in this respect, the science of education maintains its claim to be called a science. A science is ever changing, since it constantly soars higher and higher; but it is also immutable, for it never loses contact with its base; that is to say, its fundamental laws. Because of its unlimited powers of expansion a science can always keep pace with and adapt itself to the ever changing claims and requirements of the age. Without rendering uncertain its first principles or holding them in a loose grip, education may likewise adapt itself to progressive conditions. I often think that one reason why we are not sufficiently tenacious of that upon which we have once agreed is the fear lest we should curtail its adaptability. But when we follow the analogy of other sciences we shall see that this fear is groundless. There might be found to-morrow a new method of decomposing water which would open up new industries; but this would not render the methods already used untenable. So it is with education.

Now, are there any laws which we can lay down as laws of Nature in education? A little reflection will show that there are such laws, and some of them have been formulated as clearly as were Newton's Laws of Motion. For instance, one of these is stated by Pestalozzi as follows:—"Nature," said he, "develops all the human faculties by practice, and their growth depends upon their exercise."

He bade us inquire what are the child's faculties, how they have been developed by Nature, to what extent they are still capable of development, and what is the Divine intention with regard to them. He bade us assist Nature by multiplying the exercises.

The natural theory of education starts with a few such principles as the following:—

1. Every child is capable of action, and surrounding material objects stimulate it to action.
2. The external stimulants act through the organs of sense.
3. The sensations are the fundamental elements of knowledge.
4. The development of the mind begins with the reception of sensations and proceeds by the formation of ideas.
5. Natural education is the action and reaction between the external stimulants and the mind's power, causing growth and development.
6. When Nature is the educator the laws of the learner's being govern the educator's action, and determine what he does and what he leaves undone. He ascertains, as it were, from the child himself how to conduct his education.

To these another important fundamental principle has been added by Prof. Payne:—

7. The learner's ideas must be incorporated with the learner's mind and become part of his being. Words are the conventional signs, the objective representatives, of ideas; and their value to the learner depends on his possession of the ideas they represent. The words without ideas are not knowledge to him.

Perhaps we should keep these laws the better in mind if we named them as they do in other sciences. We have Pascal's Law, Boyle's Law, Joule's Law: why not Pestalozzi's, Payne's, Scott's, or any other discoverer's law—for instance, Quick's law: "Education is a process of cultivation"? The horticulturist who has learnt by observation Nature's methods can assist the processes of growth and development, and sometimes even control them. So also can the educator. The giving of this assistance is the purpose of education. It is education—

#### YET LACKS EXACTNESS.

Now, you will at once recognize these rules as the foundation of Froebelian teaching, the backbone of the kindergarten; yet they are often set aside and forgotten at the next and subsequent stages. My purpose now is to show how they may be, and ought to be, preserved in the teaching of elementary science. The principles of education remain true in all stages, although they are often masked or hidden, and a more subtle search is required to find and expose them; yet they are to be revealed, and those who have had opportunities of following the growth of many pupils from childhood to maturity recognize the identity of the

principles which are applied, consciously or unconsciously, from without the pupil, or from within, at different stages. It is true, for example, all through the course of education that science which is merely bookish science is very useless, and yet few exercises work out Nature's method of teaching more perfectly than real experimental work—that is to say, continuous and systematic inquiries, the answers to which are found and tested by practical operations carried out by the student himself. The necessity for system in this work is, perhaps, referred to by Carlyle. He asks: "Does not the very fox know something of Nature? Exactly so; it knows where the geese lodge! The human reynard, very frequent everywhere in the world, what more does he know than this, and the like of this?"\*

#### MANY METHODS, YET NO INCONSISTENCY.

But my purpose to-night is to revive your interest in some methods having a bearing on the teaching of elementary science which you have heard of before, and some apparently very modern, and to show that each has its proper place and purpose, and that the discovery of new methods need not displace old friends.

#### THE SOCRATIC METHOD.

Perhaps one of the oldest methods of teaching is that method of sharpening the wits by cross-examination called "the Socratic method." In its pure form this method is applicable to two kinds of science, one which is based on operations and actions that are universally going on amongst men, and respecting which all persons—even the very young—have some knowledge. This is the science of conduct. It is that science upon which Socrates himself exercised his art of questioning. He could do this on such subjects as virtue, industry, thrift, &c., without providing any knowledge but what may be supplied by the mind of the student who seeks an answer to the question. We may still do the same with the same class of subjects.

The other subject to which the Socratic method in its pure and simple form is applicable is a certain stage of elementary science in which every question can be accompanied by a practical experiment from which the answer is derived by simple observation. But this method does not carry us far, and we soon find it defective.

#### THE HEURISTIC METHOD.

The Socratic method pure and simple is destructive, and we want a constructive addition to it. Recently this addition has received a name, if not a local habitation. One of the earliest recorded experiments in physics is that of Archimedes with the crown of Hiero. Every schoolboy knows the story of the problem about the crown, the revelation of the bath, and the excitement of the philosopher as he rushed through the streets shouting: "Eureka!"

Since then the word has been much used for advertising purposes as indicating discovery or experiment. For instance, enterprising haberdashers ask us to buy *ureaker* shirts. And now the same verb *εὑρίσκω*, ("I find out" or "discover") gives a name to a method of teaching chemistry and physics—the heuristic method. It is true this method is applicable to other subjects—to art, to geometry, to algebra, &c. Let me quote a passage from a recent text-book:—

Examples were given of these applications, and a practical exercise with a young pupil was done with a number of wooden cubes as follows, the answers being given by the pupil without aid from the questioner:—

Place one and say how many squares face you. Write down the number.— Answer: One.

Add as many as make a square larger. How many have you added?—3.

Write down the number. What is the total?—4.

Add as many as make the square. How many have you added?—5. And the total?—9.

What sort of numbers are 1, 3, 5?—Odd numbers.

And the numbers 4 and 9?—One even, the other odd.

But what numbers make up 4?—Two two's.

And 9?—Three three's.

What sort of numbers, then, are 4 and 9?—Square numbers.

Continue to build up squares. How many do you add next?—7.

Write down the number and say what are down altogether.—1, 3, 5, 7, and the total 16.

How many numbers?—4.

And the total the square of what?—4.

Then the mode of forming the successive additions was deduced, and the fact that  $1 + 3 + 5 + \dots + (2n - 1) = n^2$  was established, and, it may be said, was discovered by the pupil.

\* T. Carlyle, "Hero Worship," Lect. iii., page 167, second edition.

## THE HEURISTIC METHOD SUITABLE FOR CHEMISTRY AND PHYSICS.

There is, however, no subject that offers such scope for this method as chemistry and physics. An eminent chemist, in answer to an inquiry of mine as to his view of this question, and also as to the exact points of controversy, writes as follows:—

Elementary chemistry and physics are subjects admirably fitted to assist in educational development by heuristic methods, and very easy problems, such as "Why does iron rust?" "What happens to chalk when it is burnt?" may be put before the student, so that he may get some idea of the methods of discovery, and learn to help himself. A knowledge of the facts of a science, however interesting, will scarcely assist us in our everyday life. The controversy is between those who simply think that "knowledge is power" and those who hold that it is the knowledge of how to use knowledge that avails. Chemistry, to be of value educationally, must, according to the latter, be taught as are carpentering, cookery, and dressmaking—not by attendance at lectures (though these occasionally may be useful to students of such subjects), but by practical methods of investigation. Guide and assist the student by all means, they say, but let him depend as far as possible on himself.

The setting of little problems as here indicated is possible early in the teaching of science, but it is not quite the beginning. The first stage involves seeing and reasoning; the second doing, seeing, and reasoning.

Exercises in observation of experiments performed by the teacher must precede experiments in the hands of the pupil, or much will be lost. One of the most enthusiastic advocates of this method, and of what he calls "juvenile research," Prof. Armstrong, seems to recognize this point of order, for he says:

In practice, the only serious difficulty met with has been to induce students to give themselves the trouble to consider what information is gained from a particular observation; to be properly inquisitive, in fact. I cannot think that this arises, as a rule, from mental incapacity. When we consider how the child is always putting questions, and that nothing is more beautifully characteristic of young children than the desire to know the why and wherefore of everything they see, I fear there can be little doubt that it is one of the main results of our present school system that the natural spirit of inquiry, inherent to a greater or less extent in every member of the community, should be thus stunted in its growth, instead of being carefully developed and properly directed.

To maintain and develop that natural spirit of inquiry we must work with Socratic questioning and heuristic exercises mixed or alternating.

To exhibit this alternation a lesson was given by the lecturer to an intelligent school-boy from a neighbouring elementary school.

Experiment and question by the lecturer, followed by the answer of his "victim," constituted the lesson, and here and there a little heuristic problem was interposed to be worked out by the students individually. It is impossible to convey the whole effect, but the following sketch of the lesson will indicate the method.

## LESSON.

What is this?—A pair of scales.  
 What am I doing with it?—Weighing.  
 Why are the scales now steady?—Because the weights balance.  
 That word of yours gives a name to all appliances for weighing.  
 What can we call them all?—Balances.  
 What part of the balance is this?—The beam.  
 When I shake it what does the beam do?—Moves up and down.  
 Yes; we say, it "oscillates."  
 Look now at this U-tube. What does it contain?—Water.  
 I shake it. What does the water do?—It oscillates.  
 What does it remind you of?—The beam of the balance.  
 It is one; but tell me what is above it.—Air.  
 On which side?—Both sides.  
 What balances the air pressure on the right?—The air pressure on the left.  
 What forms the beam of this balance?—Water.  
 [Here is the place for a problem or problems to prove and give a general idea of the magnitude of the air pressure.]  
 PROBLEM.—Take a wide-mouthed bottle, such as is used for preserved fruit; also take a hard-boiled egg with the shell removed. Drop a burning piece of paper into the bottle, and keep the fire burning for a minute or two by adding other bits of paper. Then place the egg on the mouth of the bottle so as to act as a stopper. Wait and see what happens, and then explain it.  
 [The egg is forced into the bottle by air pressure. After some questions on the problem the lesson is resumed.]  
 I tilt the tube. What is driven out on the left?—Air.  
 And let in on the right?—Air.  
 I close the end on the left, with the finger, and place the tube

upright. Show me the beam of the balance now. What presses on the right?—Air.

And on the left?—Air and water.

On which side is the air pressure greater?—The right.

How do you know?—Because water is added to that on the left to balance that on the right.

What is this?—A glass U-tube.

And this?—A foot rule.

Take the foot rule, and measure the arms of the tube.—One is fourteen inches; the other rather less.

What do I pour in?—Mercury.

What length of tube does the mercury take up?—About two inches.

I now pour water into the longer arm. What happens?—The mercury rises in the other.

Now point to the mercury forming the beam. Measure the mercury above the beam on the one side.—It is one inch.

Measure the water on the other.—It is thirteen and a half inches.

What balances the thirteen and a half inches of water?—One inch of mercury.

What have you proved?—That thirteen and a half inches of water balance one inch of mercury.

Then which is the heavier?—Mercury.

How many times as heavy as water?—Thirteen and a half.

Measure this tube.—It is three feet long.

What difference is there between the two ends?—One is open and the other closed.

What am I pouring in?—Mercury.

I fill it, close it with my finger, invert it, put the end under the mercury in a cup, and then remove my finger. What happens?—The mercury sinks in the tube.

What signs are there that I am weighing something?—The mercury oscillates.

Show me the beam of this balance.—It is in the cup.

What is above the beam in the tube?—Mercury.

What outside?—Air.

Is there any air above the mercury?—No.

How do you know?—The tube was filled with mercury, and no air has got in since.

What are the two pressures which now balance?—That of the air and that of the mercury.

Measure the mercury.—It measures two feet five and a half inches.

Yes, nearly two and a half feet.

How many feet of water would balance that mercury?—Two and a half by thirteen and a half.

That is nearly what?—More than thirty-three feet—less than thirty-four feet.

[Then the siphon as an inverted balance is dealt with, and several heuristic problems with siphons of different forms are proposed for experimental solution.]

## TEACH NOT INDIVIDUAL SCIENCES AT FIRST.

There are other questions of method not yet as stable as they ought to be. For instance, let us ask with what sciences we shall begin. It is clear that, if we wish to classify any number of things—plants, animals, or sciences—we must have some knowledge of the characteristics of the things to be classified; hence we must have a science course preliminary to the prosecution of individual sciences. Huxley provided the preliminaries for one section when he created physiography; but that is not enough—we must carry the medley further, and teach at first a science of common things.

## RATE OF EFFICIENT WORKING.

The next question is one of rate of working—the horse-power of the average pupil. What constitutes a fair and reasonable year's work in science for scholars of ten, twelve, or fourteen years? My opinion is that we expect and attempt too much. We do not give our plants time to grow, and, as to our structures, we build too rapidly for them to endure. There is a very general want of patience in this work. It is of the same kind as that evinced by a maiden aunt who was present when her little nephew was learning to read. The governess wished him to get at the word by looking at it as a whole, and noting its leading consonants. The word was *p-e-n-c-i-l*. The lad was beginning to shape his lips for it, but aunt was impatient. "You stupid boy, what have you in your pocket?"—"A ball." "No, stupid. What do you write with?"—"A piece of chalk." Thus aunt's impatience wrecked the lesson.

## HUXLEY'S LAW ON TECHNICAL EDUCATION.

There is yet another law which seemed to be more stable a few years since than it does now. I call it the "Huxley Law on Technical Education." It was first promulgated at Manchester.

The workshop is the only real school for a handicraft. The education which precedes that of the workshop should be entirely devoted to the strengthening of the body, the elevation of the moral faculties, and

the cultivation of intelligence, and especially to the imbuing the mind with a broad and clear view of the laws of that natural world with the components of which the handicraftsman will have to deal; and the earlier the period of life at which the handicraftsman has to enter into the actual practice of his craft the more important is it that he should devote the precious hours of preliminary education to things of the mind that have no direct bearing on his branch of industry, though they be at the foundation of all realities.

#### THE BALANCE OF METHODS YET TO BE FOUND.

Now, a little reflection on these laws, methods, and principles will show that we have not found the right balance amongst them. We are apt to run one at a time to excess and to neglect others. Take, for instance, the heuristic method. As applied to mathematics, it is represented by problem work. Of this Prof. Chrystal has freely spoken as follows:—

The history of this matter of problems, as they are called, illustrates in a singularly instructive way the weak point of our English system of education. They originated, I fancy, in the Cambridge Mathematical Tripos Examination, as a reaction against the abuses of cramming book-work, and they have spread into almost every branch of science-teaching. At first they may have been a good thing. He who could work the most problems in three or two and a half hours was the ablest man, and, be he ever so ignorant of his subject in its width and breadth, could afford to despise those less gifted with this particular kind of superficial sharpness. But, in the end, it all came to the same: we prepared for problem-working in exactly the same way as for book-work. We were directed to work through old problem-papers, and study the style and peculiarities of the day and of the examiner.

But the fact is we may run any one of these principles to excess if we ignore the others. Let us take the heuristic method and consider its effect when applied in science, to the exclusion of social, religious, and literary influences. If I want to trace a curve of high order, I find assistance by running it to infinity, and seeing what it is like there—what are its branches; what its asymptotes. At infinity the method we are considering may exhibit a narrowing of human sympathies and enjoyments. For instance, the mind and soul of Cavendish were nourished exclusively by heuristic methods. This is how Cavendish is described by his biographer:—\*

He did not love, he did not hate, he did not hope, he did not fear; he did not worship as others do; he separated himself from his fellow-men, and apparently from God. There was nothing earnest, enthusiastic, heroic, or chivalrous in his nature, and as little was there anything mean, grovelling, or ignoble. He was almost passionless. . . . An intellectual head thinking, a pair of wonderfully acute eyes observing, and a pair of very skilful hands experimenting or recording, are all that I realize in reading his memorials. His brain seems to have been but a calculating engine, his eyes inlets of vision, not fountains of tears; his hands instruments of manipulation, which never trembled with emotion, or never clasped together in adoration, thanksgiving, or despair; his heart only an anatomical organ, necessary for the circulation of the blood.

This man, destitute of passions and of sympathies, during his body life, poured down light upon, without warming, the world. His discovery of the composition of water has given to industry a vitality and an intelligence the effects of which it would be difficult to exaggerate; yet it is clear that the race could not exist if all were developed into emotionless Cavendishes. There is room for much variety of methods and of implements in education, and what is now needed is that we should seek to give each its proper function.

#### NOW THE TIME TO CO-ORDINATE METHODS.

As I have said recently, the times seem ripe for the promotion of a better degree of proportion. A solvent has been found for that rigid aversion which literature and art for generations maintained towards science of all kinds. The tendency of some scientific societies and departments to retaliate and to detract from the importance of literary studies has disappeared. There is no danger now that the new Education Department will favour either at the cost of the other. It is an oft-repeated truism that to know one another better, to be able to dwell on similarities rather than on diversities, are the first steps towards a better understanding between two parties, and certainly this saying has no truer application than that to science and literature. To recognize the common growth of scientific and other instincts is a matter of prudence, lest in trying to root up weeds from among the wheat we should at the same time root up that which is as valuable as wheat. Considering the severance which formerly existed between literature and science, men could hardly wonder that when thrown together in the after-work of life they should

meet as strangers, or if the severe garb, the curious implements, and the strange wares of the latter should seem little attractive when contrasted with the light companionship of the former. In proportion as they are led to know each other in the minds of the young, in that proportion will the estrangement become impossible. Here, then, is our plea for a co-ordination of methods.

Method is better than impulse, deliberate purpose than erratic action, the clear glow of sunshine than irregular reflection, and definite utterances than an uncertain sound. In proportion as knowledge is better than surmise, proof than opinion, in that proportion will the teacher value a discrimination between the certain and uncertain, and a just estimate of the issues depending on the use of this method or on that. We should each accord to his neighbour full liberty to make his own experiments in his own way, but we should hold on firmly to the plans and implements which we ourselves have proved to be effective.

The CHAIRMAN agreed with the lecturer that the moral results of teaching, whether of science or any other subject, were the most important consideration. It was a common error to suppose that there was an antagonism between science and the humanities; they were, in fact, only complementary parts of a complete system of education, and neither could be properly left out. If it was true that some devotees of science were not very lovable men, it was also true that equally unlovable men were to be found among those who spent their lives in the pursuit of literature. Boys should not begin the formal study of science at too early an age, but should rather be taught that general kind of knowledge which the lecturer had called "the science of common things" before devoting special attention to a particular branch of science. Teachers would agree that the study of physics should precede that of chemistry. He would like to recommend to the attention of science teachers Dr. Hill's "Introduction to Science." He considered it extremely useful, as it dealt with the general principles and methods of science, as well as with the application of these to certain problems of the day.

Dr. MOODY remarked that the advocates of the heuristic method did not desire to see that method adopted to the exclusion of all others, but they objected to the method which consisted only of the learning of a number of facts, and claimed that at least a few hours a week should be given to the heuristic method. Science teaching could not be carried on in the same way as literature teaching. The pupils must be encouraged to help themselves. Far too much was attempted in school work, with the result that children only acquired superficial knowledge. He found that boys of eleven or twelve, who were supposed to have worked through two books of Euclid, for example, had very little capacity to deal with riders. Better results would be produced if the boys' attention were confined to a few problems and they were taught to approach these problems from all sides by means of a large number of exercises.

Mr. ORCHARD was of opinion that, though much relating to science teaching was still "unsettled," it was at least settled that the method styled "heuristic" had come to stay. The Socratic method, to which reference had been made, could scarcely be called an avenue of truth. Beyond showing a student how much—or, rather, how little—he knew, it could not be said to convey much information. The business of science was to interrogate Nature; take note of her responses and interpret them; then, by the discriminative and assimilative power of the mind, arrange and connect them into a systematic whole. This was certainly to a great extent effected by the heuristic method as expounded by the lecturer. The experiments should be undertaken under skilful and careful guidance, and at first should be very easy and confined to general principles, for which there should be some theoretic basis, so that the pupil might be aware of what he was driving at. Again, the problems ought to be suggestive—*e.g.*, consideration of the force of gravity might lead to the discovery that the weights of bodies are independent of their volumes, thus suggesting the important notion of mass. Undoubtedly, the learning of physics should precede that of chemistry. He entirely concurred with the lecturer's remarks as to patience being an indispensable science virtue, and as to the importance of preserving a due proportion in studies.

The Rev. J. O. BEVAN said the discussion of scientific method was interesting to all teachers, because there was no subject to which scientific method might not with advantage be applied. The evil results attendant on the neglect of scientific method were illustrated by the backwardness of some of our artisans as compared with those of Germany, with the necessary consequence that the Germans were securing trade which formerly was in the hands of the British. Another illustration was afforded by the course of the war in South Africa, which was influenced by the fact that very many of our officers had neglected to make an adequate study of the art of war. The value of the study of science lay not so much in the acquirement of knowledge of facts as in the mental discipline to be derived from the search after truth.

Dr. WORMELL having replied to the remarks of the various speakers, a vote of thanks to the lecturer concluded the proceedings.

\* "Life of Cavendish," by Dr. Wilson, page 185.

## CORRESPONDENCE.

## WHAT IS GRAMMAR?

To the Editor of the Educational Times.

SIR,—I have some remarks to make in reply to Mr. Douse's article on "Grammar." As to definition. Johnson defines grammar as "the art of using words properly." That which Mr. Douse sneers at, as at one time current in ladies' seminaries, is given by the celebrated Lindley Murray. Whether grammar be called a science or an art is not a very important matter. Like chemistry, it was studied, and its principles or laws of nature determined, while it retained the name of an art. The principles of grammar are, however, only indirectly laws of nature, it being properly part of the science of physiology.

Mr. Douse, while complaining of vague definitions, falls into the opposite error, excluding one half of his first chief division. The analogy between chemistry and grammar is given in Wilson's "Inorganic Chemistry," differing from that of Mr. Douse in being logically applied. The letters of the alphabet correspond to the chemical elements. Some of the chemical elements do not exist in Nature except in combination; parallel to this, some letters are not in themselves words. In one sense all the letters are words; they are sounds which convey a meaning, as in the sentence: "Do you spell your name with an S?"

The chemical element fluorine is remarkable as never having been observed, only known as a constituent of compounds, like a letter only to be sounded in combination.

In § 5 Mr. Douse speaks of letters as if they were merely written characters or symbols and not sounds. The examination of one or two grammar books will not fail to unfold a correct definition of orthography, namely, that division of grammar treating of the form and sound of letters and syllables. Mr. Douse takes up letters and syllables under the heading phonology, and appears to think the different name makes it a different subject. At the same time the term "phonology" is no more appropriate than "morphology"—the one relating to sounds, the other to symbols.

Concerning orthography, Milton speaks in his "Latin Grammar" as follows:—"Grammar, touching letters and syllables, is omitted as learnt before, and little different from the English spelling-book; especially since few will be persuaded to pronounce Latin otherwise than their own English."

And Lindley Murray: "The sentiments of a very judicious and eminent writer (Quinctilian) respecting this part of grammar may, perhaps, be properly introduced on the present occasion: 'Let no person despise as inconsiderable the elements of grammar because it may seem to them a matter of small consequence to show the distinction between vowels and consonants, and to divide the latter into liquids and mutes. But they who penetrate into the innermost parts of this temple of science will there discover such refinement and subtlety of matter as are not only proper to sharpen the understandings of young persons, but sufficient to give exercise for the most profound knowledge and erudition.' . . . Thus, to principles apparently the most trivial as a few plain elementary sounds we owe that variety of articulate voices which has been sufficient to explain the sentiments of so innumerable a multitude as all the present and past generations of men."

Mr. Douse will not find a parallel to his remarkable use of the terms "speech" and "language" in any science.

Though sounds precede written characters, yet in the case of words taken from, say, Latin and Greek into English their origin, so far as English is concerned, is from the written characters. The elements of grammar are sounds and symbols which, either by themselves or in combination, convey a meaning; like chemical elements which, either by themselves or in combination, form substances found in Nature.

Mr. Douse (§ 9) calls his second division morphology, and, following the name, treats of words as if always written; committing a similar error to that which he wrongly ascribes to grammarians in orthography. The illustrious grammarians of any age, not being members of the College of Projectors, did not set themselves the task of classifying words before they did anything with them. Mr. Douse's term "phonology" is as appropriate when treating of words as "morphology," having the same relationship to morphology as physiology has in the science of biology. "Etymology" is the proper name for the part of grammar treating of words, to quote from Milton: "Etymology teaches what belongs to every single word or part of speech."

Objection may very fairly be taken to prosody as a division of grammar, though authorities are not wanting for its inclusion. One part of it, orthoepy, may be very properly included in etymology.

In conclusion, the true elements of grammar are—(1) elementary sounds represented by symbols, and called "letters" and "syllables"; (2) elementary compound sounds represented by symbols, and called "words"; (3) sentences. The corresponding divisions are—(a) orthography, (b) etymology, (c) syntax.—Yours, &c. EDOM WHITE.

## PRACTICAL USE OF PHONETICS.

To the Editor of the Educational Times.

SIR,—Being deeply interested in the subject of phonetics, especially as applied to French, I was pleased to see a letter from Prof. Spiers on this important subject in your May number. I cannot, however, agree with all that Prof. Spiers says. Not for a moment would I venture to oppose Prof. Spiers on questions of French grammar or literature. I recognize as willingly as any one the high position he holds in the world of modern languages.

Prof. Spiers is, no doubt, a perfect master of French pronunciation; but one may be all that without comprehending the full use of phonetics. Let me illustrate my meaning. He says: "The  $\delta$ , or  $\phi$ , is the *eu long* in *peu, creux*; the  $\alpha$  is the *eu short*, as in *peur, seul*." Now the difference between  $\phi$  and  $\alpha$  ( $\delta$  is not the same as  $\phi$ ) is not one of length. Both sounds could be produced and kept on for half an hour if one only had sufficient breath. The difference is one of quality.  $\phi$  is closer than  $\alpha$ ; that is, the lips are more rounded, and the hole between them smaller or closer. Prof. Spiers goes on: "There is a short *a* ( $\alpha$ ) and a long *a* ( $\alpha$ )." Once again, the difference is not one of length. Indeed, it is possible to find words where the  $\alpha$  is long, e.g., *dard*, which is pronounced *da:r* (: means long), and *davantage* (third syllable), which is pronounced *davata:z*. Prof. Spiers might, perhaps, reply that he meant what is here indicated. Be that as it may, he has not explained the sounds properly; and one of the chief reasons why so much bad pronunciation exists is that words are used with meanings so vague.

Prof. Spiers, while implying doubt as to the efficacy of phonetics in ordinary classes, states that a teacher can, by the aid of a Frenchman, in half an hour acquire the power to use these symbols, and, by the help of them, read correctly henceforward. It seems to me that it is here where the error creeps in. If a teacher's pronunciation is faulty, it will require not half an hour with a Frenchman with the symbols, but many hours, to perfect it. The partisans of phonetics, in their anxiety to press the adoption of them, have always made this mistake. And the system is doomed to failure if the teacher has not had, at the least, some weeks' training.

Of what use, then, is the study of phonetics? First, it is an immense saving of time; and, secondly, it enables a foreigner to produce sounds which he would probably never succeed in producing without such a training. A man with a good ear, an excellent control of his vocal organs, a retentive memory, and a keen desire to excel, will acquire a fairly good pronunciation by residing in France from one and a half to two years, and all without the aid of phonetics. But, as far as pronunciation is concerned, I will venture to say that the same man will acquire an equally good result in three months under the tuition of a phonetic expert, such as M. Zundt-Burguet, of the Alliance Française.

Any one who has tried to learn French pronunciation from a Frenchman knowing nothing of phonetics, though speaking perfectly, cannot fail to have had some very trying experience. He has tried and tried again, with such encouragements as the following:—"Now you have it nearly." "Now try once more." "Not quite so good." "Now listen to me." "You have got it now." "No, you have lost it again." What does all this mean? It means that the Frenchman produces the sound perfectly from long usage; but he does not know exactly what he does with his tongue, jaws, and lips. Indeed, when he does try to explain, he often misleads rather than helps his pupil. Three-quarters of the labour can be saved by a careful study of the various positions of the jaws and tongue, and the part played by the nose. This preliminary training, however, requires not half an hour, but several months. The symbols are practically useless in themselves. Each of them represents a certain definite position of the organs of speech. In several cases this position can only be gained by long and painful practice. When one has become habituated to English the organs grow into certain ways of moving, which render it extremely difficult to put them readily into the new positions. So it is that some English people never acquire a really good pronunciation of a foreign language, even after many years spent in the country.

"L'Écriture Phonétique" is of little use to one who has not had some previous training in phonetics. The best English book on the subject is Prof. Rippmann's "Elements of Phonetics," but even this will appear terribly barren unless one has previously had some practical lessons by a master of the subject. Personally I only know of two in England—Prof. Rippmann, of Queen's College, and Dr. Baker, of the County High School, Isleworth.

In conclusion, I may say that I, in a humble way, have used the system with beginners at the Finbury Pupil-Teachers' School. The first month was spent entirely in the examination of sounds, English and French—in short, an elementary course of phonetics. This was continued, together with elementary French grammar. A little later I introduced the "First French Course," and at the end of six months most of the pupils could ask and answer questions of various kinds in a French altogether superior to that of the ordinary student at such a period.—Yours faithfully, B. DUMVILLE. Rouen.

MORTON LUCE TESTIMONIAL.

To the Editor of the Educational Times.

DEAR SIR,—We beg to ask your support to a testimonial which we and others of Mr. Morton Luce's friends desire to present to him. Mr. Luce, with whom we have been acquainted for several years, is, as you are doubtless aware, a gentleman of superior literary attainments, the author of an excellent manual for the study of Tennyson, and a well-known lecturer on English literature. The chief reason for offering Mr. Luce a testimonial at the present time is that a prolonged illness has compelled him to discontinue all work, both literary and educational, and that repeated premature attempts to resume such work have so seriously undermined his strength that, according to the opinion of his medical advisers, a lengthened period of rest and freedom from anxiety is essential to his recovery. These conditions cannot be secured by any means or effort of his own, his savings having already been greatly reduced by illness, and, on this account, we are confident that the proposed testimonial will receive the warm and liberal support of his friends and of the admirers of his work. Although Mr. Luce's literary work appeals to a comparatively limited number of people, we feel that his "Commentary on Tennyson" will win for him in his present difficulties sympathizers and friends from among all who inherit the language in which the poet was privileged to write. Apart from all considerations of the great personal worth of Mr. Luce, we believe there are many who, in contributing to the proposed testimonial, will, on Mr. Luce's resuming his literary work, recognize that they have rendered a public service, and will regard it as a privilege to be associated with such a testimonial.

The Hon. Treasurer, T. G. Jeffery, Esq., will receive all contributions. Other communications should be addressed to one of the Hon. Secretaries.—We remain, yours truly,

- EDWARD DOWDEN, Highfield House, Rathgar, Dublin.
- RICHARD GARNETT, 27 Tanza Road, Hampstead, London, N.
- J. CHURTON COLLINS, 51 Norfolk Square, London, W.
- C. LLOYD-MORGAN, 16 Canynge Road, Clifton, Bristol.
- STOPFORD A. BROOKE, 1 Manchester Square, London, W.C.
- GEORGE SAINTSBURY, 2 Eton Terrace, Edinburgh.
- J. E. SANDYS, St. John's College, Cambridge.

Hon. Treasurer,

T. G. Jeffery, Esq., Capital and Counties Bank, Redland Branch, Bristol.

Hon. Secretaries,

- B. Bevan-Petman, M.A., King's College, Cambridge.
- H. W. C. Smith, Esq., B.A., Stone House, Grove Road, Redland, Bristol.
- Edgar J. Masters, Esq., 70 Lancaster Road, Stroud Green, London, N.

THE PARIS EDUCATION CONGRESS.

To the Editor of the Educational Times.

MONSIEUR,—Le Comité d'Organisation du Congrès international de l'Enseignement primaire a l'honneur de rappeler à toutes les personnes qui, en France et à l'étranger, s'intéressent aux questions d'éducation que ce congrès s'ouvrira à Paris, le jeudi 2 août, pour durer jusqu'au dimanche 5 inclusivement.

Il sera divisé en cinq sections, correspondant aux cinq questions mises à l'étude. I. L'éducation ménagère: sa définition, ses limites, son adaptation à chacun des degrés de l'enseignement primaire. II. De la fréquentation scolaire. III. De l'éducation morale: son objet, ses principes, ses méthodes et ses procédés. IV. De l'enseigne-

ment primaire supérieur: son objet, ses limites; moyens de l'adapter aux intérêts régionaux et locaux. V. Des institutions post-scolaires: cours d'adultes et lectures publiques, etc.

Le Comité se préoccupe d'assurer quelques commodités aux membres du Congrès, tant étrangers que Français. Pour le voyage, M. le Ministre vient de demander aux Compagnies de chemins de fer de leur accorder une réduction de 50% sur les prix du tarif ordinaire.

En ce qui concerne le séjour à Paris, le Comité peut déjà les prévenir que la carte qui leur sera délivrée par ses soins, conformément à l'art. 5 du règlement (1), leur donnera droit à l'entrée gratuite à l'Exposition pendant toute la durée du Congrès. Le règlement n'avait pu leur garantir cet avantage, qui n'a été accordé que par une mesure récente. En outre, le Comité fait des démarches en vue de leur préparer, soit dans des maisons particulières, soit dans des établissements d'instruction publics ou privés, une hospitalité économique; il espère pouvoir aussi leur désigner des restaurateurs qui se seraient engagés à leur faire les conditions les plus avantageuses. Un avis ultérieur fera connaître les mesures qui auront été définitivement prises à ce sujet.

Enfin, le Comité a constitué des commissions particulières pour la réception des adhérents, l'organisation des séances, des conférences, des fêtes, etc.

Il signale de nouveau à tous ceux qui doivent prendre part au Congrès, inspecteurs d'académie et inspecteurs de l'enseignement primaire, directeurs et directrices d'écoles normales et d'écoles primaires supérieures, instituteurs et institutrices, membres des comités des œuvres auxiliaires ou complémentaires de l'école, l'intérêt qu'ils auraient à se réunir pour étudier préalablement les questions mises à l'ordre du jour et à s'entendre pour désigner les personnes les mieux préparées à présenter, en des conclusions précises, le résultat des délibérations prises en commun. Les auteurs des mémoires sont invités à faire suivre leurs conclusions de projets de résolutions. Les mémoires devront tous être adressés, avant le 15 juin 1900, à M. Trautner, 20, rue Etienne-Marcel, Paris, secrétaire du Comité d'Organisation, qui les transmettra ensuite aux rapporteurs compétents.

Pour que cette transmission soit possible, il est nécessaire que chaque mémoire ne vise qu'une seule question. Pour être mieux guidé dans quelques-unes de ses démarches, surtout dans celles qui concernent le logement, le Comité serait heureux de connaître, avant le 10 juin, les noms des membres du Congrès. Les adhésions des collègues étrangers seront néanmoins reçues jusqu'au 1<sup>er</sup> août prochain.

G. JOST,

Le Secrétaire Général.

GRÉARD.

Le Président du Comité d'Organisation.

L. TRAUTNER,

Le Secrétaire.

"THE FROG."

To the Editor of the Educational Times.

DEAR SIR,—In the notice of "The Frog," by A. Milnes Marshall, seventh edition, by G. H. Fowler, the editor's statement in the preface that the new illustrations (pages 98-99) are woodcuts is challenged, and they are described as process blocks, poorly made and badly printed. Allow me to assure you that Miss Green's drawings were cut on wood by one of the few firms which still practise the craft, and that, so far from the publisher sparing expense, the cost of this series is about ten times as much as that of process blocks. Miss Green's very delicate and minutely realistic pencil drawings have been rendered by the wood-cutter with great skill. It is true they contrast with many of the other illustrations cut from the late Prof. Marshall's drawings; but that is because the latter are of a diagrammatic nature, and lend themselves to a bold black-and-white treatment, which is not possible in the case of the new drawings.—Faithfully yours, D. NUTT.

57-59 Long Acre, London, W.C., May 2, 1900.

[We regret that our reviewer (whilst speaking highly of Miss Green's drawings, as well as of Dr. Fowler's editing) mistook the woodcuts in question for process blocks.—EDITOR.]

THE NATIONAL HOME-READING UNION.

To the Editor of the Educational Times.

DEAR SIR,—May I ask the favour of your kind assistance in making known to teachers that the new Book List for the Young People's Section is now ready, and will be sent by return of post on receipt of the fee of 1s. 6d., which also covers the cost of the Magazine containing the articles upon the books, with suggestions and questions especially useful to teachers?

The Book Lists of the Union are not published, as a rule, until the 1st of October; but the Committee have made a special effort to issue this List early, in the hope that it will be useful to teachers who desire to requisition books and to plan out their work for the coming season.—I remain, yours faithfully, M. C. MONDY, Secretary. May 25, 1900.

## FORECASTS AND COMMENTS.

June 1, 1900.

THE next Evening Meeting of the College of Fixtures. Preceptors will be held on Wednesday, June 13, when Dr. R. P. Scott will read a paper on "The Inspection of Secondary Schools: of what Tests ought it to consist?"

\* \* \*

MR. MACKINDER's course of three lectures on "The Economic Possibilities of South America" will begin on June 12. The lectures will be given at the London School of Economics, 10 Adelphi Terrace, on Tuesdays at 8.30 p.m.

\* \* \*

ON June 14 the American Ambassador, Mr. Choate, will present the prizes at the Leys School, Cambridge.

\* \* \*

THE REV. DR. MOORE will give a course of twelve free lectures on "Dante's Purgatorio," on the Barlow foundation at University College.

\* \* \*

THE Bradfield Greek play comes this year after an interval of two years instead of the usual three. Bradfield celebrates its jubilee this year, and the "Agamemnon" will be part of the celebration. The first performance is fixed for June 19.

\* \* \*

THREE entrance scholarships—the Reid in Arts, the Henry Tate and the Pfeiffer in Science—will be awarded on the results of an examination, to be held at Bedford College, London, on the last Tuesday and Wednesday in June. Forms of entry can be obtained on application to the Principal, and must be returned not later than June 15. The scholarships are all tenable for three years, and are of the annual value of £31 10s., £50, and £48, respectively.

\* \* \*

THREE free studentships, of the value of £46 annually, are offered by the trustees of the Reid Fund, jointly with the Council of Bedford College, to the female students taking the highest place in the First Division of the Oxford and the Cambridge Senior Local and the Honours Division of the London Matriculation. The free studentship offered on the result of the Cambridge Senior Locals is tenable for three years, and the others for two years. All further information about these scholarships may be obtained from the Reid Trustees, Bedford College.

\* \* \*

A GLADSTONE Memorial Prize, of books to the value of £5, will be offered for competition, for the first time, in the summer of 1901, and the subject of the essay, which must deal with history or political science, will be announced in a few weeks' time. The competition will be open to all present students of Bedford College, and to all students who have left the college not more than one year.

\* \* \*

As we have already announced, a meeting of University Extension students and others will be held at Cambridge, from August 2 to 27. The meeting will be divided into two parts. The first part will last from August 2 to 15, inclusive, and the second from August 15 to 27, inclusive. The meeting will be opened on the morning of August 2, at 12 o'clock, by the Right Hon. A. J. Balfour, M.P., who will deliver an inaugural address.

The general subject of the lectures throughout the meeting will be "Life and Thought in England in the Nineteenth Century." The lectures will present, in broad outline, a review of the more remarkable movements and events of the century which is drawing to a close. Its distinctive contributions to our national life will be discussed, as well as advances in scientific discovery. An attempt will be made to show how changed conditions have given rise to new problems, and what some of these problems are.

A FRENCH holiday course, under the direction of Prof. Louis Bascan, will be held at Luc-sur-Mer, near Caen, between August 3 and August 24. This course is specially intended for English teachers, and the inclusive cost, for the three weeks, will be £9. Prof. Bascan refers, for personal inquiries in this country, to Sir Joshua Fitch, Canon Daniel, and the Rev. G. W. Garrod.

THE demand for registration is a natural sequel to the growth of self-respect in any professional body. The position of Irish intermediate and elementary teachers has recently been improved in various ways. We are not surprised to hear that the Association of Intermediate and University Teachers of Ireland have passed a resolution in favour of registration, and are endeavouring to raise the subject in connexion with the Irish Intermediate Education Bill.

A MONSTER petition is being prepared by an "Imperial Protestant Federation" in Ireland against the endowment of a new Roman Catholic University, on the ground that the Dublin and Royal Universities already give Catholics all that they ought to desire. This statement, being examined, simply means that one man may define what another man is entitled to wish for—which is, at least, questionable.

OXFORD'S latest Chair is the Wykeham Professorship of Physics, in connexion with which the University is called on to provide a special laboratory. To meet this and other necessary expenditure, the colleges have once more been appealed to for contributions to the University chest.

THE DUKE OF DEVONSHIRE, as we all know, is ready with his Secondary Education Bill, but the Cabinet, as a whole, are dubious. The London correspondent of the *Manchester Guardian* assures us that the Duke's colleagues regard the prospect of the debates on such a bill with dismay. "They remember what happened in 1896, when clauses setting up a local authority for secondary education, were discussed. There is also another reason, which is summarized in a piece of advice given to a member of the Government, the other day, by one of its most distinguished rank-and-file supporters—'Now's your chance for a Secondary Education Bill, while Lord Cranborne is in South Africa.'" The Cabinet may dread the *odium theologium*, but that is not all packed up in the person of Lord Cranborne.

CAMBRIDGE has decided that the University of Tasmania be adopted as an institution affiliated to the University. The Bachelors of Arts, or Bachelors of Science, of the University of Tasmania, who have satisfied the examiners in Latin, one other language not being English, and mathematics, in any one or more of the three annual examinations required for their degree, will be entitled to be admitted to the privileges of affiliation.

PORTRAITS of the late Prof. Blackie and of Dr. George Macdonald have been added to the gallery of Old Aberdonians, in Marischal College, Aberdeen.

IN the case of educational endowments, at any rate, precedence must be accorded to those who give most. The Duke

of Northumberland recently informed the Northumberland County Council that he was prepared to build, and adequately maintain, at his own cost, with such assistance as might be derived from the Science and Art Department and County Council Grants, a secondary day school for boys in Alnwick, on a site of twelve acres, plans for which, at an estimated cost of some £10,000, had been already prepared.

THE pupil-teacher problem becomes more and more difficult of solution. For instance, Mr. T. S. Aldis, one of Her Majesty's chief inspectors on the schools in the West Central Division of England, reports that the dearth of pupil-teachers is becoming a matter of urgency, on account both of the immediate inconvenience and of the consequent dearth which it creates in the supply of teachers of a higher grade. The School Board in Birmingham require more than five hundred pupil-teachers, with a view to the future supply of qualified assistants; and they can only muster three hundred.

INCIDENTS in the higher education:—There were disorderly scenes in the streets of Oxford, arising out of a continuation of the rejoicings over the relief of Mafeking. Property was wrecked to supply fuel for bonfires, and the police were compelled to charge the mob several times with their batons to break up the crowds. The fire brigade, also, had to play upon the demonstrators, and this led to free fights. The house of Herr Hein, German Lecturer at Aberdeen University, who is suspected of pro-Boer tendencies, was mobbed by the students, and a number of windows were smashed. He was, also, roughly treated in his class-room. A special meeting of the Senatus has had to deal with a number of the students concerned in the affair.

BIRMINGHAM is now a University city. By the Royal Charter, "our trusty and well-beloved Councillor Joseph Chamberlain," together with some 226 others, forming the first Court of Governors, have been created "one body politic and corporate, with perpetual succession and a common seal, by the name and style of the University of Birmingham." At the present moment the University of Birmingham and Mason College are separate institutions, but they are to be united under the provisions of a Bill before Parliament, which, if passed in the present Session, should come into operation on the 1st of October, which will be the twentieth anniversary of the opening of the college.

#### Appointments and Vacancies.

THE REV. H. G. GREY, of the Lahore Mission of the Church Missionary Society in India, has accepted the post of Principal of Wycliffe Hall, vacated by Dr. Chavasse, now Bishop of Liverpool. Mr. Grey graduated from Wadham in 1873 with a Second Class in Greats. He was vicar of Holy Trinity from 1877 to 1885, and curate of St. James's, Clapham, for the two years following. In 1887 he offered himself to the Church Missionary Society, and has worked in succession at Quetta, St. John's College, Lahore, and Amritsar.

By consent of the University of Melbourne, Dr. J. W. Gregory has accepted the post of scientific director of the National Antarctic Expedition, which is to sail from England next year. It remains to fill the three other scientific posts which the committee have decided to attach to the expedition. It is understood that nothing will be settled in regard to these till Dr. Gregory's return to England in the autumn.

DR. F. T. ROBERTS and Mr. R. J. Godlee have been appointed to the Holme Professorships of Clinical Medicine and Surgery, respectively, at University College, London. Dr. G. Vivian Poore succeeds Dr. Roberts as Professor of the Principles and Practice of Medicine.

It is stated that Dr. Warre, of Eton College, will resign the Headmastership in the course of the present year.—Canon Fur-

neaux, Headmaster of Repton School, intends to retire in August from the position which he has held during the past eighteen years.—The Rev. J. T. Handford is resigning the Headmastership of St. Peter's School, York.

THE Professorship of Hebrew and Old Testament Exegesis at King's College, London, is vacated by the death of Prebendary Stanley Leathes.

THE REV. ARCHIBALD ROBERTSON, D.D., Trinity College, Principal of King's College, London, has been elected Bampton Lecturer for next year. The subject will be "The Kingdom of God in the History of Christian Thought." The estate now brings in £120 a year for each lecturer, but, owing to a debt of £650, it has been decided by Convocation at Oxford that no election shall be made to the office of Bampton Lecturer for the years 1902, 1904, 1906, 1908, and 1910. Thus there will be only five lectures during the next ten years.

AT Oxford, the Rev. Edward Moore, D.D., Principal of St. Edmund Hall, has been reappointed as Lecturer on Dante for a further period of two years.

EDINBURGH UNIVERSITY has elected Dr. John Wylie to succeed the late Sir T. G. Stewart in the Chair of Medicine. Dr. Wylie, who is fifty-six years of age, is a graduate of Edinburgh.

THE General Board of Studies at Cambridge will shortly proceed to the election of a University Lecturer in Physics, in connexion with the Special Board for Physics and Chemistry. The appointment will be for five years from Michaelmas, 1900, and the stipend will be £50 per annum.

THE University of Glasgow is about to appoint a new Lecturer in German. Owens College announces vacancies for Lecturers in Hebrew and Arabic. Bangor College has vacancies for Assistant-Lecturers in Electrical Engineering and Method. Mason College is also about to appoint a Master of Method.

AT Baroda College there is a vacancy for a Professor of English Literature.

AT the High School, Dundee, there are vacancies for a master of the Modern Language Department, for a lady superintendent of the girls' school, and for two mathematical masters.

THE Governors of the Fishmongers' Company have elected Mr. G. W. S. Howson, M.A., assistant-master at Uppingham, to the Headmastership of Gresham's School, Holt.

MR. J. CRICHTON, B.A., of St. Olave's, Southwark, succeeds Mr. A. P. Irwin as Headmaster of Foster's Endowed School, Sherborne; and Mr. L. M. Penn, M.A., has been appointed Headmaster of Victoria College, Congleton.

Literary Gossip. AN excellent suggestion was made by Mr. Flinders-Petrie at the Society of Arts a fortnight ago. He recommends the establishment of a national repository for science and art. We are not poor in museums and galleries, but we need more classification, which implies more room. For instance, the authorities of the British Museum are seeking power from Parliament to hand over large accumulations of printed books and papers to local authorities. There is a manifest disadvantage in dispersing printed documents which are not so worthless as to merit destruction. The documents now in the British Museum are of stone, metal, textiles, paint, and printers' ink. The theoretically best classification would keep all the printed documents together, even if other homes had to be found for the stone and metal.

It is good news for such as consult or borrow books from the London Institution that the authorities are contemplating the provision of an adequate catalogue. The one which exists is by no means a model of completeness or systematic arrangement, and good collections deserve good catalogues.

THE University of Chicago Press, which is developing into one of the chief educational publishing bodies in the United States, sends us the first three numbers of the *Elementary School Record*, to be completed in a series of nine parts. They contain an account of the working of the experimental school attached to the Pedagogical Department of the University, and give evidence of successful work in the manual training of children.

WE have received the Eights Week number of the *Oxford Magazine*, frivolous, ingenuous, with comic illustrations—a veritable *memento vivere*, addressed by the twenty-year-old students of our most ancient seat of learning to revive the faded memories of the generations which preceded them. This is how the youngsters describe themselves for the edification of their parents and schoolmasters, who pay their bills for them and who worked them up to scholarship pitch:—

Thrice happy, careless of our destinations  
And all the dark unseen;  
Our only care was thought of Moderations,  
Our only foe the Dean!

THE conclusion of the great work of the "Dictionary of National Biography" will be celebrated at the Mansion House on the 29th of June. The proprietor, editor, and some of the principal contributors have accepted invitations to lunch with the Lord Mayor on that day.

MORE federation of the Empire! Mr. Flavelle, who should be a French-Canadian, and who is in business at Toronto, has founded two travelling fellowships in the University of Toronto—of £150 a year each—the holders of which are to study modern history in Oxford for two years. They are to be selected from among the Toronto graduates who have taken a First Class, either in Classics or in Classics with English and History. The avowed object of the foundation is to train men for public life in Canada.

KING ALFRED's version of the "Consolations of Boethius," done into Modern English, with an introduction, by Mr. W. J. Sedgefield, will be published immediately by Mr. Henry Frowde. The Anglo-Saxon text followed is that edited by the translator for the Oxford University Press last year, and the book should be welcomed by those interested in the commemoration of the forthcoming millenary of King Alfred's death. Mr. Sedgefield hopes that the Modern English dress now given to the King's best book will help to make him less an unsubstantial shadow for Englishmen of to-day, and more a real man—practical, right-feeling, and earnest beyond his generation.

### ASTRONOMY AS A MORAL FORCE.

By ALFRED T. STORY.

I THINK it was Sir William Herschel who said that an undevout astronomer must be mad, or words to that effect; and we know that the philosopher Kant, in his great work "The Critique of Pure Reason," remarks that there is nothing so calculated to strike the mind with awe as the starry heavens and the moral law. The saying is a remarkable one, and it recalls to my mind an observation made to me some years ago by a young mechanic who had been attending a course of lectures on astronomy. He said: "One cannot study a subject like that without becoming a better and more thoughtful man. All that order and beauty and harmony, all that mutual dependence and marvellous interaction existing between millions of bodies, suns and systems and satellites, large and small, all working together with such wonderful exactitude and balance that their revolutions and their relative influence one upon another can be calculated and predicted with the greatest nicety—it is impossible to think of it without being impressed, in a way that words cannot express, with

the Being from whose mind it comes, and who must have intended that the same sublime order and majestic symmetry should obtain amongst the lesser creatures of His universe, and especially those who are, so to speak, soul of His soul."

These may not be the exact words of the young mechanic, but they embody his thought; and it is a thought so pregnant with meaning that the more it is pondered over the more deeply are we struck with its beauty and its truth. The harmony that reigns amongst the heavenly bodies is the harmony of the Divine Mind. It is a harmony so wondrous that it leaves nothing superfluous, shows nothing wanting. From the tiniest moon or asteroid to the most stupendous system, there is not one body without its due place and influence, not one but has its own beauty and radiance, even though that beauty, that radiance, be only reflected—like the light of our moon, for instance. Nay, when it comes to that, all owe something elsewhere: nothing is what it is of its own self. For the harmony is an inter-harmony—a something that cannot exist of itself alone. Each star, planet, world, depends on others, on the whole, and the whole again on the Central Soul, which is harmony, and lives and works through it all. The ancients were so struck with the sublime and ordered movements of the heavenly bodies that they likened them to a choric dance, which, in turn, they supposed to be accompanied by a celestial music—the music of the spheres. There is not only something very beautiful in the idea, but there is—as seems more than probable—an adumbration in it of a great truth. One of the conquests of the latter half of the century in the domain of science is the law of the correlation of forces. We know that, according to this law, no power is, or can be, lost. We know that, if it disappears as one thing, it reappears, or is traceable, as another. Thus the force we call electricity may be transformed into light, into heat, or into motor power; but, whatever the change, there is no loss, no waste.

In Nature electricity manifests itself to our intelligence as light in the lightning, as sound in the thunder, as energy in its destructive force. Dispersed through Nature, it is equally active in other, though more subtle, forms. It is in reality the same force revealing itself to different senses. So, we may say, it is with that choric dance of the spheres imagined by the ancients. To their eyes it was a dance, a stately movement; to their ears, the ears of the soul, it was music; while to the higher spiritual sense it was Divine harmony. To us moderns, used as we are to dwelling almost exclusively on external things, much of that inner sense which is so beautiful in the ancients, and is seen in such splendour in the Hebrew Scriptures, has been lost—lost, that is, in the depth and intensity it once had; and so, perhaps, the wonder and glory of the heavens do not so readily translate themselves to our minds as the ordered and rhythmic dance, as celestial music, as beauty, as creative, thought-out work. But, though the stars do not appeal to us in this way, or do not thus appeal to many, yet few are they who could study their structure, their motions, their interdependence one upon another, the laws of their existence, their inner life, so to speak, without being deeply influenced thereby. The order and harmony which reign in and through them enter into our souls as we study and contemplate their nature and movements, and can never again wholly leave us. We may not be at once transformed to their perfection of order and balance; we are not, and cannot be, suddenly so changed. But the force with which those perfections strike us, revealing, as they do, the beauty and unity of the creative thought, wherein there is no anarchy, the sense of awe and majesty they constantly create in us, as, perhaps, nothing else does in the same degree, gradually and insensibly work a change in our minds, fashioning us, as it were, more and more to their Divine model.

Careful study in other departments of Nature—as, for instance, in botany and chemistry—reveals the same system, the same symmetry of movement and of life, so to speak; but here they do not seem to possess the same moral value to us, possibly because these branches of investigation are more nearly allied to our everyday domestic economies and sublunary needs. In the case of astronomy, on the other hand, we are lifted suddenly, and at a bound, into another and a higher region—one in which we are brought in contact with forces and movements of such magnitude, and a life so vast, that the contrast strikes into insignificance the temporal ends and paltry ambitions of the terrestrial sphere.

No one who studies astronomy seriously can altogether avoid comparisons such as these. It does not follow, of course, that the things terrestrial should be neglected or misprised. They are essentials to be regarded and dealt with according to their

degree of importance. But, in proportion as they are allowed to monopolize more than their due share of interest, they lower and circumscribe the plane of life, and prevent it from reaching the grandeur and altitude native and possible to it. Hence the value, the high moral value, of the study of astronomy. We often hear it affirmed that the study of science tends to enlarge the mind; and that it undoubtedly does if pursued in the right spirit. But there are aspects of scientific study whose effect is the very opposite of broadening, and, as we may say, elevating, the mind. Take, for instance, the man whose thoughts are occupied solely with the explosive power of certain chemicals, the sum of whose ambition is to discover a compound which will destroy a whole legion or an entire city at a blow. He may be anything but a bad man; but there is nothing in his investigations to elevate and ennoble the mind. Very much the same thing may be said of one who devotes his time and strength to mineralogy with a view to the discovery and extraction of the precious metals. The study is perfectly legitimate and honourable; but its tendency is to impoverish the mind in its higher and broader relations and aptitudes—as we know, in the case of Darwin, his devotion to the minutiae of physiological and morphological action in animals and plants resulted in the atrophy and stultification of certain of the higher attributes of his nature. Such a thing could not arise from the study of astronomy. Its influence is to awaken just those faculties which suffered most in the great naturalist—to awaken and strengthen others also. It stirs and stimulates the imagination, wherein alone the soul can see and be, in a manner, in touch with the Divine ordering and handling of the universe. It purifies awe and lifts reverence into its true and natural atmosphere, and, while it humbles man by showing him his insignificance, he is, at the same time, elevated by being enabled to see that, despite his littleness, he possesses something of grandeur in that he finds in himself points of contact with the Divine Mind in being able to perceive the wonderful order with which it works, and to appreciate and love the perfections of that order.

Such being the case, is it too much to think that one, seeing and admiring the Divine order and harmony manifest in the universe, as revealed to us by astronomy, will be influenced thereby to wish to see in his own life and conduct, public as well as private, something of those supernal qualities? It is impossible to think otherwise. It is an inalienable attribute of the best natures to aspire unceasingly to the better and higher; and it cannot be that they should study that marvellous reign of law—attuned, as we put it, in the language of human feeling, to music and the dance—which is for ever above our heads, like a school lesson to be learned, without wishing to bring down something of its beauty, something of its perfection, into our too often tumultuous earthly life. And is not desire the parent of effort? So I hold that astronomy would be a most valuable adjunct to our school studies—for the higher forms, of course. Taught in a broad and sympathetic manner, it might be made to do wonders for the future citizens of our world-empire. Emerson, in one of his thoughtful and suggestive essays, speaks about yoking an implement to a star, and making it productive for human needs. But how much nobler to hitch the minds of youth, so to speak, to the constellations in their ordered and harmonious courses, and so to use them as instruments for the perfecting of our civic and national life!

To some this may seem nothing but imagination, pure and simple, and yet it is not so; for, inasmuch as—and in so far as—we have the powers to comprehend and admire all the beautifully adapted machinery of the heavens, to that extent we have a certification and assurance of our ability to approximate thereto, if we will, in our own life and doings.

#### NOTES FROM PARIS.

THE British Educational Section at the Paris Exhibition is now in good working order. The Palais de l'Education et de l'Enseignement is admirably placed. It forms part of the great building in the Champs de Mars, with the Eiffel Tower marking the entrance, and the renowned Château d'Eau the opposite end of the rectangular ground-plan—the whole lying on the left bank of the Seine, opposite to and connected by the Pont de Jéna with the Trocadéro. On the ground-floor the fine arts are illustrated; the scholastic department is above. Here the space assigned to Great Britain is certainly very limited; but the exhibits are so admirably laid out that the arrangements, unlike those at the Imperial Institute, do not suggest any undue crowding—and this with every square inch occupied, even thus early in the day. The section is approached by a transverse gallery, free on both sides, and

about the centre, arranged in three parallel groups, the six screens assigned to Scotland and Wales are placed. Beyond this, and standing at right angles on the same gallery, are five screens provided with shelves which afford space for relics, modern mementoes, photographs, and representative specimens of work from the Universities, the great public schools, with the secondary schools for girls and boys, technical schools and Board schools, with their offshoots. At the end of this gallery, and lying at right angles to it along one main side of the building, recesses have been arranged for some admirable examples of photography; beyond these, again, astronomical, geological, and other scientific charts are similarly arranged. Space has been found to screen off a small office, and here Mr. Fabian Ware, Director of the British Section, and a French colleague attend in turns to answer inquiries. Close at hand are hung photographs representing four sections of the Franco-English Guild, and just in front of these Mr. Gladstone's famous examination paper is a very conspicuous object. Our nearest neighbours are Germany, with scientific apparatus, and France, with specimens from the *écoles normales*. The collection is a most interesting one, and remarkably free from a certain element of "dullness" that so often goes with purely educational exhibitions. There can, indeed, be only one opinion as to the arrangements in this department, viz. :—that they reflect great credit on those who are responsible for their practical working. It is, however, to be regretted that here, as at the Imperial Institute, Ireland is unrepresented.

Two recesses in the Education Section of the Paris Exhibition have an interest all their own, for they are furnished by the pupils of the Maisons d'Education de la Légion d'Honneur, whose position is unique among French schools. Founded by Napoleon, in the first decade of the century, for the children (orphaned or not) of the members of the Legion, they were organized, in every detail, by the War Minister, under whose control they still remain. There are three such *maisons* in France, all in the neighbourhood of Paris: one is at St. Denis, adjoining the famous abbey; another at Les Loges, in the very heart of the forest of St. Germain-en-Laye; the third is at Ecouen, in the famous *château* of the Montmorency family, close to the forest of the same name. Of these, St. Denis stands *facile princeps*, for only the daughters of superior officers are eligible, and the educational programme is the widest. Ecouen is occupied mainly by the daughters of active non-commissioned officers, reinforced by some whose fathers are subalterns, retired or on "half-pay" as commissioned officers. At Les Loges the technical side of education is developed, and the pupils are often the children of men in the ranks. At the present moment there are just under a thousand names on the books of the three houses, and of these a very small contingent is supplied by children of civilian members of the Legion. There are no religious restrictions, and education is free, with a few places reserved for paying pupils. All the schools are under the rule of the "headmistress," at St. Denis, and, once a year, the pupils are there gathered together to celebrate the national *fête*. The mistresses—*les dames* they are called—are almost exclusively chosen from among former pupils; most of them now hold the higher Government diploma. An Old Girls' Association is a recent feature of the system. "Famille," "Honneur," "Patrie," are the watchwords of all concerned; and, if the education is less "progressive" than in some of the best known girls' *lycées*, the moral tone is of the highest, and the standard of manners worthily represents this tone.

### MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on May 16. Present: Dr. Wormell, Vice-President, in the Chair; Mr. Barlet, Rev. J. O. Bevan, Mr. Bidlake, Mr. Brown, Dr. Buchheim, Mr. Charles, Miss Dawes, Mr. Eve, Miss Jebb, Rev. R. Lee, Mr. Millar Inglis, Rev. G. P. Pearce, Mr. Pinches, Rev. Dr. Poole, Mr. Rushbrooke, Rev. Dr. Scott, Mr. Storr, Rev. J. E. Symms, and Rev. J. Twentyman.

The minutes of the last meeting were read and confirmed.

The Diploma of Associate was granted to Miss A. V. Acocks, who had passed the required examination.

The report of the Examination Committee was adopted.

The report of the Education Committee was adopted.

The following persons were elected members of the College:—

Mr. G. W. Dolbel, A.C.P., Oxford Road, Basford, Stoke-on-Trent.

Miss A. G. Doré, 50 Gladsmuir Road, Highgate, N.

Miss M. E. Gutteridge, A.C.P., Baynard Castle, Gravesend.

Mr. T. Hay, M.A. Camb., B.Sc. Lond., A.C.P., 15 Broomfield Road, Chelmsford.

The following books had been presented to the Library since the last meeting of the Council:—

By G. BELL & SONS.—Bell's History Readers (Tudor Period); Bell's Reading Books (Scott's Ivanhoe); Liddell's Caesar, Book I.; Pearce's Selections from Ovid's Metamorphoses; Wainwright's Virgil's Æneid III.

By BLACKIE & SON.—South Kensington Drawing Sheets, Sets I., II., and III.; Cheetham's Elementary Chemistry (Second Year); Crosskey's Shaded Drawings of Models and Ornaments for Class-Teaching; Downie's Macaulay's Essay on Clive; Moore Smith's Shakespeare's King John.

By C. J. CLAY & SONS.—Plato's Education of the Young (Translated from "The Republic").

By W. B. CLIVE.—Hayes and Plautow's Horace's Satires.

By HACHETTE & Co.—Oger's Erckmann-Chatrian's Madame Thérèse.

By MACMILLAN & Co.—Brennan, Pickburn, and Brereton's Selections from English Poetry (1783-1853); North's Ebnor's Herr Walther von der Vogelweide Voegelin's Kurtz's Die Hummisten.

By RIVINGTONS.—Duhamel's Luzel's Deux Légendes Bretonnes.

Calendars of Queen's College, Galway, 1899-1900; Bedford College, London, 1899.

The Medical Register, 1900; The Dentists' Register, 1900.

## REVIEWS.

### SIR JOSHUA FITCH'S LECTURES.

*Educational Aims and Methods.* Lectures and Addresses by Sir Joshua Fitch, M.A., LL.D. (Cambridge University Press.)

All who have enjoyed the reading of Sir Joshua Fitch's former treatises will welcome this new volume with much expectation of entertainment and help, and they will not be disappointed. It may be true, as the author admits, that this collection "is more miscellaneous and less systematic in its character than the 'Lectures on Teaching'"; but there is not an uninteresting element in the work, and throughout it exhibits the high ideals of the functions of a school and the appreciation of the work of teaching which we associate with Sir Joshua Fitch. It shows in every part his perfect grasp of the situation described or explained with his usual lucidity and grace of diction. The volume consists of lectures and addresses given at various times before different academic audiences in England and America, and is fitly described by its title. This might be expanded with appropriateness into educational aims, methods, and aspirations of the past and the present, and their connexion with social and industrial necessities, religious controversies, and political events. The subjects may naturally be divided into three classes:—(1) Questions of method specially interesting to teachers; (2) questions which have recently formed the subjects of public discussion and are of general interest; (3) the biographies of some educational reformers.

First in the first section, and also first in the work, is the lecture on the "Methods of Instruction as illustrated in the Bible." The first point made in this interesting lecture is drawn from an analogy between the life of a nation and the life of a man. "What is true in the infancy of society and of nations is true also of the childhood of every human being. It is easier to enforce the observance of particular acts than to make their meaning intelligible." "There was a stage, a very early stage, in the history of the chosen people wherein what they needed most was positive injunction respecting abstinence from certain faults to which, owing to the special circumstances of their lives, they were most prone. There is a similar stage in the lives of the young." This view of the necessity of imposing commands without explanation in the beginning is followed through a transitional reference to Wordsworth's "Ode to Duty," to the further necessity of leading the pupil to recognize as early as possible the *value* of the injunctions he is expected to obey.

The author, however, fails, we think, to trace in the Book of Proverbs what was, after the period of mere injunction, the first sketch of a system of education. His view that the proverb is less effective as an instrument of teaching than direct injunction, that there is an air of paradox and unreality about it, and that it is more interesting and intelligible to older people than to children, is not in agreement with the experience of many teachers who have freely used the proverbs. It is perfectly true that the proverbs and the scheme of education cast by the Book of Proverbs apply to different ages, but a judicious selection may well be used even with our younger children. It is, perhaps, no aim of the author in this lecture to go beyond the "Methods of Instruction as illustrated in the Bible," but as he dwells on the characteristics of Hebrew poetry, and discusses in connexion with this the question, "What poetry is suited for children?" it would require but a little advance to consider the use of Bible studies as part of a literary training, and a means of perfecting style. Illustrations of this influence may easily be drawn from the prose writings of Matthew Arnold, one of Sir Joshua Fitch's favourite authors, and from those of many others.

In the first section of subjects are a lecture on "The Evolution of Character," in which, for once, Sir Joshua surrenders himself to a scientist's point of view, and discusses the main items of the modern creed of evolution; another on "The Training of Reason," which is in Sir Joshua's best form; and a lecture on "Hand Work and Head Work," that is to say, manual and technical instruction.

The second class of subjects deals with endowments, and all

the vexed questions of their use and abuse, the University Extension Movement and its relation to schools, the Sunday school of the future, and higher education of women. On all these subjects we recognize that the author has said what he ought to have said.

The third section consists of the lectures on Socrates, Ascham, Joseph Lancaster, Pestalozzi, and Edward Thring. The first four are frequent and familiar subjects of our author; the times, the character, and methods of Socrates is perhaps his favourite subject, and yet it is ever fresh when coming from him, and never more so than in this last casting of the lecture. We yet have something to learn from Athens. The lecturer has had much reason to know and appreciate the work and character of Lancaster, for in the fifties, when Sir Joshua was Principal of the Borough Road College, there were on his Committee a number of aged Quakers who had known Joseph personally, and who had pleasant recollections of him and much reverence for his memory.

The lecture on Pestalozzi is all too short. We have several biographies of Pestalozzi—for instance, Baron Roger de Guimps', translated by Margaret C. Crombie, and J. Russell's work—but this life has not yet been treated fully with such judicious estimation and spiritual sympathy as Sir Joshua Fitch always brings to his criticisms. His appreciation here is a little qualified. He tells us: "There is no finality in the system of Pestalozzi. He saw with intense clearness some fundamental truths, but he could not see all the practical applications of those truths." This must be true of all living educational systems and of every educational reformer. A system which is "final" is dead, and no mortal can see beyond the veil and live. Pestalozzi himself was conscious of his defects. He says he was deficient in sustained attention, reflection, circumspection, and forethought. His views of life and the world, taken from his mother's parlour, were necessarily limited. The want of practice in boyish sports made him awkward. Yet, although his schoolfellows called him "Harry Oddity of Foolstown," they loved him for his good nature and obliging disposition. Later in life, believing that all people were like-minded with those of the home from which he took his standard, he trusted everybody, and was often mistaken and deceived.

We have not space in which to consider the lecture on Thring, but we commend it to our readers. In this, as in all the lectures of the book, there is evidence that the natural limitations to the use of all schemes and methods, the dangers of excess or abuse, the transient influence of the personality of the apostle or founder, are weighed with an impartial and matured judgment and explained with great clearness and perfect taste.

#### GIBBON EDITED.

*The History of the Decline and Fall of the Roman Empire.* By Edward Gibbon. Edited, with Introduction, Notes, Appendices, and Index, by Prof. J. B. Bury. (Methuen.)

When a professor of history edits an eighteenth-century historian for readers of the twentieth century, he testifies not merely to his own opinion of the original text, but also to the fact that scholars and men of judgment continue to find it both readable and trustworthy. Hume and Robertson "we laud as classics and leave on the shelves." Gibbon also is a classic in the literary sense; a balanced and musical writer of prose, and the literary progenitor of Macaulay. But we keep him "on the line" in our libraries, and do not shy him on the somnolent upper shelves. That is because he stands the test of time; the more we read him the more we find how much labour he gave to his task, how clear, as a rule, was his judgment, and how careful he was in his statement of facts.

In one important respect we believe that Gibbon substituted a prejudice for the impartial exercise of his judgment. The moral of his history is defined in his own epigram: "I have described the triumph of barbarism and religion." He lamented the breach of continuity in the development of human society along the lines of the classical spirit and "pagan" thought, of which Marcus Aurelius was the highest outcome. For this breach of continuity the Northern barbarians and Roman Christianity were responsible. Instead of progress he found retrogression; and, not content with watching the inevitable evolution of facts, recognizing the necessity of the struggle, acquiescing in the victory of the Teutons and Scandinavians, and balancing the ultimate benefits of this victory against the temporary suppression of Roman literature, culture, and philosophy, he expended on the Christian Church a vast amount of sarcasm, bitterness, and scorn.

Prof. Bury in some sense re-states and defends Gibbon's position:—

To attempt to deny a general truth in Gibbon's point of view is vain; and it is feeble to deprecate his sneer. We may spare more sympathy than he for the warriors and the Churchmen; but all that has since been added to his knowledge of facts has neither reversed nor blunted the point of the "Decline and Fall." Optimism of temperament may shut the eyes; faith, wedded to some "one increasing purpose" which it shrinks from grasping, may divert from the path of facts. But, for an inquirer not blinded by religious prepossessions, or misled by comfortable sophistries, Gibbon really expounded one of the chief data with which the philosophy of history has to reckon. How are we to define progress; how recognize retrogression?

It is not quite evident what Prof. Bury means by saying that it is feeble to deprecate Gibbon's sneer at the Church and Christianity. The question raised is one of historical interpretation. Gibbon was an eighteenth-century man; if he had lived to-day, his attitude would have been different. The historical instinct makes one desire to follow facts and interpret them, quite apart from our own predilections and prejudices. The historian describes the past, and knows that it led to the present. If he goes on to say: "I wish it had been otherwise," he may be well worth listening to, but, for the moment, he is no longer a historian. The "faith" which sees a steady purport in history, and grasps that purport as being the working out of physical and psychological laws, producing wisdom from experience and settled institutions from freedom, cannot be, as Prof. Bury says, diverted from the path of facts. On the contrary, it abides by the facts whatever they may be, and sees them "co-operating to an end"—not the end which it wishes, or a vague end which it shrinks from grasping, but an actual and definite end for each individual born into the world—the summation of a series whereof he or she is merely the last term.

We have been betrayed into what reads like a reflection on Gibbon by Prof. Bury's implied defence of what is really the weakest part of his "History." But we hasten to say that the editor's introduction of sixty-eight pages is a very interesting, a moderate and impartial estimate of the qualities of Gibbon as a historian. It shows the limitations of "the greatest history of modern times"; it allows that Gibbon would probably have taken a somewhat different standpoint if he had lived a hundred years later; it grants his cynicism and reserve of sympathy:—

It is well to realize that the greatest history of modern times was written by one in whom a distrust of enthusiasm was deeply rooted, and who regarded history as "little more than the register of the crimes, follies, and misfortunes of mankind." This cynicism was not inconsistent with partiality, with definite prepossessions, with a certain spite. In fact, it supplied the antipathy which the artist infused when he mixed his most effective colours. The conviction that enthusiasm is inconsistent with intellectual balance was engrained in his mental constitution, and confirmed by study and experience. It might be reasonably maintained that zeal for men or causes is an historian's marring, and that "reserve sympathy"—the principle of Thucydides—is the first lesson he has to learn. But, without venturing on any generalization, we must consider Gibbon's zealous distrust of zeal as an essential and most suggestive characteristic of the "Decline and Fall."

That is admirably judicious, and, so interpreted, we can accept all that Prof. Bury says of Gibbon's virtues. He is "still our master, above and beyond 'date.'" The editor's added notes, his valuable appendices of authorities and sources, and the very excellent index of 164 pages by Mrs. Bury complete an edition of Gibbon which is, on its own account, a precious and indispensable contribution to history.

#### THE OLDEST ARYAN.

"Short Histories of the Literatures of the World." Edited by Edmund Gosse, LL.D.—Vol. IX. *A History of Sanskrit Literature.* By Prof. Arthur A. Macdonell, M.A., Ph.D. (Heinemann.)

The Boden Professor of Sanskrit at Oxford gives us in this volume almost the first English history of Sanskrit literature—the prehistoric literature of the Hindoos, which was before we know anything about them except that they were. It is true that Prof. Max Müller wrote an account of "Ancient Sanskrit Literature" many years ago, confined to the Vedic age, which was at the time of its appearance a revelation to Englishmen. Since then there has been much research, and a great classification of ideas. German as well as English scholars have been at work, Prof. Macdonell amongst them. There was consequently

a clear demand for such a volume as this, which is at once a summary for the student and an attractive literary survey for the cultivated reader. A hundred years ago, it is to be remembered, we knew next to nothing of Sanskrit. H. T. Colebrooke laid the foundations of our exact knowledge of the language, which we now rightly regard as the key to Hindoo character, thought, and religion. "Vedic" literature, in the simple meaning of the words, implies nothing more or less than the Hindoo "Scriptures." The Scripture of India is less narrative and historic than the Syrian Scripture, but it is equally valuable as a guide to the religious and moral thought of the writers and their contemporaries. The "Rig-veda," the oldest Sanskrit book, may be described as the Hindoo Book of Psalms—the "Verse Scripture." It is a collection of hymns in praise of the gods, which were used as an accompaniment to the offering of *soma* juice and melted butter, the oblation or sacrifice of the mild Hindoo. The "Sama-veda" and "Yajur-veda" were also in the nature of service-books, mainly based on the "Rig-veda." The "Atharva-veda," roughly corresponding to Apocrypha as compared with canonical books, is a book of incantations, not to say exorcisms, addressed to the demon-world. Such are the four sections of Vedic literature, which, representing religious ideas at an earlier stage than any other literary monuments of the ancient world, "are of inestimable value to those who study the evolution of religious beliefs."

The "Brahmanas" are the later prose works of the Hindoo priesthood, comprising a very complex ritual—*brahman* signifying "devotion" or "prayer." As the "Vedas" give us the oldest poetry of the Indo-European family, so the "Brahmanas" give us the oldest prose. As to their substance, there need be no illusion: "they form an aggregate of shallow and pedantic discussions, full of sacerdotal conceits, and fanciful or even absurd identifications"; whereas the "Vedas" are "poetical in matter and form," and their thought is, on the whole, "natural and concrete." Next to these elements of Sanskrit literature come the "Sutra"—"threads" or "clews" of ritual, the record of practice and traditional ceremonial, which are reckoned amongst the sources of Indian indigenous law. Lower down the stream of time we come upon the epics, lyric poetry, drama, philosophy, science, and fables.

Prof. Macdonell supplies many illustrations of Sanskrit poetry, rendered by himself in metre, though without attention to rhyme. Here from the "Atharva-veda" is an incantation for the bedside of a sick person:

Just as a yoke with leathern thong  
They fasten on that it may hold:  
So have I now held fast thy soul  
That thou may'st live and may not die,  
Anon to be unhurt and well.  
Downward is blown the blast of wind,  
Downward the burning sunbeams shoot,  
Adown the milk streams from the cow,  
So downward may thy ailment go.

Here is a sleep charm:

The man who sits and he who walks,  
And he who sees us with his gaze,  
Of these we now close up the eyes,  
Just as we shut this dwelling-house.

The reader will find a varied interest in Prof. Macdonell's book. For the student it is rendered doubly valuable by an appendix on the authorities for Indian technical literature, law, history, grammar, mathematics and astronomy, medicine, and the arts, as well as by a series of general bibliographical notes.

#### NEW PROBLEMS FOR THE NEW WORLD.

*Colonial Civil Service: The Selection and Training of Colonial Officials in England, Holland, and France.* By A. Laurence Lowell. With an account of the East India College at Haileybury (1806-1857), by H. Morse Stephens. (Macmillan.)

Victories, like a great many other things, are apt to produce more difficulties than they solve. Certainly, since the decent interment of the late General Monroe, the new questions which have to be met by the United States are numerous, and not the least difficult of these is the one which Mr. A. Laurence Lowell has placed before his readers in this volume. Mr. Lowell's method of dealing with his subject is excellent and convincing. He begins by a review (with evident knowledge) of the methods of training adopted by the various colonizing nations of modern times, and then proceeds to apply what lessons can be drawn from them to the conditions which obtain in his own country.

If it be necessary that America should become a colonizing power (and it appears now inevitable that it must be so) it is well

that she should at least realize how large is the responsibility which she is undertaking, and prepare to play her part well. Mr. Lowell has gone through the systems of England, Holland, and France to obtain information. With regard to the last of these, we may observe at the outset that the French system has not yet had time enough to prove useful for purposes of comparison. Of the English system it is to be recollected that there are two perfectly distinct methods which have been used in supplying the Indian Civil Service (and in some senses that of the Colonies), namely, that of patronage and that of competitive examination. Both these systems have their special value, and to-day some of us are not quite so certain as Macaulay was that the method of getting the best article is always by open competition. In the second part of the volume there is a most interesting review by an old Cambridge man, H. Morse Stephens, perhaps the greatest authority we have on Indian history, of Old Haileybury, the college of the East India Company. He thus sums up what he has to say on this subject: "It appears clearly from this history that the patronage system produces . . . results not inferior to open competitive examination." No doubt there was less danger of that quagmire of all education, cramming, being resorted to under the system of qualified patronage than there is under that of open competition.

After a full consideration of both the English systems, Mr. Lowell feels that, admirable as they are here, they are not suited to the United States. The difficulties to be overcome there are, first, that the habits of thought of our cousins are entirely different from our own.

In England there is a strong feeling against making appointments to public office on the ground of personal favouritism, and, on the other hand, there is no serious opposition to basing appointments on a standard of scholarship which practically confines them to a small educated class. . . . In America the popular feeling is very nearly the reverse on both these points.

They have no objection to patronage in itself, and they would regard any high educational standard as being a perfectly indefensible piece of class legislation. "They would have little jealousy of a system of favouritism which virtually confines appointments to the men who have influence with politicians;" and they hold that even if an educational standard could be established it would be practically impossible to maintain it. If it were placed at the standard of the best educational establishments of America, the jealousy of the lesser States Universities would be at once aroused, and political machinery would be put in force to lower the standard.

Mr. Lowell is of opinion that the only solution of the difficulty, as far as America is concerned, is the foundation of a special College something after the style of old Haileybury. He proposes that entrance to this shall be by nomination as in the cases of Annapolis and West Point; that after nomination the educational standard in the college should be kept at a high standard, quite as high as that of the best Universities; and he most aptly points out that for those who are destined to make their career far from home the inestimable advantage of an *esprit de corps*, which cannot be obtained under the system of open competition, is almost an essential. He observes that the life of the civil servant in the colonies is entirely different from anything which is usual in the United States. "There are no men in the United States whose ordinary vocation is ruling Asiatics, or whose normal occupation involves the art of administering dependencies." And, therefore, he holds that the pay and conditions of pension, &c., should be so good as to justify the best men in giving their lives to the Colonial service, and that then they should be so trained both in general culture and in special training that the best possible results may be obtained from them.

#### REVISED TEXTS.

- (1) *Æschyl's Tragediæ, cum fabularum deperditarum fragmentis, postæ vita, et operum catalogo.* Recensuit Arturus Sidgwick. (Clarendon Press.) (2) *Corpus Postarum Latinorum a se aliisque denuo recognitorum.* Edidit J. P. Postgate. Fasc. III. (Bell.)

(1) Mr. Arthur Sidgwick's edition of *Æschylus* is a valuable piece of work, and confirms the good opinion we have formed of the "Oxford Classical Texts." Starting, of course, from the *Medicean*, he has supplemented its deficiencies with the readings of later MSS. and—where all fail—with conjectural emendations. The result is a far more scholarly text than that familiarized by the editor's well known school edition of separate plays. With regard to the conjectural emendations, it is inevitable that

there should be wide difference of opinion. The corruptions in the text of Æschylus are so serious that it is absolutely necessary to draw somewhat freely on the *fontes perennis* of conjectural emendation; and what, in the case of such a text, appears to one scholar a probable emendation may very well appear to another altogether unlikely. We have long regarded Mr. Sidgwick as a conservative—almost a high old Tory—in textual matters; and in editing this text we cannot but think that he must occasionally have been surprised at his own boldness. Still, it is needless to say, he does not go to such lengths as Wecklein and Nauck; and on the whole his text is a very satisfactory compromise between the excessive fidelity of Dr. Verrall and the reckless depreciation of manuscript authority in which the most advanced editors indulge. A noteworthy feature of the book is the inclusion of the Fragments, which will be welcome to more advanced students and add much to the value of the work.

(2) Speaking generally, the critical apparatus of the new Corpus of the Latin Poets is on a more extensive scale than that of the Oxford series of texts. The volume before us contains Grattius, Manilius, Phædrus, the "Aelna," Persius, Lucan (including the Fragments), and Valerius Flaccus. The volume, admirably edited under the general direction of Dr. Postgate, is a monument of industry, and is highly creditable to all concerned in its production. We trust that it will not be many years now before this great work is completed, and we congratulate Dr. Postgate on the progress that he has already made. In an interesting preface *benevolæ lectori*, he apologizes for the long interval that has elapsed since the preceding *fasciculus* appeared. But nobody who knows the immense trouble that is involved in the preparation of such a work as this will think the apology necessary. Both of these important works will take their place among the books indispensable to the English student.

## GENERAL NOTICES.

### CLASSICS.

"Illustrated Classics." Edited by E. C. Marchant.—*Vergil's Æneid*. Book I. Edited by E. H. S. Escott. Book III. Edited by L. D. Wainwright. (Bell.)

There is a good deal of difference between these two volumes of Bell's "Illustrated Classics." Neither of the introductions reaches a high standard, but it is by no means easy to make points on so wide and complicated a subject in a way that appeals to schoolboys. Both editors accept the common idea of the character of Æneas, without making an effort to appreciate and explain Vergil's point of view. It is just possible that a great artist like Vergil failed in an essential point; to assume offhand that he did so is inadequate criticism. The late J. R. Green, in one of his charming "Stray Studies," has, it seems to us, made out a very good case for the much-abused hero. As the series is probably to include most of the books of Vergil, it might be worth while for the general editor to consider whether it is not desirable to prefix to each of them an identical introduction, drawn up with extreme care, such as he himself could give us. When we come to the notes the difference is striking. Mr. Wainwright's extend to ninety pages, in which he makes careful and scholarly use of his materials, and shows judgment in dealing with conflicting interpretations. Perhaps he may even have gone a little too far in this direction for an elementary edition. Mr. Escott has but twelve pages; the help given is scarcely sufficient in amount, and there are several examples of inaccuracy and poor translation. Thus, in "officio nec te certare priorem pœniteat," *priorem* is called proleptic; in "dederatque comam diffundere ventis," *diffundere* is said to be epexegetic of the single word *comam*; and the familiar "vera inoessu patuit dea," is rendered "by her gait the true goddess stood revealed," as if *dea* were the subject. Again, one can hardly approve *talia moliri*, "to act thus"; or *fertur equis*, "is run away with," which does, no doubt, appear in Page, but not as a translation. Nor is it satisfactory to say that in "erumpere nubem," *nubem* is in the accusative after the transitive sense of *rumpere*, "to burst the cloud and come forth."

*The Satires of Horace*. Edited by B. J. Hayes and F. G. Plaistowe. (Clive.)

This edition is evidently intended for pass students. No difficulty is passed over; indeed, many comparatively common constructions, which ought to be familiar to a schoolboy sufficiently advanced to read the "Satires" with profit, are explained. The work seems to be done with accuracy and judgment, so far as it goes, but one misses the literary flavour and delicate taste which characterize the editions of Dean Wickham and Prof. Palmer. To the latter the editors would seem to be under considerable obligations; but there is a large stock of common matter on which every editor of Horace must draw. There is nothing about the book to indicate that it is a labour of love.

*Selections from Ovid's Metamorphoses*. Edited by J. W. E. Pearce. (Bell.) This volume of Bell's "Illustrated Classics" contains the stories of Pyramus and Thisbe, Philemon and Baucis, Midas, and the search of Ceres for Proserpine. The introduction is brightly written, and includes short specimens of Golding's, Garth's, and King's translations, which a teacher might make very instructive. The notes are clear and scholarly, and some, like that on *longa mora est*, show considerable power of dealing with schoolboys' difficulties. What is especially to be commended is the abundance of illustrative quotations from English poetry, both in the notes and in the short and interesting introductions to the several extracts. Nothing contributes more to the highest objects of classical teaching. The illustrations are plentiful and good; though, perhaps, it is doubtful whether a mulberry-tree and a lizard from Nature need have been included. It is to be regretted that the "Metamorphoses" take so small a place in school reading. They are not harder than the "Æneid," and contribute more to the knowledge of classical legend, in which schoolboys are generally so deficient. Examining bodies might take a hint.

*Greek Testament Reader*. By T. D. Hall. Second Edition. (Murray.)

This is an unpretentious, but judiciously compiled, little manual, which is very well fitted to assist those who, "not having the advantage of systematic instruction, are yet desirous of acquiring the power of reading the New Testament in the language in which it has been preserved to us." The short notes at the foot of the text explain every difficulty in a clear and really helpful manner; and Mr. Hall wisely refrains from pointing a moral, and from long illustrative quotations. The book is suitable for use also in the middle forms of schools. Indeed, it would give a better insight into the general contents and teaching of the Gospel narrative and the Epistles than can be got from plodding through successive books. There are no passages from the Acts of the Apostles.

*Herodotus, Book II*, translated by J. F. Stout (Clive), is a fluent rendering from Stein's text. Mr. Stout is a useful acquisition to the staff of translators engaged by the University Correspondence College, for he manages to be quite literal without degenerating into the ancient, but now happily discarded, style of dear old Bohn. But Mr. Stout cannot write English hexameters, as the following lines will show:—

"These, prepared with such skill, were the drugs of Zeus-born Helen,  
Excellent drugs, the gift of Thonis' wife, Polydamna,  
Egypt's queen; for there the fertile meads yield abundant  
Drugs, some good when mixed in the wine-cup, others as baneful."  
The last line is the only one that is satisfactory as a hexameter.

### SCIENCE.

*An Introduction to Science*. By Alex Hill, M.D. (Dent.)

We are not quite sure of the title of this little book, as there appear to be two title-pages, with variations. Both, however, describe it as "an introduction," so that when we read in the preface that, "if read without previous training or study, this book can hardly fail to be misleading," we feel somewhat bewildered. The frankness of the warning, at any rate, disarms our criticism, and leaves us free to say that there are many things in the book that are interesting, some that are new, and others which, though old, are retold so as to be worth the retelling. But when we take the book as a whole we are puzzled to say for whom it is written, and must leave each of our readers to form his own judgment from the above quotation.

(1) *An Elementary Course of Practical Zoology*. By the late T. J. Parker and W. N. Parker. (Macmillan.) (2) *A Manual of Zoology*. By the late T. J. Parker and W. A. Haswell. (Macmillan.)

These two books on zoology, alike in external appearance and in the presence, on the title-page, of the late Prof. Jeffery Parker's name as joint author, are otherwise altogether unlike. (1) The first is on the lines originated in Huxley and Martin, and familiar by the name of "type-system." It combines descriptions of a limited number of animal species, written so as particularly to bring out the broad biological laws which they illustrate, with instructions for the dissection and microscopic examination of them. The "types" selected are those set down in the syllabus of the Intermediate Science and Preliminary Scientific Examinations of London University, with one omission—the skull of the dog. In spite of this solitary omission, the book is likely to become the standard text-book for those examinations, as it leaves nothing to be desired in clearness of statement. There are many illustrations, not a few of which are new.

(2) The other book deals not with selected animals, but with the whole animal kingdom, and is in large measure a condensation of the great text-book of the same authors. Considerable care has been devoted to the condensation, and the plan of treatment varies with the different animal groups. Sometimes we find detailed description of a central type, followed by a statement of the main variations from this; at others, a generalized account of the whole group. Some of the small and unimportant divisions are omitted. Those who have wished for something smaller than the big "Parker and Haswell" will welcome the present manual. Digitized by Google

## MATHEMATICS.

*The Teaching of Elementary Mathematics.* By David Eugène Smith, Principal of the State Normal School at Brockport. (Macmillan.)

This is a work of three hundred pages, showing how the subjects included as elementary mathematics have developed in history, and how they have been used, and are being used, in education. It deals in succession with arithmetic, algebra, and geometry, and endeavours to answer for teachers such questions as—Whence comes the subject? Why am I teaching it? How has it been taught? What ought I to read in order to be duly prepared to teach it? The critical treatment of these questions will help to stimulate teachers to revolt against some antiquated customs, and to desire more rational methods. According to the author, it seems that America, following England's lead, has gone into problem-solving too extensively, neglecting the logic of the subject, which, both educationally and scientifically, is the most important part of it. The historical outline is not as well ordered as it might be, and the earlier treatises, which are worth noting for their clearness of exposition and for the amount of Latin and learning expended on them, are not mentioned. For instance, the earliest in our language is "The boke called the boke of algorym or Angrym after lewder use. This boke tretys the Craft of Nombryng" (Egerton 2622). The explanation of numeration there given is as follows:—"Every figure & he stonde aftir a nother toward the lyfte side he schal betakene ten tymes as much more as he schul betoken & he stode in the place there that the figure afore hym stonde. Loo an ensampulle 9634. The figure foure that has his schape 4 betokens bot hymselfe for he stonde in the first place. The figure of thre that has his schape 3 betokens ten times more then he schuld & he stode there as the figure of 4 stonde that is thretty"; and so on until the number is read "Nine thousande sex hundryth & thretty & foure." All the simple rules are explained with equal fullness, and some outline of their methods seems essential to a work sketching the various ways in which the subject has been taught in the past. A very useful chapter is the last, which is headed "The Teacher's Bookshelf."

*Longmans' Elementary Algebra, up to and including Quadratic Equations.* By Wm. Geo. Constable, B.Sc., B.A., and Jas. Mills, B.A. (Longmans.)

The chief feature of merit in this elementary text-book is the carefully graduated sets of exercises and examples. The authors have omitted formal proofs when such proofs contain difficulties for beginners; but they have carried their caution in this respect further than is advisable in several cases. For instance, the rule of signs for multiplication is laid down as follows:—"The following rule must be observed: If the signs of the two quantities be alike, the sign of the product is +," &c. Not a word is said which will help the beginner to see some reason for the rule; and rules without reasons are out of place in algebra.

*Algebra: An Elementary Text-Book for the Higher Classes of Secondary Schools and for Colleges.* By G. Chrystal, M.A., LL.D., Professor of Mathematics in the University of Edinburgh. Part II. Second Edition. (Black.)

When Prof. Chrystal's work first appeared it was at once recognized as an epoch-making book as regards algebra, rendering the subject exactly serviceable as herald and pioneer for the recent rapid developments of the higher mathematics. The experience of a few years has confirmed all teachers in this estimate of its value. "Algebra is generous," says D'Alembert. "L'algebre est généreuse; elle donne souvent plus qu'on ne lui demande." The truth of this saying is emphasized by the work of Prof. Chrystal. The subject has now become an unrivalled training in consecutive and sustained mathematical reasoning. The second edition now before us develops further the theory of series with a view to rendering it more useful to students proceeding to study the theory of functions. A sketch of the modern theory of irrational quantity is added to the chapter on limits, and forms a sound basis for the subsequent structure of pure analysis in its most modern form.

## MODERN LANGUAGES.

*Lamartine: Scènes de la Révolution Française.* Edited by O. B. Super. (Isbister.)

Mr. Super has made a good selection of chapters from the "Histoire des Girondins," including only such portions of the larger work as are not open to criticism on account of their inaccuracy. They relate exclusively to Louis XVI. and his family. There is a short biographical sketch; it is strange to find no mention of "Jocelyn." The notes are mainly historical, and are kept within reasonable bounds.

*Contes et Saynètes.* Edited by T. F. Colin. (Ginn.)

A useful selection of fourteen short stories and four slight dramatic sketches, all taken from writers of the present day, and suggesting the more harmless *contes* published in such papers as *Le Journal*. They are suitable for rapid reading, and will help to increase the vocabulary. There are a few notes at the foot of the page, with renderings or explanations; the list of words at the end ought to be fuller.

*French Prose of the Seventeenth Century.* Selected and edited by F. M. Warren. (Isbister.)

While there are numerous editions of dramas of the "classical"

century, there has hitherto been a lack of books introductory to the study of the prose-writers of this period. Mr. Warren's selections from the works of Descartes, Pascal, La Rochefoucauld, Bossuet, and La Bruyère can warmly be recommended for use in the highest classes of schools and at the University. There is a convenient introduction, perhaps a little too brief, dealing with these writers, and the notes have been written with care and will be found helpful to the young student.

*An Elementary French Grammar.* By G. E. Fasnacht. (Macmillan.)

This book gives the essentials of French grammar in little more than a hundred pages. It is carefully printed and skilfully arranged, and should serve well for purposes of reference, especially as far as the accident is concerned; in the sections devoted to syntax the endeavour to put things concisely has led to some rather serious omissions.

*Lehrbuch der Deutschen Sprache.* By A. Werner-Spanhoofd. (Isbister.)

The author's system stands midway between the classical method and that of the extreme partisans of the *neuere Richtung*. His principle is that each lesson should teach one grammatical fact or set of facts. With this view, he begins each chapter with a *development lesson*—i.e., a few short sentences, from which the rule or principle—for instance, the government of *an, auf, &c.*—is to be gathered. This part of the process, he thinks, should be done as much as possible in German—indeed, after a few lessons, the explanatory remarks are given in German. It is doubtful how far this is wise; to talk about grammar in German would seem to be out of the range of beginners. The book, however, is so arranged that the teacher can please himself on this point. Then follow reading exercises, longer sentences or anecdotes, still harping on the same string; then the grammar in English, vocabulary, and exercises. The exercises consist partly of German sentences to be completed, partly of English sentences to be translated. The plentiful supply of such exercises makes the book very useful for oral, as well as for written, work. The book is, on the whole, a good one; and the author tells us that it has been practically tested. But one may doubt whether it is effective in teaching the declension of nouns, or even that of adjectives. Two chapters for the former and a single chapter for the latter are hardly sufficient. It would have been better to spread the nouns, group by group, over a number of chapters dealing with other points.

*Walther's Allgemeine Meereskunde.* Edited by Miss S. A. Sterling.

(Isbister.)

A knowledge of German is indispensable to a scientific man. Probably that is the reason why the University of London has of late years done its best to exclude it, at least in practice, from its Matriculation Examinations. While school reading should be mainly literary, it is a distinct advantage if a boy destined for scientific studies can gain, before leaving school, an elementary knowledge of the commoner technical words and phrases he is likely to meet with. This abridgment of Walther's "Physiography of the Sea," to use the nearest English equivalent to *Meereskunde*, is, therefore, a welcome addition to our list of reading-books. The chapters on marine fauna and flora supply a biological vocabulary, while those on the saltiness of the sea, on icebergs, and on denudation and volcanic islands, introduce the reader to chemical and geological terminology. At the same time, the subject-matter is far more valuable than that of many of the story-books now in vogue. Even Hauff's "Karavane" might often give place to it with advantage. The notes and vocabulary are fairly useful, but might easily be improved. Translations like "mountain of folding," for *Faltengebirge*, "horsts" for *Horste*, "land-complexes" for *Landkomplexe*, "laterite" for *Laterit*, are not helpful; while it is quite unnecessary to translate *Kreta* or *Sauerstoff*, or to say where St. Helena and Formosa are situated. What is really wanted is an explanation, and not merely the English equivalents, of technical terms outside the vocabulary of an educated man with no pretension to specialist knowledge.

## MISCELLANEOUS.

*Our Great City, or London the Heart of the Empire.* By H. O. Arnold-Forster. (Cassell.)

The place of London in the world, and of Londoners in the history of the world, with a general description of the city, are the main features of this excellent little book. The author's forte is the clear arrangement of details. If anything, Mr. Arnold-Forster is too comprehensive; but this is a fault on the right side. There are chapters on municipal government and education, and a suggestive chapter on London as it might be. Altogether, it is an arresting and stimulative reading-book.

"Temple Encyclopædic Primers"—*The Civilization of India.* By Romesh C. Dutt, C.I.E. (Dent.)

An excellent volume of an excellent series. Mr. Dutt takes us through the Vedic and epic ages, the "age of laws and philosophy," the rise and progress of Buddhism, the Puranic and Rajput ages, the Afghan, Moghul, and Mahratta ascendancies. The story is fascinating; the author has told it very well, and the illustrations are very attractive. "Handbooks to the Bible and Prayer Book." Edited by the Rev.

Bernard Reynolds, M.A.—*Handbook to Joshua.* By the Rev. G. H. S. Walpole, D.D. (Rivingtons.)

A good book for teachers, arranged in a series of chapters with

text and notes, followed by lessons on the matter and method of each chapter, and "blackboard sketches" of moral inferences. The system is a little elaborate—which is all the better for the teacher.

(1) "Bell's History Readers."—*English History during the Tudor Period, 1485–1603.* (Bell & Sons.) (2) "Waverley School Series."—*Alternative Historical Reader, Book II.* (McDougall's Educational Co.)

The former of these two volumes gives a simple narrative for young readers, which is printed in good bold type, well illustrated, accurate, and sufficiently comprehensive. The summaries of the lessons are useful, and the book may be commended. The "Alternative" Reader comprises British history from 1603, with a *résumé* of the earlier period. It is well printed and specially well illustrated. The lessons are accompanied by a few definitions and words for spelling.

"The Pedagogical Library."—*Organic Education: a Manual for Teachers in Primary and Grammar Grades.* By Harriett M. Scott, assisted by Gertrude Buck, Ph.D. (Isbister.)

An educational report, of American origin, describing a plan of work based on actual experiment, in Detroit. It is pedantic, but at the same time practical and suggestive.

*The Abbey Church of Tewkesbury, with some Account of the Priory Church of Deerhurst, Gloucestershire.* By H. J. L. J. Massé, M.A. (Bell & Sons.)

A well written guide to two very interesting ecclesiastical buildings. This is one of the continuation series of volumes uniform with "Bell's Cathedral Series." It has forty-four excellent illustrations.

*The ABC of Drawing and Design.* By F. G. Jackson. (Chapman & Hall.)

A series of ruled drawing books and cards for graduated copying of designs, arranged for elementary standards.

*Art Studies of Animals, Plants, Common Objects, and Conventional Forms.* (Macmillan.)

This is a book of somewhat promiscuous copies for freehand drawing, with a few plain instructions in what are called the "principles of ornament." The idea is good, and it is well worked out.

*A Practical Method of Teaching Geography. Book II.: Europe.* By J. H. Overton. (Cassell.)

Outline maps of Europe in different aspects, and portions of Europe, each map being covered by tracing paper, so that the learner may go over the ground with his pencil. There are also directions for systematically exercising the memory.

*Penmanship for Pupil-Teachers, &c.* By A. H. Garlick, B.A. (McDougall's Educational Co.)

Copies and directions. There are notes at the foot of each page, intended to fix the attention of the writer. The plan is good; the "hand" is nearly perpendicular, and very distinct.

*Scarlet and Blue; or, Songs for Soldiers and Sailors.* Edited by John Farmer. (Cassell.)

The editor of "Gaudeamus" and "Dulce Domum" has here collected the words and music of nearly a hundred old English songs for soldiers and sailors, or dealing with them. He has also added thirteen regimental songs specially annexed by as many different regiments. The book is consequently full of old favourites, whose titles are household words, and whose airs are fixed in the memories of all. Notes and type are excellently printed, and the volume is a store of good things.

*The Army and Navy Musical Drill.* By A. Alexander. (Philip & Son.)

A very serviceable book of exercises for boys, well illustrated and explained, and accompanied by some of the best tunes (without words) by Arne, Boyce, Donizetti, and others. This is a capital book for its purpose.

*Cassell's Guide to London, and Cassell's Guide to Paris and the Universal Exhibition of 1900.* (Cassell.)

These are two good guides, clear and cheap, with plans and many illustrations. They are in paper covers, or they could not be so cheap; but they will easily survive a few weeks of daily use. There will be plenty of need for them in the coming season.

"Arnold's School Series."—*Passages for Dictation, selected from the Works of the best Prose Writers for Advanced Students.* (Edward Arnold.)

A handy little book of 167 passages in two parts, one set more difficult than the other. Some of the pieces were set in Queen's Scholarship and Teachers' Certificate Examinations, but most of them are specially selected. The authors should have been quoted in each case.

"The World's Epoch Makers."—*Cranmer and the Reformation in England.* By Arthur D. Innes, M.A. (Edinburgh; Clark.)

The idea of this series cannot be regarded as original; but there is, perhaps, still plenty of room for short biographies of the central men of important periods. Mr. Innes gives us not so much a life of Cranmer as an account of the ecclesiastical period in which he was prominent. He has done his work very well, and the volume may be found useful.

*Great Books as Life Teachers.* By N. D. Hillis. (Oliphant, Anderson, & Ferrier.)

Mr. Hillis gives us here a collection of "studies of character, real and ideal." It is, apparently, a book of American origin. We light on an anecdote of a bishop's "miter." Anecdotes, literary comments, and good moral inferences make up the substance of the volume.

*Practical Building Construction.* By John Parnell Allen. (Crosby Lockwood & Son.)

A third edition, revised, of a well known handbook for students intending to qualify as architects and surveyors, and to pass the Science and Art examinations. It has over one thousand very clear and detailed illustrations.

*The Building of the British Empire.* With Notes on the Growth of Constitutional Government in the Colonies, Imperial Federation, Statistical Tables, Etymology of Colonial Names, Biographies of Empire Builders, &c. By Arthur T. Flux. (A. M. Holden.)

This new volume of "Prof. Meiklejohn's Series," judging from its title-page alone, should be a very systematic and instructive work for young readers, on historical and geographical lines, with a touch of politics and reasoned patriotism. That, in fact, is a very good description of the book. Its history is summary rather than narrative, and there is an infinitude of well arranged detail. It is a serviceable manual, and will make a good sequel or companion to general textbooks on history and geography.

*Home Geography and the Earth as a Whole.* By Ralph S. Tarr and Frank M. McMurry. (Macmillan.)

Messrs. Tarr and McMurry design a set of three volumes on geography, of which this is the first. The second will deal with North America, and the third with "Europe and the other Continents"—from which it may be concluded that the work is intended primarily for students in the United States. The first volume is concerned mainly with physical geography and earth-knowledge, the main illustrations being taken from North America. It is a thoroughly good book on a sensible plan, though not specially adapted for our own schools.

*A First Manual of Composition.* By E. H. Lewis, Ph.D. (Macmillan.)

Here we have another book from over the water—an attempt to convert the young grammarian into a rhetorician, or, at any rate, to bridge the gulf between the analysis and the construction of sentences. It is not easy, as it depends on the talent of the pupil more than the skill of the teacher. But Dr. Lewis has provided a great deal of useful practice. He recommends the correction of pupils' exercises by means of rubber-stamps!

"The Prize Library."—*Wellington.* By George Hooper. Nelson. By J. K. Laughton. (Macmillan.)

These two reprinted biographies very naturally find a place in the publishers' series of cheap books suitable for small prizes and presents in schools where the prize fund is not large, and where the distribution of a large number of books at the end of a term is rather conventional and ornamental than anything else. Both volumes are well written, and Mr. Laughton is an acknowledged authority on the life of Nelson.

*The Story of Dick.* By Major Gambier Parry. (Macmillan.)

This simple and wholesome story may be classed, from some points of view, with the two volumes last mentioned. It is a sort of elementary recruiting text-book, and will do as a gift for boys, provided that the giver thinks it suitable for the boy.

*Us, and Grandmother Dear.* By Mrs. Molesworth. (Macmillan.)

These are two volumes of Messrs. Macmillan's half-crown illustrated stories "for presents and prizes." They are amongst the most popular of Mrs. Molesworth's tales—"Us" for young children and the other for older boys and girls—with pictures by Mr. Walter Crane.

*Nellie's Memories.* By Rosa Nouchette Carey. (Macmillan.)

An experimental volume: a novel of Miss Carey's "abridged for schools." Miss Carey is charming in her way, but we fear that her way is too sentimental for the schoolroom. And the abridging only concentrates the sentimentality.

*Eight Aysgarth School Sermons.* By C. H. Boutflower. (Macmillan.)

The Chaplain to the Bishop of Durham was accustomed for some eight years to preach from time to time in the chapel of Aysgarth School. He has now published a few of his simple and straightforward sermons as a memorial to the late Headmaster, the Rev. C. T. Hales. The discourses are well considered and reasonably colloquial.

WE HAVE ALSO RECEIVED the following publications and new editions:—

*The New Code—1900 (N.U.T. Edition).* By J. H. Yoxall and T. A. Organ.

*The Coming of the Kilogram: a Plea for the Adoption of the Metric System of Weights and Measures—new edition,* by H. O. Arnold-Forster. (Cassell.)

*Practical Metal-Plate Work,* edited by Paul N. Hasluck (Cassell)—the second volume of a series of works on technical instruction.

*Electric Bells: How to Make and Fit Them.* Edited by Paul N. Hasluck. (Cassell.)

**MATHEMATICS.**

**14169.** (Professor COCHEZ.)—Etudier la courbe  
 $(2x + 3y)^2(x - y) + x + y = 0.$

Solution by G. D. WILSON, B.A.

Put  $x + y = \sqrt{2} X,$   
 $y - x = \sqrt{2} Y,$

and the equation becomes

$$(5X + Y)^2 Y = 2X.$$

This is unchanged if we put  $-X, -Y$  for  $X, Y.$  Also  $Y$  and  $X$  must be of the same sign, and (solving as a quadratic for  $X$ )

$$Y^2 \leq \frac{2}{5}.$$

The only real asymptote is  $Y = 0,$  and  $X = 0$  is an inflexional tangent at the origin.

**6405.** (The late Professor SYLVESTER, F.R.S.)—If  $p, q, r, s$  are the distances of a point in a circular cubic from the four concyclic foci  $A, B, C, D,$  prove that

$$\frac{(p-q)(q-r)(r-p)}{ABC} = \frac{(q-r)(r-s)(s-q)}{BCD} = \frac{(r-s)(s-p)(p-r)}{CDA} = \frac{(s-p)(p-q)(q-s)}{DAB}.$$

Solution by Professor SIRCOM, M.A.

If  $AC, BD$  meet in  $O$  and  $OA = a, OB = b, OC = c, OD = d,$  we shall have (SALMON, *Higher Plane Curves*, p. 250),

$$(b+c)p + (a-b)r = (a+c)q \quad \text{and} \quad (c-d)p + (a+d)r = (a+c)s,$$

whence

$$c(p-q) + b(p-r) + a(r-q) = 0$$

and

$$c(p-s) + d(r-p) + a(r-s) = 0.$$

Finding  $b, d$  from these equations, and putting  $bd = ac,$  we find

$$c^2(p-s)(p-q) + ac\{(p-s)(p-q) + (r-s)(r-q)\} + a^2(r-s)(r-q) = 0,$$

whence

$$c(p-s)(p-q) + a(r-s)(r-q) = 0$$

and  $(s-p)(p-q)(q-s) : (q-r)(r-s)(s-q) = a : c = DAB : BCD.$

$$\frac{(s-p)(p-q)(q-s)}{DAB} = \frac{(q-r)(r-s)(s-q)}{BCD}, \quad \&c.$$

**14350.** (Professor N. BHATTACHARYYA.)—If a quadrilateral that is complete can be circumscribed about a circle, prove that the line of collinearity of the middle points of the diagonals passes through the centre of the circle.

Solution by J. H. TAYLOR, M.A.; and F. H. PEACHELL, B.A.

Let the middle points of  $AC, BD, EF,$  respectively, be  $H, K, G.$

Then

$$\triangle AHB = \triangle BHC$$

$$\text{and } \triangle DHC = \triangle AHD.$$

Therefore

$$\triangle AHB + \triangle DHC$$

$$= \frac{1}{2} \text{quadrilateral } ABCD.$$

Similarly,

$$\triangle AKB + \triangle DKC$$

$$= \frac{1}{2} \text{quadrilateral } ABCD.$$

Therefore, at any point  $P$  on straight line  $HKG,$

the sum of triangles  $\triangle APB, \triangle DPC = \frac{1}{2}$  quadrilateral  $ABCD$

(*Pitt Press Euclid*, p. 103, Ex. 3, *Solutions*, p. 46).

Now

$$AB + CD = AD + BC,$$

and, if  $O$  be the centre of the circle inscribed in quadrilateral, the altitudes of triangles  $\triangle ABO, \triangle BCO, \triangle CDO, \triangle DAO$  are equal; therefore

$$\triangle ABO + \triangle CDO = \frac{1}{2} \text{quadrilateral}.$$

Therefore  $O$  must lie on  $HK.$

**14325.** (R. KNOWLES.)—Prove that the sum of the first  $(r + 1)$  coefficients in the expansion of  $(1 - x)^{-m/n}$

$$= \{(m+n)(m+2n)\dots(m+rn)\}/n^r \cdot r!$$

Solution by F. H. PEACHELL, B.A., and H. J. WOODALL, A.R.C.S.

$$(1 - x)^{-m/n} = 1 + \frac{m}{n}x + \frac{m(m+n)}{n^2 \cdot 2!}x^2 + \frac{m(m+n)(m+2n)}{n^3 \cdot 3!}x^3 + \dots$$

Also

$$(1 - x)^{-1} = 1 + x + x^2 + \dots$$

Therefore

$$(1 - x)^{-(m/n)-1} = 1 + \left(1 + \frac{m}{n}\right)x + \left(1 + \frac{m}{n} + \frac{m(m+n)}{n^2 \cdot 2!}\right)x^2 + \dots$$

Therefore required sum is the coefficient of  $x^r$  in  $(1 - x)^{-(m/n)-1},$  and therefore

$$= \{(m+n)(m+2n)\dots(m+rn)\}/n^r \cdot r!.$$

**14267.** (B. N. CAMA, M.A.)—If an equiangular spiral be inscribed in a rectangle, prove that (1) the angular points of the rectangle lie on another spiral, (2) the lines joining the points of contact of opposite pairs of sides intersect at right angles in the pole, (3) the area of the quadrilateral of the chords of contact varies as the area of the rectangle.

Solution by the PROPOSER and H. W. CURJEL, M.A.

Let the spiral PQRS be inscribed in the rectangle ABCD. Then, since the locus of intersection of orthogonal tangents is a copolar spiral, therefore ABCD is inscribable in another spiral.

Also the quadrilaterals OBQR, OCRS, OPDS, OPAQ are cyclic; therefore

$$\angle QOR = \angle ROS = \angle SOP = \angle POQ = \text{a right angle};$$

therefore QS, PR intersect at right angles in O. Now the

$$\text{area of PQRS} \propto PR \cdot QS \propto AB \cdot BC \operatorname{cosec}^2 \alpha \propto \text{area of ABCD}.$$

**14377.** (E. W. REES, B.A.)—If, on the sides of a triangle ABC, squares  $BB_1C_1C, CC_2A_2A, AA_3B_3B$  be described, and if  $A_1A_3, B_3B_1, C_1C_2$  intersect in the points  $C', A', B',$  and if through  $A', B', C'$  perpendiculars be drawn respectively to  $BC, CA,$  and  $AB,$  prove that these perpendiculars intersect in a point O which is the centre of gravity of the triangle  $A'B'C',$  and that the symmedian point of this triangle is G, the centre of gravity of the triangle ABC.

Solution by the PROPOSER.

From similar triangles  $B'OC', A_2AA_3,$  we have

$$OB'/OC' = AA_2/AA_3 = b/c.$$

Therefore

$$OA' : OB' : OC' = a : b : c,$$

and the perpendiculars intersect in O.

And O is the centre of gravity of triangle  $A'B'C'.$  For let  $C'O$  meet  $A'B'$  in  $m_3.$  Then, from triangles  $B'C'm_3, A'C'm_3,$  we have

$$B'm_3/A'm_3 = (B'C' \sin \theta_2)/(A'C' \sin \phi_1);$$

and, from triangle  $AGB,$

$$\sin \theta_2/\sin \phi_1 = BG/AG = BM_2/AM_1 = B_1B_3/A_2A_3.$$

For  $A_2A_3^2 = b^2 + c^2 - 2bc \cos A, A_1A_3 = b^2 + c^2 + 2bc \cos A = 4AM_1^2;$

therefore

$$A_2A_3 = 2AM_1 \quad \text{and} \quad B_1B_3 = 2BM_2.$$

[The rest in Volume.]

**14266.** (V. R. THYAGARAGAIYAR, M.A.)—Find the equation of a curve (in Cartesian coordinates) which is such that the radius of

curvature at any point is equal to the length of the curve measured up to that point from a fixed point on the curve. Trace the curve.

*Solution by H. A. WEBB and H. W. CURJEL, M.A.*

With the usual notation,  $s = ds/d\psi$ ; therefore  $ds/d\psi = c\sqrt{2}e^{\psi+\frac{1}{2}\pi}$ ,  $c$  being a constant length.

Now  $ds = \sec \psi dx = \operatorname{cosec} \psi dy$ .  
Therefore  $dx = c\sqrt{2} \cos \psi e^{\psi+\frac{1}{2}\pi} d\psi$ ,  $dy = c\sqrt{2} \sin \psi e^{\psi+\frac{1}{2}\pi} d\psi$ .  
Therefore  $x - A = ce^{\psi+\frac{1}{2}\pi} \sin(\psi + \frac{1}{2}\pi)$ ,  $y - B = -ce^{\psi+\frac{1}{2}\pi} \cos(\psi + \frac{1}{2}\pi)$ ;  
 $A$  and  $B$  being constants.

Take the origin at a point on a curve, the directions of the axes being such that  $\psi = -\frac{1}{2}\pi$ . Then at the origin  $s = c\sqrt{2}$ . Also  $A = 0$ ,  $B = c$ .

Therefore  $x^2 + (y - c)^2 = c^2 e^{2\psi+\pi} = c^2 e^{-2 \tan^{-1} x/(y-c)}$   
or  $\log \{x^2 + (y - c)^2\} = 2 \log c - 2 \tan^{-1} x/(y - c)$ .

This is the equation of an equiangular spiral whose angle is  $\frac{1}{4}\pi$ .

**14122.** (The late "LEWIS CARROLL.")—It is given that (1), if  $C$  is true, then, if  $A$  is true,  $B$  is not true; and (2), if  $A$  is true,  $B$  is true. Can  $C$  be true? What difference in meaning, if any, exists between the following propositions?—(1)  $A, B, C$  cannot be all true at once; (2) if  $C$  and  $A$  are true,  $B$  is not true; (3) if  $C$  is true, then, if  $A$  is true,  $B$  is not true.

*Solution by H. MACCOLL, B.A.*

Using my usual method and notation, let  $\phi$  denote the data  $\{C : (A : B)\} (A : B)$ , which is synonymous with  $\{C : (AB)\} (AB)^*$ , we get  $S(C^*\phi) = C^*(A^* + B^* + A^*B^*)$ ,  $S(C^*\phi) = C^*A^*$ .

As neither of the products on the right-hand side is a formal impossibility, it follows that neither  $C^*$  (that  $C$  is impossible) nor its denial  $C$  (that  $C$  is possible) is formally inconsistent with our data  $\phi$ . Hence, without further data, we cannot answer the question "Can  $C$  be true?" To answer "Yes" would be to assert  $C^*$ ; to answer "No" would be to assert  $C$ ; and neither conclusion is legitimate without further data.

Expressed in the same notation, the PROPOSER'S second question is "What difference, if any, exists between the three statements  $(ABC)^*$ ,  $(CA : B)^*$ ,  $\{C : (A : B)\}^*$ ? The first and second are each equivalent to  $C : (AB)^*$ , and the third is equivalent to  $C : (AB)^*$ . Now, since  $(AB)^*$  formally implies, but is not equivalent to,  $(AB)$ , it follows that the third statement formally implies, but is not equivalent to, the first and second. (See my paper in *Mind*, January, 1900.)

[The rest in Volume.]

**14416.** (Professor IGNACIO BEYENS, M.A., Lt.-Col. du Génie.)—Si dans un triangle ABC on mène une droite AD et l'on prolonge  $AD_1 = AD$ , considérant les droites AB, AC, AD comme les magnitudes et directions de trois forces, leur résultante est la droite  $AD'$  isotomique de AD dans le triangle proposé.

*Solution by Professor A. DROZ-FARNY; and H. W. CURJEL, M.A.*

Tirons  $CD_1$ , et soit E son point milieu, et prolongeons AE de  $EF = AE$ . AF sera la résultante des deux forces AC et  $AD_1$ . Il reste donc à chercher la résultante des forces AF et AB. Comme

$CE = ED_1$  et  $AD = AD_1$ ,  
AE est parallèle à BC et égale à  $\frac{1}{2}CD$ ; donc  
 $AF = CD$ .

Portons sur BC  
 $BD' = CD = AF$ .

Les points D et D' sont conjugués isotomiques et le quadrilatère  $AFD'B$  est un parallélogramme. Donc la résultante des forces AF et AB est bien la droite  $AD'$ .

**6322.** (J. E. A. SREGGALL, M.A.)—Solve  $x - y = a$ ,  $xs + y = b$  in positive integers,  $a$  and  $b$  being integers prime to each other, and one odd, the other even.

*Solution by H. W. CURJEL, M.A.*

$$x(z+1) = a + b;$$

therefore  $x$  is odd and  $z$  is even, and every resolution of  $a + b$  into a pair of factors  $c, d$  gives a solution if  $c > a$ , namely,  $x = c$ ,  $z = d - 1$ ,  $y = c - a$ .

**14208.** (Rev. T. ROACH, M.A. Suggested by Quest. 13173.)—Six circles are described, each passing through the incentre and touching one side of the triangle at one of its extremities. (1) Show that the centres of the six circles lie on the radii  $ID \dots$ , on three circles concentric with the incircle. (2) Show that the product of the radii of three alternate circles =  $2R^2r$ .

*Solution by F. L. WARD, B.A.; and L. E. REAY, B.A.*

Let  $ID$  meet perpendicular to  $AC$  in  $G$ ; therefore

$\angle GCI = \frac{1}{2}\pi - \angle ACI = \frac{1}{2}\pi - \frac{1}{2}\angle C$ ,  
and  $\angle CID = \frac{1}{2}\pi - \frac{1}{2}\angle C$ ;  
therefore  $\angle GCI = \angle GIC$ ;  
therefore  $GI = GC$ ;  
therefore circle, centre  $G$ , radius  $GI$ , touches  $AC$  at  $C$ .

Similarly, the other centres lie on the radii  $ID \dots$ . Also, if  $GM$  is perpendicular to  $IC$ ,

$$GI = \frac{IC}{2 \sin \frac{1}{2}C} = \frac{ID}{2 \sin \frac{1}{2}C} = \frac{r}{2r_a r_b r_c}$$

where  $r_a \dots$  are the escribed centres =  $ab/2r_c$ ; therefore alternate products

$$= \frac{a^2 b^2 c^2}{8r_a r_b r_c} = \frac{2a^2 b^2 c^2 r}{16r_a r_b r_c r} = 2r \left(\frac{abc}{4\Delta}\right)^2 = 2R^2 r.$$

[The PROPOSER solves the second part of the Question as follows:—

$$GI = ID / (2 \sin^2 \frac{1}{2}C) = r / (2 \sin^2 \frac{1}{2}C);$$

therefore product of three radii =  $r^3 / (8 \sin^2 \frac{1}{2}A \sin^2 \frac{1}{2}B \sin^2 \frac{1}{2}C) = 2R^2 r^3$ .]

**14391.** (Professor E. LEMOINE.)—Si ABC est le triangle de référence,  $l$  la distance du point A' au côté BC,  $m$  la distance du point B' au côté CA,  $n$  la distance du point C' au côté AB, et que  $A_1 y = A_1' x$ ,  $B_1 z = B_1' x$ ,  $C_1 x = C_1' y$  soient, en coordonnées normales, les équations de  $AA'$ ,  $BB'$ ,  $CC'$ ,  $AA'B'C'$  seront triplement homologues par permutation circulaire (c'est-à-dire que  $AA'$ ,  $BB'$ ,  $CC'$ ;  $AB'$ ,  $BC'$ ,  $CA'$ ;  $AC'$ ,  $BA'$ ,  $CB'$  concourront en L, en M et en N). Si l'on a  $A_1 B_1 C_1 = A_1' B_1' C_1'$ , et

$$abc A_1 B_1 C_1 (l - h_a)(m - h_b)(n - h_c) + lmn (bA_1' + cA_1)(cB_1' + aB_1)(aC_1' + bC_1) = 0,$$

$a, b, c$  sont les trois côtés et  $h_a, h_b, h_c$  les trois hauteurs de ABC. On suppose  $0 \geq l \geq h_a, 0 \geq m \geq h_b, 0 \geq n \geq h_c$ .

*Solution by Rev. J. CULLEN.*

If  $AA'$ ,  $BB'$ ,  $CC'$  are concurrent, then, clearly,  $A_1 B_1 C_1 = A_1' B_1' C_1'$ . Again, since the points  $A', B', C'$  are  $(l, \lambda A_1', \lambda A_1)$ ,  $(\mu B_1', m, \mu B_1)$ ,  $(\nu C_1', n, \nu C_1)$ , the equations of  $AB'$ ,  $BC'$ ,  $CA'$  are

$$\mu B_1' y - m x = 0, \quad \nu C_1' z - n x = 0, \quad \lambda A_1' x - l y = 0.$$

Therefore  $\lambda \mu \nu A_1' B_1' C_1 = l m n$ ; also  $\lambda (bA_1' + cA_1) + a l = 2\Delta$ ;  
hence  $\lambda = -a(l - h_a) / (bA_1' + cA_1)$ , &c.

Similarly, the condition stated holds for  $AC'$ ,  $BA'$ ,  $CB'$ .

**14368.** (D. BIDDLE.)—If the roots of the cubic equation  $x^3 + qx + r = 0$  be  $x_1, x_2, x_3$ , prove that the sum of the products of  $(x_1 - x_2)/x_3, (x_2 - x_3)/x_1, (x_3 - x_1)/x_2$ , taken two at a time, is  $-9$ .

*Solution by Rev. T. ROACH, M.A.; R. P. PARANJPEY, B.A.; and many others.*

$$S = \frac{\sum x_2(x_1 - x_2)(x_3 - x_3)}{x_1 x_2 x_3} = \frac{\sum \{x_2^2(x_1 + x_3) - x_2^3 - x_1 x_2 x_3\}}{x_1 x_2 x_3}$$

Also  $\sum x_1 = 0, x_1 x_2 x_3 = -r$ ; therefore  $S = \frac{-2\sum x_1^3 + 3r}{-r}$ .

Again  $(x_1 + x_2 + x_3)^3 = 0$ ;  $\therefore \sum x_1^3 + 3r = 0$ ;  $\therefore S = -9$ .

[Mr. PARANJPEY observes that it is necessary that none of the roots should be zero, but they need not be real.]

**14205.** (Rev. W. ALLEN WHITWORTH, M.A.)—If convergents to  $\sqrt{3}$  be formed in the usual way by a continued fraction, show that the

$n$ th convergent is  $\frac{(2 + \sqrt{3})^n + (-1)^n}{(2 + \sqrt{3})^n - (-1)^n} \sqrt{3}$ .

*Solution by Rev. T. ROACH; and Professor SANJANA, M.A.*

$$\sqrt{3} = \sqrt{4 - 1} = 2 - \frac{1}{2 + \sqrt{3}} = 2 - \frac{2 - \sqrt{3}}{4 - 3} = 2 - (2 - \sqrt{3})$$

$n$  being number of components, and  $a, \beta$  roots of  $K^2 - 4K + 1 = 0$ . [HALL *Higher Algebra*, xxxi. A, No. 8.] Therefore

$$\begin{aligned} \sqrt{3} &= 2 - \frac{(2 + \sqrt{3})^n - (2 - \sqrt{3})^n}{(2 + \sqrt{3})^{n+1} - (2 - \sqrt{3})^{n+1}} \\ &= \frac{(2 + \sqrt{3})^n (3 + 2\sqrt{3}) - (2 - \sqrt{3})^n (3 - 2\sqrt{3})}{(2 + \sqrt{3})^{n+1} - (2 - \sqrt{3})^{n+1}} \\ &= \sqrt{3} \frac{(2 + \sqrt{3})^{n+1} + (2 - \sqrt{3})^{n+1}}{(2 + \sqrt{3})^{n+1} - (2 - \sqrt{3})^{n+1}} = \sqrt{3} \frac{(2 + \sqrt{3})^{2n+2} + (-1)^{2n+2}}{(2 + \sqrt{3})^{2n+2} - (-1)^{2n+2}} \end{aligned}$$

QUESTIONS FOR SOLUTION.

**14568.** (Professor G. B. MATHEWS, F.R.S.)—Let  $\psi(n)$  denote the number of positive integral solutions of  $x + y = n$ , subject to the conditions that  $3x \geq 4y$  and  $2x < 7y$ : then

$$\sum \psi(n) x^n = (1 + x^3 + x^4 + x^5 + x^6 + x^7 + 2x^8 + x^9 + x^{10} + x^{11} + x^{12} + x^{13}) + (1 - x^7)(1 - x^9).$$

Hence obtain an analytical expression for  $\psi(n)$ .

**14569.** (JOHN C. MALET, F.R.S.)—Being given that the roots of an algebraic equation of the twelfth degree,  $a_1, a_2, a_3, a_4, \beta_1, \beta_2, \beta_3, \beta_4, \gamma_1, \gamma_2, \gamma_3, \gamma_4$ , are connected by the relations

$$a_1 + a_2 + a_3 + a_4 = \beta_1 + \beta_2 + \beta_3 + \beta_4 = \gamma_1 + \gamma_2 + \gamma_3 + \gamma_4, \\ a_1 a_2 a_3 a_4 = \beta_1 \beta_2 \beta_3 \beta_4 = \gamma_1 \gamma_2 \gamma_3 \gamma_4,$$

solve the equation.

**14570.** (Professor NEUBERG.)—Les plans symétriques des faces d'un tétraèdre par rapport aux sommets opposés forment un nouveau tétraèdre. Trouver le rapport de similitude des deux tétraèdres.

**14571.** (Professor MORLEY.)—Prove that the sum of the cubes of the coefficients in the expansion of  $(1-x)^{-p}$  is, when convergent,

$$\cos \frac{1}{2}(\pi p) \Gamma(1 - \frac{1}{2}p) / \{\Gamma(1 - \frac{1}{2}p)\}^2,$$

$p$  being real or complex.

**14572.** (Professor E. LEMOINE.)—Soit ABC un triangle. Appelons  $A_1, B_1, C_1$  les pieds sur BC, CA, AB des trois bissectrices des angles du triangle, et  $A'_1, B'_1, C'_1$  les pieds des trois bissectrices des angles supplémentaires. On soit que  $A'_1, B'_1, C'_1$  sont en ligne droite, ainsi que  $A_1, B_1, C_1$ . Cela posé si nous appelons  $p$  le demi-périmètre du triangle,  $R$  le rayon du cercle circonscrit,  $r$  le rayon du cercle inscrit,  $d$  la distance des centres de les deux cercles. Démontrer que les distances  $P, P'$  du centre de gravité du ABC aux droites  $A'_1 B'_1 C'_1$  et  $A_1 B_1 C_1$  sont respectivement

$$P = \frac{p^2 + r(4R+r)}{2d}, \quad P' = \frac{(p-a)^2 - r_a(4R-r_a)}{2d_a},$$

$r_a$ , étant le rayon du cercle exinscrit tangent au côté BC et  $d_a$  la distance du centre de ce cercle au centre du cercle circonscrit.

**14573.** (Professor E. J. NANSON.)—Prove that

$$\sum \sin^2 A \sin(B-C) = -\sin(A+B+C) \Pi \sin(B-C).$$

**14574.** (Professor A. DROZ-FARNY.)—La bissectrice intérieure de l'angle A du triangle ABC coupe en D et E le côté BC et la circonférence circonscrite au triangle. Soit I le centre du cercle inscrit. Calculer le rapport AI/DE. Que devient ce rapport lorsque les côtés du triangle sont en progression arithmétique, BC étant le côté moyen ?

**14575.** (J. A. THIRD, M.A., D.Sc.)—If  $A'B'C'$  be the first BROCARD triangle of ABC, and D, E, F be the points where  $B'C', C'A', A'B'$  meet BC, CA, AB respectively, show (1) that  $DA', EB', FC'$  are tangents to the BROCARD circle of ABC, and (2) that DA, EB, FC are tangents to the circumconic of ABC which passes through the BROCARD points.

**14576.** (Professor COCHEZ.)—Courbe  $(x^2 - y^2)xy = 1$ .

**14577.** (Professor LANGHORNE ORCHARD, M.A., B.Sc.)—Sum to  $n$  terms the series  $1 + 5 + 3 + 4 + 3\frac{1}{2} + 3\frac{1}{2} + 3\frac{1}{2} + \dots$

**14578.** (Professor K. J. SANJANA.)—If A vary inversely with B, then B varies inversely with A; this is taken to be mathematically correct, but often fails when applied to purposes of practical inference. Thus, though it is true that price varies inversely with supply, we cannot say that supply varies inversely with price, for a higher price produces a more plentiful supply. Explain the apparent anomaly; or is the converse logically incorrect ?

**14579.** (Professor N. BHATTACHARYYA.)—The axes of a given ellipse E are  $2a, 2b$ ; and a similar ellipse  $E_1$  is inscribed within the evolute of E; another similar ellipse  $E_2$  is inscribed within the evolute of  $E_1$ , and so on. If  $S_n$  denote the sum of the areas of the ellipses E,  $E_1, E_2 \dots E_{n-1}$ , prove that

$$S_{2n} = \left\{ 1 + \left( \frac{a^2 - b^2}{a^2 + b^2} \right)^{2n} \right\} S_n.$$

**14580.** (Professor UMES CHANDRA GHOSH.)—Show that the sum of the  $r$ th powers of all the numbers less than any number N and prime to it, is

$$N^{r+1}/(r+1) \left\{ (1-1/a)(1-1/b)(1-1/c) \dots \right\} + B_1 \cdot r/2! \\ \times N^{r-1} (1-a)(1-b)(1-c) \dots \\ - B_2 \left[ \{r(r-1)(r-2)\}/4! \right] \cdot N^{r-3} (1-a^3)(1-b^3)(1-c^3) \dots \\ + B_3 \left[ \{r(r-1)(r-2)(r-3)(r-4)\}/6! \right] \cdot N^{r-5} (1-a^5)(1-b^5)(1-c^5) \dots \\ \dots \&c.,$$

$a, b, c, \&c.$ , being the different prime factors of N, and  $B_1, B_2, B_3, \&c.$ , the Bernoullian numbers.

**14581.** (D. BIDDLE.)—A given square has inscribed to it a random square and also a circle. Find the respective chances that a point taken at random in its area shall lie (1) within the inscribed square but outside the circle, (2) within the circle but outside the inscribed square.

**14582.** (R. TUCKER, M.A.)—The tangent at D, the extremity of the diameter through A, to the circumcircle ABC meets AC, AB produced in  $q, r$ . The orthocentre and S.-point of  $Aqr$  are given by  $\cos^2 B \cos^2 C, \cos A \cos B, \cos C \cos A$  and  $2bc \Pi \cos A, ca, ab$ , respectively. If  $\rho_a (\rho_b, \rho_c)$  are the circumradii of  $Aqr, \&c.$ , then  $\rho_a \rho_b \rho_c = R^3/P^2$ , where  $P \equiv \Pi(\sin A)$ . If  $\Omega_a, \Omega'_a, \&c.$ , are the B.-points of  $Aqr, \&c.$ , then the sum of the squares of the six tangents from A (B, C) to the circles  $\Omega \Omega' \Omega_a \Omega'_a, \&c.$ , equals  $4\Delta \sin^2 \omega/P$  and the product of the tangents =  $32R^2 \Delta \sin^2 \omega/P^3$ . If  $Bq, Cr$  meet in  $T_a$ , and so on, then  $AT_a, BT_b, CT_c$  meet in  $\cot A \cos A, \cot B \cos B, \cot C \cos C$ .

**14583.** (J. MACLEOD, M.A.)—EBK, HCL, two unequal circles external to each other, are cut by the line of centres AD in B, C. AM = diameter of EBK, and DN = diameter of HCL; M, N being on line of centres. ME is tangent to EBK, and NH to HCL. EB and NH meet in F, and ME and HC in G. Prove that  $FG = \frac{1}{2}EH$ .

**14584.** (R. F. DAVIS, M.A.)—ABC is a given triangle; O circumcentre, R circumradius. If along AO AP be set off =  $R \cdot \cos^2 \frac{1}{2}A$ , the circle centre P, radius PA touches the incircle of ABC (as well, of course, as the circumcircle). Hence, if A be a fixed point on a given circle, and PQ a variable chord of constant length, the incircle of the triangle APQ touches a fixed circle. (Due to Mr. C. E. McVICKER, M.A.)

**14585.** (J. H. TAYLOR, M.A.)—If three circles, which touch a fixed straight line at the focus S of a parabola, touch the parabola in P, Q, R; and cut in points  $p, q, r$  a circle which, centred on the axis, passes through S and touches the parabola, the circles  $pSO', qSO', rSO'$  (where O' is the reflection of the focus in the directrix) intersect at  $60^\circ$ .

**14586.** (R. O. ARCHIBALD, M.A.)—Any circle through the cusp and centre of the base of a cardioid cuts the curve again in two points  $P_1, P_2$ , and its double tangent in  $P_3, P_4$ . Show that, (1) the line  $P_1, P_2$  produced is tangent to the cardioid; (2) the lines  $P_1P_3, P_2P_4$  (which do not meet unless produced) are tangent to the cardioid at  $P_1, P_2$  respectively. Conversely, if any tangent to a cardioid meet the curve again in  $P_1, P_2$ , and if the tangents to the curve at  $P_1, P_2$  meet the double tangent in  $P_3, P_4$ , the points  $P_1, P_2, P_3, P_4$  lie on a circle through the cusp and centre of the base of the cardioid.

[Note.—The tangents  $P_1P_3, P_2P_4$  when produced cut on a hyperbola, and the points  $P_3, P_4$  divide the points of contact of the double tangent harmonically. This result was first stated by SIEBECK, *Crelle's Journal*, 1866, p. 362, and later by WOLSTENHOLME in *Educational Times Reprint*, 1874, Vol. xx., p. 34, Quest. 4142.]

**14587.** (G. H. HARDY, B.A.)—Prove that the line element of a sphere of unit radius may be expressed in the form

$$ds^2 = \{dn^2 - dn^2\beta\} (da^2 - d\beta^2);$$

that the equation of a circle on the sphere is

$$p \sin^2 \frac{1}{2}(\alpha - \beta) \sin^2 \frac{1}{2}(\alpha + \beta) + q \sin^2 \frac{1}{2}(\alpha + \beta) + r \sin^2 \frac{1}{2}(\alpha - \beta) + s = 0;$$

and that the condition that two circles should cut at right angles is

$$p\rho' + p'\rho = q\rho' + q'\rho.$$

**14588.** (R. P. PARAMJPYE, B.A.)—Prove by elementary considerations, and without the use of continued fractions, that the most general positive integral solution of the equation  $x^2 - 2y^2 = z^2$  is

$$x = k(\lambda^2 + 2\mu^2), \quad y = 2k\lambda\mu, \quad z = \pm k(\lambda^2 - 2\mu^2),$$

where  $\lambda$  and  $\mu$  are prime to each other, and the ambiguous sign is chosen to make  $z$  positive.

**14589.** (Rev. J. CULLEN.)—If  $\alpha, \beta, \gamma$  are vectors from a point P to the vertices of a given triangle ABC; also  $p, q, r$  are the trilinear coordinates of P, and  $p_1, q_1, r_1$  those of another point Q, show that the vector PQ is  $\sum \alpha p_1 / \sum \alpha p$ , with the condition  $\sum \alpha p \alpha = 0$ . [E.g.,  $\sum \alpha^2 \alpha = \alpha^2$  with  $\sum \alpha = 0$  is the vector from the centroid to the symmedian point.] Apply the above result to prove Quest. 14532.

**14590.** (G. D. WILSON, B.A.)—If the conic represented by  $Lx^2 + my^2 + nz^2 = 0$  (areal coordinates) be a parabola, show that the equation of its axis is

$$\frac{\cos A}{al} (my - nz) + \frac{\cos B}{bm} (nz - lx) + \frac{\cos C}{cn} (lx - my) = 0.$$

**14591.** (E. W. REES, B.A.)—Give a geometrical construction of a triangle, two sides and the inradius being given.

**14592.** (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Solve in integers in a general form the equation  $N_1 \cdot N_3 = N_2 \cdot N_4$ , where  $N_r = x^r + iy^r$ , and give numerical examples.

**14593.** (ROBERT W. D. CHRISTIE.)—Find all the primitive roots of any prime of the form  $12l + 1$  from a single equation

$$ax^{2k} \pm bx^k - c = 0 \pmod{12l + 1},$$

and extend the same, if possible to all primes.

E.g.,  $x^2 \pm 5x - 1 \equiv 0 \pmod{13}$ .

**14594.** (V. DANIEL.)—Points P and Q are taken on the sides CA, CB of a triangle ABC, so that  $PC \cdot QC = PA \cdot QB$ . Show that the envelope of the line PQ is the parabola touching CA and CB in A and B, and for which semi-latus rectum =  $\Delta^2/CV^2$ , CV being the median through C.

**14595.** (R. KNOWLES.)—If  $d$  denote the distance between the centres of the nine-point and circum-circles of a triangle, prove that  

$$4d^2 = R^2(1 - 8 \cos A \cdot \cos B \cdot \cos C).$$

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

**6614.** (J. J. WALKER, M.A.)—If  $u, v, w$  are any three functions of  $x$ , and if  $w'$  stands for  $dw : dx$ ,  $D^2w$  for  $d^2w : dx^2$ , ..., prove that the formula

$$uw'D^2vw^n + nDuvw' \cdot D^{n-1}vw^{n-1} + nD^2uw^2w' \cdot D^{n-2}vw^{n-2} + \dots + nD^{n-1}uw^{n-1}w' \cdot Dvw + D^n uw^n w',$$

is implicitly symmetrical in  $u, v$ ; and exhibit its value in an explicitly symmetrical form.

**6626.** (Professor SYLVESTER, F.R.S.)—(1) If  $\phi$  is any rational function of  $\omega$ , investigate a method for determining the condition to which  $\lambda$  must be subject in order that  $\lambda\phi + 1 = 0$  shall have one or more real roots of  $\omega$  lying between 0 and 1. (2) If  $\phi, \psi$  are any two rational functions of  $\omega$ , investigate a method for determining the condition to which  $\lambda, \mu$  must be subject in order that  $\lambda\phi + \mu\psi + 1 = 0$  shall have one or more real roots of  $\omega$  lying between 0 and 1.

**6629.** (Professor WOLSTENHOLME, M.A.)—Prove that the locus of the equation

$$\frac{\pi}{2} y^n = \int_0^{\pi} \frac{\sin z}{z} \cdot \frac{\sin 2z}{2z} \cdot \frac{\sin 4z}{4z} \dots \frac{\sin 2^{n-1}z}{2^{n-1}z} \cdot \frac{\sin \pi z}{z} dz$$

from  $x = -1$  to  $x = 1$  is the straight line  $y = x$ .

**6630.** (Professor NASH, M.A.)—If three tangents OP, OQ, OR be drawn to a semi-cubical parabola from any point O, prove that (1) the circle through P, Q, R meets the curve in three other points P', Q', R', the tangents at which will meet in another point O'; (2) the middle point of OO' always lies on a fixed straight line; and (3) the lines joining O, O' to the cusp make equal angles with the axis.

**6632.** (Professor GENSE, M.A.)—Find the envelope of the asymptotes of conics inscribed in or circumscribed about a given quadrilateral.

**6633.** (W. J. C. MILLER, B.A.)—A rifleman, who, on an average, hits his mark  $a$  times out of  $b$ , fires at random at a circular target which is turning round a vertical axis through its centre. Find his chance of hitting the target, and show what this chance becomes when  $a : b = 11 : 14$ .

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to D. BIDDLE, Esq., Charlton Lodge, Kingston-on-Thames.

**NOTICE.**—Vol. LXXII. of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price, to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

THE LONDON MATHEMATICAL SOCIETY.

Thursday, May 10, 1900.—Prof. Elliott, F.R.S., Vice-President, in the Chair. Twenty-two members present.

THE SPECIAL GENERAL MEETING.

The Chairman, having read the By-laws bearing upon the subject of the meeting, announced that it was proposed "that By-law IV., 1 (By-laws, p. xiii.) be amended by substituting the words 'half past 5 o'clock in the afternoon' for '8 o'clock in the evening.'" The motion, having been seconded by Dr. J. Larmor, was carried unanimously.

ORDINARY GENERAL MEETING.

Dr. Glaisher communicated "A Congruence Theorem relating to Eulerian Numbers and other Coefficients."

Prof. Lamb spoke on "A Peculiarity of the Wave-System due to the Free Vibrations of a Nucleus in an extended medium."

Prof. Love gave a description of Mr. J. H. Michell's "Diagrams illustrating Distributions of Stress in Two Dimensions" (a paper communicated at the January meeting).

The following papers were taken as read:—

"The Differential Equation whose Solution is the Ratio of Two Solutions of a Linear Differential Equation," Mr. M. W. J. Fry.

"Note on the Quinquefacial Equation," Prof. L. J. Rogers.

"On the Differentiation of Single Theta Functions," Rev. M. M. U. Wilkinson.

"Linear Substitutions commutative with a given Substitution," Dr. L. E. Dickson

Lt.-Col. Cunningham, R.E., showed that numbers which are expressible in the two forms  $N = (\mu x^2 + \nu y^2)/a = (\mu' x'^2 + \nu' y'^2)/a'$  are always composite, when  $\mu\nu = \mu'\nu'$ ; and showed how to reduce them to the forms  $N = X^2 + \mu Y^2 = X'^2 + \mu' Y'^2$ , the factorization of which is known from Euler's researches.

CASSELL'S EDUCATIONAL LIST.

JUST PUBLISHED.

**OUR GREAT CITY; or, London the Heart of the Empire.** By H. O. ARNOLD-FORSTER, M.P. About 300 pages, crown 8vo. With a Series of Full-page Illustrations. Strongly bound in cloth, price 1s. 9d.

Cheap Edition, 2s. 6d., of

**"SCARLET AND BLUE,"** The Best Collection of Patriotic Songs. Edited by JOHN FARMER, of Oxford.

Referring to this book, FIELD-MARSHAL LORD ROBERTS, V.C., G.C.B., G.C.S.I., &c., &c., writes:—

"I have been particularly interested in the collection. . . I feel sure that the whole publication will become popular. . . It is all-important, in my opinion, that esprit de corps should be encouraged in any possible way, and there is nothing which brings such a feeling to the surface in the minds of Englishmen as recollections of former deeds of heroism and bravery."

Cheap Edition, now ready, price 6d.

**THE COMING OF THE KILOGRAM.** By H. O. ARNOLD-FORSTER, M.P. A Plea for the Adoption of the Metric System of Weights and Measures.

New and Revised Edition.

**CASSELL'S LESSONS IN FRENCH.** Parts I. and II., 2s. each; complete in One Vol., 3s. 6d.

This work (which reached a sale of 141,000 copies in its original edition) has been revised by MR. JAMES BOELLE, B.A., Examiner in French Language and Literature in the University of London. It is now in all respects suitable for the Oxford and Cambridge Local Examinations and the College of Preceptors Examinations.

**FOUNDERS OF THE EMPIRE.** By PHILIP GIBBS. 256 pages. Extra Crown 8vo., prettily bound in cloth. With four coloured plates and numerous illustrations. Price 1s. 8d.; or handsomely bound as Prize Book, 2s. 6d.

**IN DANGER'S HOUR; or, Stout Hearts and Stirring Deeds.** A Reading Book for Upper Standards. With Introduction by H. O. ARNOLD-FORSTER, M.P. With Coloured Plates and numerous Illustrations. Prettily bound in blue cloth, 1s. 8d.; or, handsomely bound, cloth gilt, 2s. 6d.

**A PRACTICAL METHOD OF TEACHING GEOGRAPHY.** Book I.: ENGLAND AND WALES. Book II.: ENGLAND. By J. H. OVERTON, F.C.S. (Twenty-two Maps, interleaved with tracing paper.) 6d. each.

Cassell's Educational Catalogue will be sent post free on application.

CASSELL & COMPANY, LTD., LUDGATE HILL, LONDON, E.C.

NOW READY. Demy 8vo, cloth, 676 pp., price 2s. 6d., free by post. To Members of the College the price is 1s., or 1s. 6d. free by post.

THE CALENDAR OF

The College of Preceptors, FOR THE YEAR 1900:

CONTAINING

All information respecting the objects and operations of the College, Lists of Officers, Examiners, and Members, the Regulations of the various Examinations, &c., with an Appendix containing the following Examination Papers:—

1. Papers set at Examination of Teachers for Diplomas, Midsummer, 1899.
2. Do. do. do. Christmas, 1899.
3. Papers set at Examination of Pupils for Certificates, Midsummer, 1899.
4. Do. do. do. Christmas, 1899.
5. Papers set at Professional Preliminary Examination, March, 1899.

# MACMILLAN & CO.'S LATEST LIST.

## ENGLISH.

### A FIRST MANUAL OF COMPOSITION.

Designed for use in the Highest Grammar Grade and the Lower High School Grades. By EDWIN HERBERT LEWIS, Ph.D., Professor in the Lewis Institute, Chicago. Crown 8vo, 3s. 6d.

### KEY AND COMPANION TO ENGLISH GRAMMAR, PAST AND PRESENT.

By J. C. NESFIELD, M.A. Globe 8vo, 2s. 6d. net.

### MACMILLAN'S ENGLISH CLASSICS. NEW VOLUMES.

### FROM BLAKE TO ARNOLD. Selections from English Poetry (1783-1853).

With Introduction, Critical Essays, and Notes, by C. J. BRENNAN, M.A. Edited by J. P. PICKBURN, B.A., LL.B., and J. LE GAY BRERETON, B.A. Globe 8vo, 2s. 6d.

EDUCATIONAL TIMES.—"A very good piece of work. . . . The introductions are fresh and perspicacious, and the selections are generally admirable."

### DRYDEN.—THE HIND AND THE PANTHER.

With Introduction and Notes by W. H. WILLIAMS, M.A., formerly Scholar of Trinity College, Cambridge; Professor of Classics and English Literature in the University of Tasmania. Globe 8vo, 2s. 6d.

SCHOOLMASTER.—"A skilfully written introduction of some dozen pages gives a clear and concise enunciation and criticism of the animal fable which the poem is in form. . . . The notes which follow the text are, as far as we have tested them, accurate and full."

## FRENCH.

### LATEST ADDITIONS TO

### SIEPMANN'S ELEMENTARY FRENCH SERIES.

### NORMAND.—L'ÉMERAUDE DES INCAS.

Par CHARLES NORMAND. Adapted and Edited by the late F. ASTON BINNS, M.A. Balliol College, Oxford. Globe 8vo, 2s.

### WORD AND PHRASE BOOK. Sewed, 6d.

GUARDIAN.—"A text which boys will find of thrilling interest. It is rich in vocabulary and not overweighed with difficult constructions. We have been disappointed in no single instance in either notes or vocabulary, and the extensive aids to the acquisition of a stock of words and of facility in composition, which characterize this series, seem quite up to the usual level of excellence."

### DAUDET.—LA TOUR DES MAURES.

Par ERNEST DAUDET. Adapted and Edited by A. H. WALL, M.A., Assistant-Master at Marlborough College. Globe 8vo, 2s.

### WORD AND PHRASE BOOK. Sewed, 6d.

SCHOOL WORLD.—"The notes are good."  
EDUCATIONAL TIMES.—"The story is of rather an exciting nature, and is well suited for rapid reading. The notes are brief but sufficient."

### VERNE.—LE TOUR DU MONDE EN QUATRE-VINGTS JOURS.

Par JULES VERNE. Adapted and Edited by LOUIS A. BARBE, B.A., Headmaster of the Modern Language Department in the Glasgow Academy. Globe 8vo, 2s.

### WORD AND PHRASE BOOK. Globe 8vo, sewed, 6d. KEY. 2s. 6d. net.

ACADEMY.—"An excellent and amusing class-book. . . . The notes are satisfactory, and so is the vocabulary."

### A HISTORICAL FRENCH GRAMMAR.

By Prof. ARSÈNE DARMESTÈRE. Edited by Prof. ERNEST MURET and Prof. LÉOPOLD SUDRE. Authorized English Edition by Prof. ALPHONSE HARTOG. Crown 8vo, 12s. 6d.

EDUCATIONAL TIMES.—"MM. Muret and Sudre have done their work very thoroughly. . . . The outcome appears to be eminently satisfactory."

### AN ELEMENTARY FRENCH GRAMMAR.

By G. EUGÈNE FASSACHT, sometime Assistant-Master in Westminster School, Editor of "Macmillan's Series of Foreign Classics." Globe 8vo, 1s. 6d.

### SPECIMENS OF MODERN FRENCH PROSE.

Edited, with Biographical and Critical Notes, by H. E. BERTHON, Taylorian Teacher of French in the University of Oxford. Pott 8vo, 2s. 6d.

[Foreign School Classics.]  
Educational Times.—"Mr. Berthon has already given us a little volume of selections of French poetry. The present book shows the same happy discrimination and the same conscientious editing. . . . The biographical and historical notes are distinctly good."

## GERMAN.

### LATEST ADDITION TO

### SIEPMANN'S ADVANCED GERMAN SERIES.

### KURZ.—DIE HUMANISTEN.

Von ISOLDE KURZ. Edited by A. VOEGELIN, M.A. (Lond.), Assistant-Master at St. Paul's School. Authorized Edition. Globe 8vo, 2s. 6d.

### WORD AND PHRASE BOOK. Sewed, 6d.

## HISTORY AND GEOGRAPHY.

### A SHORT HISTORY OF THE UNITED STATES.

For School Use. By EDWARD CHANNING, Professor of History in Harvard University. With Maps and Illustrations. Crown 8vo, 6s.

### TARR AND McMURRY GEOGRAPHIES.

**FIRST BOOK.—HOME GEOGRAPHY AND THE EARTH AS A WHOLE.** By Prof. RALPH S. TARR, B.Sc., F.G.S.A., and Prof. FRANK M. McMURRY, Ph.D. With many Coloured Maps and numerous Illustrations. Crown 8vo, 3s. 6d.

## GREEK.

### PAUSANIAS, AND OTHER GREEK SKETCHES.

By J. G. FRAZER, Fellow of Trinity College, Cambridge, D.C.L. Oxford, LL.D. Glasgow, Litt.D. Durham. Globe 8vo, 5s. [Everaley Series.]

### TOPICS ON GREEK AND ROMAN HISTORY.

Intended for use in Secondary Schools. By ARTHUR L. GOODRICH, Free Academy, Utica, New York. Crown 8vo, 3s. 6d.

### KEY TO INTRODUCTION TO GREEK PROSE COMPOSITION.

By H. PITMAN, M.A. Globe 8vo, 5s. net.

### MACMILLAN'S CLASSICAL SERIES. NEW VOLUMES.

### EURIPIDES.—THE ANDROMACHE.

With an Introduction and Notes by A. R. F. HYSLOP, M.A., Assistant-Master in Harrow School. Fcap. 8vo, 2s. 6d.

EDUCATIONAL NEWS.—"A sound and scholarly piece of work."

SCHOOL WORLD.—"The editor has performed his task with diligence and skill. His annotations are sound and luminous."

### GREEK MELIC POETS.

By HERBERT WEIR SMYTH, Ph.D. Göttingen, Professor of Greek at Bryn Mawr College, Pennsylvania. Fcap. 8vo, 7s. 6d.

PILOT.—"We are glad to give a very hearty welcome to this valuable and learned edition of all the best remains of Greek melic poetry. . . . The breadth and accuracy of the editor's learning are evidenced on every page of his work. The book will be eagerly read by countless students in England and America."

SCHOOL WORLD.—"A book of very great use and interest. . . . Altogether an excellent contribution to the study of old Greek poetry."

### DEMOSTHENES.—ON THE PEACE, SECOND PHILIPPIC, ON

THE OBERONESUS, AND THIRD PHILIPPIC. Edited, with Introduction and Critical and Explanatory Notes, by JOHN EDWIN SANDYS, Litt.D., Fellow and Tutor of St. John's College, and Public Orator in the University of Cambridge. Fcap. 8vo, 5s.

GUARDIAN.—"Like all Dr. Sandys's work, it is admirably done. . . . As a piece of scholarship, it is excellent."

LITERATURE.—"The edition is thoroughly satisfactory."

## MATHEMATICS.

### BOOK I. NOW READY.

### THE ELEMENTS OF EUCLID.

By I. TODDUNTER, F.R.S. New Edition, Revised by S. L. LONEY, M.A. Globe 8vo, 4s. 6d. Book I., 1s.; Books I. and II., 1s. 6d.; Books I.-IV., 3s.

### WOOLWICH MATHEMATICAL PAPERS.

For Admission into the Royal Military Academy for the Years 1890-1899. Edited by E. J. BROOKSMITH, B.A., LL.M., St. John's College, Cambridge; Instructor of Mathematics at the Royal Military Academy, Woolwich. Crown 8vo, 6s.

### THE TEACHING OF ELEMENTARY MATHEMATICS.

By DAVID EUGÈNE SMITH, Principal of the State Normal School at Brockport, New York. Crown 8vo, 4s. 6d. net. [Teachers' Professional Library.]

SCHOOL WORLD.—"An excellent book, distinguished by common sense and sound judgment. . . . We have no hesitation in recommending the work to all mathematical teachers."

## KELLAND TRAINING COLLEGE FOR TEACHERS, HIGH SCHOOL AND KINDERGARTEN, LEICESTER.

*Principal*—Miss MORGAN, N.F.U. Higher Certificate. *Head English Mistress*—Miss J. B. MORGAN, B.A. Lond. (Assisted by a Staff of Trained and Certificated English and Foreign Teachers.)

Preparation for Examinations of the National Froebel Union, Cambridge Teachers' Diploma, Oxford and Cambridge Locals, &c.

Grounds include Tennis Court, Croquet Lawn, Sand Playground, Garden, &c.

Prospectus, with particulars of Boarders' Fees, Entrance Scholarships, on application.

Resident GOVERNNESS STUDENT can be received. Premium 25 guineas. Excellent opportunity for gaining Teachers' Diplomas.

## BEDFORD COLLEGE, LONDON (FOR WOMEN).

YORK PLACE, BAKER STREET, W.

*Principal*—Miss ETHEL HURLBATT.

The Session 1900-1901 will open on Thursday, October 4th. Students are requested to enter their names on Wednesday, October 3rd.

Lectures are given in all branches of General and Higher Education. Taken systematically, they form a connected and progressive course, but a single course of Lectures in any subject may be attended.

Courses are held in preparation for all the Examinations of the University of London in Arts and Science, for the Teachers' Diploma (London), and for the Teachers' Certificate (Cambridge); and also a Special Course of Scientific Instruction in Hygiene. Six Laboratories are open to students for Practical Work. Two Entrance Scholarships awarded yearly. A Gladstone Memorial Prize and the Early English Text Society's Prize are awarded to students each June.

The Art School is open from 10 to 4. Students can reside in the College.

Full particulars on application to the PRINCIPAL.

## BEDFORD COLLEGE, LONDON (FOR WOMEN).

YORK PLACE, BAKER STREET, W.

### DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING

(Recognized by the Cambridge Syndicate.)

*Head of the Department*—Miss H. ROBERTSON, B.A.

The Third Term of the Session 1900 begins on Thursday, October 4th.

The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge, held annually in December.

The Council will, in December, award a Gilchrist Travelling Studentship, value £70.

Full particulars on application to Miss ROBERTSON.

## THE DATCHELOR TRAINING COLLEGE,

CAMBERWELL GROVE, S.E.

(In connexion with the Datchelor Collegiate School for Girls.)

*Governing Body*—The Worshipful Company of Clothworkers of the City of London.

*Principal*—Miss RIGG.

*Mistress of Method and Lecturer*—Miss CARPENTER. Assisted by other Teachers and Lecturers.

This College provides a full course of professional training for Women Teachers, together with abundant opportunity for regular class teaching in a school of over 400 pupils. Special provision is made for instruction in Physiology and Hygiene, Elocution, Drawing, and Ling's Swedish Drill.

Students are prepared for the Examination of the Cambridge Teachers' Training Syndicate.

Fees moderate.

A COLLEGE HALL OF RESIDENCE is provided for Students in the Training College. Terms moderate.

A Free Studentship (Training and Residence) will be awarded in September. For conditions apply to the SECRETARY.

## THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.

*Principal*—Miss M. PUNNETT, B.A. (Lond.).

The object of this College is to give a professional training to educated women who intend to teach. In addition to the course of training, it offers the advantages of a College life and one year's residence in Cambridge.

The Students attend the Cambridge University Lectures on Teaching, in addition to those of the Resident and Visiting Lecturers, and are prepared for the Cambridge Teachers' Certificate (Theory and Practice). Ample opportunity is given for practice in teaching science, languages, mathematics, and the other usual school subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Wollaston Road, Cambridge.

## ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS IN SECONDARY SCHOOLS AND IN FAMILIES.

*Principal*—Miss M. R. WALKER.

This College provides a complete Course of Professional Training for Women Teachers, in preparation for the Cambridge Teachers' Certificate. The Course includes attendance at the University Lectures on Education, in addition to Lectures delivered by the College Staff, and the Students have ample opportunities of gaining experience in Class-Teaching in Schools. Five Heriot Bursaries of £30 are offered in October. Apply to the PRINCIPAL, 5 Melville Street, Edinburgh.

## JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

*Address*—74 GOWER STREET, LONDON, W.C.

*Registrar*—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

## JOINT AGENCY FOR ASSISTANT-MASTERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

*Registrar*—Rev. F. TAYLOR, M.A. Cantab.

The Joint Agency for Assistant-Masters and Tutors is under the management of a Joint Committee composed of representatives of the following Bodies:—

Headmasters' Conference.

Incorporated Association of Headmasters.

College of Preceptors.

Teachers' Guild.

Welsh County Schools' Association.

Private Schools' Association.

Association of Headmasters of Preparatory Schools.

Association of Headmasters of Roman Catholic Schools.

Assistant-Masters' Association.

Association of Technical Institutions.

&c. &c.

As the Agency is not working with a view to profit, but to benefit Assistant-Masters, the rates of commission are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m., Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

## ASSOCIATION FOR PROMOTING THE EMPLOYMENT IN ELEMENTARY SCHOOLS OF GIRLS WHO HAVE HAD A SECONDARY EDUCATION.

*President*:

THE ARCHBISHOP OF CANTERBURY.

*Chairman of Executive Committee*:

SIR JOSHUA FITCH.

*Honorary Secretary*:

Miss J. MERIVALE,

4 Park Town, Oxford,

who will be glad to supply information.

## THE MARIA GREY TRAINING COLLEGE FOR WOMEN TEACHERS,

SALISBURY ROAD, BRONDESBURY, LONDON, N.W.

*Principal*—Miss ALICE WOODS.

A Full Course of Professional Training is offered to ladies who desire to become Teachers in Secondary Schools or in Kindergartens.

The Course for students preparing for the Cambridge Teachers' Certificate or for the London Teachers' Diploma begins in September or January, and lasts for one or two years. The Course for Kindergarten students preparing for the Higher Certificate of the National Froebel Union begins in September, and takes two years and one term.

Ample opportunities are given for Practice in Teaching in the School and Kindergarten of 150 pupils on the premises, as well as in other Schools.

The Winkworth Hall of Residence, close to the College, accommodates 20 students.

Scholarships to the amount of £230, from public and private sources, are annually awarded.

For all particulars as to qualifications for entrance, terms, scholarships, &c., apply to Miss ALICE WOODS, at the College.

**LONDON UNIVERSITY EXAMINATIONS.**

**SUMMER VACATION CLASSES FOR BEGINNERS**

IN PRACTICAL CHEMISTRY, PHYSICS, BOTANY, AND ZOOLOGY.

These Classes commence Tuesday, Aug. 7th, 1900, at University Tutorial College, London, and meet daily for four weeks. The Chemistry, Botany, and Zoology Courses extend over four weeks, and the Physics Course over two weeks.

The subjects will be dealt with in a very elementary manner, and in Zoology and Botany the work at first will be taken very slowly, so that the student may acquire skill with the knife and microscope, and thus pursue his private work to greater advantage.

**Summer Vacation Revision Class for B.Sc.**

Classes are held in subjects for the B.Sc. Examination, Oct., 1900, commencing Tuesday, Aug. 7th, at University Tutorial College, London, and extending over a period of four weeks. Special attention is paid to practical work.

Daily Lectures, supplemented by Private Tuition or small Exercise Classes, are given in Pure and Mixed Mathematics, and the more important parts taken up in Zoology and Botany.

During the last two Sessions, nearly 300 students of University Tutorial College have passed the Prelim. Sci. (M.B.) and Inter. Science Examination of London University with 30 places in Honours, and 64 students have passed the B.Sc. Examination with 15 places in Honours.

Full particulars of classes may be had from **THE VICE-PRINCIPAL,** University Tutorial College, 32 Red Lion Square, Holborn, W.C.

**ENGINEERING AND CHEMISTRY.**

**CITY AND GUILDS OF LONDON INSTITUTE.**

SESSION 1900-1901.

The Courses of Instruction at the Institute's CENTRAL COLLEGE (Exhibition Road) are for Students not under 16 years of age; those at the Institute's TECHNICAL COLLEGE, FINSBURY, for Students not under 14 years of age. The Entrance Examinations to both Colleges are held in September, and the Sessions commence in October. Particulars of the Entrance Examinations, Scholarships, Fees, and Courses of Study, may be obtained from the respective Colleges, or from the Head Office of the Institute, Gresham College, Basinghall Street, E.C.

**CITY AND GUILDS CENTRAL TECHNICAL COLLEGE.**

(EXHIBITION ROAD, S.W.)

A College for higher Technical Instruction for Day Students not under 16 preparing to become Civil, Mechanical, or Electrical Engineers, Chemical and other Manufacturers, and Teachers. Fee for a full Associateship Course, £25 per Session. Professors:—

## HINTS ON FRENCH SYNTAX.

By **F. STORR,**

Chief Master of Modern Subjects in Merchant Taylors' School.

"The merit of the book is its simplicity and brevity, and we have no hesitation in saying that these *Hints* would prove a valuable supplement to any grammar that might be in use. . . . Neatly printed in clear, bold type, and interleaved throughout, this book is one we can confidently recommend not only to teachers for class use, but as an invaluable aid to students preparing for the Scholarship, Certificate, and London Matriculation Examinations."—*The Practical Teacher*, January, 1900.

 The Athenæum says:—"Edited with great care. No better edition could be found either for the class teacher or for the solitary student."  
 The Guardian says:—"The notes are excellent."

**SHAKESPEARE.—HENRY THE FIFTH.** Edited by W. BARRY, B.A. ( Lond.). 8d. *(Blackie's Junior School Shakespeare.)*

**SHAKESPEARE.—THE MERCHANT OF VENICE.** Edited by H. L. WITHERS, B.A. 1s. 6d. *(The Warwick Shakespeare.)*  
 The Journal of Education says:—"One of the best small editions of 'The Merchant of Venice' that we have seen. We heartily recommend this edition."  
 The Educational Times says:—"The introduction and notes alike are models of interpretation by suggestion as well as by clear, pointed exposition."

**CAESAR.—THE GALLIC WAR. Books IV., V., VI.** Edited by Prof. JOHN BROWN. With numerous Illustrations, Plans, and Maps. 1s. 6d. each.  
 The Athenæum says:—"Admirably done (Book V.). The notes are terse and lucid; the introduction is full and equally lucid."

**HORACE.—THE ODES. Book IV.** Edited by STEPHEN GWYNN, B.A. With or without Vocabulary. Illustrated. 1s. 6d. *(Blackie's Illustrated Latin Series.)*

The Academy says:—"The distinguishing feature of this new series is the illustrations. Those in the present volume are interesting and appropriate. Apart from this the work is well done. Mr. Gwynn's introduction is excellent, and shows independence of thought."

**VIRGIL.—ÆNEID. Book I.** Edited by Prof. A. J. CHURCH, M.A. Cloth, 1s.  
 The Bookman says:—"One of the most intelligently edited text-books for elementary students to be met with."

**LIVY.—Book V.** Edited by W. CECIL LAMING, M.A. Cloth, 2s. 6d.  
 The Spectator says:—"Mr. Laming has incorporated excellent matter in his book. . . . There are some valuable hints on translation, . . . . There are some excellent illustrations which add much to the value of the book."

\* \* \* The Publishers will be pleased to entertain applications for Specimen Copies with a view to introduction.

# MESSRS. WM. BLACKWOOD & SONS' LIST.

## BLACKWOODS' ILLUSTRATED CLASSICAL TEXTS.

General Editor—H. W. AUDEN, M.A., Assistant-Master at Fettes College.

NOW READY.

**Cæsar.—Gallic War. Books IV., V.** By ST. J. B. WYNNE WILLSON, M.A., Assistant-Master at Rugby. *With or without Vocabulary.* 1s. 6d. Vocabulary separate, 3d.

(Prescribed for the Oxford Local, London Matriculation, and College of Preceptors Examinations, 1900.)

"Mr. Wynne has certainly succeeded in giving boys all the information and help they could possibly desire for translating Cæsar, and we may say that a thorough acquaintance with the contents of this volume would be a considerable step towards a knowledge not only of Latin, but of Roman history and antiquities in general. . . . The notes are copious and accurate; while an appendix of proper names, with historical and geographical notes, is a good feature."—*Journal of Education.*

"A very attractively edited volume, with some quite successful pictures and good notes which reach a really high level of merit."—*Guardian.*

**Virgil.—Georgics. Book IV.** By J. SARGEANT, M.A., Assistant-Master at Westminster. 1s. 6d.

(Prescribed for the Cambridge Higher Local Examinations, 1900, 1901.)

"The editing of the specimen before us is thoroughly competent: the notes are brief and interesting, and the introduction and the appendices are of more than average merit. . . . The price of the book is remarkably low."—*Educational Times.*

"The book is the best we have seen of the new type of school-book. If Messrs. Blackwood keep up to this standard, their series will stand high."—*Literature.*

"There is a pleasing freshness about this volume."—*Athenæum.*

**Cicero.—In Catilinam. Books I.—IV.** By H. W. AUDEN, M.A. 1s. 6d.

"The introduction, notes, and appendix are all on the level of the highest classical work, and contain a great deal of useful and suggestive material for the most advanced classes. The illustrations, of which there are eleven, cannot fail to be most helpful to an appreciation of the speeches."—*Glasgow Herald.*

**Ovid.—Metamorphoses (Selections).** By J. H. VINCE, M.A., Assistant-Master at Bradford. 1s. 6d.

**Demosthenes.—Olynthiacs I.—III.** By H. SHARPLEY, M.A., formerly Assistant-Master at Marlborough. [Immediately.]

**Xenophon.—Anabasis. Books I., II.** By A. JAGGER, B.A., Hymer's College, Hull. [Immediately.]

## BLACKWOODS' ENGLISH CLASSICS.

With Frontispieces. In fcap. 8vo volumes, cloth.

General Editor—J. H. LOBBAN, M.A., Editor of "English Essays," formerly Examiner in English in the University of Aberdeen.

**Macaulay.—Life of Johnson.** By D. NICHOL SMITH, M.A., Editor of "King Henry VIII." (Warwick Shakespeare). 1s. 6d.

"A MOST DESIRABLE EDITION. The introduction includes a life of the author, together with an excellent appreciation of his style and critical methods, whilst the one difficulty in reading Macaulay—his fondness for allusion—is overcome by a complete and interesting set of notes, involving considerable research in eighteenth century biography."—*Educational News.*

**Goldsmith.—Traveller, Deserted Village, and other Poems.** By J. H. LOBBAN, M.A. 1s. 6d.

"Goldsmith has never appeared in more attractive garb than he does here, type and binding being alike beautiful. Nor do the literary accompaniments of the text in the shape of introduction and notes deserve less praise. . . . The editor's remarks on the poems are full of fine feeling and discrimination. . . . In short, this is not only AN IDEAL EDITION for schools, but is well worthy of a place on the student's bookshelf."—*Educational News.*

**Milton.—Paradise Lost. Books I.—IV.** By J. LOGIE ROBERTSON, M.A., First English Master, Edinburgh Ladies' College. 2s. 6d.

**Cowper.—The Task, and Minor Poems.** By ELIZABETH LEE, Author of "A School History of English Literature." 2s. 6d.

**Scott.—Lady of the Lake.** By W. E. W. COLLINS, M.A. 1s. 6d.

**Johnson.—Lives of Milton and Addison.** By Prof. J. W. DUFF, M.A., Durham College of Science, Newcastle-upon-Tyne. 2s. 6d.

**Carlyle.—Essay on Burns.** By JOHN DOWNIE, M.A. [Immediately.]  
*Other Volumes to follow.*

## BLACKWOODS' LITERATURE READERS.

Edited by JOHN ADAMS, M.A., B.Sc., F.C.P.,

Rector of the Free Church Training College, Glasgow.

The Series consists of Four Volumes.

Book I. Pp. 228 . . . Price 1s.      Book III. Pp. 303 . . . Price 1s. 6d.  
Book II. Pp. 275 . . . Price 1s. 4d.    Book IV. Pp. 381 . . . Price 1s. 6d.

"The volumes, which are capitally printed, consist of selected readings of increasing difficulty, to which notes and exercises are added at the end. The selected pieces are admirably chosen, especially in the later books, which will form a beginning for a really sound and wide appreciation of the stores of good English verse and prose."—*Athenæum.*

"The selected readings . . . are interesting, and possessed of real literary value. The books are well bound, the paper is excellent, and the unusual boldness and clear spacing of the type go far to compensate for the entire absence of pictorial illustrations."—*Guardian.*

"A very excellent gradus to the more accessible heights of the English Parnassus. . . . The appendices on spelling, word-building, and grammar are the work of a skilful, practical teacher."—*Pall Mall Gazette.*

## BLACKWOODS' SCHOOL SHAKESPEARE.

Edited by B. BRIMLEY JOHNSON.

Each Play complete, with Introduction, Notes, and Glossary. In Crown 8vo Volumes, price 1s. 6d. each, cloth; paper, with cloth back, 1s.

As You Like It. [Ready.]

(Prescribed for Cambridge and Oxford Local Examinations, 1900.)

The Merchant of Venice. [Ready.]      Julius Cæsar. [Ready.]  
Richard III. [Ready.]      The Tempest. [Ready.]

\* \* Others to follow.

## Professor MEIKLEJOHN'S SERIES.

### The Art of Writing English. A Manual for Students.

With Chapters on Paraphrasing, Essay Writing, Précis Writing, Punctuation, and other matters. By J. M. D. MEIKLEJOHN, M.A.  
Second Edition. Crown 8vo, 340 pp. . . . . 2s. 6d.

### One Hundred Short Essays in Outline. By Professor MEIKLEJOHN. Second Edition. Crown 8vo, 110 pp. . . . . 1s.

"This is undoubtedly one of the most useful books for pupil teachers, Scholarship and Certificate students, ever produced."—*The Practical Teacher*.

### General Intelligence Papers; with Exercises in English Composition. By GERALD BLUNT, M.A. Crown 8vo, 130 pp. . . . . 2s.

"This little book is likely to be very useful. It avoids the faults of so many books of the same class: the questions are not too difficult."—*Rev. Joseph Wood, D.D., Headmaster of Harrow School*.

### A School Geography; with Special Reference to Commerce and History. With Maps and Diagrams. By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 410 pp. . . . . 2s. 6d.

"This is a well-planned book, with many good features, and the promise of the title-page is sedulously fulfilled."—*The Educational Times*.

### A School Algebra for Junior Forms. By F. OSCAR LANE, B.Sc. Lond., Assistant-Master, King Edward's School, Birmingham. Crown 8vo, 232 pp. . . . . 1s. 6d.

With Answers, 266 pp. . . . . 2s. 0d.

"A very trustworthy book for beginners, extending to indices, surds, and progressions."—*The University Correspondent*.

### A Short Arithmetic. By G. A. CHRISTIAN, B.A., and A. H. BAKER, B.A. Crown 8vo, 196 pp. . . . . 1s.

With Answers, 1s. 6d.

"A book of well graduated examples, and just as much theory as will explain the methods of their solution."—*The Educational Times*.

### A Short Geography, with the Commercial Highways of the World. Sixteenth Edition. Crown 8vo, 196 pp. . . . . 1s.

"Terse, practical, informative, and statistic. This shilling Geography is exactly what a School Geography needs to be."—*The Teachers' Aid*.  
"Clearness and conciseness exemplified."—*The Private Schoolmaster*.

### A Short History of England and Great Britain. B.C. 55 to A.D. 1890. Twelfth Edition. Crown 8vo, 172 pp. . . . . 1s.

"In the 'Short History' there is plenty of anecdote, ballad, and stray gems of literature; and we find, though not with its usual emphasis, the Professor's expertness in the use and disposition of type."—*Education*.

### A Short Grammar of the English Tongue, with Three Hundred and Thirty Exercises. Eleventh Edition. . . . . 1s.

This little book is written in the clearest and simplest style for beginners. It contains:—

- |                                 |   |
|---------------------------------|---|
| i. The Simplest Definitions.    | iv. Graduated Methods of Parsing.       |
| ii. Slowly graduated Exercises. | v. Bad Grammar Corrected, with Reasons. |
| iii. Clearly printed Tables.    | vi. Analysis, with Plain Diagrams.      |

### A New Spelling Book. With Side Lights from History. Eighth Edition. Crown 8vo, 152 pp. . . . . 1s.

"We agree with the main principle here followed—that spelling should be learnt through the eye rather than through the ear."—*The School Guardian*.

### A New Poetry Book for the Use of Schools and Families. Fourth Edition. 180 pp. . . . . 1s.

"This neatly bound little collection, which is one of Professor Meiklejohn's series of school manuals, may be confidently recommended to teachers in search of new selections for recitation."—*The Schoolmaster*.

## BOOKS FOR PRIZES. PUBLISHED BY BLACKIE & SON.

**THE BOYHOOD OF A NATURALIST:** An Autobiography. By FRED SMITH. Crown 8vo, cloth, 3s. 6d.  
"An admirable little book. . . . We can warmly recommend it to young people."—*Athenæum*.

The Educational Times.

Just a year ago, we observe on turning back *Hap-hazard?* to our file, the Board of Education Bill had found its way into Grand Committee. It passed into law with very little difficulty; and just three months ago it came into operation. We cannot at the moment fix the date of its practical and effective application, because that depends on a number of wise and eminent men who, whatever may be their faults, are neither old men in a hurry nor young men in a galloping haste. In one word, the working of the Act is slow. We have spoken of the new Higher Elementary Schools projected as "the crown of the primary." During the past month an Order in Council has been printed, and it will take effect this month, transferring the educational functions of the Charity Commissioners to the Board. Beyond this, we are not aware that the Board has done anything definite on its new lines except the shifting of a few officials and pigeon-holes. As we go to press, we have heard nothing about the Consultative Committee—unless it be a little gossip from behind the scenes as to the selection of individuals to sit on this Committee. We made a remark to deaf ears, many months ago, to the effect that much valuable time would be saved by appointing this Committee as the first proceeding under the Act. There were six or eight months after the passing of the Act during which the selection of the Committee might have been provisionally made, and the Order in Council necessary for their appointment could have been issued in the first week of April. The advantage of such a course was obvious. The fourth clause of the Act provides for the establishment of

a Consultative Committee consisting, as to not less than two-thirds, of persons qualified to represent the views of Universities and other bodies interested in education, for the purpose of—

(a) Framing, with the approval of the Board of Education, regulations for a register of teachers, which shall be formed and kept in manner to be provided by Order in Council: Provided that the register so formed shall contain the names of the registered teachers arranged in alphabetical order, with an entry in respect to each teacher showing the date of his registration, and giving a brief record of his qualifications and experiences; and

(b) Advising the Board of Education on any matter referred to the Committee by the Board.

The third clause provides that

the Board of Education may by their officers, or, after taking the advice of the Consultative Committee hereinafter mentioned, by any Univer-

sity or other organization, inspect any school supplying secondary education and desiring to be so inspected, for the purpose of ascertaining the character of the teaching in the school and the nature of the provisions made for the teaching and health of the scholars, and may so inspect the school on such terms as may be fixed by the Board of Education with the consent of the Treasury.

These are the functions of the Consultative Committee. Without it the Board cannot seek the advice of the educational experts, cannot frame preliminary regulations for the Register, and cannot direct any University or other organization to inspect secondary schools. The Board may not be keen for the advice of experts, and there may be no urgent need for inspection until the Secondary Authorities are created. But every one is keen, and there is urgent need, for a Register. It seems to us that the delay in the appointment of the Consultative Committee is most unfortunate.

The Board of Education, we infer, see no reason whatever for being in a hurry. We have no desire to put them out of step by goading from behind, but we trust that they will not in the meantime allow their policy and system of operations to be imposed on them from without. The manner in which the Board are to deal with the endowed schools—so far as any change is to be made from the methods of the Charity Commissioners—is, we should have thought, pre-eminently a matter on which they would desire to have the advice of their Consultative Committee. We cannot say what they would have desired, but, as a matter of fact, they seem to have adopted the policy of inviting the managers of educational trusts throughout the country to come to Parliament for separate and private Acts. If we are wrong, we shall be glad to be corrected. The debate of June 22, on the third reading of the Birmingham (King Edward VI.) Schools Bill, in the House of Commons, leaves this important matter in an extraordinary—not to say an impossible—position. We simply cannot believe that the Board of Education, having taken over the responsibilities of the Charity Commission, intend forthwith to abandon all present and prospective control over the management of the school trusts, and to go back to the old plan of management by local bodies without supervision. Yet Mr. Balfour stated in the course of the debate that the Birmingham Bill ran on general lines which the Board of Education were prepared to accept in the case of other charities.

To make the matter perfectly clear, so far as the Leader of the House may have accurately interpreted the opinions and

intentions of the Board of Education, let us see precisely what it was that Mr. Balfour said. He observed that it was a mistake to treat the Birmingham Bill as though it were introduced by a local authority without any reference to a central authority.

That was not the case. The Bill was referred to the new Education Department, and upon it that Department passed judgment and introduced amendment. The new Education Department were of opinion that the Bill ran on general lines, and they were prepared to approve any other Bill which resembled this. Therefore, they were not legislating at random, but on general educational conditions which had been considered by the central department of the Government which had been entrusted with the duty. In the next place, was it possible to proceed by general legislation? It was manifestly impossible, in his judgment, to proceed by a general Act which should be applicable to 22,000 cases, or half that number, or a quarter that number, or an infinitesimal portion of that number. Every case must be tried on its merits. He had no doubt that there were, outside Birmingham, other great institutions which might be treated, and they probably would be treated, as it was proposed to treat King Edward's School. In those cases the Education Department would apply the same principle which was applied to that Bill. In future, private Bills would be submitted to the Education Department, and he had no doubt the House would be prepared to sanction similar measures as they were about to sanction this Bill.

After that, we may expect a deluge of fresh legislation. If all the schools which want to be rid of supervision bring in their Bills, as Mr. Balfour invites them to do, Parliament will soon be sick (if it is not already sick) of the very name of education.

Mr. Balfour holds that this is the only fair and just way to proceed. It is not the way of the Endowed Schools Commission and Acts of Parliament. It is not the way of those who think that endowed schools need the supervision of a central authority, empowered to step in at any moment and revive a dwindling school by a modification of its scheme. Nor is it the way of those who think that the Board of Education should retain, and not dispense with, the powers of organization which have lately been collected in their hands. It is difficult to look without misgiving on the hap-hazard manner in which a momentous new departure seems to have been taken by the Board as a mere incident in the engineering of a Birmingham private Bill.

*A Modern Language Congress.*

A MEETING of the German Association of Modern Language Teachers was held at Leipsic in Whitsun week, and attended by nearly two hundred persons, including a delegate from the French Government and a representative of the English Modern Language Association. The real interest of the meeting consisted in the general acquiescence in the principles of the reformers, or *neuerer Richtung*, who, under the inspiration of Prof. Vietor, of Marburg, and with the practical experience of distinguished schoolmasters like Prof. Hartmann, of Leipsic, Prof. Wendt, of Hamburg, and Prof. Walter, of Frankfort, have for years been endeavouring to give a new direction to modern language teaching. Their methods are becoming known in England, and may be found fully developed in the series of class-books now being published under the auspices of Prof. Rippmann. The aim is to cultivate as much as possible, and that from the earliest stages, the power of thinking in the foreign language, and, as a means to that end, lessons are to be carried on as much as possible in that language. The resolutions adopted dealt with the higher classes of the *Oberrealschulen*—that is, of the schools in which no Latin is taught—and it was maintained that they were compatible with any efficient

method of instruction in the lower classes, though it was obvious that the sympathies of their supporters were with oral methods in those classes.

The most important of them were as follows:—The foreign language is to be the medium of instruction, only exceptional difficulties being explained in the mother tongue; translation is to be the exception and not the rule; syntax is to be taught, in the main, by the inductive method out of the reading-book; free composition in the foreign language is to be the rule, translation into it hardly falling within the range of school-teaching; reading-books should be selected to initiate boys and girls as much as possible into the life and ways of thought of other nations. Only one resolution of the reformers was rejected. It was to the effect that the teacher of a foreign language should not make the learning of the mother tongue an object of his teaching. Concurrently with these resolutions, others were passed, urging the appointment of an adequate modern language teaching staff at all Universities not fully equipped in that direction, a better supply of travelling scholarships to enable teachers to become familiar with English and French life, and permission for the *alumni* of the non-Latin schools to study modern languages at the Universities. This resolution called forth a formal protest on the part of a considerable minority.

The discussions were supplemented by several interesting lectures. One dealt with the study of Chaucer, another with the effect of political divisions on the formation of the Romance languages, and a third with the system of instruction adopted at Frankfort, where French is used in preference to Latin in the lowest classes of the different types of schools as a common basis of general grammatical knowledge. One of the most interesting features of the gathering was the invitation to the Paris Congress addressed to the assembly by Prof. Schweitzer, who is eminently *doctus sermones utriusque linguæ*, and an enthusiast for modern language reform. He dwelt in graceful and eloquent words on the international value of such a teaching of modern languages as might bring about a real understanding of the thoughts and aims of other nations. The Congress was by no means limited to formal discussions; hospitality was the order of the day. Most of the members met at dinner in the hall of the famous Buchhändlerhaus, and finished the evening at a representation of the "Meistersinger of Nuremberg" given in their honour by the Opera Company. Other evenings were passed in the enjoyment of the *Commers*, where, to the clink of beer-glasses and the accompaniment of toasts and songs, some of them written for the occasion, the time passed very pleasantly.

## NOTES.

THE Secondary Education Bill, intended to supplement the Act of last year by establishing Local Authorities, has been introduced as we go to press, but too late for comment this month. The interval for comment will be a long one, as the Bill cannot become law this Session. It provides that County and County Borough Councils shall be empowered to submit schemes, either separately or in combination, for the establishment of Statutory Committees, to take over the local control of secondary and technical education, and to

administer the Parliamentary grants already at their disposal, without restriction to technical objects. There is a clause conferring on the Councils a fuller power of rating than they already possess. The Duke of Devonshire has been unable to carry out his undertaking to create a third branch of the Department for Secondary Education other than technical, but he designs a subdivision of Sir William Abney's branch, under Mr. W. N. Bruce as Assistant-Secretary, which will partly serve the same purpose. The Duke looks forward to yet another Bill in the future for the further delimitation of elementary and secondary education. It will certainly be needed.

We are not surprised to find the skies of June speech-days displaying somewhat of a military tone. Mr. Choate's speech at the Leys School was, however, an exception, due perhaps more to diplomatic discretion than to a conclusion that his audience "cared for none of these things." Cultured Americans make ideal distributors of prizes. Speaking with a quaint directness of language and wide knowledge of practical life not often met with in educated Englishmen, they find a more ready response in an audience of schoolboys. Lord Coleridge, at the City of London School, was perhaps too learned and improving, while Lord Cross, at Rossall, overburdened his speech with a not very necessary panegyric on the virtues of athleticism. We must, however, be grateful to him for giving us a variant of the Queen of France and cricket story in the form of Queen Adelaide and the football. Speeches on speech-days are, however, as sermons, free from criticism, and one is happy to think that their usual buoyant tone only reflects the buoyant spirits of the boys.

We are sorry to have to record the death of Dr. C. A. Buchheim, Professor of German Language and Literature at King's College, London, and a member of the Council of the College of Preceptors. He was born in Moravia seventy-two years ago, and studied at the University of Vienna. After a short stay in Paris, he came to England, in 1852, and settled down in London, where he was engaged for some years as a translator, in the teaching of his native tongue, and in correspondence for German literary papers. He was, we believe, the first to introduce the novels of Dickens to his countrymen in a German version. After he had lived eleven years in London, and edited several German works for English schools, he was appointed to his professorship at King's College in 1863, and held the chair to the time of his death. For some time he was German tutor to the children of the Prince and Princess of Wales. His literary labours were mainly devoted to the editing of Lessing, Schiller, Goethe, and Heine. His many German texts, with elaborate introductions and notes, some of which were recognized as the most scholarly editions of German masterpieces which had appeared in England, will be fresh in the memory of our readers. Most of these were published by the Clarendon Press, who also printed his "Modern German Reader." Amongst his other works we may mention "Materials for German Prose," "Deutsche Lyrik," "Balladen und Romanzen," and Heine's "Lieder und Gedichte"—the three last-named being volumes in the "Golden Treasury" series. In 1897 the University of Oxford conferred on him the honorary degree of M.A., which he privately described as "an ample reward for a life of hard work." Dr. Buchheim's connexion with

the College of Preceptors began in 1862. In the following year he was appointed an Examiner in German; he was elected to the Council in 1867, and took the Fellowship Diploma in 1873.

THE Committee recently formed to secure the presence of women on Secondary Educational Authorities has appointed an Executive Committee, with Sir Richard Jebb as Chairman and the Right Hon. A. D. Acland as Vice-Chairman. Mr. H. B. Garrod, the treasurer of the Committee, invites contributions to meet the necessary expenses. It may be remembered that the Report of the Royal Commission on Secondary Education (1895) made the following recommendation:—"We think that women ought to be eligible for appointment (whether by a public authority or by co-optation) upon both sets of authorities [that is, county authorities and county borough authorities], and that it is indeed desirable to provide that a certain number shall be women, as experience seems to have shown that the interests of girls often receive insufficient attention, and that there is also a risk that women may not be chosen unless some special provision for their presence is made." Comparatively few women have been appointed on the Technical Instruction Committees of the County Councils, and the object of the new Committee is to provide beforehand for a more satisfactory state of things in regard to the authorities hereafter to be created. The Hon. Secretary of the Executive Committee is Mrs. J. R. MacDonald, 3 Lincoln's Inn Fields.

THE first annual meeting of the Agricultural Education Committee was held on Friday, June 22, at the Rooms of the Society of Arts. Lord Egerton of Tatton took the chair, and the adoption of the report of the Executive Committee was moved by Sir William Hart-Dyke, and seconded by Mr. J. H. Johnstone, M.P. In the words of the latter speaker it would be difficult to find any Committee which in the short space of eleven months had accomplished so much of its object as the one in question. Sir William Hart-Dyke referred to the alteration in the Code for rural schools, which we have already discussed in these columns. He welcomed the special circular issued by the Board of Education to managers and teachers of rural elementary schools, impressing upon them "the importance of making education in the village school more consonant with the environments of the scholars than is now usually the case, and especially encouraging the children to gain an intelligent knowledge of the common things which surround them in the country." The Committee have succeeded in persuading the new Board of Education to modify the "Science and Art Directory," which now includes separate curricula (1) for rural schools of science for boys, and (2) for girls' schools of science. They have also put themselves in touch with Technical Instruction Committees and Agricultural Societies, and have issued some twenty-three pamphlets. A special reader is being prepared, containing selections from classical English authors bearing on agriculture, for use in elementary schools; and a series of Nature-study leaflets modelled after those published in America by the Cornell University are in contemplation. As there is still much left to be done, the Agricultural Education Committee agreed to continue work, and re-elected the old Executive, with one or two additions, including the Countess of Warwick. The question as to the

educational work of the Board of Agriculture is still unsettled. The training of teachers has not yet been put on a proper footing, and means to fulfil the provisions of the Code, so far as possible, must be devised at once.

LORD BEACONSFIELD, in one of his airy excursions into political economy, said that, while the nation was always prone to be anxious about the misfortunes of all other industries, it never concerned itself about the condition of agriculture—by far the largest and most important industry in the kingdom. The report of the Executive Committee fortunately shows that that is no longer the case. Much credit is, indeed, due to this Committee for the advice given by it to the Board of Education when framing the New Code in order to ensure both a general and really practical course of education in agricultural subjects in country schools. The Royal Agricultural Society has for many years endeavoured to develop in secondary schools some interest in the subject. The system of junior scholarships established by the Society lent itself somewhat too kindly to text-book cramming; but it was mainly due to the efforts of the Agricultural Society that the subject was recognized at all in secondary schools. We are glad to learn that the Committee intends to go on with its work and to do its best to secure further reforms in agricultural education.

THE controversy between the London colleges and the Medical Council is reaching an acute stage. Recently the minimum period of medical study necessary to enable a student who has passed the qualifying examinations to be registered as a practitioner was extended from four to five years. This change has apparently led to a certain diminution in the numbers of students attending the medical departments of the colleges, which now seek to obtain the recognition of the last year spent by a student in certain schools, if engaged in scientific study, as a part of such minimum period of five years. This system, of course, enables a medical student to save the expense of one year's training at a medical college; but, says the Council, "we are jockeyed out of our five years' *bona fide* medical study." Both parties have expressed their views in strongly worded reports; and it would seem that the colleges are minded to question the jurisdiction of the Council to lay down any conditions as to *where* the five years' course of medical study should be pursued. The controversy is, indeed, a compliment to secondary schools, as showing the admitted excellence of their scientific training. It, perhaps, also points to the *res angusta domi* of the medical colleges, which prevents them from lowering their fees, to enable them to attract a larger number of students.

THE deplorable estrangement from Nature which modern conditions of life and education entail on the children of our large towns is glaringly illustrated by a correspondent's experience during a holiday at Whitsuntide, spent near Leith Hill, in Surrey. His wife had taken with them a young servant of some eighteen years, bright, intelligent, and well educated according to London School Board standards. She had, however, never been out of London except for two or three day trips. The evening of their arrival was wet, and she was sent to the landlady for some firewood to lay a fire.

She returned, exclaiming: "Look! she has given me bits of trees. These won't light a fire!" They were only very serviceable, well dried, chopped twigs. The following morning she stood in amazement in front of a gooseberry bush—"Growing!" The volumes contained in the tone of voice could not be expressed. It took her nearly a week to learn the difference between rows of potatoes, beans, and carrots, and she found great difficulty in hearing the notes of the cuckoo, although she heard the song of other birds easily. Her delighted wonder at the sight of a brood of chickens but a few hours old was exquisitely refreshing, and she wanted to bring one to London as a house pet. London! She thought a week in the country was enough at a time.

It is inevitable that the pupils of the new secondary schools will be principally recruited from the elementary schools of the country. According to the report of the Welsh Central Board for 1899, five out of every seven scholars in the secondary schools of Wales come from public elementary schools. The result is not an ideal one, inasmuch as a small proportion only remain to complete their full secondary-school course, and the education given in the junior forms is not a satisfactory conclusion to the education of a boy intended for trade or commerce. Without further organization, such a result is inevitable in England, as it now is in Wales. At present in Wales both elementary and secondary schoolmasters are dissatisfied. The former complain that boys leave for secondary schools who would do far better to complete their education in the higher standards, and the latter suffer from a congestion in the lower forms which hampers the real work of their schools.

## SUMMARY.

### THE MONTH.

THE Board of Education is gradually applying the special powers of reorganization conferred on it by the Act of 1899. During the month a draft Order in Council was issued as a "first instalment," by which some of the powers of the Charity Commissioners relating to trusts for educational purposes are transferred to the Board. The reorganizing zeal of the Department is evidently not to be confined to the directions of the Act. Thus, in the last week of May, the President of the Board approved a Committee consisting of the Right Hon. J. L. Wharton, M.P. (Chairman); Mr. Stephen E. Spring Rice, C.B., of Her Majesty's Treasury; Mr. T. H. Elliott, C.B., of the Board of Agriculture; General Festing, C.B., of the Board of Education (Victoria and Albert Museum); Dr. H. F. Parsons, of the Local Government Board; Mr. W. T. Blanford, F.R.S., late of the Geological Survey of India; Professor C. Lapworth, F.R.S., of Mason University College, Birmingham; with Mr. A. E. Cooper, Board of Education, South Kensington, as secretary; to inquire into the organization and staff of the Geological Survey and Museum of Practical Geology; to report on the progress of the Survey since 1881; to suggest the changes in staff and arrangements necessary for bringing the Survey in its more general features to a speedy and satisfactory termination, having regard especially to its economic importance; and, further, to report on the desirability or otherwise of transferring the Survey to another public Department.

It may be convenient to place on record the main provisions of the Order in Council referred to above:—

1. The powers of (a) inquiring into charities; and (b) requiring accounts and statements to be rendered and answers to questions to be returned; and (c) requiring copies of and extracts from documents to be furnished; and (d) searching records; and (e) requiring the attendance of witnesses and the production of documents; and (f) examining witnesses on oath and administering oaths conferred on the Charity Commissioners and their Assistant Commissioners and officers by the enactments specified in Part I. of

the First Schedule to this Order, or by any scheme under the Charitable Trusts Acts, 1853 to 1894, or the Endowed Schools Acts, 1869 to 1889, may, so far as they relate to trusts for educational purposes, be exercised by the Board of Education and their officers concurrently with the Charity Commissioners and their Assistant Commissioners and other officers. 2. There shall be transferred to the Board of Education (a) all powers conferred on the Charity Commissioners by any scheme made under the Endowed Schools Acts, 1869 to 1889, or any of them, and regulating an endowment held for, or applicable to, educational purposes in Wales or the county of Monmouth, or by any scheme amending any such scheme, except such of those powers as relate to the vesting or transfer of any land or funds of the endowment in, to, or from the Official Trustee of Charity Lands or the Official Trustees of Charity Funds; and (b) all powers conferred on the Charity Commissioners by the Charitable Trusts Acts, 1853 to 1894, or the Endowed Schools Acts, 1869 to 1889, so far as those powers are exercisable in respect of any endowment so regulated.

On June 13 the Council of the University of Birmingham held its first meeting. Amongst those who attended were Mr. Chamberlain, Chancellor, the Lord Mayor of Birmingham, Vice-Chancellor, and Dr. Heath, Vice-Principal. The Council resolved: "That all the professors and other members of the teaching staff and all officers and servants of Mason University College be hereby appointed to the same offices and places in the University of Birmingham as they at present hold in the College until September 30 next." It is not till October 1 that the Birmingham University Act, which has received the Royal Assent, comes into operation, and by a clause in the Act every one included in the resolution is transferred to the University. The appointments now made cover the intervening time, and a further effect of the resolution is that the Senate of the University is formally constituted. The Council divided the professional staff into Faculties of Science, Arts, and Medicine, and the Faculties of Science and Arts will proceed to elect their Deans, who will have seats on the Council. The Dean of the Medical Faculty (Dr. Windle) is elected under the Charter, but in the other two cases the election lies with the professors. The Faculty of Medicine, in accordance with the Charter, will have to appoint an additional representative on the Council, and when these elections have been made the Council will be complete. The formal business included the appointment of three committees: (1) General Purposes; (2) Finance and Estates; and (3) Library. An Advisory Board was also constituted, consisting of officers of the University and members of the former Advisory Board, to consider the report having relation to the deputation to the United States and Canada, which was referred at the last meeting of the Court of Governors to the Council, with power to take such action in the matter as might seem to them desirable. The following appointments were made:—The Vice-Principal (Dr. Heath) as Registrar of the University, Mr. Charles Showell as Treasurer's Deputy, Mr. John Humphreys, L.D.S., as honorary secretary of the Dental School, and Messrs. Cornish Brothers, of New Street, as booksellers and publishers to the University. It was decided to hold the first Matriculation Examination of the University in September next.

On June 14, the House of Commons discussed the Education Estimates. Sir John Gorst made an interesting speech, from which we quote what he said as to the necessity of greater accommodation for the training of teachers:—

If Parliament really intends to have teachers properly taught and fit for the work they have to do, they must pick the children out of the elementary or higher elementary schools when they are of proper age. They must send them with a scholarship to secondary schools, as they are trying to do in Wales. They must there have them taught to teach, and they must have a sufficient supply of training colleges in which to train these young teachers as soon as they are fit to be trained. At the examinations of Christmas, 1899, of those who succeeded a great number were quite unable to get into the training colleges for want of room. Of men, 2,338 desired to obtain admission into training colleges, but only 1,042 got in; 223 failed to get in, not from failure in examinations, but through lack of accommodation, while 1,073 failed in examinations. In the case of women, there were 3,968 who desired admission to the training colleges. Of these 1,575 got in, and 1,369, though qualified, were unable to get in for lack of accommodation. Every place in every training college in the country is absolutely full.

The new Code of regulations for evening continuation schools for the year 1900-1901 substitutes for "English" the two grant-earning subjects of "English Language" and "English Literature." We subjoin the syllabus of the latter subject:—

1. What is literature? It may be approached either for relaxation ("light" literature), or for instruction (philosophy, science, history in certain aspects), or for knowledge of, sympathy with, and pleasure in the spiritual life and history of humanity (poetry in the widest sense). The permanent and transient elements of poetry. Writers are the children of their ages, and their works reflect their infinitely various personalities; but all great writers express, in their own way, the central truths and interests of human nature. The making of English. The Anglo-Saxons. Their heathen lays. Beowulf. The gleemen. The coming of Christianity. Caedmon. Alfred. The Norman Conquest. English swamped by Norman French. The Celtic fringe and its bards. Romance.

2. English literature begins again. Its debt to French. Renaissance. Chaucer. How he sums up the literary tendencies of his age. His romance and realism. Wyclif and English prose.

3. Literature withers during the Wars of the Roses. Importance of printing. Caxton. Malory. The Renaissance again. The humanists. Wyatt and Surrey. Literature withers again during the disputes about religion. Exception in the English Bible and Prayer Book.

4. Elizabeth. Growth of national life and patriotism. Spenser, Sidney. Their influence. Elizabethan lyric and pastoral.

5. The origins of drama. Its position in Elizabethan society, the city, the court. Marlowe, the first great dramatist.

6. Shakspeare: his life and plays. Roughly, the plays fall into four chronological periods: the Histories, e.g., "Richard II.," "Henry IV.," "Henry V.," "The Comedies, e.g., "As You Like It," "Twelfth Night"; the Tragedies, e.g., "Hamlet," "Macbeth," "Lear"; the Romances, e.g., "Cymbeline," "The Tempest." (Only one or two plays should be treated with any detail.)

7. Elizabethan prose. Its application to the literature of knowledge by Bacon, Hooker, Raleigh.

8. From Elizabeth to James. The courtly poets, Donne, Herrick, Carew. Growing artificiality of lyric. The religious poets, George Herbert, Vaughan.

9. Puritanism and poetry. Milton.

10. The Restoration. Influence of French literature. Common sense and lucidity become the literary ideals. The age of prose begins. Dryden.

11. Prose, and prosaic poetry. The "classic" ideal. Pope. Swift. Johnson.

12. The reaction from prose. Feeling for romance, for Nature. The first comes to a head in Coleridge, the second in Wordsworth.

13. Later developments of romanticism. Shelley, Byron. The worship of beauty. Keats.

14. Nineteenth-century prose. History. Macaulay, Froude. Social speculation. Mill, Carlyle, Arnold, Ruskin.

15. The beginnings of the novel. Its nineteenth-century development.

16. Tennyson sums up the ideals of his age. A new impulse to the study of the individual. Browning.

THE new Directory of the Board of Education, South Kensington, containing regulations for establishing and conducting science and art schools and classes, has been published. Many of the regulations have been modified, more particularly those referring to administrative matters and practical work. The syllabus of practical mathematics has been revised, but the subjects remain much the same as were prescribed in last year's syllabus. A syllabus of an advanced stage of practical mathematics has been added. The syllabus of mineralogy has been slightly modified and recast. The laboratories in a school of science are to be available for preparation work by students of the school beyond the school hours of the time-table. Courses of work for schools of science in rural districts have been added. The obligatory subjects of the elementary course for men are:—(1) mathematics; (2) chemistry (with practical work); (3) physiography (Section I.) or elementary physics (with practical work); (4) biology (Section I.) or elementary botany (practical work may be in the field or garden); (5) drawing, practical geometry, or practical mathematics. Manual instruction in its application to workshop and garden must also form part of the course, which is intended to cover two years. The elementary course for women in schools of science differs slightly from the foregoing. Physics and chemistry are optional for the second year, and hygiene may be taken instead of botany. Practical mathematics is not included. Separate advanced courses of work are prescribed for men and women who have passed through the elementary courses.

THE SCHOOL OF ART WOOD-CARVING at South Kensington having received from the Clothworkers' Company a grant of £50, this, in addition to a similar grant from the Drapers' Company, has enabled the school to continue its work for another year in rooms rented from the Imperial Institute. But for this

timely grant it would have been necessary to close the school, as the Committee of the City and Guilds Institute, in consequence of the increasing demands on their funds, have been obliged to withdraw their annual grant of £250. The closing of the school is, however, only deferred for a year, unless aid towards its funds can be obtained from some other source.

ONE result of the order of merit in the University Honour lists is that the top men and their schoolmasters have come to expect a little biographical attention from the Press. We add a few details as to the highest Wranglers in the Cambridge Mathematical Tripos. The Senior Wrangler, Mr. Joseph Edmund Wright, having gained a minor scholarship, entered Trinity in October, 1897. He was educated at the Liverpool Institute. Mr. Arthur Cyril Webb Aldis, Second Wrangler, matriculated at Trinity Hall in October, 1897, as a scholar of that foundation, having previously been educated at the Grammar School, Walsall, where his father, Mr. J. A. Aldis, M.A. (formerly scholar of Trinity), was Headmaster, and at King Edward's School, Birmingham. Mr. William Cecil Bottomley, Third Wrangler, is a son of Mr. William Bottomley, solicitor, of Manchester. He was educated at Tettenhall College and Owens College, and matriculated at Trinity in October, 1897. Mr. Balak Ram, Fourth Wrangler, was born in 1876, at Jullundhar, Punjab, India, and is a son of Mr. Madho Ram. He was educated at the Government College, Lahore, and entered St. John's College as scholar and prizeman in October, 1897. Mr. John Chadwick, Fifth Wrangler, gained an entrance scholarship at Pembroke College in 1877. Mr. Marples, bracketed Sixth Wrangler, was educated at the Cloughton Collegiate School, under Mr. W. R. Yardley, L.C.P., and at University College, Liverpool. He is a B.Sc. of Victoria University. At the age of sixteen (we are informed by Mr. Yardley) he made a collection of over three hundred and fifty varieties of imports into Liverpool, placed them in boxes with labels, and presented them to his old school. He showed great application, was an adept at drawing and shorthand, and had an advanced knowledge of French and German. Miss W. M. Hudson, who is equal to Eighth Wrangler, is the daughter of Prof. Hudson, of King's College. She was born in London, and educated at Clapham High School. She entered Newnham with a scholarship in 1897. Her brother, Prof. Hudson, was Senior Wrangler two years ago. Miss Greene (between Ninth and Eleventh Wranglers) was born in Shropshire, and educated at Ladies' College, Wellington, and Orme Girls' High School.

A MEETING of the Council of the University College of North Wales, Bangor, was held at the college on June 20. Mr. W. W. Firth, B.Sc. Victoria, formerly Whitworth Exhibitioner, was appointed to the Assistant-Lectureship in Electrical Engineering which the college has been enabled to establish by the liberality of the Company of Drapers. Mr. Firth began his career in the works of Messrs. Platt at Oldham, and was trained in Owens College, Manchester, and the Royal College of Science, London. Mr. Alexander Darroch, M.A., was appointed Assistant-Lecturer in the Day Training Department. Mr. Darroch is a trained certificated teacher, who, after teaching for some years in Scottish public schools, entered the University of Edinburgh, where he won a Rhind Philosophical Scholarship, and graduated with First Class Honours in Philosophy. After graduating, he attended classes in the subjects of Education and Political Economy, gaining a medal in each subject, and in the latter also the Merchant Company's Prize. In 1899 he was appointed a Heriot Research Fellow. A vote of thanks was passed to the Piercy Trustees for their donation of £1000 to found a Piercy Scholarship at the college.

A TYPICAL "pious donor" in the United States died early in June. Jonas Gilman Clark had made money in land, gold, and banking, and twenty years ago he retired to Worcester, Massachusetts. According to an obituary notice in the *Times*:

He had long had a desire to found a University, his purpose being, in his own words, "to increase human knowledge, and transmit the perfect culture of one generation to the ablest youth of the next; to afford the highest education and opportunity for research." He had given a close study to the subject of the higher education, and was anxious to include in his proposed University the best features to be found in institutions in America and elsewhere. He travelled extensively in search of information, studying the records of education as carried on in Egypt, Greece, and ancient Rome, as well as the experiences of contemporary Europe. He then secured a charter for

Clark University at Worcester in 1887, endowing it with one million dollars, to which he added a like amount later on. In accordance with the usual course in America, this institution, founded by a single individual, has already been the beneficiary of large amounts from local donors.

## UNIVERSITIES.

(From our Correspondents.)

THE end of a summer term which has no "Commem." Oxford. is almost monopolized by the Final Schools. Candidates this year were expected to be fewer than usual, because a special decree was passed, allowing those on service in South Africa to postpone their examinations for one year. The Vice-Chancellor announces the names of fifty-one undergraduates who have availed themselves of this permission. But in the Honour schools the number this year is 469, against 490 last year, a drop of only twenty-one. The Pass schools, on the other hand, are no less than seventy-four to the bad—417 against 491. It will be noticed that this year the Honours men considerably outnumber the pass men. Probably this does not indicate any new preponderance of the student, but results rather from a very general belief that a "gulf"—i.e., a pass without Honours, in an Honours school—is easier than a pass through the Pass schools. Whether this belief is founded on fact may be doubted, but its results are good; even for the man of average stupidity, the crumbs that fall from the table of "Greats" are probably more stimulating by far than the dead level of elementary all-round knowledge "got through" in "Groups." The only things that suffer much are "Greats" lectures. Just as a fleet must steam the pace of its slowest ship, so a lecture tends to sink to meet the capacity of its least capable hearer.

The ill effects of this come out specially in our very loose lecture system. Oxford lectures were originally collegiate affairs; a college tutor lectured to his pupils. He lectured on wide subjects in few hours, and was saved from being either too meaninglessly general or too irrelevantly particular, by possessing a close personal knowledge of his hearers and their requirements. Now that lectures have for many years been inter-collegiate, this saving condition has ceased to work; and the lecturer's position has, in consequence, become very difficult, while for the serious student it is getting proverbial that "lectures are no use." There are two remedies. One may revert to the collegiate system: in philosophy this is to some extent happening; energetic tutors lecture classes of their pupils informally in their own rooms; or, if lectures remain inter-collegiate, as for the most part they are bound to do, fewer must be given, upon more definitely limited subjects, and these few must extend over more hours. Of this reform also there are signs and foretastes already; and, as a rule, the more eminent and the better teacher a lecturer is, the more you will find him radically dissatisfied with the existing arrangements. The evil is greatest in the case of lectures for Honour Moderations—certainly the school of whose possibilities least is made. It is also rampant in those for "Greats," and bad in several other cases.

My indictment of the Classical Honour Moderations School in my last letter preceded by only ten days a tardy attempt at reform. On June 5 a form of statute was promulgated, and the preamble of it approved, providing that there shall in future be a Fourth Class. That a change was urgently wanted, almost every ex-Moderator would testify. It is less certain whether the proposed Fourth Class is the best form for the change to take. The congestion in the school is at the top end not at the bottom. And by leaving the classes First, Second, and Third, while subdividing them where advisable, we should preserve that continuity of the school and its classes, at which the proposed change deals a violent blow. However, the Fourth Class will almost certainly be adopted; no opposition was offered in Congregation to the first steps towards it, and on June 19 the second stage was also passed.

The important Hertford Scholarship has been won by Mr. R. W. Livingstone, New College. Five "mentions" were given, and the names placed only in alphabetical order. This is just what—Moderations being as they are—is wanted; but it rests entirely with the caprice of the examiners, who do not often act so wisely. The Lothian Prize for this year has not been awarded.

Prof. Burrows, who has since 1862 been Chichele Professor of English History, is retiring from the active performance of his duties, which will, of course, devolve on a deputy. Who he will be is not settled; and Oxford is exceptionally rich just now in her younger History dons. Probably either Mr. B. H. Firth or Mr. C. W. C. Oman will be appointed.

THERE seems to be a good prospect of extensive building operations taking place in the Long Cambridge. Vacation. The plans for the Botany School are practically approved by the Senate, and before the men return to residence some progress will doubtless be made in the actual work. The Geological Museum will also by that time have made substantial progress, while it is not beyond reason to expect that, through the lucky windfall of the Squire bequest, the Law School will also take material shape before many months are over. The proposal to roof in the eastern quadrangle of the University Library has not met with prompt acceptance from the Senate; in the debate it was to all intents and purposes admitted that the architectural features of the King's Parade front were not of such importance as to necessitate consideration, but the depleted state of the University Chest was a determining factor in the arguments against the costly alterations suggested by the Syndicate.

The resignation by Dr. Sidgwick of the Knightbridge Professorship of Moral Philosophy, on account of ill-health, came as a great surprise to all except the Professor's intimate friends. He will carry with him into his retirement the good wishes of all. Dr. Sidgwick's good work for Newnham and his unflinching generosity to that institution are known to but few, and it is to be hoped that for many years Mrs. Sidgwick may, in her difficult position as Principal of Newnham, have so valuable an adviser ever at her side.

Prof. Somerville has already begun to win the confidence of the University and the public for his new department of Agriculture. We have lately had a striking proof of this. Mr. Macfarlane Grieve, who, though an Oxford M.A., has been admitted to the Cambridge degree *ad eundem*, has come to the conclusion that a Professor of Agriculture without an experimental farm is like a Professor of Chemistry without a laboratory. Mr. Grieve, whose residence is at Impington Park, near Cambridge, has accordingly offered to the University free of rent till 1909 a farm of 145 acres on his estate, within three miles of Cambridge. It is hardly necessary to add that this generous offer has been gladly accepted by the Senate.

At the beginning of 1899 a grant was made to Mr. W. W. Skeat, of Christ's College, towards defraying the cost of a scientific expedition to the Malay peninsula. The report shows that much valuable work has been done in the fields of ethnology, geology, and zoology.

The publication of the various Tripos lists has not been productive of any great surprises, but a remarkable state of things is shown to exist with reference to the relative popularity of the various subjects. For example:—Mathematics, Class I., 16; Class II., 26; Class III., 21; total 63. Classics, Class I., 19; Class II., 63; Class III., 31; total 113. Natural Science, Class I., 40; Class II., 43; Class III., 39; total 122. The numbers in the Chemistry Special are also increasing, a result due to the rapid growth of our Medical School. In the Medieval and Modern Languages Tripos one man is placed in the first class with one mark of distinction; the women's list contains four first classes with three marks of distinction.

On June 12 we administered honorary degrees of Doctor of Law to Mr. Choate, the American Ambassador; Lord Rosse, Chancellor of Dublin University; Mr. Gully, the Speaker; and Sir William Anson, Warden of All Souls, Oxford. The recipients of the Doctorate in Science and Letters included—Science: Sir Benjamin Baker, Sir Walter Buller, M. Jules Poincaré, member of the Institute of France; Letters: Mr. Ingram Bywater, Regius Professor of Greek at Oxford; Prof. Davidson, Edinburgh; Prof. Flinders Petrie; Mr. W. L. Newman; Prof. W. M. Ramsay, of Aberdeen; and Prof. White, of Harvard. Next year we hope to have two of these names repeated—Buller and White, with the possible addition of Baden-Powell.

Mr. Wilberforce has been elected to the vacant Lectureship in Physics, and Mr. Sykes has been appointed to succeed Dr. Sandys as Tutor of St. John's.

The festivities of the May week were much overclouded by the intimate association of so many Cambridge men with the war. The number of visitors was much below the average, and several of the balls usually held were given up altogether. First Trinity had no difficulty in keeping head of the river, and will probably be able to put on two strong crews for Henley.

Wales. The latter part of June in the University of Wales has been very largely occupied with various University examinations. Owing to the large number of options which the Wales degree allows, it is found needful to spread the examination over some time, so as to prevent "clashing" between

subjects taken by students. The Matriculation Examination of the University was held this year in the week beginning June 25.

The examinations of the Central Welsh Board for Intermediate Education will be held during the last fortnight in July. It is not improbable that the question of changing the time of the examination from July to Easter will be again raised. It is felt by many that it is a very severe strain on children to have to undergo an important examination in very hot weather, such as we had at the end of July last year, with the risk of interruption from the emotional disturbance caused by thunderstorms. Doubtless the question of the date of the examination will receive very careful consideration on the part both of the Central Board and of the Headmasters' Association.

A movement is now on foot to establish a University Settlement in Cardiff. To this end an association is being formed, with an executive committee to carry out the work. This movement has been started for the most part by some of the past students of the Welsh University Colleges. There is no doubt a very considerable field in Wales for the dissemination of culture from University and other centres both by individual and collective effort, and this new movement may well supply a want in this direction. In the industrial districts, especially of Glamorganshire and Monmouthshire, institutions, such as a settlement and the like, could do much to brighten the lives of the inhabitants. In Cardiff itself it is only fair to state that the University College, through its excellent system of evening and day technical and other classes, which are attended by hundreds of the inhabitants of Cardiff and the district, has been now for some years doing a great work for popular education in Glamorganshire. It is to be hoped that if the proposed settlement is started its promoters will come to a clear understanding with the College authorities as to their respective spheres of work, so as to prevent the overlapping of classes and the like. As some of the leading spirits in connexion with this interesting and valuable new movement are connected with the Cardiff College, no doubt this precaution will be taken.

The headmasters and headmistresses of the county schools of South Wales and Monmouthshire have elected as their representatives upon the Central Welsh Board for Intermediate Education Mr. R. W. Jones, B.A., Headmaster of the Gelligauer Grammar School, and Miss L. M. Bengier, Headmistress of the Swansea High School for Girls.

## A SELECTION FROM CASSELL'S PRIZE BOOKS.

**OUR GREAT CITY; or, London the Heart of the Empire.** By H. O. ARNOLD-FORSTER, M.P. About 300 pages, crown 8vo. With a Series of Full-page Illustrations. Strongly bound in cloth, 1s. 9d.

"Eminently readable and instructive, and its many well chosen illustrations add much to its attractiveness."—*The Scotsman*.

**IN DANGER'S HOUSE; or, Stout Hearts and Stirring Deeds.** With Introduction by H. O. ARNOLD-FORSTER, M.P. With Four Coloured Plates and numerous Illustrations. Handsomely bound in cloth gilt, 2s. 6d.; also in blue cloth, 1s. 8d.

**FOUNDERS OF THE EMPIRE.** By PHILIP GIBBS. With Four Coloured Plates and numerous Illustrations. Handsomely bound in cloth gilt, 2s. 6d.; also in red cloth, 1s. 8d.

**BRITAIN'S ROLL OF GLORY; or, the Victoria Cross, its Heroes, and their Valour.** By D. H. PARRY. Cheap Edition, Revised and Enlarged. With Eight Full-page Illustrations by STANLEY L. WOOD. Cloth, 3s. 6d.

**THE IRON PIRATE.** A Plain Tale of Strange Happenings on the Sea. By MAX PEMBERTON. With Sixteen Full-page Illustrations, 3s. 6d.

**KING SOLOMON'S MINES.** By H. RIDER HAGGARD. Illustrated, 3s. 6d.

**THE BLACK ARROW.** By R. L. STEVENSON. Illustrated, 3s. 6d.

**ROBINSON CRUSOE, CASSELL'S FINE ART EDITION OF.** With upwards of 100 Original Illustrations by WALTER PAGET, 3s. 6d.; buckram, gilt edges, 5s.

**PERIL AND PATRIOTISM.** True Tales of Heroic Deeds and Startling Adventures. Profusely Illustrated, 7s. 6d. Also in Two Vols., 4s. each.

**UNCLE TOM'S CABIN.** By HARRIET BEECHER STOWE. Fine Art Memorial Edition. With upwards of 100 Original Illustrations by JENNY NYSTROM STOEPENDAAL. 7s. 6d.

**THE QUEEN'S EMPIRE.** A Pictorial Record, in which the Modes of Government, National Institutions, Forms of Worship, Methods of Travel, &c. of the Inhabitants of the British Empire are vividly portrayed. Two Volumes, containing about 700 splendid Illustrations, 9s. each.

**THE STORY OF THE HEAVENS.** By SIR ROBERT STAWELL BALL, LL.D., F.R.S. With Chromo Plates and Wood Engravings, 10s. 6d.

**THE STORY OF THE SUN.** By SIR ROBERT STAWELL BALL, LL.D., F.R.S., F.R.A.S. With Eight Coloured Plates, and other Illustrations. Cloth gilt, 10s. 6d.

**CASSELL'S ILLUSTRATED PRIZE CATALOGUE,** containing a list of Prize Books adopted by the London School Board, &c., and **CASSELL'S COMPLETE CATALOGUE,** giving particulars of several hundred Books suitable for presentation, will be sent, post free, on application.

**BELL'S HANDBOOKS TO THE GREAT PUBLIC SCHOOLS.**

Crown 8vo, profusely Illustrated, 3s. 6d. net each.

FIRST VOLUMES OF SERIES.

**CHARTERHOUSE.** By A. H. TOP, M.A., late Scholar of Trinity College, Oxford; Assistant-Master at Charterhouse. With 58 Illustrations, chiefly from Photographs by L. MARSHALL, Assistant-Master at Charterhouse.

**RUGBY.** By H. C. BRADBY, M.A., Assistant-Master at Rugby. With 44 Illustrations, chiefly from Photographs.

**ETON.** By A. CLUTTON-BROCK, New College, Oxford. [In the press]

PART III. NOW READY. 4to, 9s. net.

**CORPUS POETARUM LATINORUM,** a se aliisque denue recognitorum et brevi lectionum variate instructorum, edidit JOHANNES PERCIVAL POSTGATE, Litt.D.

Contents:—Grattius. Edited by J. P. POSTGATE.—Manilius. Edited by MALVIN BECHERT.—Phædrus. Edited by JAMES GOW.—Ætina. Edited by ROBINSON ELLIS.—Persius. Edited by W. C. SUMMERS.—Lucretius. Edited by W. E. HEITLAND.—Valerius Flaccus. Edited by J. B. BURY.

Cheaper Re-issue. 2 vols. 8vo, 15s.

**TEUFFEL'S HISTORY OF ROMAN LITERATURE.**

Revised and Enlarged by LUDWIG SCHWABE. Authorized Translation from the Fifth German Edition by GEORGE C. W. WARR, M.A., Ex-Fellow of Trinity College, Cambridge, Professor of Classical Literature in King's College, London.

**BELL'S SCIENCE SERIES.**

NEW VOLUME.

EDITED BY PERCY GROOM, M.A.,  
AND PROF. G. M. MINCHIN, M.A., F.R.S.

Crown 8vo Illustrated, 288 pages, price 4s. 6d.

**AN INTRODUCTION TO THE STUDY OF THE COMPARATIVE ANATOMY OF ANIMALS.** By GILBERT C. BOURNE, M.A., F.L.S., Fellow and Tutor of New College, Oxford; University Lecturer in Comparative Anatomy.

Vol. I.—Animal Organization. The Protozoa and Coelenterata.

Crown 8vo, 3s. 6d.

**ESSAYS AND ESSAY WRITING FOR PUBLIC EXAMINATIONS.** By A. W. READY, B.A., Army and University Tutor, formerly Scholar of Wadham College, Oxford.

This book is divided into Three Parts. Part I. contains Rules and Directions for beginners. Part II. contains Twelve Complete Essays, preceded by an Analysis and Sketch of each, and followed by Notes and Explanations. Part III. contains Articles for Advanced Pupils. An Appendix contains a list of subjects set for Woolwich and Sandhurst.

Crown 8vo, 2s. 6d.

**A SHORT COURSE OF ELEMENTARY PLANE TRIGONOMETRY.** By CHARLES PENDLEBURY, M.A., Senior Mathematical Master of St. Paul's School; F.R.A.S.; formerly Scholar of St. John's College, Cambridge.

This Short Course of Elementary Plane Trigonometry is intended for the use of Junior Students and of those others who do not require so complete a knowledge of the subject as would be obtained from a study of the author's larger work. In its range this book will be found sufficient for Candidates for the Oxford and Cambridge Local Examinations, the College of Preceptors, the Cambridge Previous Examination, the London Intermediate Examination in Arts, the Science and Art Examinations, College Entrance Examinations, and other examinations of the same character.

**BELL'S CLASSICAL TRANSLATIONS.**

The following have been added to this Series:—

**PLATO.**—Apology of Socrates and Crito (1 Vol.), Phædo, and Protagoras. Translated by H. CARY, M.A. 3 vols. 1s. each.

**PLAUTUS.**—Trinummus, Aulularia, Menæchmi, and Captivi. Translated by HENRY T. RILEY, M.A. 4 vols. 1s. each.

**BELL'S ILLUSTRATED CLASSICS.**

New Volumes, pott 8vo, 1s. 6d. With or without Vocabularies.

**XENOPHON, ANABASIS. Book I.** Edited by E. C. MARCHANT, M.A.

**OVID'S TRISTIA. Book III.** Edited by H. R. WOOLRYCH, M.A., Headmaster of Blackheath School.

**VERGIL. Selection from Æneid, Books VII.-XII.** Edited by W. G. COAST, B.A., Assistant-Master at Pettes College.

Full prospectus of this Series post free on application.

London: **GEORGE BELL & SONS, York Street, Covent Garden.**

# COLLEGE OF PRECEPTORS' EXAMINATIONS.

SUITABLE BOOKS IN THE  
**University Tutorial and Preceptors' Series.**

## English.

- ENGLISH GRAMMAR, THE PRECEPTORS'.** By W. H. Low, M.A. Lond., and ARNOLD WALL, M.A. Lond. [*In the press.*]  
**The English Language: Its History and Structure.** By W. H. Low, M.A. Lond. With 320 Test Questions. *Fifth Edition.* 3s. 6d.  
**History of England, The Matriculation. (To 1702.)** With Maps, Battle-Plans, and numerous Chronological and other Tables. By C. S. FEARENSIDE, M.A. Oxon. 3s. 6d.

## French.

- FRENCH COURSE, THE PRECEPTORS'.** By E. WEEKLEY, M.A. Lond. 2s. 6d.  
**FRENCH COURSE, BARLET'S PRECEPTORS' JUNIOR.** By STÉPHANE BARLET, B. es Sc., Univ. Gall. 1s. 6d.  
**French Prose Composition.** By E. WEEKLEY, M.A. Lond. 3s. 6d.  
**FRENCH READER, THE PRECEPTORS'.** With Notes and Vocabulary. By ERNEST WEEKLEY, M.A. Lond. *Second Edition.* 1s. 6d.  
**French Prose Reader.** Edited by S. BARLET, B. es Sc., and W. F. MASOM, M.A. With Notes and Vocabulary. *Third Edition.* 2s. 6d.

## Latin Grammar, &c.

- LATIN COURSE, THE PRECEPTORS'.** By B. J. HAYES, M.A. Lond. and Camb. 2s. 6d. [*In the press.*]  
**Latin Grammar, The Tutorial.** By B. J. HAYES, M.A., and W. F. MASOM, M.A. *Fourth Edition.* 3s. 6d. **Exercises and Test Questions on.** 1s. 6d.  
**Latin Composition.** With Exercises. By A. H. ALLCROFT, M.A., and J. H. HAYDON, M.A. *Fifth Edition.* 2s. 6d.  
**Latin Reader, The Tutorial.** With Complete Vocabulary. 2s. 6d.  
**LATIN READER, THE PRECEPTORS'.** [*In preparation.*]

## Mathematics and Science.

- Algebra, The Tutorial.** By WM. BRIGGS, M.A., LL.D., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. Based on the *Algebra* of RADHAKRISHNAN. Part II.: Advanced Course. 6s. 6d.  
**Algebra, A Middle.** By WM. BRIGGS, M.A., LL.D., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. 3s. 6d.  
**Arithmetic, The Tutorial.** By W. P. WORKMAN, M.A. [*In preparation.*]  
**Biology, Text-Book of.** By H. G. WELLS, B.Sc. Lond., F.Z.S., F.C.P. Part I.: Vertebrates. *Second Edition.* 2s. 6d. Part II.: Invertebrates and Plants. 2s. 6d.  
**Book-keeping, Practical Lessons in.** By THOMAS CHALICE JACKSON, B.A., LL.B. Lond. 3s. 6d. Exercise Books ruled Ledger, Journal, or Cash. 3d.  
**BOOK-KEEPING, THE PRECEPTORS'.** By the same Author. [*In preparation.*]  
**Botany, First Stage.** By A. J. EWART, D.Sc. Lond. 2s.  
**Chemistry, The Tutorial.** By G. H. BAILEY, D.Sc. Lond., Ph.D. Edited by WM. BRIGGS, M.A., F.C.S. Part I.: Non-Metals. 3s. 6d. Part II.: Metals. 3s. 6d.  
**Chemistry, Synopsis of Non-Metallic.** With an Appendix on Calculations. By WM. BRIGGS, M.A., F.C.S., F.R.A.S. Interleaved. 1s. 6d.  
**Euclid, Books I-IV.** By RUPERT DEAKIN, M.A. Lond. and Oxon., Headmaster of Stourbridge Grammar School. 2s. 6d. Books I. and II. 1s.  
**Hydrostatics, An Elementary Text-Book of.** By WM. BRIGGS, M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. *Second Edition.* 2s.  
**Magnetism and Electricity, Text-Book of.** By R. W. STEWART, D.Sc. *Fourth Edition.* 3s. 6d.  
**MECHANICS, THE PRECEPTORS'.** By F. ROSENBERG, M.A., B.Sc. 2s. 6d.  
**Mensuration of the Simpler Figures.** By WM. BRIGGS, LL.D., M.A., F.C.S., and T. W. EDMONDSON, M.A. *Second Edition.* 2s. 6d.  
**Sound, Light, and Heat, First Stage.** By JOHN DON, M.A., B.Sc. Lond. 2s.  
**Trigonometry, The Tutorial.** By WM. BRIGGS, M.A., LL.D., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. 3s. 6d.  
**TRIGONOMETRY, THE PRECEPTORS'.** Edited by WM. BRIGGS, M.A., LL.D., F.C.S., F.R.A.S. 2s. 6d.

## FORECASTS AND COMMENTS.

July 2, 1900.

THE General Meeting of Members of the College Fixtures. of Preceptors will be held on Saturday, July 21, at 3 p.m. A course of twelve lectures on "The Practice of Education" will be delivered in the autumn session. The Council propose to arrange for a Winter Meeting of teachers in January next on the plan of those which were held in January, 1898 and 1899.

\* \* \*

ON July 3, Prof. A. V. Dicey will distribute the prizes at King's College, London. There will be a conversatione in the evening. On the same evening the Wykehamist anniversary dinner will be held at the Whitehall Rooms.

\* \* \*

JULY 4 is Harrow speech day. The same date is fixed for the Bradfield College Jubilee dinner.

\* \* \*

ON July 10, Lord Reay presides at the annual meeting of the Children's Happy Evenings Association.

\* \* \*

AN examination will be held at the Charterhouse, London and Godalming, on July 10 and 11, for ten or more scholarships, open to boys between twelve and fourteen years of age.

\* \* \*

THE London School of Economics and Political Science offers three studentships for the encouragement of research—one of £100 a year for two years, and two of £50 a year, confined, in the first instance, to women students. The examinations will be held on July 17 and 18. Particulars may be obtained on application to the Director, at 10 Adelphi Terrace.

\* \* \*

THE DUKE AND DUCHESS OF YORK have promised to present the prizes to the cadets of the Thames Nautical Training College, on Thursday, July 19. The Committee of the "Worcester" have engaged the General Steam Navigation Co.'s new steamer "Eagle" to take the Duke and Duchess and a large company to the "Worcester," off Greenhithe, on the occasion. The boat will leave Fresh Wharf, London Bridge, at noon.

\* \* \*

THE Midsummer entries for the Diploma examination of the College of Preceptors number 270, a figure which stands favourable comparison with the 186 of last year.

\* \* \*

OXFORD CONVOCATION has passed a statute providing that the subjects on which the occupant of the newly established Wykeham Chair of Physics, for which the endowment, in accordance with the arrangements of the University Commission, is provided by New College, shall chiefly lecture shall be electricity and magnetism. The election of a professor will be proceeded with as soon as possible.

\* \* \*

THE *Athenaeum* says that it is "expected by optimists" that the University of London will set out on its new career with a fully constituted Faculty of Law. It is hoped that the Inns of Court will fall into line, after all, and associate themselves with the University. One seat on the Senate was assigned by the

Statutory Commission to each of the four Inns, but it seemed doubtful for a time whether the Inns would avail themselves of the opportunity thus presented to them.

\* \* \*

VICTORIA UNIVERSITY now includes agriculture among the subjects of examination for the degree of Bachelor of Science, thus following the example of Cambridge, Durham, and Wales in the recognition of agriculture as a study within the University.

\* \* \*

THE authorities of the Gilchrist Educational Trust have established in commemoration of their late chairman, Mr. Leigh Holland, who was specially interested in the higher education of women, a Fellowship of the value of £100 a year, to be held in alternate years by students of Girton and Newnham respectively. The holder of the Fellowship must have been placed in the First Class of one of the triposes, and will be required to follow a course of preparation for the profession of medicine or teaching, or such other professional pursuit as may be approved by the trustees. The first award will be made by Girton in July.

\* \* \*

AN honorary scholar, at a school or University, is a scholar who stands first in the examination, but leaves the emoluments for the candidate who comes next to him. That is honourable as well as honorary, and it is good to see the increasing frequency with which rich men's sons covet and attain this position. The names of two of these appear in the latest scholarship list of Cheltenham College.

\* \* \*

THE "Universities Catholic Education Board," in their report for 1899-1900, claim that they have been instrumental in appointing a chaplain and lecturer at both Universities. The subjects of the lectures given every Sunday during term time embrace religion, philosophy, and history. There were forty-five Roman Catholic undergraduates in residence at Oxford and twenty-seven at Cambridge. The expenditure in the maintenance and salaries of chaplains and lecturers amounted to £617; subscriptions to £660. The estimated expenditure for 1900 is £800.

\* \* \*

At the recent annual meeting of the Central Council of Diocesan Conferences, Canon Brooke, of Rochester, painted an alarming picture of the insecurity of the denominational system. We quote as we find it.

It was tottering to its very basis, and, unless something was done, they would have, in the course of two or three months, voluntary schools given up right and left on all sides. He thought that, if Church people were going to do anything in this matter, they should act at once. It was a fallacy to suppose that the parents were generally interested in this matter of religious education. The clergy, in his opinion, had neglected their schools in the most shameful and abominable manner.

\* \* \*

THE following have been appointed by the Committee of Management to the staff of examiners in the London College of Music:—John Greig, M.A. Edin., Mus.Doc. Oxon.; John C. Bowen, musical director of the Dominican Church, Haverstock Hill; Matthew Kingston, Mus.Bac. Cantab.; F. W. Pacey, Mus.Bac. Oxon.; and H. G. Trembath, Mus.Bac. Oxon.

\* \* \*

THE Council of Newnham College has finally arranged to purchase the freehold of the site of the college buildings, at present held on lease from St. John's College. This freehold will be acquired at Michaelmas, 1900, on payment of £18,000. Towards this sum gifts and promises amounting to nearly £13,900 have already been received.

\* \* \*

THE Grocers' Company offer four scholarships tenable at their school at Oundle, covering boarding and tuition fees (amounting to £76 or £81, according to age), open to sons of officers, naval or military, who have been killed in action or have died of disease during the campaign in South Africa. These scholarships

will be awarded by the Court by selection, subject to a qualifying examination. Applicants must not be less than ten or more than fifteen years of age, and the scholarship will be tenable so long as the boy remains in the school. Applications to be addressed to the Clerk, Grocers' Hall.

—♦♦—

Appointments and Vacancies. DR. TYRRELL, Professor of Greek at Trinity College, Dublin, has been appointed to the Chair of Ancient History, in succession to Dr. Mahaffy, now Senior Fellow. Prof. Tyrrell is many-sided—his volume on Cicero's Letters is well known, as also is his exceptional literary acumen.

\* \* \*

DR. OLIVER LODGE, D.Sc. Lond., Professor of Experimental Physics in University College, Liverpool, a Staffordshire man, has been appointed by the Crown to be Principal of Birmingham University. Dr. Lodge was at one time scientific adviser to the Electrical Power Storage Company. He is the President of the Physical Society of London, has been a Fellow of the Royal Society since 1887, and has written largely in the scientific journals on mechanics and electricity. His works comprise "Modern Views of Electricity," a collection of his contributions to the scientific press, "Lightning Conductors and Lightning Guards," "Pioneers of Science," a popular illustrated work on astronomical biography and discoveries, and "The Work of Hertz and his Successors."

\* \* \*

WE regret to learn that illness is assigned as a cause of Dr. Henry Sidgwick's resignation of the Knightbridge Chair of Moral Philosophy in the University of Cambridge, which he had held for seventeen years.

\* \* \*

CONSIDERATIONS of health also account for the resignation by Canon Shuttleworth of the Chair of Pastoral Theology at King's College, London, and for the retirement from active duties of Mr. Montagu Burrows, Chichele Professor of English History at Oxford.

\* \* \*

THE approaching retirement is announced of Mr. F. W. Walker, High Master of St. Paul's School, and previously High Master of Manchester Grammar School. Mr. Walker has served at both these schools the traditional full term of a headmastership, and he raised them both to the highest level of efficiency. Of his work at St. Paul's we shall speak again.

\* \* \*

THERE have been more than the ordinary number of changes this year at the public schools. Repton has received a new Head in the person of the Rev. H. M. Burge, of University College, Oxford, who succeeds Canon Furneaux, resigned. A new Headmaster is required for Sedbergh School, Yorkshire, in the place of Mr. Hart. The statement that Dr. Warre, of Eton, contemplated retirement was made without foundation.

\* \* \*

At Oxford, Mr. E. De Selincourt, M.A., has been appointed Lecturer in Modern English Literature for a term of three years.

\* \* \*

THE Lectureship in Physiology at Durham University is vacant by the death of Mr. G. E. Williamson, F.R.C.S.

\* \* \*

CARDIFF UNIVERSITY COLLEGE is about to appoint assistant-lecturers in the normal and intermediate training department, in classics, and in history, with English language and literature.

—♦♦—

Literary Gossip. OXFORD is always generous with the books which she annually produces in her capacity as printer and publisher. She has just sent to Birmingham University several hundred volumes from the Clarendon Press, to the value of £100 sterling. Mason College, of course, has a good library of its own; but the Birmingham University Library is still *in nubibus*.

THE interesting collections of the late Dr. Fortnum will cost the University of Oxford about a thousand pounds to reduce finally into her own possession. In addition to £500 contributed by Braenose College, the University is spending double that amount on the extension of the Ashmolean, which is necessary for the accommodation of the Fortnum and other recent acquisitions.

\* \* \*

MR. FLINDERS PETRIE, the Professor of Egyptology at University College, London, had a very good reception when he was presented for his honorary degree at Cambridge. The Public Orator pointed out that he had taught archaeologists the great value of a strictly scientific method. "He had carefully surveyed Stonehenge and the other principal monuments of Great Britain, and had written, with no less care, on 'Weights and Measures' and on 'Inductive Metrology.' He had explored the Pyramids of Egypt, and, by his discovery and excavation of the site of Naucratis, and his researches among the ruins of the Labyrinth in the region of Lake Moeris, had, in both cases, triumphantly vindicated the veracity of Herodotus." This was almost as nice for Herodotus as though he, too, were being capped as D.Sc. or Litt.D. Cantab.

\* \* \*

THE five-hundredth anniversary of the foundation of Cracow University was duly celebrated on June 7. A large number of men of science, including representatives of most of the European Universities and colleges, attended. The Austrian and foreign investigators went in procession on Thursday morning to the Church of St. Mary, where a Papal Brief in reference to the celebration was read. The graves of the founders of the University were visited, and wreaths were deposited on them. At the special commemorative meeting subsequently held, speeches in Latin were delivered by Prof. Tarnowski, the Rector, and Dr. von Hartel. An illuminated address was presented by a deputation from Oxford University.

\* \* \*

THE process of Celtogalvanism still continues. The Board of Education prints as an appendix to specimen schemes intended for use in Welsh-speaking districts a note stating that, "in districts where Welsh is the home language of the children, it is advisable that Welsh be freely used as the medium of instruction in the lower part of the school, especially in such subjects as object lessons on geography. But the English lesson, the chief aim of which is to 'impart a command' of correct English, should be conducted as far as possible in the English language, though Welsh should be used for the purposes of necessary explanation." The Board also recommend bilingual school reading books. The Celtic tongues are very interesting, as a matter of history and literature; but falling water does not go uphill. To teach those children English would be the true education.

\* \* \*

CAMBRIDGE is very wise in giving a large option of subjects for its University Essays. The adjudicators of the Prince Consort Prize announce the following subjects for dissertations for the year 1902:—(1) "The Second Athenian Confederacy." (2) "The Client-Princes of the Roman Empire." (3) "Alexius Comnenus." (4) "Political and Commercial Relations between England and Flanders under the Houses of Lancaster and York." (5) "The Theory of Toleration under the later Stuarts." (6) "The Colonial Charters and their bearing on American Polity." Any one of the following subjects may be chosen by a candidate for the Cobden Prize in 1901:—(1) "Lessons to be deduced from recent experience at home and abroad in the application of Co-operative Methods to Agriculture, with special reference to credit associations." (2) "The nature and limits of the services that may be rendered by Statistical Methods to Economic Inquiry in ascertaining the causes which determine the general rate of wages in a modern industrial community, and in appraising their relative importance." (3) "The causes and effects of Changes in the relative Values of different kinds of Agricultural Produce in

the United Kingdom during the last fifty years." (4) "The influence on International Trade exerted by changes in the methods and cost of Transport by Land and Water during the last fifty years; with special reference to the United Kingdom, Germany, and the United States of America." (5) "The methods by which the burden of Taxation upon different individuals and classes should be determined."

\* \* \*

THE Stopford Brooke Lecture Fund at University College, London, has reached about £700, out of the £10,000 which it was desired to collect. It is expected that a first course of lectures may be arranged for next year.

\* \* \*

THE PRINCE OF WALES has accepted a copy of the third volume of the "Handbook to Christian and Ecclesiastical Rome" (A. & C. Black), by M. A. R. Tucker and Hope Malleon. This volume contains an account of the Order of St. John of Jerusalem, of which one of the authors is a member, and of which the Prince is Grand Prior in England.

\* \* \*

THE volume on Wales which Prof. Owen Edwards has been writing for "The Story of the Nations" series has now been finished, and the manuscript is in the publisher's hands. Prof. Edwards has succeeded in collecting a number of curious and interesting pictures for the illustration of this volume.

\* \* \*

"A HISTORY of Bradfield College by old Bradfield Boys," edited by Mr. A. F. Leach, will be published shortly by Mr. Henry Frowde, Oxford University Press. The book will be a handsome volume, and will contain many illustrations. Mr. Leach is already known as a historian of Winchester College, and author of "English Schools at the Reformation."

## SECONDARY INSPECTION.

At the Evening Meeting of the College of Preceptors, held on Wednesday, June 13, Dr. WORMELL in the chair, R. P. SCOTT, Esq., M.A., LL.D., read the following paper on "The Inspection of Secondary Schools: of what tests ought it to consist?"—

### THE ROYAL COMMISSION ON SECONDARY EDUCATION: ITS OUTCOME.

It is now nearly five years since the Report of the Royal Commission on Secondary Education was signed, and since then not a few things have happened in the educational world. We have much to be grateful for to the Bryce Commission, since, like its great predecessor of 1864, it has come to conclusions which are constructive, and offer a definite plan of organization. We may agree with many of its recommendations, or we may differ from the plan as a whole; but the promulgation of a reasoned system is a challenge to all and sundry to formulate reasons for accepting or for rejecting the proposals thus authoritatively made. The interchange of opinion on the Report, taken together with the definition of terms which results from discussion, does good service to the cause of education; it helps clear thinking, and clear thinking should lead in due time to right action.

Some persons may be inclined to discount the results of the Bryce Commission, because after five years so few of its definite recommendations have been placed upon the Statute Book. Such criticism seems, however, to ignore facts. It is the fate of Education Commissions in England to be effective partially, and after much delay; yet the Board of Education Act has passed and has opened the door to a series of momentous changes of which few people recognize the importance. Thus, we have now a Minister of Education—in name; we have a Board of Education—still in the throes of being about to be; we have a Permanent Secretary, who is responsible—in theory—for the whole education of the country; we have a Consultative Committee—in *posse*. Registration of teachers is imminent, and a Local Authority Bill looms in the near future; nor should it be forgotten by those who are not enthusiastically in favour of such a measure that this subject was accorded a prominent position in the Queen's Speech, and has thus acquired a definite place on the Government programme for the present Session. Thus, though it must be conceded that in secondary education the wheels of the administrative chariot are driving heavily, yet it is a fact, apparent even to the naked eye, that it moves.

### ONE CAUSE OF DELAY IN LEGISLATION.

It may be affirmed, without much fear of contradiction, that, while part of this delay is due to natural causes (such as the ingrained English dislike to reform, and the consequent inertness of officials), some of the delay is due to the method adopted by the Commission itself. The Commission pointed out truly enough the urgency of the

case, and circumstances continue to justify its view; but, owing to political exigency, the Commission was hurried in its work, and, though only appointed in March, 1894, its Report was called for before the autumn of 1895, in order that its recommendations might form a basis for legislation on the subject in 1896. The Commission was unable, therefore, to present with sufficient force the case for reform. It omitted to base its conclusions on widespread investigation and inspection, and, in consequence, the movement for giving effect to the Commission's recommendations has been deprived of much of the force which otherwise it should have acquired. A general inspection of schools is a necessary preliminary to effective and well considered action, and until that necessary step has been taken we shall remain in the dark, not only as to what provision for secondary education exists, but also as to the equally important fact of the *quality* of this provision. We need such an inspection, not only in the interests of education, but also in those of justice to vested interests and in those of the economy of public money. Unless we take stock of our educational resources, we shall not realize the richness of its variety. We may, in ignorance, trample out of existence many valuable and delicate seedlings; we may bring to undeserved ruin many teachers whose work lies outside the public and official groove; we may embark on an unnecessarily costly experiment, through building and maintaining new schools, where often it might be possible to make use of such schools as exist.

But if, in the interests of the nation, we really desire to preserve variety, to deal justly with vested interests, to build up an efficient system of secondary schools, with due regard to economy, it is indispensable to set on foot a wise system of inspection, even though on a small scale to begin with, so administered that from the outset it may enjoy the confidence both of teachers and of the public.

#### TWO ASPECTS OF INSPECTION.

One of the incidents in "Alice in Wonderland" somehow fixes itself in my mind as illustrating two aspects of our present attitude towards inspection. The bewilderment of the teacher who has lost his bearings under the new conditions, the impassive, go-as-you-please air of the high officials, are both reflected in Alice's first interview with the sententious Cheshire Cat. The Cheshire Cat, you will remember, always offers its advice grinning, and from a safe distance:—

"It looked very good natured, she thought; still, it had *very* long claws and a great many teeth; so she felt that it ought to be treated with respect.

"Cheshire Puss," she began, rather timidly, as she did not at all know whether it would like the name, 'will you please tell me which way I ought to go from here?'

"That depends a good deal where you want to get to," said the Cat.

"I don't much care—" said Alice.

"Then it doesn't matter which way you go," said the Cat.

"—so long as I get *somewhere*," Alice added as an explanation.

"Oh! you're sure to do that," said the Cat, 'if you only walk long enough.'

The obviousness of such advice need not hide from us its wisdom, nor the difficulty, under present circumstances, of applying it in educational practice to schools which do not set out with any definiteness of aim.

There is, perhaps, hardly any word which has stood, and stands, for more apprehension, anxiety, and heartburning among teachers than the word *inspection*. Nor is this to be wondered at, for the term is so wide that only use and custom can narrow its application. To *inspect* is to look into—i.e., for the purpose of reporting to a proper authority; and *inspection* as applied to schools may be taken to mean to look into any (or all) of the matters which relate, whether directly or indirectly, to teaching. Thus a complete inspection will, for the purpose of reporting to the proper authority, look into and estimate the efficiency of (a) the premises in which the teaching takes place; (b) the administrative conditions in which the teacher is placed; (c) the instruments through which the teaching is communicated to the learner; (d) the result of the teaching as evidenced in the pupil.

The Bryce Commission distinguished these four tests from each other. The first three are inspectional, and are classed as sanitary, administrative, and educational inspection respectively. The last is the examination test, and should be distinguished from inspection. It is true that these kinds of inspection tend to overlap; yet it will be well if we endeavour, in speaking of them, to keep them distinct. And before dealing with them separately it may be well to indicate some important considerations which should accompany their use.

1. The cost of inspection ought certainly to be borne by the State. It would be unreasonable to expect that a school doubtful as to its efficiency should have to pay for having the doubt decided against it; and yet this is the very case in which inspection would be most serviceable. In Wales schools pay for being inspected; but, as they are examined as well as inspected, the payment may probably be regarded solely as an examination charge.

2. That only such schools as are reported upon satisfactorily under all three heads should be allowed to be classed as "efficient" in the

Register of Schools. It is clear that, in the future, admission to this Register will be indispensable for any school if it is to hold its own against competition. After a time the public will only use such schools as are registered as efficient.

3. In sanitary inspection no report ought to become public property, and action ought not to be taken on such report by the proper authority until those responsible for the school have been allowed a reasonable time to set right any shortcomings which inspection may have revealed.

4. In educational inspection, the report, before submission to the Local or Central Authority, should first be submitted to the headmaster or principal of the school, not with the object of allowing alteration in the statements therein contained, but in order to afford an opportunity of adding any comments or explanations which would help the Authority in its judgment of the report itself.

#### INSPECTION OF THREE KINDS: CONSIDERATIONS AFFECTING INSPECTION.

Turning now to the kinds of inspection:—

1. Sanitary inspection deals with the buildings, the class-rooms—their adequacy and suitability as to light and air—the playgrounds, playing-fields, offices, the actual situation of the school, its accessibility, &c. It is highly important that this kind of inspection should be thorough, and be undertaken by an inspector chosen for his knowledge not only of the principles of sanitation generally, but of the application of such principles to school conditions in particular. Regulations as to the conditions desiderated in the matter of floor-space, position of windows and doors, approved modes of ventilation, width of passages, &c., should be issued for the guidance of those who are responsible for the upkeep of schools, and the inspectors in their reports should be allowed for some time to come a considerable latitude in applying the principles to concrete cases, and should in all cases of reasonable approximation to the approved conditions issue the certificate of sanitary efficiency. This inspection ought to be in the hands of men and women specially appointed for this specific purpose. In the case of Local Authorities administering large areas, the Local Authority would probably appoint, but the Central Authority ought to have available such inspectors, whose services might be placed at the disposal of Local Authorities administering small areas.

2. The second kind of inspection is administrative. It will be essential for the Local Education Authority of the future, on which will be thrown the responsibility of supplying (or aiding the supply of) an adequate number of secondary schools, to know the exact conditions on a fixed day in each year under which each school in the local list is administered. It should know the type of secondary school to which the school belongs, the fee charged, the number and age of the pupils, the number for whom accommodation is provided, the number and the qualifications of the staff, the income of the school from endowment, from grants (central or local), from fees, &c. It should know exactly how the school is administered, whether by governing body, directors, or proprietor; and, if the school is administered under a scheme or other legal instrument, it should know whether the provisions of such document are faithfully carried out. It will readily be seen that much of the work of administrative inspection can be conducted by means of a return made at the instance of the Board of Education. A copy of this return would naturally be placed in the hand of the educational inspector when about to visit the school. The foregoing details of the return should be public. Also, for the official information of both Local Authority and Central Authority, but not for publication, the actual salaries paid to assistant masters and mistresses should be noted. It should be competent for the Board of Education to take any necessary steps to verify such return.

3. The third kind of inspection—educational inspection—is that variety of inspection which generally monopolizes the name; but this is too frequently confused with examination, with which it is nearly allied. It will be well to distinguish the two. Educational inspection of the school, as distinguished from examination of the pupils, should consist in a looking into for the purpose of making an official report thereon (a) the suitability of the curriculum—that is, of the whole course of instruction—to the professed aim and type of school; and (b) the general working of the school regarded for this purpose as a part of administrative machinery. Such inspection comprises the organization of the school into forms and sets, the syllabus of work assigned to each form and set, the number of pupils in each form and set, the proficiency as regards teaching of each member of the staff. Such inspection should further report upon the discipline of the school, the method by which it is obtained, the general relations between teachers and pupils, the efficiency of the school outside its strictly instructional orbit—the school games, the school societies, the influences which outside the class-room also help in character building. For an inspection of this kind to be really efficient we need singularly able, industrious, honest, and tactful men and women as inspectors. It will be difficult at first to find in any large number persons really fitted to undertake this work. Moreover, it should be borne in mind that each secondary school will, in general, require more than one inspector to properly appraise its work. We shall need inspectors qualified respectively to inspect in classics, in modern languages, in English and mathematics, in science, and in

art. If this removes one difficulty—that of not requiring too much from any one inspector—it creates another—that of increasing the number of inspectors and the stringency of the test. But neither is this difficulty insuperable; for it would be possible, and in general it would be satisfactory, to vary each year, after the first time of inspection, the chief stress of the inspection. One year the educational inspection might be principally directed to ascertaining the school efficiency in the humanities, say; the next to the scientific side; and it might be possible, on special recommendation, to allow individual schools of admitted efficiency to be inspected once only (say) in three years, provided the results of outside examinations continue satisfactory. The good results of inspection conducted in this manner cannot be doubted, and examples of its benefits will be within the experience of many of us. To take two illustrations drawn from my own knowledge. Teachers in secondary schools, speaking generally, are grievously lacking in the power to teach in the presence of an adult visitor. This self-consciousness is an evil in itself; but, in fact, many secondary teachers who possess good ability are weak in teaching power—that is, in mapping out a lesson, in presenting its points with clearness and force, in getting hold of the pupils' attention and keeping it, in questioning, in summarizing—because they have never been helped by the sympathetic criticism of a master of their craft. This an inspector should be. He should, through having been a teacher himself, know the difficulties of the task, and, like a cricket expert watching a county match, he should be a keen and accurate judge of the skill shown by batsman and bowler. In a recent case which has come to my knowledge a friend of mine, who is a good French scholar, not only acknowledged, in a letter he recently sent me, the gain which the hints of the inspector had been to him in teaching the subject, but added that, when the inspector went away, many of the boys had a much greater liking for French than they had when he came.

Such an inspector should examine individual pupils only so far as he wished to do so, in order to verify any impression he might have formed; but the examination of the school should be entirely distinct from its inspection. The main reason for keeping the two distinct is in order to get the best out of the inspector. If he has to go through the drudgery involved in stacks of examination papers, his judgment will be pressed to death by sheer pounds avoirdupois, and he will evade the task of thinking, and will assume that the teacher and the school public will be charmed to hear skilful variations on the theme that Brown, ma., of the Shell, did an excellent paper in French Unseen, and that Wilkinson, min., of the Preparatory, gained absolutely full marks in the Junior Arithmetic paper.

Overwork as to details is the reason why too frequently in school reports we cannot see the wood for the trees. Frequently this is not so much the fault of the tester as of the test. And it must, of course, be obvious that inspection, whether regarded as an art, or as a craft, suffers incalculably from the want of recognized types of schools and standards of teaching. Except in the case of the great public schools and the schools which prepare for them, there are as yet no recognized types of curricula, so that the inspector is unable to carry with him to the school any accurate, or even approximate, standard of comparison by which to estimate its work. Each secondary school is officially a separate and unrelated entity, and the inspector who recognizes the disadvantage of this has, perhaps, been bidden not to proclaim these difficulties from the house-tops, lest, perhaps, the school concerned should transfer its custom to some other examining body which cultivates a more discreet mode of life.

I may point out that the College of Preceptors is endeavouring, and with a great deal of success, to carry out this plan which I have just been speaking about; and, in a memorandum which was sent in March last year to the Secretary, Intermediate Education (Ireland) Commission, the College states that the method which seems to be very acceptable to schools is as follows:—

(1) Inspection of the whole or part of a school may be taken in conjunction with the examination of some of the pupils under the Certificate and Junior Forms Examination Schemes, a report being furnished on the combined examination and inspection. (2) In addition to the full schedules of marks awarded in every subject, which are supplied to all heads of schools sending in candidates to the Certificate and Junior Forms Examinations, the College furnishes, for a small additional fee, a written report on the work of the candidates (where whole classes have been sent in). These reports are based on the remarks made by the individual examiners while marking the answers of the candidates, and are, therefore, of the nature of a judgment on the work compared with that of other schools as they pass in succession before the examiner's mental vision. To this comparative appreciation by a large number of experts in their particular subjects greater weight would probably attach than to that of a single examiner. This scheme has only been in operation for two or three years, and the growing demand for these reports shows that they are found useful.

To the educational inspection properly conducted, an indispensable supplementary test is the examination of the pupils, of whom, if the

school age allows, a certain proportion should enter for some public examination, such as the University Locals or the examinations of the College; and it is important to note that one (or more) whole forms should thus be presented, and the results of this and other external examinations should be noted in the inspector's report. This report will be made more complete, and, therefore, more valuable, if it could incorporate also the report on an inspection of the annual examination of the school conducted somewhat as follows:—The headmaster or principal assigns among the staff the whole of the setting and marking of the examination papers, no teacher, as a rule, examining his own pupils. The questions as set are submitted to the examiner for revision and approval; the papers, when marked, are also submitted to him. With a comparatively small expenditure of labour, the inspector, under these circumstances, is able to bring to bear the whole force of his personal experience in estimating the result; and if on a single sheet he could put against each subject in each form a letter, such as "G" (good), "F" (fair), "M" (moderate), to denote the standard attained, it would be possible, almost at a glance, to see which subject and which forms are being taught well, and which not so well. In school inspection the general result is best realized by means of a few bold strokes in a complete and well defined outline.

#### NEED FOR A COLLEGE OF INSPECTORS.

But, in order to get inspectors to deal thus with their work, there is the need of a corporate and professional feeling among inspectors as such. Inspectors should meet in conference, to compare and contrast the results obtained in similar schools under various conditions in different parts of the country; experiments in teaching should be by them watched and recorded, their judgment, favourable or otherwise, tabulated, their own methods discussed and modified. In this manner a college of inspectors could do invaluable work for schools. Assuredly, an ever increasing importance attaches, and must attach, to inspection. Examination (both public and private) has its place, and that an important one, in the school economy; but the weight attaching to it is likely to decrease as inspection grows in efficiency, and, therefore, in public repute; but when it is recognized that examination, at most, touches but a small proportion of the pupils of any one school; that it is a test which perforce is a test of instruction rather than of education; that, in the nature of things, it takes no account of the spirit and tone, of the discipline, of the subtle influences of tradition, of the formative intercourse between teacher and pupil—all elements in the school's highest life; it may, perhaps, be acknowledged that a body of teachers could hardly set themselves a more fruitful, if difficult, task than that of helping to form a healthy public opinion among parents, as well as among legislators and administrators, as to the absolute and urgent necessity of pressing into the service of the inspection of schools a body of efficient men and women, whose work shall be carried on in such conditions of official recognition and corporate life as ultimately shall ensure its success.

Mr. EVE called attention to the reports now issued by the College of Preceptors based on the notes of the several examiners, often combined with inspection. It was not easy to draw up such reports because they had to be submitted to governing bodies who were not always familiar with school details. For this reason the plan had been adopted of sending the general report to the governors and the minuter details (including practically all the remarks of the examiners) to the headmaster of the school. He agreed with the lecturer that it was extremely difficult to find suitable inspectors. It would be regrettable if the work of inspection were entrusted to young men who had not had sufficient experience as teachers to fit them for the task. He knew one man who was almost ideally qualified to be an inspector, a man of advanced scholarship and of considerable experience as assistant-master and headmaster, and who, in addition, had had much miscellaneous experience, being a member of a County Council and managing a good deal of their educational work. Unfortunately, few men with such qualifications were available, and a single inspector could not manage to inspect more than about fifteen schools in a year. Above everything officialdom was to be avoided.

Miss CROOKSHANK thought that the inspection of a school should not be placed in the hands of a single inspector, but that at least two should be associated in the work. A school should also not be inspected by the same inspector in successive years. These precautions would tend to correct variations of standard.

The Rev. J. O. BEVAN said an examiner was expected to combine so many different qualifications that it was very difficult to obtain suitable men in sufficient number. All inspectors should have had experience as heads of schools, and know something about the management of them. Otherwise teachers would feel the lack of that sympathy which should exist between the inspector and the principal and teachers of the school inspected. It should be borne in mind that the inspectors would not all be Government inspectors, as the Act provided for inspection by other bodies, whose reports would of course have the same weight as the Government reports. Examination of a school by paper work alone was not sufficient. It was important that the

examiner should visit the school and become acquainted with its "atmosphere." He could then deal with the answers of the pupils in different ways according to the particular type of school presented to his consideration. Inspectors were sometimes unjustly criticized when their reports did not agree with the experience of the head teacher. It sometimes happened, for example, that a pupil who generally did good work in school was unwell during an examination, and consequently unable to do himself justice. He agreed with Dr. Scott that private schools furnished a valuable asset in the country's educational stock, and it was to be regretted that such schools suffered not only in the present, but also in their prospects for the future, from want of concerted action.

Miss WALKER considered that reports should be full and candid. They would then be of assistance to the principal in remedying defects and in raising the standard of the school from year to year.

Mr. ORCHARD thought that inspection should be compulsory; otherwise those schools which most required it would shirk it. To be thorough, inspection should embrace the teacher, the taught, and the school premises. The inspector and the examiner should go through the examination work together as far as possible, and prepare a joint report. Pupils should be examined *viva voce*, in order that the value of their knowledge might be accurately estimated. To be able to draft a satisfactory report an inspector should have had experience in teaching, so that he might come to the work with the necessary knowledge and sympathy with teachers and pupils. He agreed with the lecturer that there should be different inspectors for different classes of subjects.

Mr. SHIPHAM thought that, having regard to the enormous difficulty of forming a correct estimate of the work of a school, it was important that sufficient time should be devoted to the inspection. Instead of the one or two days usually spent on the oral examination and inspection of a school, at least five days should be allowed if a trustworthy estimate was to be formed. When an inspector visited a school for a single day the boys were on their best behaviour; but this unnatural condition would not last for five days. This would, of course, increase the expense, but it was necessary.

The CHAIRMAN, referring to the lecturer's remark that up to the present time the recommendations of the Secondary Education Commission had only been partially put into effect, said he was sure that the Commissioners had reason to be satisfied that so much had already been accomplished. He felt that inspection, supplemented by a certain amount of examination, ought to be welcomed by teachers, as it might be the means of emancipating teaching from the tyranny of examination. Inspection should cover all the work of a school. There was danger in incomplete or one-sided inspection. An inspector who was a specialist in science or in literature, for example, might unduly stimulate his favourite subject to the detriment of other subjects. The last speaker had rightly urged that inspection should not be hurried. It was of the highest importance that the inspector should patiently take such time as might be required. He agreed with Mr. Eve that special care was required in preparing reports for governing bodies, as, from their unfamiliarity with school details, they might easily mistake a suggestion for improvement as being a censure. The College of Preceptors, therefore, did wisely in supplementing its reports to governing bodies by recommendations to heads of schools.

Dr. SCOTT having replied to the remarks of the various speakers, a vote of thanks to the lecturer concluded the proceedings.

### THE JUBILEE OF BRADFIELD COLLEGE.

BRADFIELD completes her fiftieth year of existence this year. Founded in 1850 by "Tom" Stevens, rector and squire of Bradfield, with three pupils, the school gradually increased during the first decade of its existence both in numbers and reputation. In 1860 the number of boys was about a hundred and twenty, and that number was maintained, but not substantially added to, during the next decade. The founder was so convinced of the stability of his school that in 1862 he obtained a Royal Charter, having previously conveyed the buildings and land to trustees. But in the trust deed he committed an error that well nigh proved fatal to Bradfield. For by reserving to himself absolute power as Warden over the funds, and over the head and assistant masters, he in effect forged against himself and his offspring the deadly weapon that has the magic power of dealing the blow that kills even when the wielder of it is unconscious that he has raised his arm to strike. He created a dual control.

By 1880 Stevens was seriously embarrassed. The numbers had fallen to fifty and three; the resources of the founder had been crippled by the large sums he had expended in "restoring" and refurbishing his church; and in 1881 he was compelled to retire from the Wardenship, resign the living, and dispose of his property. Bradfield had at the best, it might seem, furnished to

the scholastic world, and to the authority that controls its destinies, a striking example of the miserable consequences that attend upon the setting up of a double head. It seems odd now to reflect that Stevens had started his school as a choir school. Deeply interested in one side of the Oxford movement, he had dreamed of setting up a cathedral service in his parish church; and for that purpose he had found the resources of the village inadequate. I have no thought of disparaging the energy of Mr. Abdy Williams; and I am not concerned here to estimate the value, educational or otherwise, of his Greek music and his Greek instruments. But I do not think that in this year of jubilee the chapel music at Bradfield can be accounted a strong feature. In this case the founder's "intentions" faded with the founder.

And yet, after all, Tom Stevens had builded better than he knew. For in 1880 the present Headmaster, Dr. H. B. Gray, to whom the resuscitation of the school is wholly due, had left Westminster to take charge of the fifty-three. For five or six years he had a hard struggle for existence. But by 1888 the battle had been won; and now, in place of fifty-three, there are over three hundred boys in the school. The only dark spot in the outlook, as it seems to me, is the consequence of the fact that the prosperity of Bradfield has been in its inception, and is in its continuance, so entirely due to its chief. "May the king live for ever!" should be the pious wish of all O.B.B.'s; but, however vain one may be to abstain from words of ill omen, it should act as a warning to all concerned that Dr. Gray, for the first time in his life, was recently ordered to spend three days in bed in consequence of overwork. Let him inspire his lieutenants, and adopt betimes that most valuable and most inspiring of the *arcana* of rulers—that the chief business of the chief is to do nothing; and that salaries should vary in inverse proportion to the amount of work accomplished.

With this one reservation at which I have hinted, but on which I am unwilling to dwell, the outlook for Bradfield is bright indeed. The school lies amid some of the fairest scenery of Berkshire; the site is high, and the situation salubrious; the school looks down from a beautifully wooded eminence on a village and church so fairly placed that it is no wonder a mystic should have been seized with a longing to praise God continually there with singing sweet as that elusive music with which the neighbouring wood re-echoes. The buildings, though not palatial, are adequate; they have grown up in so pleasantly haphazard a style from the old manor-house, the nucleus from which Tom Stevens started, that they present a charming unity in their very diversity. Perhaps a more solid advantage is the present popularity of the modern boarding schools. As against the ancient foundations, the expenses are generally smaller, and the accommodation and appliances are better.

The great day schools do not seem to be making way; they certainly are not, in most cases, obtaining their fair proportion of the natural increase in demand. The prejudice against educating sons in great towns does not diminish among parents; some of the most successful day schools have done injury to themselves by proclaiming too loudly their scholastic successes. On the whole, we rather expect a considerable increase in the numbers at Bradfield, always assuming that Dr. Gray does not allow the sword to wear out the scabbard.

If Dr. Gray continues to guide the fortunes of the school for another ten years, its fortune is apparently assured. We read that when Brasidas the Spartan died a chapel was erected to his memory at Amphipolis, which he had delivered from the enemy; and, by a pleasing convention, he was declared founder of the city. So when the present head of Bradfield—after the lapse, as we must all hope, of many more than the ten years just mentioned—shall have suffered the common lot of all men, it will not be strange if the college chapel, now a torso, is completed in his memory, and if, perhaps in a still more remote future, Dr. Gray comes to be looked upon as the *œcist* of the college. Certainly "Tom" Stevens's achievement, estimable as were his aims, is scarcely the kind of plant that burgeons into pious memories and founder's day speeches. At the most it may be his lot to play Zeno to Dr. Gray's Chrysippus.

Of the triennial Greek plays that have proved a valuable attraction at Bradfield, I shall say nothing at present, as I hope to give some account of the jubilee performances in the next number of this journal. As for sports and games, cricket and soccer flourish; and the red-coated cadet corps, as competitors at Bisley know, is a tower of strength. The "bug-hunting" club seems to attract a large number of the junior boys.

E. C. MARCHANT.

## REVIEWS.

## OLD STAGERS AND NO STAGERS.

- (1) *The Greek Drama*. By Lionel D. Barnett. (Dent.) (2) *The Frogs of Aristophanes*. Translated by E. W. Huntingford. (Methuen.)

Between the "Old Stagers" and the "No Stagers" the battle rages yet. If we may quibble with the metaphor, the English stage, we may say, was already occupied by an "old stager" in the person of Mr. Haigh. But there was room for a "no stager"; and in due time Mr. Barnett has made his entrance. He is, however, placed at a disadvantage, because, whereas Mr. Haigh had space wherein to dilate upon the why and wherefore, Mr. Barnett is compelled in his little manual to state only his conclusions without giving reasons. One consequence of this enforced reticence is that his book will not serve the purpose of examination candidates. He is a disciple of Dörpfeld and Robert; and his work provides in a convenient compass a general survey of their views. Those who follow the long-lived controversy over the details of the fifth-century theatre may well be amused to note how one by one the notions that they learned in youth for facts are being relegated to the limbo of exploded things. The *thymele*, for example, which of late years has shifted its position and its signification more than once, has now disappeared altogether; and we are to think of the word as a mere synonym of "orchestra." These things are very perplexing; and, full of learning as is Mr. Barnett's book, we cannot think that the construction of the fifth-century theatre is a suitable subject to be dealt with in a handbook so small that theories have constantly to be stated as though they were ascertained facts.

We much prefer that portion of Mr. Barnett's book which is devoted to the dramatists. And here we have in a small compass some admirable criticism, as bright and sound as it is learned. "Æschylos," says the author, "is the greatest of the Greek prophets, and with Pindar he is the last." We rather think that Isocrates would have winced at this dictum. Sophokles is "a polished man of the world, a refined sensualist of singular sweetness of charm and manner." Euripides is described much as Wilamowitz and Dr. Verrall have depicted him. Aristophanes is neatly hit off as a combination of Rabelais and Mr. W. S. Gilbert, though, of course, Mr. Barnett recognizes that the genius of Aristophanes has other sides too; for was not his the soul that all the Muses chose for their abiding place?

Among the extant plays of Aristophanes, "The Birds" and "The Frogs" undoubtedly occupy the highest place as daring flights of fancy. In "The Birds" the poet climbs up into heaven; in "The Frogs" he goes down into hell. Of "The Frogs" a spirited and ingenious verse translation is before us. Mr. Huntingford is especially successful in representing the verbal puns of the original. Perhaps the happiest hit is made in the passage where Charon declines to take the slave Xanthias on board "unless he has fought at Arginuse for his skin." "Slaves not taken" (rhymes Mr. Huntingford) "Unless he's fought at sea and saved his bacon." The bragging of Dionysus is admirably turned:—

I'd like a small adventure with a devil,  
To raise the journey's rather prosy level!

Whether the translator is well advised in freely introducing modernisms we are not sure. It is often easy to make a point by frankly indulging in anachronistic renderings; but they have an incongruous effect; as when, for example, we read of Theramenes:—

Theramenes? he's clever; he's a fox at politics, sir,  
Who, if he plays to beat the ace, and finds he's in a fix, sir,  
Consults his sleeve without your leave, and always wins the trick, sir.

That is adaptation rather than translation; and the modernity of it jars in the neighbourhood of allusions to the details of ancient life and manners. Take another example:—

Where the porpoise comes round at the bos'un's shrill sound  
To the dingy black bows, and in fun  
Flings up to the ship a prophetic tip  
On the number of miles of the run.

The words we have italicized are a highly diverting adaptation of the original—*παρρέια και σταδίου*; but, with the assistance of a modern reference, it introduces a point that has no place in the original.

In rhyming Mr. Huntingford has much facility; he can make his lines jingle like church bells—

Change the metre, rather fleetly, hail Demeter, harvest Queen;  
You must greet her and entreat her with a sweeter tune, I ween.

That he does not stick at trifles in order to secure this jingling effect is shown by such lines as this:—

And in a crisis if he's high in power, makes money of it.

But, whatever difficulties present themselves, Mr. Huntingford never flags. His rendering is a most spirited performance, and will make good reading even for those who know nothing of the original. We conclude with a longer extract that shows what the translator can do in the lyric passages:—

Come forth, Iacchus, come!  
And leave thy honoured home  
To dance upon this lawn, and here to meet  
The brotherhood  
Of holy men and good,  
Iacchus, O Iacchus!  
And waving round thy brows  
A wreath of myrtle boughs  
That teems with leaf and berry,  
With fearless feet  
Strike up the measure, unrestrained and merry,  
With grace that every sense can please,  
The mystic dance of holy votaries.

## LITERARY HANDBOOKS.

- (1) "Periods of European Literature." Edited by Prof. Saintsbury.—*The Transition Period*. By G. Gregory Smith, M.A. (Blackwood.) (2) *The Early Poems of Alfred Lord Tennyson*. Edited by John Churton Collins. (Methuen.) (3) *A History of Epic Poetry (Post-Virgilian)*. By John Clark, M.A. (Edinburgh: Oliver & Boyd.)

(1) Mr. Gregory Smith, Lecturer in English in the University of Edinburgh, is under the impression that there is a "pleasant fiction, which abides with us too securely," that the change from the old to the new in Western languages and literatures came to us "suddenly and strangely, as at the pass of a harlequin's wand." It would be very difficult to hold an idea of this kind, and we are not quite clear as to where Mr. Smith has found it laid down in "critical tradition." What has unquestionably existed in our literary manuals for generations past is a certain vagueness, slurring, and even manifest neglect in dealing with the fifteenth century, arising partly from lack of knowledge and of sympathy with the authors of that century, but mainly from the fact that these authors could not compare with Dante and Chaucer, that they were crippled by the uncertainty of literary form, and that their inspiration was rather for fugitive songs, allegories, and pastorals than for masterly and sustained poems. Of course, Mr. Smith is perfectly accurate in pointing out that there was no absolute gap or check of literary development, that the transition was natural, regular, and continuous, and that the value of the actual products of this period has too often been under-estimated.

The contents of this volume, so far as Britain is affected, are concerned with the Chaucerian tradition, the influence of the metrical romances, the Scottish poets, the ballads and popular songs, the development of the drama, the moulding of English prose, and the stimulating effects of the printing press. The chapters on French literature deal with the mediæval traditions, poetry before and after Villon, the *chansons*, the early drama, the chronicles, *nouvelles*, didactic works, and the development of French prose. Other chapters are devoted to the Italian humanists, the early romanticism, popular song, the *rispetti* and *stornelli*, to the Spanish ballads and German *Volkslieder*, and to the drama in Spain, Italy, and Germany. Mr. Gregory Smith's volume is one of the most comprehensive and informing of the series to which it belongs.

(2) Mr. Collins tells us that he has given much time and labour to this critical edition of Tennyson's earlier poems; and, indeed, the fact is evident in the work. This volume will earn for its writer an additional tribute of gratitude from all who have learned to appreciate his keenly critical and accurate methods of literary study. He begins with an introduction of forty-three pages on the sources and inspirations of Tennyson's art, and then proceeds to reproduce the poems in their chronological order, supplying commentaries and notes, with the variant readings from earlier editions. An appendix gives us the poems temporarily and finally suppressed, with the Cambridge prize poem of "Timbuctoo"; and at the end there is a complete bibliography. To the lover of Tennyson this volume will be invaluable, not to say indispensable. It does not lend itself to quotation by way of illustrating its critical system, and we must be content to commend it as one of the most scholarly achievements of English literary analysis.

(3) Mr. Clark examines with some thoroughness, and in an attractive manner, the epic poetry of Europe after the time of Virgil. From the "Pharsalia" and the "Thebaid," from "Fingal" and "Beowulf," from the "Song of Roland" and "The Cid," he takes us through the stories of the great national epics of Germany, Italy, Spain, Portugal, France, and Britain, dealing with their metre and characteristic qualities, and frequently comparing one with another. The book has considerable critical value; but, as a simple collection of plots, it will be welcomed by many readers.

#### PUBLIC SCHOOLS.

(1) *Charterhouse*. By A. H. Tod, M.A. (2) *Rugby*. By H. C. Bradby, B.A. (Bell & Sons.)

(1) There can be no doubt but that Godalming is a far more healthy site for a public school than Smithfield. Physically and morally and mentally, woods and fields and fresh air must be better for boys than the reek of central London, the network of dingy streets, and the weariness that seems to hang over the places which men have long inhabited. And yet one cannot read Mr. Tod's account of Charterhouse without feeling that the change from town to country was a heavy loss. Indeed, he confesses as much. The "traditional loyalty towards the school suffered," he says, "a severe shock at the migration"; and all through the book we feel that this is the history of a practically new school—a very admirable one, doubtless; no mean nurse of heroes, and yet scarcely connected more than in name with the old foundation that Thackeray loved. Probably the change was both wise and inevitable, and yet it was a pity; since tradition and sentiment and the religion of the ancient site were entities as real and true as fresh air and sanitation, and it is above all by sentiments and traditions, and the indefinable emotions which emanate from ancient things, that character is formed. We are glad to note that the author is alive to the great defect of the public-school system—its tendency, growing stronger and stronger, to make for a rigid uniformity, to crush out originality of character as the eighth deadly sin. It is a serious defect, this, since, in the last resort, nations are often saved by the abnormal man who can grapple with the abnormal danger; and yet the sourest critic of the public school would hesitate if he were asked for a remedy. Rugby has a form of "specialists"; but even the holdest headmaster would hesitate before constituting a class for original geniuses.

(2) Rugby School inevitably suggests Arnold, and this volume in Messrs. Bell's series of "Handbooks to the Great Public Schools" gives reason to the common opinion by choosing a portrait of the great Doctor as its frontispiece. But, when one turns to the very admirable history which Mr. Bradby has written, one sees, we will not say the injustice, but the exaggeration, of the popular view. Rugby had a history, had heroes, before Dr. Arnold; and now, as the century closes, and we permit ourselves to review and to revise its most cherished dogmas, it may be permissible to hint a doubt even as to the great *mythos* of "Tom Brown." A "school for Christian gentlemen" was Dr. Arnold's ideal. *Negatur*, a scholastic opponent might reply; the ideal was rather, if Dr. Arnold had but known it, a school for high stoical gentlemen, and the *ethos* cultivated, though it expressed itself in terms of Christianity, drew its true inspiration from the fountains of Marcus Aurelius. An admirable discipline, we will all admit, and yet there is something lacking, and perhaps it is the absence of this "something"—let us say, boldly, that "something" stands for the mystical element, the transcendent love, which is the note of true Christianity—which leaves the character of the ruling caste in England deficient in certain very important points. "It is just, but it is not gracious," was the comment of a foreigner on the English rule in India; and one recognizes the truth of the criticism, and one may inquire whether this lack of graciousness is not to be traced to the stoic discipline of Arnold. A word of praise must be given to the excellent series of illustrations, which give a kind of pictorial history of Rugby. They prove, by the way, that the sham Gothic of 1809, foolish enough in all conscience, is infinitely preferable to the elaborate and learned perversity, to the fireworks in coloured brick, which issued from the brain of Mr. Butterfield in the seventies.

#### MR. FIRTH'S CROMWELL.

"Heroes of the Nations." Edited by Evelyn Abbott, M.A.—*Oliver Cromwell, and the Rule of the Puritans in England*. By Charles Firth, M.A. (Putnam's Sons.)  
We are being rather overdone by lives of Cromwell; but, if

any one is entitled to a hearing on the later and most authoritative additions to the historical biography of the Protector, it is Mr. Firth, of Balliol; and it may be said, on the publishers' behalf, that Cromwell could not possibly be omitted from a series of national heroes. Mr. Firth has based this volume in part on his article contributed to the "Dictionary of National Biography" twelve years ago, and within the twelve years there have been new publications of seventeenth-century papers, as well as a natural accumulation of points in the mind of the biographer. The consequence is that this volume deserves to be regarded as new in all important respects—for the "Dictionary" article is merely the skeleton which Mr. Firth has clothed.

The Civil War, as Mr. Firth very wisely and clearly points out, was a historical and constitutional crisis even beyond what the actors in it conceived. That it was partly a war between Puritanism and Popery, and partly a struggle between Parliament and King, every schoolboy knows; though schoolboys are not always made to understand, and, perhaps, could not understand, how these two antagonisms grew out of and into each other. But what Mr. Firth is concerned to show is that our constitutional history came to its main turning-point sixty or more years before we finally based the tenure of the throne on a written contract with the people.

To themselves the Parliamentary leaders seemed defenders of the existing constitution in Church and State against the revolutionary changes of the King. In reality, the greatest innovation of all lay in the claim of the Commons that Church and State should be controlled by the representatives of the people, not by the will of the King. When that claim was once made the struggle for sovereignty was an inevitable and irrepressible conflict.

It is quite true that the popular claim was relatively new and aggressive—yet based, it must be well understood, on the inherent right of a nation, and on the ancestral practice of our Teutonic forefathers. Charles honestly thought that he was fighting for "his own"—for the prerogative of his ancestors, which they had come—more fatuously than blasphemously—to attribute to the direct gift of God. "Remember," he said to the Commons in 1626, "that Parliaments are altogether in my power for their calling, sitting, and dissolution; therefore, as I find the fruits of them good or evil, they are to continue or not to be." The descendants of Saxon Assemblies and English Witenagemotes were convinced by language of this kind that the time had come to put their house in order.

Mr. Firth is not a Cromwell bigot, but his estimate of the man is necessarily high—high in the historic sense, which has recently induced a Tory Government to acquiesce in the erection by an aristocratic Imperialist of a statue to a regicide, between the Commons which he flouted and the Lords which he abolished. Either as a soldier or as a statesman, says Mr. Firth, Cromwell was far greater than any Englishman of his time, and he was both soldier and statesman in one. He was not a Cæsar or a Napoleon, but he "bestrode the narrow world" of England "like a Colossus."

## GENERAL NOTICES.

### CLASSICS.

(1) *Ovid, Tristia, Book III*. Edited by H. R. Woolrych. (2) *Vergil's Æneid, Selections from Books VII.-XII*. Edited by W. G. Coast.

(3) *Cæsar, Gallic War, Book V*. Edited by A. Reynolds. (Bell.)  
Here we have three more volumes of Bell's "Illustrated Classics," which have been so frequently noticed of late in this column. Several reproductions from photographs have been introduced with excellent results; and the maps are greatly superior to those contained in the earlier volumes of the series. It is, indeed, manifest that the publishers are sparing no pains to render the series as nearly perfect as possible; and we observe, with much interest, that it is to be extended to Greek books. We find Mr. Woolrych's notes on Ovid scholarly and accurate, but here and there rather "advanced," and suited rather to the teacher than the taught. They contain some interesting allusions, and should find favour with an intelligent learner. Mr. Coast has contrived to present a fairly continuous narrative of the last six books of the *Æneid*, "preserving the main features of the story." This volume is admirably suitable for beginners in Vergil. The major portion of the introduction is simple and elementary, but there is a section devoted to translations of Vergil which will not fail to interest teachers. The notes are short and to the purpose. This book should be widely adopted. Mr. Reynolds's "Cæsar V." is about on a level with the other books of Cæsar in the same series. The exercises, however, and some of the grammatical notes are rather more elaborate. The editor has made good use of Mr. Rice Holmes's book and of previous editions.

*Topics on Greek and Roman History*, by A. Goodrich (Macmillan), is a book in which teachers and students of ancient history may find a convenient store of references to modern authorities. The lists, which are elaborate, contain so many books that every one is sure to have access to some of the works mentioned; and, with the help of Mr. Goodrich, any one who has to lecture on the subject, or write essays, or get up periods for examination, will be able to save the time so often spent in hunting for material. The matter is divided up into a great number of topics, so that every branch of political history and the allied subjects—topography, geography, literature, &c.—is adequately represented. We cannot make out why "Cæsar, J. C., De bello Gallico," is included in the general list of authors under Roman history. We do not gather that the object of the compiler is to supply a list of original authorities; if it were, we should look for Thucydides and Cicero, and the whole host of ancient authors.

*Lucian, Charon and Timon*, being set for the London Matriculation, has been edited and translated by T. R. Mills (Clive). We have examined the volumes, and find them all that can be desired for the purpose. The competent manner in which the volumes of this series are edited is now well known and generally recognized. We are pleased to see that Mr. Mills acknowledges the sources on which he has drawn.

*Cicero in Catilinam*. Edited by H. W. Auden. (Blackwood.)

It is somewhat difficult to see the *raison d'être* of this edition; the Catilinarian orations have already been more than once handled in a scholarly way. The introduction contains, among other things, a brief history of the conspiracy, a useful notice of the rhetorical form of the orations, and a historical summary of the political position, going back to a period before the Gracchi. The summary fails to trace the filiation of popular leaders from Tiberius Gracchus to Cæsar, and the brief life of Cicero, while referring to his exile, makes no mention of its connexion with the events of his consulship. An appendix gives some useful notes on the rhetorical figures and connecting particles employed by Cicero, and a few passages for Latin prose. The notes are meagre, and do not show either very exact scholarship or exceptional felicity of translation. Thus, "scelus anhelantem" is rendered "breathing out wickedness," "panting for villany." Both cannot be correct. Again, for "sed, cum viderem, ne vobis quidem omnibus re etiam tum probata si illum, ut erat meritis, morte multassem," we have "but being aware as I was that if I, at a juncture when not even all of you were convinced of the fact, put him to death." The English reads very like a crib, the force of *etiam tum* is not brought out, and both the position of *vobis* between *ne* and *quidem* and the tense of *multassem* are ignored. Further on *inveterascent* is translated "continue their long life," which might easily divert a schoolboy's attention from the inceptive verb. It would be easy to multiply similar examples. The pictorial illustrations are interesting, and include a picture by a modern Roman artist of Cicero addressing the Senate, and restorations of the Forum and the Temple of Jupiter Stator.

#### MODERN LANGUAGES.

*Ein Opfer des Berufs und Mein Onkel aus Pommern*. By E. von Wildenbruch. Edited by R. C. Perry. (Whittaker.)

These are two short stories by E. von Wildenbruch, one of the most distinguished of contemporary German authors in the three fields of poetry, drama, and fiction. The first deals with the adventures of an ambitious, but not very sensible, young author, whose desire to shine in realistic fiction prompts him to make personal experience of the life of a cab-driver. The other tells the story of the very brief visit to Berlin of a Pomeranian squire of the old school, disposed to quarrel with everybody and everything. The stories are amusing, and meet the desire felt by many teachers for books dealing with modern everyday life; but it may be questioned whether they have literary merit or refinement enough to make them a profitable study for one or two terms. The notes and vocabulary are carefully done, and attention has been called to veiled allusions to quotations from German classics. Examples of good grammatical notes are those on "auf das Glatteste" and "ehe ich mich's versah." On the other hand, the order of "als wollte sie sagen," a construction to which attention is repeatedly called, should have been explained, and a note like that to "einige kurz hingeworfene Redebrocken," "a few remarks which I casually threw out (as a feeler)," might just prevent a boy from looking out for the real meaning of *Redebrocken*. One or two phrases are not explained, for example, "die schattigen Hallen des Thiergartens" and "der Molkenmarkt," which, from the context, ought to be a police-station. Some sentences for re-translation are added. It is a question whether a vocabulary is useful in a book intended for fairly advanced pupils; it is apt to encourage the idea that German and English words exactly answer to each other, and to postpone the acquisition of the useful art of using a dictionary with judgment.

- (1) *Histoire de la Littérature Française*. By E. E. B. Lacomblé.  
(2) *A Short History of English Literature*, by A. E. H. Swaen. (Noordhoff, Groningen.)

These books are written by Dutch schoolmasters for the pupils of modern schools. M. Lacomblé's preface is a protest against the too utilitarian treatment of modern languages which appears to prevail in

Holland, and of which there are many signs both in Germany and in our own country. His book makes no pretensions to originality, but gives, in the space of about a hundred pages, clear and appreciative notices of the chief French authors down to our own times. He has carefully avoided treating any but the best authors, and has thus been able to devote space enough to each, and to produce a very readable book. M. Swaen's book is on the same lines, but more names are introduced in a volume of about half the length of M. Lacomblé's, and the notices are hardly as interesting. Nor is the English quite free from fault.

*Ebner's Herr Walther von der Vogelweide*. Edited by E. G. North. (Macmillan.)

This book consists of selections from Ebner's work on "Walther von der Vogelweide," which is written for young people, and deals with an episode in his life when he attached himself to Philip of Swabia, about A.D. 1200. There is a brief introduction, describing the position of affairs in Germany at that time, as well as notes, a vocabulary, and an appendix of drill in words and phrases, with sentences and longer passages for translation, as in other volumes of the series. In the introduction, which is clearly written, there is an odd slip. Walther, having been born about 1170, is said to have died about 1228, at the age of seventy. The notes are fair, but would bear improvement. For example: *zu Mute sein*, "to feel"; and *zu Mute werden*, "to begin to feel," are mixed; *darnach angethan* is inadequately explained; and an anomalous expression like *ich bin gesehen* is left unnoticed. It is scarcely necessary to describe the position of Coblenz, Magdeburg, and Mayence. Some of the space gained by omitting them might, with advantage, have been given to notes on some of the particles, which are such a constant source of difficulty.

*Isolde Kurz's Die Humanisten*. Edited by A. Voegelin. (Macmillan.)

This story, taken from the authoress's "Florentiner Novellen," is in the same series as "Herr Walther von der Vogelweide," and deals, as its name implies, with the Renaissance in Italy. As in that volume, there are some notes that could be spared; half a page on Regulus is unnecessary, nor need the positions of the St. Gothard, Milan, and Bologna have been described. Otherwise the notes seem satisfactory. Perhaps one or two illustrations from "Romola" would have added to their interest.

#### MISCELLANEOUS.

*The Divine Pedigree of Man, or the Testimony of Evolution and Psychology to the Fatherhood of God*. By Thomson Joy Hudson, LL.D. (Putnam's Sons.)

This is an attempt to outline a scientific basis of Christian theism. In other words, it is a book of natural religion, written to impress spiritual ideas on the "constantly enlarging class of men who are imbued with the ultra-scientific dogma that nothing in either physical science or spiritual philosophy is worthy of belief if it is not confirmed by a series of well authenticated facts." Such people, Dr. Hudson thinks, are too apt to conclude that there is no logical necessity for the existence of an intelligent deity; and he wants to show them that there is—that science, indeed, furnishes the data for the inductive study of religion. His main theses are that the "objective mind" feeds and educates the subjective mind, which is specially fitted for life on the higher plane, and which contains in itself "all that is worth preserving in the future life." The "impellent energy" of physical, mental, moral, and religious progress is an "evolutionary instinct"; and on this instinct the author bases both the necessity and the proof of continuity. Man was made in the image of God: to this extent he may know something of God—but the knowledge shows him not so much human attributes in God as divine attributes in man. The reasoning is close, shrewd, and reverent; and the book thoroughly deserves to be read.

*Essays and Essay-Writing for Public Examinations*. By A. W. Ready, B.A. (Bell & Sons.)

Mr. Ready gives us in this volume the apparatus with which he has been accustomed to coach young men entering for Army and other examinations in the art of writing a sensible essay. His directions and admonitions are often much to the point:—"Genius is above rules; but you presumably are not a genius. . . . Cut your sentences short. . . . On no account be funny or flippant. . . . Write the exact title of the essay at the top of your first page; keep looking at this title, and ask yourself constantly if you are writing to the point." There are twelve sample essays, preceded by an analysis and sketch of each, and followed by notes and explanations. After these come a few rational lectures for advanced students on the adornments of writing; and at the end we have about a hundred subjects set for Army examinations since 1884. Altogether, this book is calculated to be very useful to those for whom it is intended.

- (1) *The Story of the West Country*. (Edward Arnold.) (2) *Outlines of Geography, an Introductory Text-book*. (McDougall.) (3) *Geography through Object-Lessons, Part I*. By F. H. Shoosmith, Ph.D., B.Sc. (A. G. Dawson.)

(1) "The Story of the West Country" is another of Mr. Arnold's well designed "Local Readers." It gives a descriptive account of "the western watershed"—of the Southern shires from Hampshire to

Cornwall, together with Gloucestershire. The book is well printed, and has good pictures and a map. (2) The "Outlines of Geography" is on a more formal plan, including statistics of all the countries of the world. It is lightened by many clear maps and pictures, and may be regarded as a satisfactory school-book. (3) Dr. Shoosmith's introduction to physical geography, illustrated by himself, is simple and commendable.

"Methuen's Commercial Series." Edited by H. de B. Gibbins, Litt.D. —*Commercial Law*. By W. D. Edwards. (Methuen.)

A good book of a good series, comprising a general outline of the commercial law of England, for such as are preparing for business life and need some clear notions of the law which will affect them. It is a serviceable guide, simply written.

*The Laureate Poetry Books*. (Edward Arnold)

This is a varied and well chosen collection of English poems in seven clearly printed paper-covered books. We cannot say why the same poems should be repeated in different books. It looks like padding, and shows that there is no systematic graduation.

*Religious Education in the Home. Hints for the Use of Parents of the Upper and Middle Classes*. With a Preface by the Bishop of Bristol. (Rivingtons.)

A very sensible and helpful colloquy with parents who are sensible; and prefaced by a very reasonable and pertinent commendation by Dr. Forest Browne. This is a paper-covered tract; but it is worth preserving.

*Kitty's Garland*. By Lady Lindsay. (Kegan Paul.)

A penny paper-covered book of sixteen poems for children. They are admirable in their way, as poetical as they are simple, as literary as they are childish. We like them very much.

*Timber and Tools: A Text-Book for Manual Training Classes*. By Jerome Wallace. (Nelson.)

This is a text-book for higher-grade science schools and classes for manual work generally. It is not specially framed for a particular examination, but contains all that is necessary for the City and Guilds Institute, the Sloyd Association, and similar examining bodies.

"Text-Books of Technology." Edited by Dr. W. Garnett and J. Wertheimer.—*Millinery, Theoretical and Practical*. By Clare Hill. (Methuen.)

Very clear and practical, with many diagrams, and well calculated to guide an intelligent young milliner towards good work and dainty achievement.

*Abbotsholme, 1889-1899; or Ten Years' Work in an Educational Laboratory*. By Cecil Reddie, B.Sc., Ph.D. (George Allen.)

Dr. Reddie gives us in this volume an elaborate account of his school, with thirty tempting photographs, a large number of press notices and other appreciations and descriptions of what seems to be a valuable and enjoyable course of manual, moral, and mental instruction in a delightful country home. The book is a glorified prospectus, and something more. Dr. Reddie is doing a good work, and deserves to succeed.

*Love and Mr. Lewisham: the Story of a very Young Couple*. By H. G. Wells. (Harper & Brothers.)

Mr. Wells is so old an acquaintance of our readers that we need not commend this story to them as clever and appetizing. It is not, like his earlier books, a work of scientific imagination, but only a pathetic story of an usher, thoroughly true to life and full of keen observation. Mr. Lewisham was a South Kensington scholar, and very green at that. He fell in love and married on nothing—then he went round to the scholastic agents in search of work. His ambition ran too high to begin with, as may be gathered from the ejaculation of Mr. Blendershin's chief assistant:—"I say! One and twenty, no degree, no games, two years' experience as junior—wants a headmastership of an endowed school. . . ." "Fifty-resident," said Mr. Blendershin, concisely, "that's your figure." There is plenty of humour in this story, with a large infusion of cynicism. It is too cynical for boys and girls, but older readers will find much in it to amuse and interest them.

Of texts with notes we have *King John* in the "Warwick Skakel-speare" (Blackie), edited by Prof. G. C. Moore Smith, M.A.—a good match for the editor's *Henry V.* in the same series; Tennyson's *Princess*—a good edition, with introduction and notes by Andrew J. George, M.A. (Isbister); Pope's *Iliad of Homer* (I, VI, XXII, and XXIV.), with introduction and notes by Paul Shorey, Ph.D. (Isbister); Scott's *Ivanhoe*, abridged for use in schools (Bell & Sons); Cowper's *The Task and Minor Poems*, by Elizabeth Lee, Milton's *Paradise Lost I-IV.*, by J. Logie Robertson, and Goldsmith's *Select Poems*, by J. H. Lobban, in "Blackwoods' English Classics," adequately dealt with under the editorship of Mr. Lobban. Messrs. A. & C. Black send us three volumes of an annotated "school edition" of Scott's poems—*Marmion*, *The Lady of the Lake*, and *The Lay of the Last Minstrel*—well edited and rather poorly illustrated. From the same publishers we have Scott's *The Talisman*, with introduction and notes by W. Melven, M.A. Messrs. Methuen send us *A Son of the State*, by W. Pett Ridge—not

bad reading for comfortable boys about a pauper boy; full of the salt of humanity.

Amongst the reprints we have Dr. A. R. Wallace's *Travels on the Amazon and Rio Negro* (Ward, Lock, & Co.), first published forty-seven years ago. Wallace was only second to Darwin in the exposition of the theory of natural selection and evolution; and Darwin said to him on one occasion: "You are the only man I ever heard of who persistently does himself an injustice, and never demands justice. But you cannot burke yourself." This is a very interesting book, and well illustrated.

WE HAVE ALSO RECEIVED the following publications and new editions:—

*Directory and Regulations for Establishing and Conducting Science and Art Schools and Classes—August, 1900-July, 1901*. (Her Majesty's Stationery Office.)

*Report of the City and Guilds of London Technical Institute*. (Gresham College.)

"University Tutorial Series."—*The Tutorial Latin Grammar*, by B. J. Hayes, M.A., and W. F. Masom, M.A. Fourth Edition. *Latin Composition*, by A. H. Allcroft, M.A., and J. H. Haydon, M.A. Fifth Edition Revised. (Clive.)

*Crown Copy-Books*, 1-14 (Educational Supply Association)—a complete set of well arranged and engraved copy-books, good in style and on good paper.

*Universal Writing-Books*, designed by John T. Pearce, B.A. (Blackwood)—with and without headlines, on feint-ruled paper, well calculated to produce a consistent handwriting.

*Exercise-Book of Facsimile Commercial Forms, Domestic Copy-Book for Girls, Commercial Copy and Exercise-Book* (Pitman & Sons)—admirably designed and excellently printed; serviceable in every way for commercial schools.

*The Vivid Map-Sheets* (A. G. Dawson)—very bold outline-maps, with a few principal features of each country, enlarged from the maps in the "Warwick Head and Hand Geographies."

*Trentieth Century Readers, First and Second Primers*. (Chambers.) *The New Penny Magazine* (Cassell & Co.)—a very good illustrated volume for boys and girls.

## MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on June 16. Present: Mr. Pinches, in the Chair; Miss Crookshank, Mr. Barlet, Rev. J. O. Bevan, Rev. A. W. Boulden, Mr. Butler, Mr. Eve, Mr. Rule, Dr. R. P. Scott, Mr. Sergeant, Rev. T. W. Sharpe, and Rev. J. E. Symms.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the number of entries for the forthcoming Certificate and Junior Forms Examinations, to take place on July 3-6, was about 5,300, and the number of entries for the Diploma Examination, to take place on July 10-13, about 280.

He reported the death of Dr. C. A. Buchheim, a member of the Council.

Saturday, July 21, was fixed as the date of the next Ordinary General Meeting of the members of the College.

The draft Report of the Council to the General Meeting was considered, and referred to the President, Vice-Presidents, and Dean for final revision.

The following persons were elected members of the College:—

Miss B. A. Blick, A.C.P., 30 Woodstock Rd., Moseley, Birmingham.  
Miss M. M. Butler, St. Joseph's Convent, Claylands Road, Clapham.

Mr. J. H. Fudge, B.A. Lond., L.C.P., Parmiter's School, Victoria Park.

Mr. W. J. Herlihy, A.C.P., St. Joseph's College, Denmark Hill.

Miss V. E. Vincent, A.C.P., Convent High School, Weymouth.

The following books had been presented to the Library since the last meeting of the Council:—

By E. ARNOLD.—Arnold's Geographical Handbooks, Nos. VII.-X.; Laureate-Poetry Books, I.-IX.; Story of the West Country; Passages for Dictation: Hamilton and Kettle's First Geometry Book, and Answers; Leakey's De Musset's Monsieur le Vent et Madame la Pluie.

By G. BELL & SOSS.—Baker's Translation of Livy XXI., XXII., and XXIII.; Coast's Selections from Vergil's *Æneid*, Books VII.-XII.; Marchant's Translation of Theoclydes, Book VII.; Reynolds's *Cæsar*, Gallie War, Book V.; Woolrych's *Ovid's Tristia*, Book III.

By A. & C. BLACK.—Higham's Scott's *Ivanhoe*; Mackenzie's Scott's *Lay of the Last Minstrel* and Scott's *Marmion*; McKinlay's Scott's *Lady of the Lake*; Melven's Scott's *Talisman*; Ord's Scott's *Quentin Durward*.

By C. J. CLAY & SONS.—Fitch's Educational Aims and Methods.

By W. B. CLIVE.—Allcroft and Haydon's Latin Composition; Hayes and Masom's Tutorial Latin Grammar; Lyster's First Stage Hygiene; Mills's *Lucian's Charon and Timon*.

By MACMILLAN & CO.—Fasnacht's Elementary French Grammar.

By J. MURRAY.—Murray's Handy Classical Maps: Britannia, Hispania, Gallia, and Italia and Sicilia; Greenidge's Student's *Gibbon*, Part I.; Hall's Greek Testament Reader; Hassall and Haverfield's Student's France.

By WHITTAKER & CO.—Perry's *Waldenbuch's Ein Opfer des Berufs und Mein Onkel aus Pommern*.

**CORRESPONDENCE.**

**SECONDARY INSPECTION.**

To the Editor of the Educational Times.

DEAR SIR,—In the course of the discussion which followed Dr. Scott's lecture on the "Inspection of Secondary Schools," I had the privilege of supporting Mr. Kahn in his plea that inspectors should report on the adequacy of salaries paid to assistant-masters, and on the conditions attached to the tenure of their appointments. Dr. Scott replied sympathetically, but charged us with drawing a red herring across the path; and a lady who spoke also rejected our suggestion, a suggestion as absurd, she urged, as if one should propose to use a scale of salaries in testing the efficiency of assistant-curates.

First, Sir, for the red herring. I thought we all desired an inspectorate which should reveal not only inefficiency, but also the causes of inefficiency; and Dr. Scott himself expressly said that the inspectors ought to inquire into the amount of endowments and the proper application of the same. It would, therefore, be open to an inspector to point out that too much of the endowment was spent on plant, and too little on persons. Especially would he be likely to do this if he believed, as many do, that there is a cash nexus between inefficiency of schools and inefficiency of teachers.

I am not sure that the analogy of assistant-curates is very illuminating. Social status on the one hand, the noble traditions of nineteenth centuries on the other, may do much to counteract the injustice of not giving the hire of which the labourer is worthy. Even so, it still remains true that in the long run—not very long—an ill-paid ministry tends to become an inefficient ministry. This stream of tendency making for inefficiency is stronger in the case of assistant-masters. Meagre payment impairs the effective force of the present generation; it helps to deter the able, and to attract only the inferior men in the rising generation. The enthusiasm of a young man listening for his vocation is often chilled by the calm prudence of a parent. "I don't want my son to be a curate, or that sort of thing," said the father of one of the boys in my class to me the other day; "there's no living to be got out of that." Obviously "that sort of thing" stood for that poor relation of the professions to which the boy's class-master had the "misfortune" to belong.

And is it altogether ignoble to think of payment in making one's choice of a profession? A young man, even burning to spend himself in the service of humanity, may properly reflect that there are other ways of service than the Church and the school. Who is to throw stones at him if he decides that he can serve his generation most effectively, and live most nearly according to the law of his nature, in a profession the members of which receive a "living wage"?

If the community wishes to underpay teachers, the community will suffer. Those who clamour for martyrs are akin to persecutors. Persecution is twice cursed; it curseth sometimes him that suffers.—I am, Sir, yours faithfully,

F. P. BEVILL SHIPHAM.

**WHAT IS NOT GRAMMAR.**

To the Editor of the Educational Times.

SIR,—In your current number a certain Edom (Edomite?) affects to "reply" to my article on "Grammar" in your April number. I am always pleased to receive instruction from any critic competent to give it, but, unhappily, your correspondent himself compels me to declare that he is totally incompetent. A writer who tells us that "letters are sounds," and, conversely, that "sounds are called letters and syllables;" also that "letters are words," because we use the corresponding sounds as their names, proclaims aloud that he has not yet mounted the very first rung in the ladder of thought; for one of the earliest linguistic lessons that an intelligent teacher impresses on children is to discriminate between things and their names, between abstractions and their concrete symbols. Further, all the diverse things that I carefully differentiated he jumbles together again and treats as identical or indifferent. Of the revolution effected in linguistic study by modern philology he has never heard, but shelters himself behind obsolete dicta of a pre-scientific age. The only valuable points of his letter, however, are the quotations, which are, at any rate, sensible, although they are of interest chiefly as fossils. With regard to my article, I desire to leave it as it stands.

I may add, as to Wilson's "Chemistry," that I never saw it; but I made no boast of the obvious analogy I employed, which, indeed, various other sciences would also have supplied. As to my method, your learned readers will at once recognize that it is based on the procedure of Plato in similar cases, and naturally does not agree with two-penny grammar primers.

I remain, sir, your obedient servant,

June, 1900.

T. LE M. DOUSE.

**MATHEMATICS.**

**14424.** (Professor NEUBERG.)—Trouver le lieu des centres des hyperboles équilatères qui ont une corde normale commune MN.

Solution by Professor K. J. SANJANA, M.A.; Professor A. DROZ-FARNY; and H. W. CURJEL, M.A.

The angle between the chord MN and the tangent at M is equal to the angle subtended by MN at the extremity R of the diameter through M.

Thus MRN is a right angle. Draw CO parallel to RN to meet the chord. Then MCO is a right angle, and MO is half of MN.

Hence the locus of C is the circle on MO as diameter.

**14501.** (Rev. T. WIGGINS, B.A.)—Given a triangle ABC, find a point D within it such that  $DA^2 + DB^2 + DC^2$  is a minimum.

I. Solution by J. H. TAYLOR, M.A.

The general problem of which this is a particular case is given in WILLIAMSON'S *Diff. Cal.* (1877), § 157.

Let A have coordinates  $h, k$ ; B,  $0, 0$ ; C,  $a, 0$ ; D,  $x, y$ .

$$\phi(u) = 3x^2 + 3y^2 - 2ax - 2hx - 2ky + a^2 + h^2 + k^2.$$

$$du/dx = 6x - 2a - 2h = 0, \text{ suppose. } d^2u/dx^2 = 6 \dots\dots\dots (A),$$

$$du/dy = 6y - 2k, \quad d^2u/dy^2 = 6 \quad (c), \quad d^2u/(dx dy) = 0 \dots\dots\dots (B).$$

Therefore  $x = \frac{1}{3}(a + h)$ ,  $y = \frac{1}{3}k$  for the minimum, indicating clearly the centroid.

II. Solution by Professor JAN DE VRIES, Ph.D.

E being the middle point of BC, we get  $BD^2 + CD^2 = 2DE^2 + \frac{1}{2}BC^2$ .

Again, G being the centre of gravity, we have, by the theorem of STEWART,

$$2DE^2 + AD^2 = 3DG^2 + \frac{1}{3}AE^2.$$

Combining with  $AB^2 + AC^2 = 2AE^2 + \frac{1}{2}BC^2$ ,

$$\text{we obtain } AD^2 + BD^2 + CD^2 = 3DG^2 + \frac{1}{3}(a^2 + b^2 + c^2).$$

Hence  $AD^2 + BD^2 + CD^2$  will be a minimum if D coincides with the centre of gravity.

III. Solution by F. H. PEACHELL, B.A.

If A, B, C, &c., be any number of points, O their centroid, P any other point, then the sum of the squares of distances of O from A, B, C, &c., exceeds the sum of the squares of distances of O from these points by  $n \cdot OP^2$ , where  $n$  is the number of points. Then, for a minimum in the question given, D must evidently coincide with the centroid of the triangle.

[See CASEY'S *Sequel*, 6th edition, p. 25.]

**14410.** (Rev. T. WIGGINS, B.A.)—Inscribe in a given triangle the triangle of least perimeter.

Solution by J. G. SMITH; W. J. GREENSTREET, M.A.; G. D. WILSON, B.A.; and many others.

The pedal triangle is that required.

For, because ROPB is cyclic,

$$\text{therefore } RPB = ROB;$$

because AROQ is cyclic, there-

$$\text{fore } ROB = A;$$

because ABPQ is cyclic, there-

$$\text{fore } QPC = A.$$

Therefore

$$RPB = QPC.$$

Therefore, if Q, R be fixed, QP + RP is minimum.

Similarly for the others. Therefore any change in the position of any vertex of PQR increases the perimeter. Therefore PQR has minimum perimeter.

**14444.** (P. MILNEN.)—A conic cuts the sides of triangle ABC in D, D', E, E', F, F' respectively; AD, AD' intersect the conic again in  $d, d'$ ; BE, BE' in  $e, e'$ ; CF, CF' in  $f, f'$ . Show that the intersections of  $dd', ee', ff'$  with the polars of A, B, C respectively are collinear.

Solution by R. P. PARANJPYE, B.A.; and Professor SANJANA, M.A.

With the triangle ABC as the triangle of reference, let the conic be

$$0 = ax^2 + by^2 + cz^2 + 2fyz + 2gzx + 2hxy \dots\dots\dots (1).$$

The equation of the lines AD, AD' is

$$by^2 + cz^2 + 2fyz = 0 \dots\dots\dots (2).$$

The locus  $ax^2 + 2gzx + 2hxy = 0$  passes through the intersection of (1) and (2). Therefore the equation of  $dd'$  is

$$ax + 2gz + 2hy = 0,$$

and we get similar equations for  $ee'$  and  $ff'$ .

Now we easily see that the line  $x/f + y/g + z/k = 0$  passes through the intersection of  $dd'$  and  $BC$ , &c. Hence the three points in question are collinear.

[Mr. CURJEL solves the Question as follows :—

Let the polars of A, B, C cut  $dd'$ ,  $ee'$ ,  $ff'$  in P, Q, R. Now the polar of A cuts AD, AD' in the harmonic conjugates of A with respect to Dd, D'd'. Therefore P lies on BC. Similarly Q and R lie on AC, AB.

Let O be the pole of DD'. Then OR, OQ, OA are the polars of C, B, P. Therefore OQ, AR and OR, AQ cut DD' harmonically. Therefore OA, QR cuts DD' harmonically; but OA, AP cut DD' harmonically. Therefore QR cuts BC in P.]

**14493.** (J. H. TAYLOR, M.A.)—If A', B', C' are vertices of similar isosceles triangles described all externally, or all internally, on the sides of any plane triangle BCA, the straight lines AA', BB', CC' are concurrent.

*Solution by W. L. THOMSON and the PROPOSER.*

Let A'BC be one of the isosceles triangles, the base angles being  $\theta$ . Let AA' cut BC in D. Let AX, AY be perpendiculars from A on BA', CA'. Then

$$\frac{BD}{DC} = \frac{\Delta ABA'}{\Delta ACA'} = \frac{AX}{AY} = \frac{c \sin(B + \theta)}{b \sin(C + \theta)}$$

Similarly, if BB', CC' cut AC, AB in E, F, respectively,

$$\frac{CE}{EA} = \frac{a \sin(C + \theta)}{c \sin(A + \theta)} \text{ and } \frac{AF}{FB} = \frac{b \sin(A + \theta)}{a \sin(B + \theta)}$$

$$\text{Therefore } \frac{BD}{DC} \cdot \frac{CE}{EA} \cdot \frac{AF}{FB} = 1.$$

Therefore AA', BB', CC' are concurrent.

**14445.** (Rev. J. CULLEN.)—Prove that

$$q^{2^p-1} - 1 \equiv 0 \pmod{(q \cdot 2^p + 1)},$$

if  $q \cdot 2^p + 1$  be a prime.

*Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.; and H. W. CURJEL, M.A.*

Let  $q \cdot 2^p + 1 = p$  (a prime).

Then, provided  $q > 2$ ,  $2^{1(p-1)} \equiv +1$ .

Also  $(p-1)/2q = 2^{p-1}$  and  $2^q \cdot q \equiv -1 \pmod{p}$ .

Therefore  $(2^q)^{(p-1)/2q} \cdot (q)^{(p-1)/2q} \equiv (-1)^{(p-1)/2q} \equiv +1$ .

Therefore  $2^{1(p-1)} \cdot q^{(p-1)/2q} \equiv +1$ , whence  $q^{2^p-1} \equiv +1 \pmod{p}$ .

The proof fails when  $q > 2$ ; but, when  $q = 1$ ,  $p = 3$ , and it is obviously true; and when  $q = 2$ ,  $p = 9$ , which is not prime. Unfortunately, the form  $(q \cdot 2^p + 1)$  gives no small primes, none in fact when  $q > 20$  (except  $p = 3$ ).

**14278.** (I. ARNOLD.)—Two non-concentric spheres intersect, forming a shell. Find the centre of gravity of the larger shell and its distance from the centre of the larger sphere, the distance between the centres of the spheres being  $d$ , and the radii of the spheres being  $R$  and  $r$ .

*Solution by the PROPOSER.*

Let  $R^3$  represent the weight of whole concentrated at centre of gravity C of larger sphere, and  $r^3$  the weight of part at A, the centre of gravity of the smaller sphere;  $d$  being equal to AC, the distance of their centres.

The centre of gravity of shell will be in AC produced. Let it be G. Then, by a well known theorem,

$$CG : CA :: r^3 : R^3 - r^3,$$

$$\text{or } CG : d :: r^3 : R^3 - r^3;$$

$$\text{therefore } CG = dr^3 / (R^3 - r^3),$$

which determines the centre of gravity of the shell KBLE.

**14512.** (Professor NEUBERG.)—Trouver dans le plan du triangle ABC un point M qui soit le centre de gravité de ses projections A', B', C' sur BC, CA, AB, pour les poids donnés  $\alpha, \beta, \gamma$ .

*Solution by H. W. CURJEL, M.A.; and CONSTANCE I. MARKS, B.A.*

Let A'M meet B'C' in A'', and let  $\angle BAM = \theta$  and  $\angle CAM = \phi$ . Then B'A'' : A'C' =  $\gamma : \beta$ . Therefore  $\sin \theta : \sin \phi = \beta \sin C : \gamma \sin B$ .

Hence AM may be drawn as the line joining A to the intersections of two parallels to AB, AC at distances  $\beta \sin C$ ,  $\gamma \sin B$ . Similarly, BM and CM may be drawn.

**14201.** (R. TUCKER, M.A.)—P, Q, R are points on a parabola, such that PQ, QR are normals to the curve. If SP, SQ, SR are denoted by  $r_1, r_2, r_3$ , prove  $(r_2 - r_1)^3 = (r_1 + r_2)^2(2r_2 - r_1 - r_3)$ ; hence they cannot be in A.P. Show that the circle PQR is given by

$$m^2(m^2 + 2)^2(x^2 + y^2) - 2pqax - 4pmay + m^2(m^2 + 2)(m^2 + 4)qa^2 = 0,$$

where P is the point  $(am^2, 2am)$  and  $p, q$  stand respectively for  $m^4 + 4m^2 + 2$ ,  $m^4 + 6m^2 + 4$ . Find also when the circle passes through the focus.

*Solution by F. L. WARD, B.A.*

With the usual notation, let PQ meet axis in  $G_1$ , and QR in  $G_2$ . Drop  $PM_1, QM_2, RM_3$  perpendicular to axis. Denote P, Q, R by  $(x_1, y_1)$ , &c. Now  $AM_1 \cdot AM_2 = AG_1^2$  or  $x_1 x_2 = (x_1 + 2a)^2$ , since  $M_1 G_1 = 2a$ .

Also  $x_2 x_3 = (x_2 + 2a)^2$ , since  $M_2 G_2 = 2a$ .

From these, and since  $r_1 = x_1 + a$ , &c.,

$$x_1(r_2 - r_1) = 4ar_1 \text{ and } x_2(r_3 - r_2) = 4ar_2;$$

therefore  $(r_3 - r_2)/(r_2 - r_1) = r_2 x_1 / r_1 x_2 = r_2 x_1^2 / r_1 (x_1 + 2a)^2$ .

But  $x_1(r_2 - r_1) = 4ar_1$ ; therefore  $(x_1 + 2a)x_1 = (r_1 + r_2)/2r_1$ ;

therefore  $(r_3 - r_2)/(r_2 - r_1) = 4r_1 r_2 / (r_1 + r_2)^2$ ,

which is the same as the result given.

[The rest in Volume.]

**14476.** (Professor E. J. NANSON.)—If

$$\frac{a^2 - bc}{a} + \frac{b^2 - ca}{b} + \frac{c^2 - ab}{c} = 0, \text{ then } \frac{a}{a^2 - bc} + \frac{b}{b^2 - ca} + \frac{c}{c^2 - ab} = 0.$$

*Solution by J. BLAIKIE, M.A.; L. E. REAY, B.A.; and many others.*

If  $\Sigma \{(a^2 - bc)/a\} = 0$ , we get  $\Sigma (a^2 bc - b^2 c^2) = 0$ .

Multiplying by  $a + b + c$ , we get

$$\Sigma \{a^3 bc + ab^2 c^2 - a^3 (b^2 + c^2)\} = 0 \text{ or } \Sigma a (b^2 - ca)(c^2 - ab) = 0.$$

Therefore

$$\Sigma \{a/(a^2 - bc)\} = 0.$$

**14458.** (J. A. THIRD, D.Sc.)—XYZ is a triangle inscribed in ABC and having its sides proportional to the medians of ABC. Show that the envelope of the circumcircle of XYZ is the LEMOINE ellipse of ABC.

*Solution by Rev. J. CULLEN and G. N. BATES, B.A.*

The sides of the pedal triangle XYZ of the symmedian point K are proportional to the medians. Hence, if the lines KX, KY, KZ revolve round K through an angle  $\theta$ , the triangle formed by joining (KX, BC), &c., is similar to XYZ, the modulus of similarity being  $\sec \theta$ . Therefore the envelope of the circle  $X, Y, Z$  is the in-conic whose foci are K and G, the centroid, since in general, if the ranges forming the pedal triangles of  $\Lambda$  and its isogonal conjugate  $\Lambda'$  revolve through an angle  $\theta$  in contrary directions, the six points are concyclic, the envelope of the circle being the in-conic whose foci are  $\Lambda$  and  $\Lambda'$ .

[Mr. BATES observes that this is a particular case of Mr. CULLEN's Quest. 14182; see Vol. LXXII., p. 65.]

**14499.** (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Prove that the continued product  $P = (a \mp b)(a^3 \mp b^3)(a^5 \mp b^5) \dots (a^{2^n-1} \mp b^{2^n-1})$

is divisible by  $\{ (2n)! + (2^n \cdot n!) \}^{n+1}$  if  $(a \mp b)$  is divisible by  $(2n)! + (2^n \cdot n!)$ .

*Solution by Rev. J. CULLEN; H. W. CURJEL, M.A.; and the PROPOSER.*

$$\text{Let } N = 1 \cdot 3 \cdot 5 \dots 2n - 1 = (2n)! + (2^n \cdot n!).$$

Now, if  $r$  is odd, we have

$$a^r \mp b^r = (a \mp b)(a^{r-1} \pm a^{r-2}b + \dots \pm b^{r-1}),$$

and, since  $a \equiv \pm b \pmod{N}$ ,

$$a^{r-1} \pm a^{-r-2} b + \dots \pm b^{r-1} \equiv r b^{r-1} \pmod{N}.$$

Therefore  $a^r \mp b^r$  is divisible by  $rN$ , and hence  $P$  by  $1.3.5 \dots 2n-1.N^n$ , i.e., by  $N^{n+1}$ .

**14443.** (R. KNOWLES.)— $F, S$  are the foci of a rectangular hyperbola; from a point  $T$  on the circle whose diameter is  $FS$ , tangents  $TP, TQ$  are drawn to meet the curve in  $PQ$ ; the circle  $TPQ$  cuts the curve again in  $CD$ ; prove that (1) the diagonals of the quadrilateral  $PQCD$  intersect in the axis; (2) two of its sides are parallel.

*Solution by Professor A. DROZ-FARNY.*

Soient  $x^2 - y^2 = a^2$  et  $x^2 + y^2 = 2a^2$  les équations de l'hyperbole équilatère et du cercle  $FS$ . La polaire d'un point  $(x', y')$  par rapport à l'hyperbole étant  $xx' - yy' = a^2$ , l'équation d'un cercle  $TPQ$  sera de la forme

$$(xx' - yy' - a^2)(xx' + yy' + \lambda) + \mu(x^2 - y^2 - a^2) = 0.$$

Cette conique sera un cercle passant par le point  $(x', y')$  du cercle  $x^2 + y^2 = 2a^2$  si  $\lambda = \mu = -a^2$ .

Les droites  $PQ$  et  $CD$  auront donc respectivement pour équations

$$xx' - yy' = a^2, \quad xx' + yy' = a^2.$$

Ces deux droites étant symétriquement disposées par rapport à l'axe transverse de l'hyperbole, le quadrilatère  $PQCD$  est un trapèze ayant cet axe comme médiane orthogonale. Il en résulte immédiatement les deux questions proposées.

**14516.** (Professor JAN DE VRIES, Ph.D.)—For each conic of a given pencil the orthoptical circle (circle of MONGE) is constructed. How many of these circles will pass by a given point?

*Solution by the PROPOSER.*

Denoting by  $A_{ki}$  the minor of the determinant

$$\Delta = \begin{vmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{vmatrix}$$

belonging to  $a_{ki}$ , the centre of the conic

$$a_{11}x^2 + 2a_{12}xy + a_{22}y^2 + 2a_{13}x + 2a_{23}y + a_{33} = 0$$

is determined by  $x_0 = A_{13} : A_{23}, y_0 = A_{23} : A_{33}$ .

If the same conic is represented by the equation

$$b_{11}\xi^2 + b_{22}\eta^2 + b_{33} = 0,$$

we have  $b_{33} = \Delta : A_{33}$ ; and the quantities

$$u_1 = -b_{23} : b_{11}, \quad u_2 = -b_{33} : b_{22}$$

will be determined by

$$A_{33}u^2 + (a_{11} + a_{22})A_{33}\Delta u + \Delta^2 = 0.$$

[The rest in Volume.]

**14474.** (R. KNOWLES.)—Tangents from a point  $T$  meet a parabola in  $P, Q$ ; the circle  $TPQ$  cuts the parabola again in  $C, D$ ; the sides  $PC, QD$  of the quadrilateral  $PQCD$  meet in  $E$ ; the diagonals in  $G$ ;  $M$  is the mid-point of  $EG$ ;  $MN_1, EN_2, GN_3$  are drawn at right angles to the axis;  $MN_1$  meets the parabola in  $K$ . Prove that  $KN_1^2 = EN_2 \cdot GN_3$ .

*Solution by R. TUCKER, M.A.*

Let  $P, Q, C, D$  be  $(m_1, m_2, m_3, m_4)$ ; then  $\Sigma(m) = 0$ . Now

$PC$  is  $y(m_1 + m_3) - 2x = 2am_1m_3$ ,  $QD$  is  $y(m_2 + m_4) - 2x = 2am_2m_4 \dots (i.)$ ; therefore  $2x_E = -a(m_1m_3 + m_2m_4)$  and  $2x_G = -a(m_1m_4 + m_2m_3)$ ;

therefore

$$4x_M = -a(m_1 + m_2)(m_3 + m_4).$$

Hence

$$KN_1^2 = 4ax_M = a^2(m_1 + m_2)^2.$$

From (i.),  $y_E = a(m_1m_3 - m_2m_4)/(m_1 + m_3) = a(m_1 + m_2)(m_2 + m_3)/(m_1 + m_3)$

and  $y_G = a(m_2m_3 - m_1m_4)/(m_2 + m_3) = a(m_1 + m_3)(m_1 + m_2)/(m_2 + m_3)$ .

Therefore

$$y_E y_G = KN_1^2.$$

QUESTIONS FOR SOLUTION.

**14596.** (Professor G. B. MATHEWS, F.R.S.)—Prove that

$$\frac{1}{(1-x)(1-y)} = \frac{1}{(1-x)(1-x^2y)} + \frac{1}{(1-x^2y)(1-x^4y^2)} + \frac{1}{(1-x^4y^2)(1-x^6y^3)} + \dots$$

$$+ \frac{1}{(1-x^2y^2)(1-xy)} + \frac{1}{(1-xy)(1-y)} - \frac{1}{1-x^2y} - \frac{1}{1-x^4y^2} - \frac{1}{1-x^6y^3} - \frac{1}{1-xy};$$

and show how to construct any number of such identities.

**14597.** (Professor NEUBERG.)—Trouver les relations entre les abscisses de quatre points pris sur l'hyperbole équilatère  $2y = 1$ , et tels que les tangentes en ces points touchent une même circonférence.

**14598.** (Professor MORLEY.)—A string is attracted to a centre  $O$ , according to NEWTON'S LAW, and rests over two pins equidistant from  $O$ . Prove that the least length of the string is  $2r(1 + \theta)^2$  where  $r$  is the distance of a pin from the centre, and  $2\theta$  is the angle (supposed  $< 2$ )

which the pins subtend at the centre. [The curves concerned are considered in an article in the *Annals of Mathematics*, October, 1899.]

**14599.** (Professor COCHEZ.)—Courbe  $\rho \sin \omega - 2\rho + 1 = 0$ .

**14600.** (Professor E. J. NANSON.)—If a triangle be self conjugate to the conic  $S$ , and two of its vertices lie respectively on  $S' + \lambda S, S' + \mu S$ , prove that the third vertex lies on  $S' + \nu S$ , where  $\Delta(\lambda + \mu + \nu) + \theta = 0$ .

**14601.** (Professor K. J. SANJANA.)—An object is placed in front of a combination of three coaxial convex lenses, whose focal lengths are  $f_1, f_2, f_3$  respectively, and the successive distances between them  $a, b$ . If the final image is in the same position as the object, prove that

$$(f_1 - a)(f_3 - b) + f_2(f_1 - a + f_3 - b) = 0 \dots \dots \dots (1);$$

$$2f_1f_2(a + b) + 2f_1f_3a - f_1b(2a + b) - f_2(a + b)^2 - f_3a^2 + ab(a + b)^2 = 0 \dots \dots (2);$$

$$\text{and } (a + b)^2f_2 + a^2f_3 - ab(a + b) = 0 \dots \dots \dots (3).$$

If  $a, b$  be given, the focal lengths are  $a(a + b)/2b, ab/2(a + b), b(a + b)/2a$  respectively, and the final image is equal to the object in magnitude. [A particular case is the system formed by three convex lenses of focal lengths  $\frac{1}{2}, \frac{1}{3}, \frac{1}{3}$ , at intervals  $1, \frac{1}{3}$ ; see WOLSTENHOLME, No. 2,781.]

**14602.** (Professor N. BHATTACHARYA.)—A light string just fits round an ellipse (eccentricity =  $e$ ), and is under the action of a central force towards a focus, varying inversely as the distance. If  $T$  and  $T'$  be the tensions at the extremities of any focal chord, show that  $e \cdot TT' + e \cdot T \cdot T'$  is constant. If  $N$  be the normal pressure on the ellipse at any point whose distance from the centre of force is  $r$ , prove that

$$N = \frac{b\mu}{\sqrt{(2ar - r^2)}} \left\{ \frac{1}{2r} + \frac{a}{(2ar - r^2)} \log \frac{a}{a(1-e)} \right\}.$$

**14603.** (J. A. THIRD, M.A., D.Sc.)— $U$  is a straight line in the plane of a triangle  $ABC$ ,  $\Delta_1$  is the conic with respect to which  $U$  is the polar of the centroid, and  $ABC$  self-polar. Prove the following statements:—

(1) If a variable in-conic, touching  $BC, CA, AB$  at  $X, Y, Z$ , has its centre on  $U$ ,  $AX, BY, CZ$  conintersect on a circum-conic,  $\Delta_2$ . (2) If a variable circum-conic has its centre on  $U$ , and if  $LMN$  be the triangle formed by the tangents to it at  $A, B, C, AL, BM, CN$  conintersect on a conic,  $\Delta_3$ , passing through the mid-points of the sides of  $ABC$ . (3)  $\Delta_1, \Delta_2, \Delta_3$  are similar and similarly situated, and intersect on  $U$ . (4) The centre of  $\Delta_3$  bisects the distance between the centres of  $\Delta_1$  and  $\Delta_2$ ; the line of centres passes through the centroid; the centroid and the centre of  $\Delta_1$  are the centres of similitude of  $\Delta_2$  and  $\Delta_3$ . (5)  $\Delta_1, \Delta_2, \Delta_3$  are parabolas, hyperbolas, or ellipses, according as  $U$  touches, cuts, or does not cut in real points the maximum inscribed ellipse of  $ABC$ ; they are circles when  $U$  is the line  $\Sigma a \cos A = 0$ , and equilateral hyperbolas when  $U$  passes through the symmedian point; generally their eccentricity is constant, as  $U$  envelops a conic having double contact with the maximum inscribed ellipse on the line  $\Sigma a \cos A = 0$ . (6) If a variable circum-conic pass through the centre of  $\Delta_1$ , its centre-locus is  $\Delta_3$ , and if  $L'M'N'$  be the triangle formed by the tangents to it at  $A, B, C, AL', BM', CN'$  conintersect on  $U$ .

**14604.** (Professor UMES CHANDRA GHOSH.)—If a conic circumscribing a quadrilateral  $ABCD$  be inscribed in a quadrilateral  $abcd$ ,  $ab$  touching the conic at  $D, bc$  at  $A, cd$  at  $B$ , and  $da$  at  $C$ , prove that the following quartets of lines are concurrent and harmonically conjugate:— (1)  $DB, AC, bd, ac$  (see SALMON'S *Conics*, p. 242); (2)  $DA, BC, ac, ef$ ; (3)  $AB, DC, bd, ef$ ; and that the three diagonals of either quadrilateral form a self-conjugate triangle with respect to the conic.

**14605.** (D. BIDDLE.)—In a tetrahedron, the trilinear coordinates of the point of contact of the inscribed sphere with any face, taken in reference to the edges of that face, are in direct proportion to the combined perpendiculars to the respective edges, from the opposite vertex and its projection on the plane of the face, the ratio being that between the area of the particular face and the entire surface of the tetrahedron.

**14606.** (R. TUCKER, M.A.)— $ABC, A'B'C'$  are the in- and circum-triangles of the same circle, and their sides are parallel. Prove

$$AB = 4\pi(\sin \frac{1}{2}A) A'B',$$

and that  $A'A, B'B, C'C$  meet in

$$(s-a)a/a = (s-b)b/b = (s-c)c/c.$$

**14607.** (Rev. W. ALLEN WHITWORTH, M.A.)—"Find two unequal integers such that the sum of their reciprocals shall be equal to the reciprocal of a given integer  $N$ ."—Show that there are

$$\frac{1}{2}(2a + 1)(2\beta + 1)(2\gamma + 1) \dots - \frac{1}{2}$$

solutions of this question, where the prime factors of  $N$  are given by

$$N = a^2 b^2 c^2 \dots$$

For example, if  $N = 12$ , there are seven solutions, viz.,

$$\frac{1}{12} = \frac{1}{15} + \frac{1}{20} = \frac{1}{16} + \frac{1}{24} = \frac{1}{18} + \frac{1}{36} = \frac{1}{24} + \frac{1}{30} = \frac{1}{30} + \frac{1}{36} = \frac{1}{36} + \frac{1}{36}$$

$$= \frac{1}{18} + \frac{1}{36}.$$

**14608.** (EDWARD V. HUNTINGTON, A.M.)—Let  $a$  and  $b$  be the radii of the circles through the cusps and vertices respectively of any epi- or hypo-cycloid having an odd number of cusps. Then, according as  $b - 3a$  is positive or negative, a line of length  $b + a$ , sliding within the curve, will envelope an epi- or a hypo-cycloid having double the number of cusps.

**14609.** (R. C. ARCHIBALD, M.A.)—Prove the following relations between the cardioid and the three-cusped hypocycloid or tricuspide:— (i.) The envelope of the parabolas, with foci on a cardioid and always tangent to two fixed lines drawn at pleasure through its cusp, is a tricuspide. (ii.) A cusp S of a tricuspide and its opposite vertex V are joined. Any tangent to the tricuspide intersects this line SV in X. With centre V and radius VX, a circle is described which cuts the tangent again in P. The locus of P is a cardioid.

**14610.** (R. F. DAVIS, M.A.)—Prove that the length of the chord of the circumcircle to a triangle ABC, drawn so as to bisect the sides AB, AC, is  $2R \{1 - \cos^2 B \cos^2 C\}^{\frac{1}{2}}$ .

**14611.** (G. H. HARDY, B.A.)—A, B, two of the angular points of a triangle XAB, lie on two faces of a tetrahedron, and the side AB passes through its centre of gravity. The sides XA, XB divide the opposite edge in fixed ratios  $\theta : 1 - \theta, 1 - \phi : \phi$ . Prove that the locus of X consists of two points, a straight line and a conic; and that the latter will be an ellipse, parabola, or hyperbola, as

$$\{3(\theta + \phi) - 2(1 + 4\theta\phi)\}^2 \begin{matrix} < \\ > \end{matrix} \begin{matrix} < \\ > \end{matrix} 4\theta\phi(3 - 4\theta)(3 - 4\phi).$$

Verify this when  $\theta = \phi = \frac{1}{2}$ .

**14612.** (R. P. PARANJPYE, B.A.)—Find the maximum number of cusps that a curve of the  $n$ th degree can have.

**14613.** (Rev. J. CULLEN.)—Two points P and Q lie on the circum-circle of a given triangle ABC, and subtend a constant angle at O, the centre. Prove that the locus of the intersection of the SIMSON-lines of P and Q is a hypocycloid.

**14614.** (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Factorize completely  $(17927 + 1)$ .

**14615.** (W. R. HUGHES.)—The four points determined by the intersection of the tangents and common chords of the circles of curvature at two points P, Q on an ellipse lie on a circle coaxial with the circles of curvature.

**14616.** (R. W. D. CHRISTIE.)—Prove for primes of the form  $4M - 1$  the modular equation  $a^2 + b = 0 \pmod{p}$ , where  $a$  and  $b$  are any primitive roots; e.g., prime 11, roots 2, 6, 7, 8, we have  $2^2 + 7 = 6^2 + 8 = 7^2 + 6 = 8^2 + 2 = 0 \pmod{11}$ .

**14617.** (V. DANIEL.)—The locus of the middle point of the intercept of a variable tangent by tangents from a fixed point to a parabola is the tangent parallel to the polar of the fixed point.

**14618.** (J. J. BARNVILLE, B.A.)—Prove that

$$\begin{aligned} \frac{1}{2+7} + \frac{1}{7+7} + \frac{1}{47+7} + \frac{1}{322+7} + \dots &= \frac{1}{3\sqrt{5} + 18}, \\ \frac{1}{5+7} + \frac{1}{17+7} + \frac{1}{97+7} + \frac{1}{565+7} + \dots &= \frac{2\sqrt{2} + 1}{28}, \\ \frac{1}{4+7} + \frac{1}{15+7} + \frac{1}{191+7} + \frac{1}{2468+7} + \dots &= \frac{9 + \sqrt{165}}{154}, \\ \frac{1}{3+7} + \frac{1}{23+7} + \frac{1}{503+7} + \frac{1}{11043+7} + \dots &= \frac{4 + \sqrt{30}}{70}. \end{aligned}$$

**14619.** (R. KNOWLES.)—If

$$F_x/(1-x)^n = 1 + (m+1)^{n-1}x + (2m+1)^{n-1}x^2 + \dots + (m+1)^{n-1}x^r + \&c.,$$

where  $m$  is any positive integer greater than 2, prove that (1)  $F_x$  is a function of the form  $1 + Bx + Cx^2 + \&c.$  of the degree  $(n-1)$  in  $x$ ; (2) the coefficients in it of  $x$  and  $x^{n-1}$  are respectively  $(m+1)^{n-1} - n$  and  $(m-1)^{n-1}$ ; (3) the sum of its coefficients is  $n-1! \cdot m^{n-1}$ ; e.g., if  $m = 3, n = 5$ , the series becomes  $1 + 4^4x + 7^4x^2 + \&c.$ , and

$$F_x = 1 + 251x + 1131x^2 + 545x^3 + 16x^4.$$

**14620.** (SRISH CHANDRA GHOSH, M.A.)—A comet of very small dimension and mass  $M$  is projected to move in a parabola (parameter =  $4a$ ) under the action of a focal attractive force ( $= \mu x^2$ ), from a point distant  $R$  from the focus. Another particle, mass  $m$ , is then shot off from the focus at an angle  $\theta$  to the principal diameter, and strikes the comet with velocity  $v$ . Investigate the subsequent motion of the comet, the coefficient of restitution being  $\epsilon$ . Supposing these elements to be in C.G.S. units, and a fraction  $k$  of the energy dissipated by collision to be spent in thermal effects, calculate the heat generated.

**14621.** (H. W. THE LONDON MATHEMATICAL SOCIETY.

Thursday, June 14, 1900.—Lord Kelvin, G.C.V.O., President, in the Chair. Present, three foreign members, twenty-one ordinary members, and a visitor, Prof. Stringham, California.

At the request of the President, Prof. F. Klein made a few remarks on the continuation of the edition of Gauss's collected works.

Prof. Darboux spoke "Sur différents problèmes relatifs aux transformations de l'espace et aux déformations finies de la matière, et sur leurs rapports avec la théorie des systèmes triples orthogonaux"; and Prof. Poincaré spoke "Sur quelques théorèmes relatifs à l'analysis situs et sur les propriétés des polyèdre dans l'espace à plus de trois dimensions."

Prof. Stringham also made a few remarks on "A Proof of the Directorial Property of the Plane Sections of a Cone in Non-Euclidean Space."

Prof. Elliott read some "Notes on Concomitants of Binary Quantics." In consequence of the lateness of the hour Lord Kelvin simply read the titles of the following papers:—

"Some Multiform Solutions of the Partial Differential Equations of Physical Mathematics and their Application," Part II., Mr. H. S. Carslaw.

"Some Quadrature Formule," Mr. W. F. Sheppard.

"Extensions of the Riemann-Roch Theorem in Plane Geometry," Dr. F. S. Macaulay.

"On the Invariants of a certain Differential Expression connected with the Theory of Geodesics," Mr. J. E. Campbell.

"On the Transitive Groups of Degree  $n$  and Class  $n-1$ ," Prof. W. Burnside.

"The Invariant Syzygies of Lowest Order for any Number of Quartics," Mr. A. Young.

"Canonical Reduction of Bilinear Forms," Part II., Mr. Bromwich.

"The Energy Function of a Continuous Medium," Mr. H. M. Macdonald.

"Note on the Representation of a Circle by a Linear Equation," Mr. J. Griffiths.

Messrs. Darboux and Poincaré were admitted into the Society. Votes of thanks to the foreign members were passed for their communications.

# MACMILLAN & CO.'S LIST OF BOOKS SUITABLE FOR PRIZES.

## ANTIQUITIES,

- Pompeii, Its Life and Art.** By A. MAU. Translated by F. W. KEISEY. Illustrated. 8vo, 25s. net.
- A Handbook of Greek Sculpture** By ERNEST A. GARDNER, M.A. Extra crown 8vo. Parts I. and II., 5s. each. Complete in One Vol., 10s.
- A History of Greek Art.** With an Introductory Chapter on Art in Egypt and Mesopotamia. By F. B. TARBELL. Extra crown 8vo, 6s.
- Atlas of Classical Antiquities.** By TH. SCHREIBER. Edited by Prof. W. C. F. ANDERSON. 4to, 21s. net.
- The City State of the Greeks and Romans; a Survey** Introductory to the Study of Ancient History. By W. WARDE FOWLER, M.A. Crown 8vo, 5s.
- A Companion to School Classics.** By JAMES GOW, M.A., Litt.D. Illustrated. Third Edition. Crown 8vo, 6s.
- Rambles and Studies in Greece.** By Rev. J. P. MAHAFFY, D.D. With Illustrations. New Edition. With a Map. Crown 8vo, 10s. 6d.

## ART.

- A Popular Handbook to the National Gallery.** Including Notes collected from the Works of Mr. Ruskin. By E. T. COOK. Fifth Edition, 1897. Crown 8vo, half morocco, 14s.
- A Popular Handbook to the Tate Gallery.** By E. T. COOK. Crown 8vo, 5s.
- Some Hints on Learning to Draw.** Containing Examples from Leighton, Watts, Poynter, &c. By G. W. C. HUTCHINSON, Art Master at Clifton College. Super royal 8vo, 8s. 6d.
- Art Anatomy of Animals.** By ERNEST E. S. THOMPSON. Illustrated 4to, 30s. net.

## ASTRONOMY.

- Popular Astronomy.** By Prof. SIMON NEWCOMB. With 112 Engravings and Maps of the Stars. Second Edition. 8vo, 18s.
- Pioneers of Science.** By Prof. OLIVER LODGE, F.R.S. Extra crown 8vo, 7s. 6d.  
Contains Lives of Copernicus, Tycho Brahe, Kepler, Galileo, Descartes, Newton, Roemer, Bradley, Lagrange, Laplace, Herschel, and Bessel.

## BIOGRAPHY.

- Boswell's Life of Johnson.** Edited, with an Introduction, by MOWBRAY MORRIS. Globe 8vo, 3s. 6d.
- St. Anselm.** By R. W. CHURCH. Globe 8vo, 5s.
- Francis of Assisi.** By Mrs. OLIPHANT. Crown 8vo, 6s.
- Alfred the Great.** By THOMAS HUGHES. Crown 8vo, 6s.

## COLLECTED WORKS. ESSAYS. MISCELLANEOUS WORKS.

- English Prose Selections.** With Critical Introductions by various writers, and General Introductions to each period. Edited by Sir HENRY CRAIK, K.C.B., LL.D. In 5 Vols. Crown 8vo. Vol. I.—14th to 16th Century, 7s. 6d. Vol. II.—16th Century to Restoration, 7s. 6d. Vol. III.—17th Century, 7s. 6d. Vol. IV.—18th Century, 7s. 6d. Vol. V.—19th Century, 8s. 6d.
- Oliver Goldsmith: The Miscellaneous Works of.** With Biographical Introduction. Edited by Prof. MASSON. Globe 8vo, 3s. 6d.
- Bacon's Essays and Colours of Good and Evil.** With Notes and Glossarial Index by W. ALDIS WRIGHT, M.A. Pott 8vo, 2s. 6d. net.
- The Essays of Elia.** By CHARLES LAMB. Edited by Canon AINGEE. Globe 8vo, 5s.
- The Choice of Books.** By FREDERIC HARRISON. Globe 8vo, 5s.
- The Pleasures of Life.** By LORD AVEBURY. Globe 8vo, 2s. 6d.
- The Use of Life.** By Lord AVEBURY. Globe 8vo, 3s. 6d.

History	J. E. Lloyd, M.A., Lincoln College, Oxford.
Constitutional History	The Principal.
English Language and Literature	W. Lewis-Jones, M.A., late Scholar of Queens' College, Cambridge.
Philosophy	James Gibson, M.A., Fellow of St. John's College, Cambridge.
Mathematics	G. H. Bryan, Sc.D., F.R.S., late Fellow of Peterhouse, Cambridge.
Welsh	J. Morris Jones, M.A., late Scholar of Jesus Coll., Oxford.
Physics	E. Taylor Jones, D.Sc.
Chemistry	J. J. Dobbie, M.A., D.Sc., late Clark Fellow of Glasgow University.
Biology	R. W. Phillips, M.A., (Camb.), D.Sc. (Lond.), late Scholar of St. John's College, Cambridge.
Zoology	Philip J. White, M.B. (Edin.), F.R.S.E.
Agriculture	Thomas Winter, M.A. (Edin.), F.G.S.
Education	J. A. Green, B.A.

Inclusive Tuition Fee £11, Is. a year. Laboratory Fees additional, on the scale of £1, Is. per term for six hours a week.

The College Courses qualify for the degrees of the University of Wales, and include most of the Subjects for degrees of London University in Arts and Science. Students wishing to Graduate in Medicine in the Universities of Edinburgh and Glasgow can make one Annus Medicus at this College. Special provision is made for Electrical Engineering. There are a Day Training Department for men and women and a Department for the Training of Secondary Teachers.

The average cost of living (in lodgings) and tuition at Bangor for the Session (35 weeks) is from £30 to £40. A Hall of Residence for Women, under the supervision of Miss Mary Maude, who is the College Lady Superintendent of Women Students, is now open.

At the Entrance Scholarship Examination (which commences in September in each year) over 20 Scholarships and Exhibitions, ranging in value from £40 to £10, will be offered for competition.

For detailed information as to Courses, Entrance and other Scholarships, &c., apply to the Secretary and Registrar.

Bangor. J. E. LLOYD, M.A.

**UNIVERSITY COLLEGE OF NORTH WALES.**

(A Constituent College of the University of Wales.)

**DEPARTMENT FOR THE TRAINING OF SECONDARY TEACHERS.**

(Recognized by the Cambridge Syndicate.)

*Professor of Education*—J. A. GREEN, B.A. Lond., assisted by Miss C. GRAVESON, B.A. Lond., and an Assistant-Lecturer to be appointed.

Preparation is offered for the Cambridge Diploma (Theoretical and Practical) and for the Teachers' Diploma of the University of London.

Full particulars of the Course (which is open to both men and women students), Fees, Scholarships, &c., may be had on application to the REGISTRAR.

**THE**

**FROEBEL EDUCATIONAL INSTITUTE,**

TALGARTH ROAD, WEST KENSINGTON, LONDON, W.

*Chairman of the Committee*—MR. W. MATHER.

*Treasurer*—MR. C. G. MONTEFIORE.

*Secretary*—MR. ARTHUR G. SYMONDS, M.A.

**TRAINING COLLEGE FOR TEACHERS.**

*Principal*—MADAME MICHAELIS.

*Mistress of Method*—MISS E. E. LAWRENCE.

**KINDERGARTEN AND SCHOOL.**

*Headmistress*—MISS M. BOYS SMITH.

Further particulars may be obtained on application to the PRINCIPAL.

**BEDFORD COLLEGE, LONDON (FOR WOMEN),**

YORK PLACE, BAKER STREET, W.

*Principal*—MISS ETHEL HURLBATT.

The Session 1900-1901 will open on Thursday, October 4th. Students are requested to enter their names on Wednesday, October 3rd.

Lectures are given in all branches of General and Higher Education. Taken systematically, they form a connected and progressive course, but a single course of Lectures in any subject may be attended.

Courses are held in preparation for all the Examinations of the University of London in Arts and Science, for the Teachers' Diploma (London), and for the Teachers' Certificate (Cambridge); and also a Special Course of Scientific Instruction in Hygiene. Six Laboratories are open to students for Practical Work. Two Entrance Scholarships awarded yearly. A Gladstone Memorial Prize and the Early English Text Society's Prize are awarded to students each June. The Art School is open from 10 to 4. Students can reside in the College.

Full particulars on application to the PRINCIPAL.

**BEDFORD COLLEGE, LONDON (FOR WOMEN),**

YORK PLACE, BAKER STREET, W.

**DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.**

(Recognized by the Cambridge Syndicate.)

*Head of the Department*—MISS H. ROBERTSON, B.A.

The Third Term of the Session 1900 begins on Thursday, October 4th.

The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge, held annually in December.

The Council will, in December, award a Gilchrist Travelling Studentship, value £70.

Full particulars on application to Miss ROBERTSON.

**THE MARIA GREY TRAINING COLLEGE FOR WOMEN TEACHERS.**

SALUSBURY ROAD, BRONDESURRY, LONDON, N.W.

*Principal*—MISS ALICE WOODS.

A Full Course of Professional Training is offered to ladies who desire to become Teachers in Secondary Schools or in Kindergartens.

The Course for students preparing for the Cambridge Teachers' Certificate or for the London Teachers' Diploma begins in September or January, and lasts for one or two years. The Course for Kindergarten students preparing for the Higher Certificate of the National Froebel Union begins in September, and takes two years and one term.

Ample opportunities are given for Practice in Teaching in the School and Kindergarten of 150 pupils on the premises, as well as in other Schools.

The Winkworth Hall of Residence, close to the College, accommodates 20 students.

Scholarships to the amount of £230, from public and private sources, are annually awarded.

For all particulars as to qualifications for entrance, terms, scholarships, &c., apply to Miss ALICE WOODS, at the College.

**THE DATCHELOR TRAINING COLLEGE.**

CAMBERWELL GROVE, S.E.

(In connexion with the Datchelor Collegiate School for Girls.)

Governing Body—The Worshipful Company of Clothworkers of the City of London.

*Principal*—MISS RIGG.

*Mistress of Method and Lecturer*—MISS CARPENTER. Assisted by other Teachers and Lecturers.

This College provides a full course of professional training for Women Teachers, together with abundant opportunity for regular class teaching in a school of over 400 pupils. Special provision is made for instruction in Physiology and Hygiene, Elocution, Drawing, and Ling's Swedish Drill.

Students are prepared for the Examination of the Cambridge Teachers' Training Syndicate.

Fees moderate.

**A COLLEGE HALL OF RESIDENCE**

is provided for Students in the Training College. Terms moderate.

A Five Studentship (Training and Residence) will be awarded in September. For conditions apply to the SECRETARY.

**CENTRAL REGISTRY FOR TEACHERS.**

—MISS LOUISA BROUGH (late Registrar of Women Teachers in connexion with the Teachers' Guild) supplies University Graduates, Trained and Certificated Teachers, for Public and Private Schools, Visiting Teachers of Special Subjects, Kindergarten Mistresses, &c., as well as English and Foreign Governesses for Private Families.—25 Craven Street, Charing Cross.

**LONDON COLLEGE OF MUSIC.**

(Incorporated.)

GREAT MARLBOROUGH STREET, LONDON, W.

**FORMUSICAL EDUCATION, AND EXAMINATIONS IN PRACTICAL AND THEORETICAL MUSIC.**

Patron: HIS GRACE THE DUKE OF LEEDS.

Dr. F. J. KARN, Mus. Bac. Cantab., Principal.

G. AUGUSTUS HOLMES, Esq., Director of Examinations.

EXAMINATIONS in PIANOFORTE PLAYING, SINGING, THEORY, and all branches of Music will be held in London and 350 Provincial Centres in December, when certificates will be granted to all successful candidates. Last day for entry, November 15.

The Higher Examinations for Diplomas of Associate (A.L.C.M.), Associate in Music (A.Mus.L.C.M.), Licentiate (L.L.C.M.), Licentiate in Music (L.Mus.L.C.M.), and Fellowship also take place in December.

SYLLABUS for the year 1900, containing important alterations (including the new Primary section in Pianoforte Playing), may be had on application.

In the Educational Department students are received and thoroughly trained under the best professors at moderate fees. Day and Evening Classes are held.

T. WEEKES HOLMES, Secretary.

**OWENS COLLEGE, VICTORIA UNIVERSITY, MANCHESTER.**

PROSPECTUSES for the Session 1900-1901 will be forwarded on application:—

- I. DEPARTMENT OF ARTS, SCIENCE, AND LAW; and DEPARTMENT FOR WOMEN.
- II. DEPARTMENT OF MEDICINE.
- III. EVENING AND POPULAR COURSES.

Special Prospectus can also be obtained of:—

- IV. DEPARTMENT OF ENGINEERING.
- V. DEPARTMENT OF LAW.
- VI. DEPARTMENT OF PUBLIC HEALTH.
- VII. DENTAL DEPARTMENT.
- VIII. PHARMACEUTICAL DEPARTMENT; and
- IX. FELLOWSHIPS, SCHOLARSHIPS, EXHIBITIONS, AND PRIZES.

Apply to Mr. CORNISH, 16 St. Anne's Square, Manchester, or at the College.

SYDNEY CHAFFERS, Registrar.

**UNIVERSITY COLLEGE, BRISTOL.**

**ENGINEERING EDUCATION.**

**COURSES FOR CIVIL, MECHANICAL, MINING, AND ELECTRICAL ENGINEERS, AND FOR ARCHITECTS AND SURVEYORS.**

*Professor*—T. E. STANTON, D.Sc.

Special facilities are offered in the way of College Scholarships and Engineering Works Scholarships, favourable arrangements being made with firms in or near Bristol for practical training to be obtained in works concurrently with the College Course.

Surveying, Field Work, and Geology form prominent features of the Civil Engineering Scheme.

A College Diploma is awarded to students who pass the qualifying Examinations.

The Institution of Civil Engineers accepts the Preliminary Certificate of the College in lieu of its Entrance Examination.

Sessional Courses are also organized for the Matriculation, Preliminary Scientific, Intermediate Arts, and Intermediate Science Examinations of the University of London, and for the B.A. and B.Sc. Degree work.

Composition fee for each Session 13 guineas. Registration fee 1 guinea.

The work of women students is under the supervision of a Lady Tutor.

Applications for vacancies in October to be made as early as possible to the SECRETARY, from whom prospectus and particulars of residence in Clifton may be obtained.

JAMES RAFTER, Secretary.

**HOME AND COLONIAL SCHOOL SOCIETY.**

(Incorporated for Examination and Certificate purposes with the National Froebel Union.)

**TRAINING COLLEGE FOR SECONDARY TEACHERS.**

HIGHBURY HILL HOUSE, LONDON, N.

*Principal*—The Rev. DAVID J. THOMAS, M.A.

*Vice-Principal*—MISS PENSTONE.

Students (Resident and Non-resident) trained for the Examinations of the National Froebel Union, and for the Teachers' Diploma of the College of Preceptors.

A High School for Girls, Transition Class, and Kindergarten are attached to the College for purposes of Demonstration and Practice.

**LONDON UNIVERSITY EXAMINATIONS.**

**SUMMER VACATION CLASSES FOR BEGINNERS**  
IN PRACTICAL CHEMISTRY, PHYSICS,  
BOTANY, AND ZOOLOGY.

These Classes commence Tuesday, Aug. 7th, 1900, at University Tutorial College, London, and meet daily for four weeks. The Chemistry, Botany, and Zoology Courses extend over four weeks, and the Physics Course over two weeks.

The subjects will be dealt with in a very elementary manner, and in Zoology and Botany the work at first will be taken very slowly, so that the student may acquire skill with the knife and microscope, and thus pursue his private work to greater advantage.

**Summer Vacation Revision Class for B.Sc.**

Classes are held in subjects for the B.Sc. Examination, Oct., 1900, commencing Tuesday, Aug. 7th, at University Tutorial College, London, and extending over a period of four weeks. Special attention is paid to practical work.

Daily Lectures, supplemented by Private Tuition or small Exercise Classes, are given in Pure and Mixed Mathematics, and the more important parts taken up in Zoology and Botany.

During the last two Sessions, nearly 300 students of University Tutorial College have passed the Prelim. Sci. (M.B.) and Inter-Science Examination of London University with 30 places in Honours, and 64 students have passed the B.Sc. Examination with 15 places in Honours.

Full particulars of classes may be had from

**THE VICE-PRINCIPAL,**  
University Tutorial College,  
32 Red Lion Square, Holborn, W.C.

**TALFOURD ELY, M.A., F.S.A.,**

Fellow of University College, London (late of the University of Berlin), Teaches and Lectures on Ancient Art and History, Classics, and English. Address—75 Parliament Hill, Hampstead, N.W.

**MR. H. A. NESBITT** (joint-author

of "The Science and Art of Arithmetic," by A. SONNENSCHN and H. A. NESBITT, M.A.) has a few hours at his disposal for Lessons in Ladies' Schools in Mathematics, History, and Literature. Mr. Nesbitt also gives Lectures on the Teaching of Arithmetic,—16 South Hill Park Gardens, Hampstead, N.W.

**MISS LOUISA DREWRY** gives

LECTURES, READINGS, and LESSONS in English Language and Literature and kindred subjects; examines; and helps Students by letter and in her Reading Society. Miss DREWRY has some leisure,—143 King Henry's Road, London, N.W.

**GYMNASTICS, HOCKEY, &c.**—

Miss SPENCER HARRY, Principal of West Norwood Gymnasium, is open to additional engagements, visiting in London or vicinity.—41 Binfield Road, Clapham, S.W.

Assisted by Technical Education Board of London County Council and by the Carpenters' Company.

SESSION 1900-1901.

The Courses of Instruction in Mechanical, Civil, Municipal, and Electrical Engineering and Architecture commence on October 2nd. They are arranged to cover periods of two and three years.

Particulars of the Courses, of Entrance Scholarships, of the Matriculation Examination, and of the Fees, may be obtained from the SECRETARY.

**Professors.**

Mechanical Engineering . . . T. Hudson Beare, M.I.C.E.  
Electrical Engineering . . . J. A. Fleming, D.Sc., F.R.S.  
Municipal Engineering . . . Osbert Chadwick, M.I.C.E., C.M.G.

Civil Engineering . . . L. F. Vernon Harcourt, M.I.C.E.

Architecture . . . T. Roger Smith, F.R.I.B.A.

Physics . . . H. L. Callendar, F.R.S.

Chemistry . . . W. Ramsay, F.R.S.

Applied Mathematics . . . K. Pearson, F.R.S.

Economic Geology . . . T. G. Bonney, F.R.S.

Mathematics . . . M. J. M. Hill, F.R.S.

The New Wing of the College, opened by H.R.H. the Duke of Connaught in May, 1893, contains spacious Mechanical and Electrical Engineering Laboratories, Workshops, Drawing Office, Museum and Lecture Theatres. The Laboratories are fitted with all the best appliances for practical work and for research work of the most advanced character.

**WESTFIELD COLLEGE.**

FINCHLEY ROAD, HAMPSTEAD, N.W. TWO

ENTRANCE SCHOLARSHIPS, of the value of £45 and £50 a year for two years, will be offered for competition among women students at an Examination to be held on September 12 and 13. Candidates must have passed the Matriculation Examination of London University in Honours or in the First Division, and the successful competitors will be required to enter into residence in October next, and to read for the B.A. or B.Sc. Degree of London University. Further particulars and entrance forms may be obtained from the Secretary to the Council, Miss S. M. SMER.

**QUEEN'S COLLEGE, LONDON.—**

First-rate Education Free. The GOVERNESSES' BENEVOLENT INSTITUTION will shortly present FOUR FREE PUPILS to Queen's College or Queen's College School, for a period of four years.

Candidates must be daughters of officers, professional men, or gentlemen of equal position, between 14 and 18 years of age, in some measure dependent on a Governess relative.

Applications can be made at this office until August 18.

C. W. KLUGH,  
Secretary to the Governesses' Benevolent Institution,  
32 Sackville Street, W.

## ST. THOMAS'S HOSPITAL MEDICAL SCHOOL,

ALBERT EMBANKMENT, LONDON, S.E.

The WINTER SESSION of 1900-1901 will open on Tuesday, October 2, when the prizes will be distributed at 5 p.m. by Sir WILLIAM MACCORMAC, Bart., K.C.V.O., in the Governors' Hall.

Three Entrance Scholarships will be offered for competition in September, viz., one of £150 and one of £60, in Chemistry and Physics, with either Physiology, Botany, or Zoology, for First Year's Students; one of £50 in Anatomy, Physiology, Chemistry (any two) for Third Year's Students from the Universities.

Scholarships and Money Prizes of the value of £300 are awarded at the Sessional Examinations, as well as several Medals.

Special Classes are held throughout the year for the Preliminary Scientific and Intermediate M.B. Examinations of the University of London.

All Hospital Appointments are open to students without charge.

Club-rooms and an Athletic Ground are provided for students.

The School Buildings and the Hospital can be seen on application to the Medical Secretary.

The fees may be paid in one sum or by instalments. Entries may be made separately to Lectures or to Hospital Practice, and special arrangements are made for students entering from the Universities and for Qualified Practitioners.

A Register of approved lodgings is kept by the Medical Secretary, who also has a list of local Medical Practitioners, Clergymen, and others who receive students into their houses.

For Prospectus and all particulars apply to Mr. RENDLE, the Medical Secretary.

H. G. TURNEY, M.A., M.D. Oxon., *Dean*.

## CHARING CROSS HOSPITAL MEDICAL SCHOOL,

The WINTER SESSION, 1900-01, will commence on Tuesday, October 2nd, 1900, at 4 p.m., when LORD LISTER, President of the Royal Society, will deliver the Third biennial HUXLEY LECTURE.

The Livingstone Scholarship (100 guineas), the Huxley Scholarship (55 guineas), and six other Entrance Scholarships, total value £550, are awarded annually.

Two Scholarships of the value of 60 guineas each are reserved for Students of Oxford, Cambridge, or London University.

FEES.—For the five years' curriculum of study required by the various Examining Bodies and for hospital Practice, 110 guineas in one sum, or 121 guineas in five instalments.

The composition fee for sons of registered medical Practitioners is 100 guineas, and the fee by instalments 110 guineas in five payments.

The composition fee for Dental Students is 54 guineas, or 60 guineas payable in two instalments of 30 guineas each.

A proportionate reduction of the above Fees is made to Students who have completed part of the curriculum elsewhere.

CHARING CROSS HOSPITAL is within three minutes' walk of the Dental Hospital of London, and the hours of Lectures are arranged to suit the convenience of both General and Dental Students.

The Hospital and School are situated within two minutes of both Charing Cross Stations, and the Athletic Ground at Eltham can be reached within half an hour from Charing Cross.

**THE SCHOOL PROSPECTUS, containing full information concerning the classes, prizes, and all other arrangements connected with the Medical School, will be sent on application to the Dean, Chandos Street, Strand, W.C.**

H. MONTAGUE MURRAY, *Dean*.

## KING'S COLLEGE, LONDON, and KING'S COLLEGE HOSPITAL.

The WINTER SESSION will commence on October 1. SCHOLARSHIPS AND PRIZES.

At Entrance £500 is awarded annually, of which £150 is for Divinity, Classics, and Mathematics; £220 is for Science and Mathematics; £130 is for Science.

During the curriculum £300 is awarded annually in prizes and scholarships.

There are chambers and buttry for students at King's College, and an approved list is kept of medical men who receive students into their houses.

In addition to the regular courses of instruction for the University, and for the Conjoint Board Examinations, special classes have been organized for the London Matriculation, and for the Primary and Final Examinations for the F.R.C.S.

During the vacation extensive additions to the accommodation of the Departments of Anatomy and Physiology have been made.

Detailed information of Classes, Scholarships, Prizes, and other matters, may be found in the Prospectus, or may be obtained from the Sub-Dean or the Secretary by letter, or by interview at appointed hours.

ALFRED W. HUGHES, M.B., M.S., F.R.C.S., *Dean*.

RAYMOND CRAWFORD, M.A., M.D. Oxon., *Sub-Dean*.

M.R.C.P., *Sub-Dean*.

For Prospectus apply to the SECRETARY, King's College, Strand, W.C.

## GUY'S HOSPITAL MEDICAL SCHOOL.

The WINTER SESSION will begin on Monday, October 1st, 1900. Five Open ENTRANCE SCHOLARSHIPS of the combined value of £410 are offered for competition in September next, and numerous Prizes, Medals, and Scholarships are awarded annually. The COLLEGE accommodates 60 residents, and contains Reading Rooms, Dining Hall, and Gymnasium for the general use of the students. During last year more than 7500 patients have been treated in the Wards of the Hospital. The Preliminary Scientific Class for Students who matriculated at London University in July will begin on October 1st. The Clubs' Union Athletic Ground at Honor Oak Park is easily accessible from the Hospital. A handbook of information for students about to enter the profession will be forwarded on application. For further particulars, or Prospectus of the School, apply personally or by letter to the DEAN, Guy's Hospital, London Bridge, S.E.

## THE DENTAL HOSPITAL OF LONDON MEDICAL SCHOOL.

LEICESTER SQUARE.

The WINTER SESSION, 1900-1901, will commence on Monday, October 1st.

*Dental Anatomy and Physiology* (Human and Comparative)—CHARLES S. TOMES, F.R.S., M.A. Oxon., F.R.C.S., L.D.S., on Tuesdays and Thursdays at 5 p.m. (Summer). (Demonstrator—A. HOPEWELL SMITH, M.A., B.C. Cantab., F.R.C.S.)

*Dental Surgery and Pathology*—WILLIAM HERN, M.R.C.S., L.D.S., on Tuesdays and Fridays, at 8 a.m. (Summer). (Demonstrator—R. HERSCHELL, L.D.S.)

*Mechanical Dentistry*—E. LLOYD WILLIAMS, L.R.C.P., M.R.C.S., L.D.S., L.S.A., on Wednesdays at 5.30 p.m. (Winter).

*Metalurgy and its application to Dental Purposes*—Dr. FORSTER MORLEY, M.A., F.I.C., F.C.S., on Thursdays at 5 p.m. (Winter). (Demonstrator—PERCY RICHARDS, F.I.C., F.C.S.)

The Hospital is open both morning and afternoon. During the Sessions the Surgeons of the day will give demonstrations at stated hours.

The Medical Tutor holds classes before each Examination for the L.D.S.

The House Surgeons attend daily while the Hospital is open.

The Saunders Scholarship of £20 per annum and Prizes are open for competition.

Fee for two years' Hospital Practice required by the Curriculum, including Lectures, £50 in one payment, or 50 guineas in two yearly instalments. The Curriculum requires two years to be passed at a General Hospital. The fee for this is about £55. Both Hospitals can be attended simultaneously.

The fee for three years' Tuition in Mechanical Dentistry is 150 guineas.

The Calendar and further particulars will be sent on application to the DEAN.

MORTON SMALE, *Dean*.

## ROYAL COLLEGES OF SURGEONS AND PHYSICIANS OF EDINBURGH, AND FACULTY OF PHYSICIANS AND SURGEONS OF GLASGOW.

Copies of Regulations for the Triple Qualification of this Board (L.R.C.S.E., L.R.C.P.E., and L.P.P. & S.G.), containing dates of Professional Examinations for year 1900-1901, Curriculum, &c., may be had on application to JAMES ROBERTSON, Solicitor, 48 George Square, Edinburgh, Inspector and Treasurer for Edinburgh; or from ALEXANDER DUNCAN, B.A., LL.D., Faculty Hall, 242 St. Vincent Street, Glasgow, Inspector and Treasurer for Glasgow. In applying for copies, please state the date of commencement of medical study.

## ST. MARY'S HOSPITAL MEDICAL SCHOOL, PADDINGTON, W.

The WINTER SESSION will commence on October 1st, with an Introductory Lecture by H. S. COLLIER, Esq., F.R.C.S.

The HOSPITAL is in close proximity to Paddington Station, Great Western Railway; to the terminus of the Great Central Railway; and to several stations of the Metropolitan, District, and Central London Railways. The Medical School provides complete preparation for the Degrees of the Universities and other Higher Examinations. The Hospital affords every facility for clinical work in all branches of Medicine and Surgery, and in the various Special Departments. A register of residences for students in the vicinity of the Hospital is kept in the office of the Medical School.

ENTRANCE SCHOLARSHIPS IN NATURAL SCIENCE.—One of £145, two of £78. 15s., one of £52. 10s., two of £57. 15s. (open to students from Oxford and Cambridge) are awarded annually by Examination in September.

IMPROVED LABORATORIES.—The Physiological Laboratories have been further extended, and a special Physiological Lecture Room, adapted for advanced Practical Classes, has been added. A complete re-organization of the Pathological Department has taken place, including the provision of new Laboratories for Pathology and Bacteriology; a new Laboratory Class Room, fitted with electric light and every modern improvement, for Practical Classes in these subjects; and a new Museum. The Chemical Laboratory has been extended, and a Special Laboratory for Public Health Courses and for the study of Pathological Chemistry has been added.

SPECIAL TUITION.—In addition to systematic Courses of Lectures and Demonstrations, special tuition is provided for the Intermediate and Final M.B. Examinations of the Universities of Oxford, Cambridge, and London without additional fees.

CLINICAL APPOINTMENTS.—The numerous Clinical Appointments in the Hospital are free to all students, and the Resident Medical Officers are appointed by competitive Examination. Of the latter, eighteen are appointed annually.

NEW OUT-PATIENTS' DEPARTMENT.—The New Out-patients' Department in the Clarence Wing, with its extensive accommodation and modern equipment, possesses exceptional advantages for clinical work.

PRELIMINARY SCIENTIFIC COURSE.—Special Classes, including Lectures and Laboratory work, are held throughout the year.

For Calendar apply to the SCHOOL SECRETARY.

## THE LONDON HOSPITAL MEDICAL COLLEGE.

The WINTER SESSION commences on October 2nd. The Annual Dinner will be held in the College Library on Monday, October 1st, Dr. GILBERT SMITH in the Chair.

The Hospital is the largest in the Kingdom; nearly 800 beds are in constant use, and no beds are closed. Being the only general hospital for East London—i.e., for a million and a half people—the practice is immense. In-patients last year, 13,234; out-patients, 189,638; accidents, 20,068; major operations, 2,508.

APPOINTMENTS.—Owing to the enormous number of patients, more Appointments, salaried and resident, are open to students than at any other hospital. Sixty qualified Appointments are made annually, and more than 150 Dressers, Clinical Clerks, &c., appointed every three months. All are free to students of the College. Holders of Resident Appointments have free board.

SCHOLARSHIPS AND PRIZES.—Thirty-four Scholarships and Prizes are given annually. SEVEN ENTRANCE SCHOLARSHIPS will be offered in September.

Special Classes are held for the University of London and other Higher Examinations. Special entries for Medical and Surgical Practice can be made. Qualified Practitioners will find excellent opportunities for studying the rarest diseases.

A reduction of 15 guineas is made to the sons of members of the profession.

ENLARGEMENT OF THE COLLEGE.—The New Laboratories and Class Rooms for Bacteriology, Public Health, Operative Surgery, Chemistry, Biology, &c., and the New Clubs Union Rooms are now in full use.

The Clubs Union Athletic Ground is within easy reach of the Hospital.

Luncheons and dinners at moderate charges can be obtained at the Students' Club.

The Metropolitan and other Railways have stations close to the Hospital and College.

For prospectus and information as to residence, &c., apply, personally or by letter, to

Mile End, E. MUNRO SCOTT, *Warden*.

## ST. BARTHOLOMEW'S HOSPITAL AND COLLEGE.

The WINTER SESSION will begin on Monday, October 1st, 1900.

Students can reside in the College within the Hospital walls subject to the collegiate regulations.

The Hospital contains a service of 750 beds.

Scholarships and prizes of the aggregate value of nearly £900 are awarded annually.

The Medical School contains large Lecture Rooms and well-appointed Laboratories for practical teaching, as well as Dissecting Rooms, Museum, Library, &c.

The Amalgamated Clubs Ground (ten acres) is at Winchmore Hill, within easy reach of the Hospital.

For further particulars apply personally or by letter to the WARDEN of the College, St. Bartholomew's Hospital, E.C. A handbook forwarded on application.

## EXCEPTIONAL OPENING FOR A BOARDING SCHOOL.—BROADSTAIRS.—

A pair of handsome Queen Anne Houses, each 12 rooms, besides baths and all modern appliances. Sanitation, gas and water supply perfect. Garden, with spacious open fields in the rear. Half-way between Town and North Foreland. Facing the Sea and East Esplanade, and two minutes' walk from the Beach. On Lease at £120 per annum; or Freehold, £2,000, of which half can remain. Separate Class-room, 22 ft. square, convertible. (Photo.) \* \* \* Each House can be let during the Season at Seven Guineas per week.—THOMAS LAURIE, 13 Paternoster Row, E.C.

**THE MIDDLESEX HOSPITAL MEDICAL SCHOOL.**

The WINTER SESSION, 1900-1901, will commence on Monday, October 1st.

Two Entrance Scholarships (value £100 and £60) will be competed for September 25th, 26th, and 27th.

One Entrance Scholarship (value £60), open to students of the Universities of Oxford and Cambridge will be competed for on September 25th and 26th. Notice in writing to be sent to the Dean on or before September 18th.

There are annually eighteen Resident Hospital Appointments open to Students without extra fee.

Composition Fee for general Students for whole Medical Curriculum 135 guineas; for Dental Students, 54 guineas.

Special terms in favour of University Students who have commenced their medical studies, and of University of London Students who have passed Prelim. Sci.

The Residential College adjoins the Hospital, and provides accommodation for thirty students.

Prospectuses and all particulars may be obtained from  
W. PASTEUR, M.D., Dean.

**ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS IN SECONDARY SCHOOLS AND IN FAMILIES.**

Principal—Miss M. R. WALKER.

This College provides a complete Course of Professional Training for Women Teachers, in preparation for the Cambridge Teachers' Certificate. The Course includes attendance at the University Lectures on Education, in addition to Lectures delivered by the College Staff, and the Students have ample opportunities of gaining experience in Class-Teaching in Schools. Five Heriot Bursaries of £30 are offered in October. Apply to the PRINCIPAL, 5 Melville Street, Edinburgh.

**THE ANSTAY PHYSICAL TRAINING COLLEGE**

OFFERS a professional Training in Swedish Gymnastics (both educational and medical) to Ladies of good education.

The Course begins in September, and lasts two years. Age of admission, 18 to 30. The work is particularly interesting and healthful, and is remunerative, there being more openings for trained teachers than can be filled.

Apply, for illustrated prospectus, to THE PRINCIPAL, The Leasowes, near Halesowen, Worcestershire.

**ENGINEERING AND CHEMISTRY.**

**CITY AND GUILDS OF LONDON INSTITUTE.**

SESSION 1900-1901.

The Courses of Instruction at the Institute's CENTRAL COLLEGE (Exhibition Road) are for Students not under 16 years of age; those at the Institute's TECHNICAL COLLEGE, FINSBURY, for Students not under 14 years of age. The Entrance Examinations to both Colleges are held in September, and the Sessions commence in October. Particulars of the Entrance Examinations, Scholarships, Fees, and Courses of Study, may be obtained from the respective Colleges, or from the Head Office of the Institute, Gresham College, Basinghall Street, E.C.

**CITY AND GUILDS CENTRAL TECHNICAL COLLEGE.**

(EXHIBITION ROAD, S.W.)

A College for higher Technical Instruction for Day Students not under 16 preparing to become Civil, Mechanical, or Electrical Engineers, Chemical and other Manufacturers, and Teachers. Fee for a full Associate-ship Course, £25 per Session. Professors:—

Civil and Mechanical Engineering—W. C. UNWIN, F.R.S., M.Inst.C.E.

Electrical Engineering—W. E. AYRTON, F.R.S., Past Pres. Inst. E.E.

Chemistry—H. E. ARMSTRONG, Ph.D., LL.D., F.R.S.

Mechanics and Mathematics—O. HENRICI, Ph.D., LL.D., F.R.S.

**CITY AND GUILDS TECHNICAL COLLEGE, FINSBURY.**

(LEONARD STREET, CITY ROAD, E.C.)

A College for Intermediate Instruction for Day Students not under 14, preparing to enter Engineering and Chemical Industries, and for Evening Students. Fees, £15 per Session for Day Students. Professors:—

Physics and Electrical Engineering—S. P. THOMPSON, D.Sc., F.R.S., Principal of the College.

Mechanical Engineering and Mathematics—W. E. DALBY, M.A., B.Sc., M. Inst. C.E.

Chemistry—E. MELDOLA, F.R.S., F.I.C.

JOHN WATNEY, Hon. Secretary,  
City and Guilds of London Institute,  
Gresham College, Basinghall Street, E.C.

**JOINT AGENCY FOR WOMEN TEACHERS.**

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged. Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

**JOINT AGENCY FOR ASSISTANT-MASTERS.**

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

The Joint Agency for Assistant-Masters and Tutors is under the management of a Joint Committee composed of representatives of the following Bodies:—

- Headmasters' Conference.
- Incorporated Association of Headmasters.
- College of Preceptors.
- Teachers' Guild.
- Welsh County Schools' Association.
- Private Schools' Association.
- Association of Headmasters of Preparatory Schools.
- Association of Headmasters of Roman Catholic Schools.
- Assistant-Masters' Association.
- Association of Technical Institutions.
- &c. &c.

As the Agency is not working with a view to profit, but to benefit Assistant-Masters, the rates of commission are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m., Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

**SESAME HOUSE FOR HOME-LIFE TRAINING.**

43A ACACIA ROAD, N.W.

Established on the lines of the Pestalozzi-Froebel House at Berlin, and managed by a committee appointed by the Sesame Club. In connexion with their practical work with the children, the Students learn the Theory and History of Education, the Development of the Child, Natural Science, Simple Gardening, Hygiene, Household Management, Kindergarten Games and Occupations, &c.

Primary Course £6. 6s. per term. Higher Course £8. 8s. per term. Board and Residence £1. 1s. per week.

Ladies desirous of engaging certificated lady-nurses for their children are invited to apply before the end of each term.

For full particulars apply to the Principal—Miss SCHEPEL.

**A BERDARE HALL, CARDIFF.—**

RESIDENCE FOR WOMEN STUDENTS OF THE UNIVERSITY COLLEGE OF SOUTH WALES AND MONMOUTHSHIRE.

Principal—Miss KATE HURLBATT.

Fees 30 guineas and 40 guineas per annum. College tuition fees £10 per annum. Scholarships of £35, £25, and £20, and Exhibitions of £10, will be obtainable on result of Scholarship Examination to be held September. A Medical School and Department for Secondary and Elementary Training are attached to the College. Apply to the PRINCIPAL.

**SEATON, DEVON (Seaside), SCHOOL FOR GIRLS.**

Pupils under 12 years of age, £36 a year.

Pupils from 12 to 16, £46 a year.

Pupils over 16, £56 a year.

No extras. Resident Governesses.

Drawing, Painting, and Music taught by Visiting Masters.

Apply to the Principal, Miss MARY GROVER, Seaton, Devon.

**SCHOOL TRANSFERS.**

The Scholastic, Clerical, and Medical Association (Limited),

8 LANCASTER PLACE, STRAND, W.C.,

undertakes the Transfer of Schools and the Negotiation of Partnerships.

For particulars as to terms, &c., apply to the Manager,

R. J. BEEVOR, M.A.,

8 Lancaster Place, Strand.

Telegraphic Address—"Triform, London."  
Telephone No. 1854 (Gerrard).

**THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.**

Principal—Miss M. PUNNETT, B.A. (Lond.).

The object of this College is to give a professional training to educated women who intend to teach. In addition to the course of training, it offers the advantages of a College life and one year's residence in Cambridge.

The Students attend the Cambridge University Lectures on Teaching, in addition to those of the Resident and Visiting Lecturers, and are prepared for the Cambridge Teachers' Certificate (Theory and Practice). Ample opportunity is given for practice in teaching science, languages, mathematics, and the other usual school subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Wollaston Road, Cambridge.

**TRINITY COLLEGE, LONDON.**

(Inst. 1872.)

President—

THE RIGHT HON. LORD COLERIDGE, M.A., Q.C.

Warden—EDMUND H. TURPIN, Mus.D.

Michaelmas Term commences Tuesday, September 25, when the individual tuition in all Practical and Theoretical Musical Subjects, as well as Class Tuition in the Theory and History of Music, during the day and evening, to professional and amateur students, will be resumed.

Lessons in the Theory and History of Music will also continue to be given by correspondence.

The College Choir, conducted by Dr. H. T. PRINGUER, is open to non-students, and meets on Tuesdays at 5.

The Orchestra meets on Mondays at 4.30 p.m.

Prospectus and Students' entry form on application.

By Order,  
SHELLEY FISHER, Secretary.

Mandeville Place, Manchester Square, W.

**KELLAND TRAINING COLLEGE FOR TEACHERS, LEICESTER.**

Principals—Miss MORGAN, N.F.U. (Higher),  
Miss J. MORGAN, B.A. (Lond.).

Preparation for the National Froebel Union Certificates. Cambridge Teacher's Diploma. Entrance Scholarships. Grounds comprise Tennis Court, Croquet Lawn, &c. STUDENT-TEACHER required for September 18th. Premium 25 guineas.

**SCHOOL BOARD FOR LONDON.**

The Board are about appoint an ORGANIZER OF HOUSEHOLD MANAGEMENT upon a scale of £250, rising by £5 annual increases to £300 per annum, together with £50 per annum for travelling expenses. The duties of such officer will be to organize and supervise the work of the School Board for London in the subjects of instruction, Cookery, Housewifery, and Laundry-work, under the new Code of the Board of Education. Applicants must apply on the proper form, to be obtained at the Head Office, and must report any certificates that they possess in connexion with the teaching of Cookery, Housewifery, Laundry-work, or Domestic Economy, and any other educational qualifications, including certificates of the Science and Art Department. They should also state what has been their experience in connexion with the supervision and teaching of domestic subjects. Applications must be sent in not later than the 25th August, 1900, addressed to the CLERK OF THE BOARD, School Board for London, Victoria Embankment, W.C., marked outside "Household Management."

FREE GUIDE TO THE  
**CAMBRIDGE HIGHER LOCAL EXAMINATION,**

The Institution prepares through the post for various University Examinations and for the **A.C.P.**, **L.C.P.**, and **F.C.P.**

*Seventh Edition.* With an Appendix of Easier Exercises.  
Fcap. 8vo, cloth, price One Shilling.

## HINTS ON FRENCH SYNTAX.

By F. STORR,

Chief Master of Modern Subjects in Merchant Taylors' School.

"The merit of the book is its simplicity and brevity, and we have no hesitation in saying that these *Hints* would prove a valuable supplement to any grammar that might be in use. . . . Neatly printed in clear, bold type, and interleaved throughout, this book is one we can confidently recommend not only to teachers for class use, but as an invaluable aid to students preparing for the Scholarship, Certificate, and London Matriculation Examinations."—*The Practical Teacher*, January, 1900.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

## OXFORD LOCAL SHAKESPEARE, 1901.

DINGLEWOOD SHAKESPEARE MANUALS, BY STANLEY WOOD, M.A.

**HENRY THE FIFTH, QUESTIONS AND NOTES. 1s.**

"A little brochure of some fifty pages, which will suggest some useful thoughts to masters teaching the play."—*Journal of Education*.

**MERCHANT OF VENICE, QUESTIONS AND NOTES. 1s.**

"Cannot but prove useful to candidates for whom these plays are set."—*Scotsman*.

## CAMBRIDGE LOCAL SHAKESPEARE, 1900.

**AS YOU LIKE IT, QUESTIONS AND NOTES. 1s.**

"They will tend rather to discourage 'cram' than otherwise. . . . We can recommend the book as a distinctly useful 'aid.'"—*Guardian*.

Each of the Manuals contains about 250 Questions, of which all the most difficult (about one-third of the whole number) are fully answered as models.

JOHN HEYWOOD, LONDON AND MANCHESTER.

OLAPHAM HIGH SCHOOL FOR GIRLS,  
G.P.D.S.C.

**THE LONDON INSTITUTE FOR THE ADVANCEMENT OF PLAIN NEEDLEWORK** will grant a Certificate showing that Candidates have passed an Examination in the Theory and Practice of Needlework Teaching.

The Educational Times.

*A Bill and a Committee.*

THE Government Bill "to make better provision for enabling County Councils and other Local Authorities to aid forms of Education not being Elementary," and the Order in Council establishing "a Consultative Committee of the Board of Education," were both circulated in the closing days of June. The result was that we were able to do no more, in our July number, than mention the introduction of the Bill, whilst the list of the Committee would be in the hands of our readers on the same day as our article lamenting the prolonged delay in its appearance. Perhaps most of our readers, when they saw the list, were disposed to wish that the delay had been further prolonged. It is not an ideal list, and the pity of it is that such a little more would have sufficed to make it excellent. The President of the Board of Education appears to have consulted his official advisers and relied on his own judgment; and we readily admit that five-sixths of the names on the Committee agree pretty closely with what we should expect as the outcome of an open vote of teachers and parents, of the professional organizations and the bodies which administer education.

The organized professional and administrative bodies were not consulted—the Duke of Devonshire did not think that it was his duty to take this means of securing an even representation of the interests and authorities concerned in education. He may have been right in taking this view of his duty, and at any rate he is the person mainly responsible under the Act. The odd thing is that his list has been criticized because it does, in many respects, appear to represent the various bodies and organizations, and does not, in the opinion of these critics, include a sufficient number of detached and uncommitted personal judgments. Others, again, have urged that technology, and the important interests of technical institutions and schools—with which the Duke of Devonshire is known to be in close and warm sympathy—are inadequately represented. The Universities might well have spared a place on the Committee for a prominent technologist.

Our own criticism is more definite and specific; and we urge it with the greater freedom because we consider the list decidedly strong in all but one particular. If the Consultative Committee is to be representative in any sense of the word—

representing all interests because it has to deal with all interests, and specially representative of interests with which it is specially enjoined by Parliament to deal—then there is a strange and inexplicable gap in its constitution. Of the eighteen members of the Committee, not one is associated or concerned with private or unendowed secondary education. Mr. Acland, Sir W. Hart Dyke, and Mr. Hobhouse are, or have been, in the public service. Dean Maclure, Archdeacon Sandford, and Dr. Waller are concerned in the administration or management of schools chiefly elementary. Mr. Gray is a spokesman of the elementary teachers in the House of Commons. Miss Manley is the principal of a training college for elementary teachers. The remaining ten hold appointments in endowed Universities, colleges, or schools. Not one can be regarded as representing, or as specially qualified to speak on behalf of, the distinct majority of secondary teachers.

Why this marked exclusion? We do not for a moment imagine that it was intentional, because it is so precisely calculated to defeat the objects of the Board of Education Act and the new Education Bill. The Act enjoins that the Consultative Committee shall be consulted before the appointment of inspectors of secondary schools desiring to be inspected. The schools chiefly tending to be inspected are those which are local and unendowed, and which have not been under the Charity Commissioners. It is public policy to induce them to undergo inspection; and the Board of Education begins a delicate task by omitting to place on the Consultative Committee a single person who would naturally induce the confidence of unendowed schools. Again, the Act enjoins the Committee to frame regulations for a register. You can register straight away the elementary teachers, and a large majority of teachers in the endowed schools. It is public policy to induce private teachers to present themselves for registration, and to complete their qualifications if these are not already sufficient. Yet the Board of Education omits to place on the Committee a single member who can be counted on to remind his colleagues of some of the most intricate difficulties of registering a whole profession for the first time. Nothing could be better calculated to make the new departure in secondary education, difficult at the best, still more difficult. Private schoolmasters, as a whole, have met the public demand for efficiency with admirable public spirit. The Board of Education—unwittingly, we quite believe—ignores them and their spirit as matters of no account.

We understand that these considerations have been brought before the President of the Board, and we have little doubt that what must have been an unintentional omission will be supplied before the first meeting of the Committee.

We print the text of the new Education Bill in our "Summary of the Month." Its main purpose is to entrust the Education Committees of the County and Borough Councils, including members who are not on the Councils, with the expenditure on any form of education other than elementary of the local taxation grants, and of a further sum of money to be raised by rate, provided that the rate does not exceed twopence in the pound. The Committees are to submit schemes of administration to the Board of Education; but, as to the character of such schemes, the Bill itself does not afford much guidance. No public money is to be directly expended for the purpose of religious instruction; but the Councils are not debarred from aiding schools in which such instruction is given. It is also provided that aid may be given to a school conducted for private profit—any grant under this head being subject to the sanction of the Board. Before erecting new secondary schools, or aiding such as already exist, the Councils are to have regard to the existing supply of efficient schools within their area. Finally, there is provision for an appeal to the Board of Education, wherever the manager or managers of a school may feel aggrieved by the action of any Council, on the ground that it operates unequally or unfairly with respect to the school. It will be generally admitted that this is a fair outline of a Bill for the establishment of Local Secondary Authorities. It may need to be filled in, but it is liberal in conception, and affords a basis on which it will be possible to build. The Duke of Devonshire has introduced this measure at a season which allows ample time for its discussion. We by no means object to leisurely progress in the task of secondary organization, provided that the clear and logical outcome of discussion on the problems set before us is permitted to have its due weight in the ultimate decisions of the Department.

*Useful Evidence.* A WELL written and comprehensive summary of the present condition of education in the United Kingdom has been prepared by the Education Sub-Committee of the Royal Commission appointed in connexion with the International Exhibition at Paris. It provides accurate information for all who take an interest in the subject, especially for foreigners, who know little or nothing of our complicated system of education. From this "Descriptive Handbook"—which is published by Messrs. Eyre & Spottiswoode—we quote one or two passages on English secondary education in private schools—partly as *pièces justificatives* for what has been said in the preceding article.

As far as can be calculated from such statistics as have been collected, about 40 per cent. of the boys receiving secondary education in England are to be found in private schools under no sort of public control. From what has been said on a former page as to the English feeling in favour of the freedom of all parents to select the course of education which they think best for their children, and when it is remembered that, not only are there social conditions to be satisfied, but also greater divergencies of religious belief probably than exist in any other country, it will be understood that private schools are likely for a long time to continue to play a considerable part in the English educational system. They appear to include every grade of educational aim and merit, and are occasionally the trial-ground of interesting experiments. They are sometimes found competing, not unsuccessfully, with local endowed schools. Recently there

has been a movement among them in favour of securing some authoritative certificate of efficiency, so that a clear line may be drawn between the good and the bad. Under the Board of Education Act, 1899, they can, if they so desire, apply for inspection by the State. The best of them already make use of the local examinations conducted by the Universities.

We have more than once dwelt on the necessity of remembering the highly efficient preparatory schools in all arguments touching the interests of private education in England. This is what the "Descriptive Handbook" has to say about them:—

One class of private schools deserves especial mention here—viz., the *preparatory schools*, so called because they prepare boys from the age of eight to thirteen or fourteen for the great public schools. These schools may thus be regarded as a part of the public-school system, which, through entrance and scholarship examinations, exercises a predominating influence over their curricula. Their fees are usually high, and many of them maintain a standard of equipment unequalled even by the foremost public schools. The statistics sent to the Paris Exhibition, collected from 240 of the most prominent of these preparatory schools, show that the number of boys averages about thirty-six to each school; that each school has four or five classes, as a rule, and that the total aggregate number of boys gives an average of about eight boys to each teacher. It will thus be seen that the conditions favour an amount of individual attention to each pupil which is desirable when dealing with very young boys, but, unfortunately, cannot be provided by poorer schools. They are, with very few exceptions, boarding schools, and probably more than half of them exclusively so. Schools started and carried on by companies, or some sort of combined voluntary effort, have a tendency to pass into the ranks of endowed schools, but they play an important part in the provision of secondary education. They are in many instances denominational in character. There is a Church Schools Company, and the Roman Catholics, Wesleyans, and the Society of Friends have their own organizations for secondary education.

With regard to girls, "more than 70 per cent. of the girls receiving secondary education are to be found in private schools." Taking boys and girls together, it is safe to say that 60 per cent. of them are educated in schools which the Board of Education do not consider it necessary to represent on their Consultative Committee.

## NOTES.

THE floor of the House of Commons is not a satisfactory arena for the discussion of questions of educational policy, and the recent debates on the Irish Intermediate Education Bill fully illustrate its unsuitability. The Bill purports to carry out certain recommendations of the late Intermediate Education Commission with a view to make the education given more thorough and the examinations less tainted with mere mark-registering characteristics. It also proposes formally to recognize two distinct courses of modern and grammar school education. Mr. John Redmond made a strong appeal to the Government to follow the precedent of the English Act by establishing a Consultative Committee to assist the Irish Board of Education with their advice. There was, however, no real discussion on the provisions of the Bill. The debate on the second reading turned mainly on the grievances which Irishmen are supposed to suffer owing to the absence of provision for the compulsory teaching of the Irish language in the schools. The same rather hollow discussion was renewed on a subsequent day in Committee of Supply, on the Vote for Elementary Education in Ireland.

We admit that a determination of the right policy of our National Boards of Education towards the different provincial

languages still spoken in these islands is a matter of some nicety and importance. It is, however, not likely to be attained by the perfervid oratory of Irish Nationalist members in the House of Commons. One would naturally look for full discussion in educational conferences before a particular course is decided upon. The drawbacks involved in haphazard Parliamentary discussion are clearly seen in this case. Some members debated the matter as if the question at issue were the compulsory and universal teaching of Irish, while others advocated only the utilizing of Irish for the more effective teaching of English, by what is now called "the bilingual method." Mr. Bryce strongly urged the latter course, and Mr. Gerald Balfour was prepared to accept such a modified proposal. Indeed, given a competent teacher, there is nothing to prevent his using a pupil's knowledge of Erse to teach him English equivalents. Such a plan is pursued with advantage in some Welsh and Scottish Gaelic-speaking districts. But it is only found necessary in a few places, even in Wales. It would certainly be ridiculous at this day to make the learning of Irish compulsory. That some of the Irish members should have pressed such a demand shows what a gulf separates them from their Scottish and Welsh colleagues, when a choice has to be made between sentiment and utility.

THE President of the Board of Trade, on his recent journey to Liverpool, was able to pay a visit to the cadet ship "Conway," for the purpose of giving away the prizes. The day, we hope, is not far distant when the Board of Education will rise to a sense of its responsibility for the proper education of boys who intend to become officers in our mercantile marine. At present only a very small proportion of the premium apprentices taken into the merchant service receive any technical instruction before they join a ship, and it is quite time that other training ships for merchant marine officers should be added to the "Worcester" and "Conway." Mr. Ritchie, like all who know the facts, bewailed the steady increase in the number of foreign sailors in our merchant ships, and there is good reason to believe that there is a similar increase in the number of foreign officers employed. The German clerk has been a very real bogey in commercial education: it is time that we should recognize even another in the form of the Scandinavian sailor. The Duke of Argyll, when giving away the prizes on board the "Worcester," suggested that the tone of the officers affected the supply of English seamen. Nothing would tend more to the raising of the officers' tone than that their early training should be obtained on a good training ship.

THE remedy, after all, is not far to seek; but the co-operation of both the Board of Trade and the Board of Education is necessary. The latter must recognize seamanship and navigation as technical subjects for instruction in which, on board training ships, proper provision must be made in seaport towns; and the Board of Trade must pursue its present policy of improving the conditions of a sailor's life on board ship. We have only recently admitted that "factory legislation" is as necessary on sea as it is on land. Again, the number of free training ships for boys who intend to become ordinary seamen should be increased. They are now a luxury provided only for Poor-law children. It is to be hoped that something will be

done before our ships are entirely manned by Lascars and *id genus omne*, generically called "Dutchmen" by the British seaman.

MISS STANSFELD, in her Report, issued by the Local Government Board, on the Industrial Training of Girls, disapproves strongly of "half-timers." School duty and house-work on alternate days is, she thinks, bewildering. Certainly anything that tends to a lack of method in girls' education is a very serious evil, since women in the home are never forced by circumstances into the punctuality and order which is a *sine qua non* in nearly all the occupations of men. But in house-work method is as pleasant and economical as it is in anything else, and its absence spells overwork and ill-temper. Now Miss Stansfeld prefers the Poor-law schools to the cottage homes, because the strict routine and discipline of the former are better educative influences than the *laissez faire* of the latter. Of course, *laissez faire* is the arch enemy; but, on the other hand, we doubt whether routine in itself is a producer of method. Once the rules are relaxed, the pupil is apt to be as helpless as the slaves in Liberia. The ideal seems rather the cottage home, where the girls might be induced to draw up their own time-tables, and be definitely instructed in the art of doing one thing while another is in progress, and thus learn to manage with method even the smallest establishment. As in every branch of life, it is the ounce of thought that is worth the pound of industrious pottering.

THE London School Board is, apparently, earnest in its endeavour to make really effective the teaching of domestic economy. It is about to appoint a lady at a substantial salary to superintend this subject throughout its schools. We hope that whoever is appointed will correct some of the absurdities that now exist. From the folly of teaching chiefly how to cook cakes and sweetmeats, the other extreme seems to have been reached. We have just heard of a little girl of ten, very full of enthusiasm at joining the cookery class—her first morning of two and a half hours was entirely spent in cleaning a huge stove, and she reached home so dirty and exhausted that she could not attend afternoon school. Her indignant mother stopped the cookery idea at once, to the child's bitter disappointment. Of course, mothers are very unreasonable, and cleaning a grate is as important as anything else in cooking, but surely there was a plentiful lack of wisdom in selecting such work for a first performance.

THE Court of the Merchant Taylors' Company advertise for a new Headmaster in Holy Orders, or who intends to take Orders, and under forty years of age. The conditions, we fear, will greatly limit the choice of the Court: in other words, they are not likely to get as good a headmaster as they doubtless desire to get. What can a clerical head of a London day school effect which a lay head could not? Prebendary Baker is doubtless an excellent headmaster, but not by virtue of his being a clergyman. As for the condition of age, it would have excluded Dr. Wood when he went to Harrow, Mr. Walker when he went to St. Paul's, and many another ripe schoolmaster who has made history in his fifth and sixth decades. The Court have their preferences, and perhaps reason for their preferences; but they are certainly narrowing their field of choice.

An interesting experiment was made by the London School Board at their annual musical display, at Queen's Hall, on the 4th of last month. In place of the usual vocal competition between its schools, it submitted the pick of them to the severe test of showing what they could make of a grand oratorio. One school was selected from each of the ten divisions, and these two hundred and fifty children forming the sopranos and altos, with the staff of the Board supplying tenors, basses, orchestra, and soloists, went satisfactorily through nearly the whole of "Judas Maccabæus." Making all due allowance for the strong support given by the excellent body of tenors and basses, the children acquitted themselves in a most creditable manner. Much volume of sound could not be expected, but their leads were taken up clearly and pursued unfalteringly, and there was never any sign of a breakdown. Once only Mr. Cowley got upon his feet and waved with desperate determination, but almost immediately he was free to resume, with a smile, his measured and confident beat.

For all that, we trust that the Board will be satisfied with the display as a proof of what can be attained by the teaching in its schools, and will not be encouraged by its success to let such performances regularly take the place of simple competitions. The latter are more suitable for children, both as being less likely to be injurious to their voices and as being more conducive to the acquisition of good and refined singing. We are the more inclined to this opinion by the singing of certain numbers by particular schools, to which, consequently, particular attention had been given, such as the duet "Hail, Judea!" by the Ecclesbourne Road boys, and the duet "O Lovely Peace!" by the Haselrigge Road girls. These were after all the most enjoyable features of the afternoon's performance, being sung in perfect time and with good tone and expression. Still, the effect of the whole was to make us very hopeful with regard to the future of choral singing in London.

We commend the following adventures in grammar to the various societies for the study of childhood. We think the subtlety of the child-mind has, perhaps, not yet been fully diagnosed. Teacher: "What is the gender of *viande*?" Pupil: "That depends on what gender the animal was." Teacher: "Why have you made *enfant* feminine?" Pupil: "I did it to make it agree with its mother." The former opens up endless possibilities of delicate suggestion in a *menu*, while the latter has a moral element the origin of which still remains to be traced.

## SUMMARY.

### THE MONTH.

THE Government Education Bill, "to make better provision for enabling County Councils and other Local Authorities to aid forms of Education not being elementary," was introduced in the House of Lords by the Duke of Devonshire in the last days of June. It will be convenient in view of future discussion, to place the text of this measure on record.

1.—(1) So much of the residue under Section 1 of the Local Taxation (Customs and Excise) Act, 1890, as is paid to any county or borough fund shall be applied for the purposes of education, and shall, after adequate provision has been made for technical and manual instruc-

tion, and subject to the like conditions and restrictions as are imposed by the Technical Instruction Act, 1889, as amended by this Act, with respect to the aid thereby authorised, be applicable to the purposes of any other form of education.

(2) The money so applied shall be administered by the Council of the county or borough through an Education Committee of the Council constituted in accordance with a scheme made by the Council and approved by the Board of Education.

(3) Every such scheme may provide for including in the Education Committee persons, male or female, who are not members of the Council.

(4) The Education Committee of a Council shall not raise money by loan or by rate, and shall not spend any money beyond the sum allowed by the Council.

(5) A scheme made under this section may provide for a joint Education Committee of two or more Councils, and may make such other provisions, including provisions with respect to the powers and duties of the Committee, and its relation to the Council or Councils by which it is appointed, as may appear necessary or expedient for carrying this Act into effect within the county or borough, or any part thereof.

(6) If the Board of Education approve any such scheme without modification, or with any modifications agreed to by the Council, the scheme shall have effect as if enacted by this Act, but shall be subject to revocation or alteration by a scheme made in like manner.

(7) If the Council do not submit a scheme within twelve months after the passing of this Act, or within such further time as may be allowed by a special order of the Board of Education, or if the Council have, at the expiration of twelve months after submitting a scheme, failed to agree with the Board of Education as to any modifications suggested by the Board, that Board may make a scheme which shall have effect as if made by the Council and approved by the Board.

2.—(1) Money raised by a rate under the Technical Instruction Acts 1889 and 1891, shall, after adequate provision has been made for technical and manual instruction, and subject to the like conditions and restrictions as are imposed by the Technical Instruction Act, 1889, as amended by this Act, with respect to the aid thereby authorised, be applicable to the purposes of any other form of education.

(2) Where money is so raised by a Council of a county or county borough it shall be administered through an Education Committee established under this Act.

(3) The amount of the rate to be raised in any one year by a Local Authority for the purposes of the Technical Instruction Acts, 1889 and 1891, and this Act shall not exceed the sum of 2d. in the pound, and the rate levied under those Acts by the Council of a borough or urban district shall not, when combined with the rate levied thereunder by the Council of a county, exceed the said limit.

(4) Paragraph (g) of Section 1 of the Technical Instruction Act, 1889, is hereby repealed.

3.—(1) A school shall not be deemed to be aided within the meaning of the Technical Instruction Acts, 1889 and 1891, and this Act, by reason only that—

(a) Any scholarship or exhibition granted or supplemented under any of the said Acts is held at that school; or

(b) The use of any museum, laboratory, workshop, or apparatus established, or maintained, or equipped wholly or in part under any of the said Acts, or the instruction given by any technical or scientific instructor paid wholly or in part under any of the said Acts, is available to scholars of the school equally with other students.

(2) A Council in the performance of their duties with respect to education shall not give any preference or advantage to any school on the ground that it does or does not belong to, or is or is not in connexion with or under the management of, any particular church, sect, or denomination, or that religious instruction is or is not given in the school.

Provided that aid shall not be given under this Act to any school in respect of religious instruction, and for the purposes of this Act this restriction shall be substituted for the restriction imposed by paragraph (c) of Section 1 of the Technical Instruction Act, 1889.

(3) Notwithstanding the proviso to paragraph (f) of Section 1 of the Technical Instruction Act, 1889, aid may be given to a school conducted for private profit to such extent and under such conditions as the Board of Education may, having regard to the special circumstances of the case, think expedient.

(4) For the purpose of determining the restrictions and conditions imposed by this Act, Section 1 of the Technical Instruction Act, 1889, shall be construed as if—

(1) References to aid out of the local rate were references to aid out of any fund or rate applicable to education under this Act; and

(2) References to technical and manual instruction were references to any form of education which is aided under this Act; and

(3) References to the Technical Instruction Act, 1889, and to Section 1 thereof were references to this Act.

4.—(1) Every Council shall make such reports and returns and give such information to the Board of Education with respect to their pro-

ceedings under the Technical Instruction Acts, 1889 and 1891, and this Act as that Board may require.

(2) Every Council shall, in the exercise of their powers of establishing and aiding schools under the said Acts, have regard to the existing supply of efficient schools and to the existing application of money applicable to purposes of education.

5.—(1) If the governing body of any school feel aggrieved by the action of any Council on the ground that it operates unequally or unfairly with respect to the school, or is otherwise prejudicial to the school, they may complain to the Board of Education, and that Board, after communicating with the Council, shall determine the matter, and the Council shall comply with any order made by the Board of Education for removing the ground of the complaint.

(2) For the purposes of this section the expression "governing body" shall include any corporation, trustees, or other persons managing a school.

6.—Nothing in this Act shall affect any, certified industrial, day industrial, or reformatory school, or any Poor Law school.

7.—In the application of this Act to Wales and Monmouthshire, the county governing body under the Welsh Intermediate Education Act, 1889, shall take the place of the Education Committee under this Act.

8.—(1) This Act may be cited as the Education Act, 1900.

(2) It shall not extend to Scotland or Ireland.

(3) It shall come into operation on the 1st day of April, 1901.

In response to an influentially signed convening circular, a meeting was held on the last day of June, Mr. Arthur Sidgwick presiding, "to consider the feasibility of establishing a permanent Federal Educational Council, consisting of accredited representatives of all forms of educational effort, for the purpose of expressing the united opinion of the country in public resolutions and of pressing such resolutions upon the attention of all authorities responsible for the conduct of education." The following resolutions were passed:—

1. That, in the opinion of this Conference, it is desirable to establish some permanent Council which will be able to speak on behalf of organizations identified with educational effort in this country, and yet in no way interfere with existing agencies and efforts.

2. That, in order to elicit and formulate the opinion of such organizations in respect of the broader issues without interference with special points of view, it is desirable that such a Council should consist mainly of accredited representatives of existing educational bodies.

3. That the Federal Educational Council be constituted as follows:—(a) Representatives, in no case exceeding two, shall be appointed by each of the bodies named on a list to be subsequently prepared by the Organizing Committee; (b) the Council shall meet not less than twice a year, and may meet whenever it shall seem desirable to the Chairman of the Council to summon it; (c) at its first ordinary meeting in each year the Council shall elect a Standing Committee; (d) the duties of the Standing Committee shall be (i.) to consider such questions as may come up in the intervals between the meetings of the Federal Council and report to it, and (ii.), if so instructed by the Council, to carry out in the intervals between its meetings such of its resolutions as may require to be promptly dealt with; (e) the Council and its Standing Committee shall be composed of both men and women.

4. That the function of the Federal Council shall be public discussion and the publication of all resolutions adopted.

5. That a Committee of twenty-five, with power to co-opt five others, be formed, for the following purposes:—(a) To consider and formulate suggestions for financing the Federal Council; (b) to prepare a list of educational bodies to be represented on the Federal Council; (c) to approach and invite these bodies to appoint and send representatives each to a second Conference at an approved date and place; (d) to formulate in detail the constitution of the Federal Council to be submitted for ratification to this second Conference.

A MEETING of the two Councils of the Provinces of Canterbury and York on Secondary Education was held in the Church House, Westminster, on July 6, at the close of the joint sessions of the two Convocations. The Archbishops of Canterbury and York presided. There were present besides the Archbishops, the Bishops of Winchester, Durham, Hereford, Newcastle, Coventry, Hull, and Beverley, the Dean of Manchester, Lord Hugh Cecil, M.P., Sir F. S. Powell, M.P., Prof. Sir R. Jebb, M.P., Mr. Stanley Leighton, M.P., Mr. J. G. Talbot, M.P., and others, with the Archdeacon of Exeter and Canon Maitland Wood, hon. secretaries. The following resolutions were passed:—

1. That the Law Committees of the two Councils be requested to submit a joint report on the Government Education Bill, 1900, at a

session of the two Councils to be held during the month of November ensuing.

2. That these Committees be instructed to consider the proposals of the Bill generally, and especially to consider whether under them the interests of religious education are or can be adequately secured.

3. That it is desirable that there should be some organization in every diocese for the encouragement of religious instruction and training in the matter of secondary education, for the maintenance of Church teaching in the secondary schools in which it is now given, and for securing complete liberty of religious teaching in any schools to be hereafter founded.

THE Secretary of the Local Examinations Board of Edinburgh University intimates that the examinations will be discontinued after June, 1901. On May 25 last the Senatus sent a remit to the Local Examinations Board requesting a report on the possibility of continuing the scheme without further and increasing drafts upon the capital fund. The Board, at a meeting held on June 12, instructed the secretary to reply that it was their opinion that the steady decline in the number of candidates, due to the operation of the Government Leaving Certificate Examinations, would continue, and that they would incur further annual loss. They therefore recommended that the last examination should take place in June, 1901, and that a circular to this effect should be issued to all interested parties. The Senatus accepted this recommendation on June 29 last, and ordered the terms to be published by the Local Examinations Board.

THE Board of Education having refused the application of the London School Board for the recognition of the existing seventy-nine higher elementary Board schools under the Minute of the Department on the ground that the establishment of so large a number in London alone would be inconsistent with the intention of the Minute, the School Board have addressed a letter to the Department in defence of their position. Their two main contentions are as follows:—

They have applied for recognition of forty-three separate schools for boys and girls in seventy-nine departments. The Board of Education say that so large a number of higher elementary schools in London alone would be inconsistent with the intention of the Minute. The School Board point out that London has a population of about 4,500,000. The School Board are, therefore, proposing one school for higher elementary education for a unit of more than 100,000 population. The School Board await the decision of the Board of Education in other towns, but they will be much surprised if towns of much less than 100,000 inhabitants do not obtain such schools, and if larger towns, like Manchester, do not obtain several. They contend that in no case should London be treated worse in proportion to its population than other parts of the country, and, further, that an allowance of one such school to 100,000 population is, so far from being excessive, much less than is required to bring the opportunities of the most efficient education within the reach of all who desire and deserve it. . . . Those who are acquainted at first hand with the educational needs of London, whether Her Majesty's inspectors or the members and officials of the Board, or of the Technical Education Board, are agreed that it would be disastrous to accept in London the need for schools of science as a measure of the need for higher elementary education. The Board, therefore, rely on a fair opportunity being given them to substantiate the claims of all schools which they have submitted, both in regard to premises, equipment, and staff, and the existing proficiency of the scholars.

THE members of the Head Teachers' Association held their quarterly meeting on July 14, in the St. Bride's Institute, the principal business being the delivery of an address by Dr. William Garnett, M.A., Secretary of the Technical Education Board of the London County Council, on "Higher Elementary Education." Dr. Garnett said he did not believe in class differences in connexion with educational work.

As teachers, the world was their parish, and they must look after the interests of all classes alike. Schools, however, must differ, and pupils must separate in accordance with the future that was intended for them. It ought to be the business of every one to seize on genius wherever found, and never to allow a lack of means to interfere with a child entering into that society for which his talents qualified him. His own belief was that a very large supply of free places in our great public schools, with a very liberal allowance in maintenance grants, so as to enable the poorer children from public elementary schools to climb the educational ladder, was the real solution of the difficulty connected with higher education. He deprecated the commercial

spirit of the age, so far as it applied to education; and, though he did not say it was raining education, he was bound to declare it an increasing danger.

EARLY in the month the foundation-stone of the new building for the London School of Economics and Political Science, to be erected in Clare Market, was laid by the Bishop of London, who hoped that the school would have a vigorous life, for one of its objects would be to equip politicians rather better than they were equipped at present for the work they had to do. In coming forward to assist in the scheme for this hall, Mr. Edwards had set an example to the citizens of London which, it was to be hoped, would be followed, for the new University would require large aid from private sources if it was to do its work and undertake the teaching of the multitudes who needed and wished to be taught. Mr. Bryce proposed a vote of thanks to the London County Council, which, he said, had done many good, wise, and bold things, for which, as usually happened in such cases, it had received a good deal of censure; but it had never done anything which showed more foresight and insight than when it undertook to give a subvention and its countenance to a school of political science. The recognition given by the University of London to the subjects there to be taught would, he hoped, react on the older Universities, and induce them to do likewise. A studentship of £100 for one year has been awarded to a candidate who is prepared to devote himself to the study and investigation of the question of compensation in relation to the amendment of the laws regulating the sale of intoxicating liquors.

THE Leysian School Mission is managed entirely by former students of the Leys School at Cambridge. For fourteen years it has worked in narrow premises in a narrow street, but it has now been decided to buy a site at the corner of City Road and Old Street at a cost of £36,000. A hostel is to be built to accommodate about sixteen residents, and to have in addition some spare rooms for Old Leysians passing through London. Adjoining is to be placed a building named Moulton House, providing a residence for about forty young men engaged in business who can devote some of their spare hours to the work of the mission. One of the large halls will seat fifteen hundred people, and a smaller one four hundred. Thirty class-rooms will also be erected, a spacious drill-hall and gymnasium, club-rooms for men and women, a room for the Boys' Brigade, a girls' parlour and rooms where the very poor may receive medical and surgical aid. The total cost will reach at least £60,000.

THE results of the L.L.A. Examination of the University of St. Andrews, which was held at numerous centres in Great Britain and Ireland, France, Germany, Belgium, Switzerland, Italy, Malta, Turkey, Natal, Cape Colony, New South Wales, and the United States, have been published by the University, from which it appears that 980 candidates entered for the examination at 84 centres this year, as compared with 959 at 77 centres in 1899, and 950 at 74 centres in 1898. 319 candidates entered this year for the first time; and, from the commencement of the scheme in 1877, 5,108 candidates in all have been entered for examination. 136 candidates have this year completed the requisite number of subjects, and will receive the L.L.A. diploma of the University.

At Bedford College, London, Miss F. C. Johnson, B.A., has been appointed the Reid Fellow for two years. The following entrance scholarships have been awarded:—The Reid Scholarship in Arts to Mary Fox, the Henry Tait in Science to Winifred Gibson, the Pfeiffer in Science to Agnes Mary Cooke. Mildred O. Power has obtained the certificate of the Sanitary Inspectors Examination Board, qualifying for sanitary inspectorships in the metropolis. The Early English Text Society's Prize has been awarded to Grace A. Wilson and Ethel Strudwick jointly. The Council will in December award a Gilchrist Travelling Studentship of the value of £70; and, in June, 1901, will award the Gladstone Memorial Prize. M. L. Dale has passed the M.A. Examination in Branch I., Classics.

THE Governors of Holloway College have offered bursaries of the value of £30 a year each for three years to E. C. Sexton and

F. Pocock, from the City of London School for Girls. The Mitchell and Davies Scholarships at the same school have been awarded to C. Brock, H. Robbins, and V. Webb. The Annual Distribution of Prizes by the Lady Mayoress will be held on October 10. The scholarships to be awarded include presentations from the following City companies:—The Grocers', Drapers', Salters', Broderers', Merchant Tailors', and Leathersellers'.

THE following entrance scholarships have been awarded at Holloway College:—Scholarships of £60 a year, for three years, to Miss M. Biden, mathematics, Sydenham High School; Miss E. East, mathematics and physics, Sheffield High School; Miss P. Fischer, German and French, Liverpool High School; Miss E. Heaton-Smith, English, private study; Miss M. Riley, classics, Ormeau School, Newcastle, Staffordshire. Scholarships of £50 a year, for three years, to Miss E. Brock, mathematics, Bromley High School; Miss M. Quixley, English, Sydenham High School; Miss A. Shove, French, Blackheath High School; Miss M. Sladden, mathematics, St. Stephen's High School, Clewer.

THE following is a list of the scholarships now annually awarded by the Technical Education Board of the London County Council:—600 junior county scholarships, 70 intermediate county scholarships, 5 senior county scholarships (besides a certain number of free places at London colleges), 30 schools of art scholarships, 30 artisan art scholarships, 100 junior artisan evening art exhibitions, 200 evening exhibitions in science and technology. 2 Swanley horticultural scholarships, 7 junior scholarships in practical gardening (for boys), 9 domestic economy training scholarships (for young women), 780 domestic economy scholarships (for girls), 32 cookery scholarships (for girls), 20 commercial scholarships (for boys). The Board has also awarded the following scholarships during the past year:—2 scholarships in sanitary science tenable at the pathological laboratory of Claybury Asylum, 3 special scholarships for teachers tenable at commercial institutions on the Continent (for men), 2 special art scholarships for deaf pupils (for boys). In all cases, except where otherwise specified, the above scholarships are apportioned between boys and girls or young men and young women.

### COLLEGE OF PRECEPTORS.—HALF-YEARLY GENERAL MEETING.

THE Ordinary Half-Yearly General Meeting of the members of the Corporation was held at the College on Saturday, July 21.

The Secretary having read the notice convening the meeting, Dr. WORMELL was appointed Chairman.

The report of the Council was laid before the meeting, and was taken as read, a copy having previously been sent to every member of the College. It was as follows:—

#### REPORT OF THE COUNCIL.

The Council beg to lay the following Report of their proceedings for the past half-year before the Members of the College:—

1. They have to report that the number of candidates entered for the Midsummer Examination for Certificates is about 3,900, while the number of entries for the Junior Forms Examination is about 1,400. These figures show a considerable falling off in the Certificate Examination, while there is a slight increase in the entries for the Junior Forms Examination. The Public Distribution of Prizes and Certificates to the successful candidates at the last Christmas Examination took place on the 21st of March, when the chair was occupied by the Dean of the College.

2. The Professional Preliminary Examination for intending medical students and others was held as usual in the second week in March, and was attended by 82 candidates. In the uncertainty that existed respecting the action of the Medical Council with regard to recognition of the College Second Class Certificate, it was only to be expected that the number of entries for this Examination would compare unfavourably with the entries for the corresponding Examinations in previous years. The Council of the College had been given to understand that the question at issue between them and the Medical Council as to the comparative standard of the various "Junior" Examinations would be submitted to experts whose services had been called in to assist the Education Committee of the Medical Council in arriving at a just conclusion on a highly technical matter. Every facility was afforded by the College to the English expert in conducting his inquiries, and the Council have been expecting to be informed by the Medical Council as to the result of his investigation; but, although his report was sent in

several months ago, no communication has been received, and the College is still left in doubt as to whether recognition will henceforth be confined to the First Class Certificate, or whether the Second Class will also be accepted by the Medical Council as qualifying for registration as a medical student.

3. For the Midsummer Examination of Teachers for the College Diplomas 280 candidates have entered (including 14 who enter for the practical Examination for Certificates of Ability to Teach). This number shows a very large increase as compared with the number of teachers who presented themselves for the corresponding Examination last year, and is larger than at any previous Diploma Examination conducted by the College. The forthcoming Examination will be held in London, and at the following Local centres:—Birmingham, Bristol, Leeds, Manchester, Cheltenham, Jersey, Florence, Lapford, Workington, and Belleville (Ontario).

4. In addition to their own Examinations of pupils and teachers, and the Examination of a number of Schools by Visiting Examiners, the Council have conducted during the past half-year the Preliminary Examinations of the Pharmaceutical Society of Great Britain. This Society has decided, after July next, to discontinue its special Preliminary Examination, and to accept in lieu of it the College Second Class Examination, for which candidates will be able to enter four times a year as heretofore.

5. The Thirty-first Annual Series of Lectures to Teachers on "The Science and Art of Education" commenced on the 22nd of February with a Course of Twelve Lectures on "Intellectual Education" by Prof. James Sully, M.A.; and a Course of Twelve Lectures on "The Practice of Education" will be delivered in the autumn by H. L. Withers, Esq., M.A., Professor of Education at Owens College, Manchester. The Council propose to arrange for a Winter Meeting of Teachers to be held in January, 1901, similar to the Meetings held in January, 1898 and 1899, with courses of lectures on special departments of education, to take place during the next Christmas vacation.

6. The usual Monthly Evening Meetings of the Members have been held during the past half-year, at which the following lectures have been delivered:—"The Licensing of Teachers in the Past," by Prof. Foster Watson, M.A.; "School Maps," by H. O. Arnold-Forster, Esq., M.P.; "Commercial Education," by A. Kahn, Esq., M.A.; "Unsettled Questions of Method in the Teaching of Elementary Science," by R. Wormell, Esq., D.Sc., M.A.; "The Inspection of Secondary Schools," by R. P. Scott, Esq., M.A., LL.D. The lectures and the discussions on them have been reported, as usual, in the *Educational Times*.

7. The Board of Education Act came into operation on the 1st of April last, and almost immediately an important Minute was issued, which, in authorizing the establishment of Higher Elementary Schools, on certain well defined conditions, may be regarded as a considerable step towards the delimitation of Primary and Secondary Education. The requirement of two years' attendance at a public elementary school antecedent to admission to the Higher Elementary School, the limitation of the "attendance grant" to pupils in such schools who are not over fifteen years of age, and the requirement of evidence of the need of such a school for the circumstances of the locality will, the Council consider, tend to prevent overlapping and interference with existing secondary schools, and they trust that the Government will not be induced to make any material modification in the provisions of the Minute. The Bill relating to Secondary Education, introduced by the Duke of Devonshire in the House of Lords on the 26th of June, will receive the careful consideration of the Council.

8. During the past half-year, the Diploma of Fellow has been conferred on two candidates, that of Licentiate on eight, and that of Associate on seventy-two, who had passed the required examinations. Twenty-seven new members have been elected, and notice has been received of the withdrawal of five. The Council regret to have to report the death of one of the oldest members of their body, Dr. C. A. Buchheim, F.C.P.; and also of the following members:—Dr. D. A. Altschul, Mr. J. H. Burton, Mr. W. R. Lee, Mr. J. S. Patmer, and Mr. W. Smith.

In reply to Mr. Brown, the CHAIRMAN said that the Second Class having been used for some years by candidates for the medical profession, and it having got abroad that the Second Class Certificate was no longer accepted as a qualification for registration, a good many who would have appeared as candidates in that class had gone elsewhere.

Mr. BROWN said he did not think that this entirely accounted for the falling off. His own impression was that the standard which the College had been adopting for the Second Class during the last few years had tended in great measure to restrict the number of entries for that class. He had called attention to this matter before, and he believed that, if the returns year by year were analyzed, it would be found that there was a considerable difference in the proportion of passes in the Second as compared with the other classes. These two facts taken together would account for the falling off. It was partly due to the action of the Medical Council, and partly to the action of

the College itself in raising the standard of the Second Class Examination.

Mr. ORCHARD said it had appeared to him for some time past that some of the papers set at the Certificate examinations had been unduly difficult; but he was bound to say that on this occasion no objection could, in his opinion, be fairly taken to the papers as a whole.

Mr. BECKTON asked whether, since the Report was drawn up, there had been any communication made by the Medical Council.

The CHAIRMAN replied that the communications with the Medical Council had been almost continuous for the past two years, and they were still going on. As far as the College was concerned, the discussion with the Medical Council had not come to an end.

In reference to paragraph 7, Mr. BROWN said that attention was drawn to the Minute which had been issued by the Board of Education regarding higher elementary schools. He thought they would all be agreed that this was a step in the right direction, and he hoped that whatever pressure might be brought to bear on the Board to neutralize that Minute would be firmly resisted. It was the first step towards delimitation. With regard to the Secondary Education Bill, this Bill was drawn on very generous lines towards private teachers, and no doubt attempts would be made to alter some of the clauses of that Bill by those who were not too well disposed towards private schools. He would like to ask whether the College, representing as it did private teachers, was prepared to use the influence it possessed to preserve this feature of the Bill in the event of it being attacked. He noticed that on the Consultative Committee which had recently been appointed there was no representative of the first organization representing secondary education in this country. They were told that the Committee was not intended to represent interests, but the views of those interested in secondary education. The College of Preceptors did not represent interests. It could not be said that it represented exclusively private teachers, or that it aimed at doing so. But, if the College did not represent interests, it must be acknowledged by everybody that its experience of every phase of secondary education was second to none, and, moreover, its position had been recognized by the Government. Looking, however, at the names on the Committee, he maintained that it did represent interests, inasmuch as the chief mouthpieces of various associations were to be found upon it. As was stated in a leading article in one of the daily papers, there was nobody on the Committee who could speak in a reliable way for the private schools which did more than half the work of secondary education in this country. If that was so, it was evident that, though there might be no desire on the part of the Government to deal otherwise than justly with private schools, yet it was most important that means should be afforded for securing the fullest information from those best qualified to speak on their behalf. For this, if for no other reason, the College ought certainly to be represented on the Committee.

Mr. EVE said this matter had recently been considered by the Council, when it was agreed that a courteous representation should be made to the authorities, pointing out the fact that there was no one on the Consultative Committee who could be said to represent the views of teachers in private schools. He was glad to hear that Mr. Brown agreed that the Bill did, in fact, give nearly all that private schoolmasters could reasonably ask for. It would not, of course, be possible to make grants of public money to private undertakings. It was further distinctly implied that, in making provision for the supply of secondary education in any district, all efficient existing schools should be considered, without regard to their being public or private. Of course, regard would have to be had to the circumstances of parents, and an undoubtedly efficient school in a particular neighbourhood might be found to be too expensive. But, assuming that the Bill was amended in the spirit in which it seemed to be drawn, he could not see that private schools had much to fear from its operation.

The CHAIRMAN said he was one of those who maintained that their Charter remained in its main provisions as unimpaired now as on the day it was granted. In particular the College was commissioned to look after the training of teachers, especially those engaged in private schools; and it could not, therefore, be denied that it was their proper province to look after the interests of those schools.

Dr. SCOTT said it was well known that the Bill could not become law this year, but he had no doubt that next Session would see it through. The Minute as to the higher elementary

schools could not fail to have an injurious effect on secondary schools, if it were not supplemented by the creation of proper local authorities. The safeguard lay in the syllabus; but nothing was said in the Minute with regard to a syllabus.

The Report of the Council was then adopted.

The DEAN then presented his Report, which had been printed and distributed among the members present. He explained that the statistics—which it was impossible to fill in, in consequence of the lateness of the examination—would be given when the report was published in the *Educational Times*.

#### THE DEAN'S REPORT.

In addition to the general statement of the examination work of the College during the past half-year, which has been embodied in the Report of the Council, I have now to submit to you, in detail, the statistics and results of the various examinations.

The Midsummer Examination of candidates for Certificates took place on the 3rd to the 7th July at 151 Local Centres and Schools. In the United Kingdom the Examination was held at the following places:—Aldeburgh, Alvechurch, Ashford (Kent), Aylesbury, Barnstaple, Bath, Belfast, Belper, Bentham, Berwick-on-Tweed, Betley, Birmingham, Blackpool, Borden, Boston Spa, Bournemouth, Brighton, Bristol, Broxbourne, Bruff (Co. Limerick), Camborne, Camelford, Cardiff, Carnarvon, Castle Cary, Cheltenham, Cheshunt, Coleraine, Cork, Croydon, Deal, Dublin, Dumfries, Durham, Ealing, East Grinstead, Eaton Socon, Eccles, Edgbaston, Ely, Exeter, Eye (Suffolk), Fakenham, Falmouth, Faversham, Forest Hill, Frome, Goudhurst, Greenwich, Grimstargh (Preston), Halton (Bucks), Handsworth, Hanley Castle, Hartlepool, Hastings, Hatfield, Havant, Hereford, Herne Bay, Horsmonden, Huddersfield, Hutton (Preston), Jersey, Kingston-on-Thames, Kingston (Herefordshire), Launceston, Leeds, Lewes, Liskeard, Liverpool, Llandudno, London, Lynsted, Manchester, Margate, Market Bosworth, Market Harborough, Matlock, New Brighton, Newcastle-on-Tyne, New Malden, Newtownbarr, Northwich, Nottingham, Oswestry, Painswick, Pencader, Plymouth, Porthcawl, Portsea, Portsmouth, Ramsgate, Richmond, Ripley (Surrey), Rochester, Ruabon, Ruthin, Rye, St. Austell, St. Leonards-on-Sea, Sandwich, Seaford, Shebbear, Sheffield, Sidcup, Slough, Southampton, Southend, Southport, Spalding, Stroud, Sunderland, Tamworth, Taplow, Taunton, Thirsk, Torquay, Uppingham, Wells (Somerset), Weston-super-Mare, Winchcombe, Wirksworth, Woodstock, Worthing, Yarmouth, Yeovil, York. The Examination was also held at Colombo (Ceylon), Gibraltar, and Constantinople.

The total number of candidates examined (not including 12 examined at Colombo) was 3,725—2,395 boys and 1,330 girls.

Taking the Christmas and Midsummer Examinations together, the total number of candidates examined during the year ending Midsummer, 1900 (not including those who attended the supplementary examinations in March and September), has been 10,952.

The following table shows the proportion of the candidates at the recent Midsummer Examination who passed in the class for which they were entered:—

	Entered.	Passed.	Percentage.
First Class .....	453 .....	222 .....	49
Second Class .....	1,252 .....	736 .....	59
Third Class .....	2,020 .....	1,414 .....	70

This does not take account of those candidates who obtained Certificates of a lower class than that for which they were entered.

The number of candidates entered for the Junior Forms Examination (not including 10 examined at Colombo) was 1,310—828 boys and 482 girls. Of these, 1,066 passed, or 81 per cent.

At the Professional Preliminary Examination for First and Second Class Certificates, which was held on the 6th to 8th of March, in London and at four Provincial Centres, viz., Birmingham, Bristol, Leeds, and Liverpool, 78 candidates presented themselves.

The Examination of Teachers for the College Diplomas took place on the 10th of July and three following days in London and at the following Local Centres:—Birmingham, Bristol, Cheltenham, Jersey, Lafford, Leeds, Manchester, and Workington. The Examination was also held at Belleville (Ontario) and at Florence (Italy). It was attended by 253 candidates—173 men and 80 women. In addition to these, 13 candidates (11 men and 2 women) were examined for Certificates of Ability to Teach. The subjects of examination included the Theory and Practice of Education, Scripture History, English Language, English History, Geography, Arithmetic, Algebra, Euclid, Trigonometry, Analytical Geometry, Differential and Integral Calculus, Mechanics, Physics, Latin, French, German, Italian, Animal Physiology, Geology, Botany, Astronomy, Chemistry, Drawing, and Music. On the results of this Examination, 4 candidates have obtained the Diploma of Licentiate, and 107 that of Associate; while 8 candidates have obtained Certificates of Practical Ability to Teach.

The Preliminary Literary Examinations of the Pharmaceutical Society have been held, as usual, at the times appointed. The number of candidates examined during the past half-year was 1,096.

The Report was adopted.

A vote of thanks to the Chairman concluded the proceedings.

#### THE CONSULTATIVE COMMITTEE.

THE Consultative Committee of the Board of Education, to which we refer in our leading columns, was appointed by Order in Council at the beginning of July. The text of the Order is as follows:—

1.—(1) There shall be established a Consultative Committee of the Board of Education consisting of eighteen members.

(2) The following persons shall be the first members of the Committee:—Rt. Hon. Arthur Herbert Dyke Acland, Sir William Reynell Anson, Bart., M.P., Prof. Henry Armstrong, Mrs. Sophie Bryant, Rt. Hon. Sir William Hart Dyke, Bart., M.P., Sir Michael Foster, K.C.B., M.P., Mr. James Gow, Litt.D., Mr. Ernest Gray, M.P., Mr. Henry Hobhouse, M.P., Mr. Arthur Charles Humphreys-Owen, M.P., Sir Richard Claverhouse Jebb, M.P., Hon. and Rev. Edward Lyttelton, Very Rev. Edward Craig Maclure, D.D., Dean of Manchester, Miss Lydia Manley, the Venerable Ernest Grey Sandford, Archdeacon of Exeter, Mrs. Eleanor Mildred Sidgwick, Prof. Bertram Coghill Alan Windle, M.D., Rev. David James Waller, D.D.

2.—(1) Subject to the provisions of this Order as to the retirement of the first members of the Committee, the term of office of a member of the Committee shall be six years.

(2) On the first day of October in every second year six members of the Committee shall go out of office and their places shall be filled by such persons as the President of the Board of Education appoints.

(3) A person going out of office may be reappointed.

3.—(1) The Committee shall elect a chairman, who shall hold office until the next day for the retirement of members of the Committee, but, if he continues to be, or is re-appointed, a member of the Committee, he may be re-elected chairman:

Provided that, if during his term of office the chairman ceases to be a member of the Committee, the Committee shall elect a new chairman.

(2) The chairman shall preside at every meeting of the Committee at which he is present.

4. Such person as the President of the Board of Education appoints shall be the secretary to the Committee and shall hold office during the pleasure of the President of that Board.

5.—(1) The Committee shall meet at such times, and notice of meetings shall be given to the members of the Committee in such manner, as the President of the Board of Education appoints.

(2) At a meeting of the Committee six shall be a quorum.

(3) Subject to the provisions of this Order a Committee may regulate their own procedure.

(4) No act or proceeding of the Committee shall be questioned on account of any vacancy in their body.

6. The President of the Board of Education may for special purposes appoint sub-committees of the Committee, and any sub-committee so appointed may, within the limits authorized by the President, add to their number persons not being members of the Committee.

7. If a member of the Committee is absent from two consecutive meetings of the Committee, except for some reason approved by the President of the Board of Education, his office shall become vacant.

8. On a casual vacancy occurring in the Committee by reason of the death, resignation, or absence of a member, the President of the Board of Education shall appoint another person in his place, and the person so appointed shall hold office until the time when the person in whose place he is appointed would regularly have gone out of office, and shall then go out of office.

9. In making appointments under this Order, the President of the Board of Education shall have regard to the requirements of the Board of Education Act, 1899, that the Committee shall consist, as to not less than two-thirds, of persons qualified to represent the views of Universities and other bodies interested in education.

10. The President of the Board of Education may fix the times of retirement of the members of the Committee appointed by this Order, so that six of them shall retire on the first day of October, one thousand nine hundred and two, six on the first day of October, one thousand nine hundred and four, and six on the first day of October, one thousand nine hundred and six.

11. The Interpretation Act, 1889, applies for the purpose of the interpretation of this Order as it applies for the interpretation of an Act of Parliament.

12. This Order may be cited as the Board of Education (Consultative Committee) Order in Council, 1900, and shall come into operation on the first day of October, one thousand nine hundred.

We add some particulars as to the personal qualifications of the members of this Committee, which will doubtless play a prominent part in reorganizing the system of secondary education in England and Wales. Its duties will be to advise the Board of

Education in regard to the inspection, &c., of secondary schools, with other matters referred to it by the Board, and to frame regulations for the creation of a Register of Teachers.

- Rt. Hon. A. H. D. Acland. Formerly M.P. and Vice-President of the Committee of Council on Education. (Official element.)
- Sir W. E. Anson, Bart.... M.P. Oxford University. (University Literary Education.)
- Prof. Henry Armstrong. City and Guilds Institute, South Kensington. (Technical.)
- \*Mrs. Sophie Bryant ..... D.Sc.; Headmistress North London Collegiate School for Girls; Headmistresses' Association; Member of Council, College of Preceptors. (Girls' Endowed Literary Schools.)
- Right Hon. Sir W. Hart Dyke, Bart. .... M.P.; formerly Vice-President of the Committee of Council. (Official element.)
- Sir Michael Foster, K.C.B. M.P. London University; Professor of Physiology, Cambridge; Sec. Royal Society. (University and Scientific Education.)
- James Gow, Litt.D. .... Headmaster, High School, Nottingham; Headmasters' Association. (Literary "Conference" and "Association" Schools.)
- Ernest Gray, M.A. .... M.P. (State-aided Elementary Schools.)
- \*Henry Hobhouse ..... M.P.; Ecclesiastical Commissioner. (Official element.)
- A. C. Humphreys-Owen. M.P. (Welsh County Council, Intermediate Literary Education.)
- \*Sir Richard Jebb ..... M.P. Cambridge University; Professor of Greek at Cambridge. (University Literary Education.)
- \*Hon. and Rev. Canon E. Lyttelton ..... Headmaster of Haileybury; Chairman of Teachers' Guild. (Literary "Conference" Schools.)
- \*Very Rev. E. C. Maclure, D.D. .... Dean of Manchester. (Elementary Schools; School Board Administration.)
- Miss Lydia Manley ..... Principal of Stockwell Training College; British and Foreign School Society. (Women Elementary Teachers' Training.)
- Ven. E. G. Sandford..... Archdeacon of Exeter. (Church of England Voluntary Schools.)
- \*Mrs. E. M. Sidgwick..... Principal of Newnham. (Women's University Education.)
- Prof. B. C. A. Windle, M.D. Dean of Medical Faculty, Birmingham. (Roman Catholic; University Scientific and Technical Education.)
- Rev. D. J. Waller, D.D... Secretary of the Wesleyan School Conference. (Nonconformist Denominational Schools.)

\* These six were members of the Royal Commission on Secondary Education.

**A SYMPOSIUM ON EDUCATION.**

BEING "A MIDSUMMER NIGHT'S DREAM."

It was late at night as I sat in my easiest arm-chair musing over the latest number of the *Pedagogic Review* and the educational problems of the hour. Gradually I was conscious of a drowsy feeling stealing over me: my thoughts became vague and indistinct, and my body ceased to be to me a matter of any importance. When I awoke I found myself in a curious cave by the banks of a sluggish stream, in the midst of a strangely varied assembly.

"We were talking about education," explained one of their number politely to me, as I opened my eyes. "I scarcely know how you have come amongst us—evidently not by the usual river-way," continued the speaker, indicating with a wave of his hand the waters of the Styx flowing by; "but, at any rate, you must have later information than we have, and your views would certainly be listened to with sympathy and respect."

"What is this ridiculous nonsense I hear about 'genetic psychology,'" broke in a stentorian voice, "these lucubrations of which I have heard on the philosophy of education? How these pedagogues waste their time! What were my words to Boswell these hundred years ago and more?—'Education is as well known, and has long been as well known, as ever it can be.' There is no philosophy of education, save in the imagination of these men. How much time do you suppose I

should have had to complete my Dictionary, Sir, had I frittered away my time in idle and vacuous discussion of this kind?"

The good Doctor glared round on the occupants of the cave so fiercely as he said this that for a few moments nobody dared to make reply; though I observed a gentle-looking old man in one corner showing unmistakable signs of disagreement with the opinions so dogmatically expressed.

"Have you not thought, Sir," began he mildly, "of the infinite delicacy of the mind of a little child, and the mysterious unfolding of its nature? We have learnt that it is the work of the educator to bring about the harmonious development of all the faculties, and this is surely an advance since your day!"

"Sir," said Dr. Johnson, "I hate by-roads in education. Speak not to me of kindergartens; I will have none of your modern fantasies."

"Come, let us live for our children," murmured Froebel sadly to himself, in his humble seat by the river; but the Doctor did not hear him, as he had just risen abruptly and changed his seat. "I would I could take him through the pleasant paths of my kindergarten, and show him there my fair and fragrant flowers, opening in the sunshine."

"Many things have I seen and many things heard," exclaimed the deep voice of a determined and imperious-looking Oriental, "yet have I never heard of such cockering ways in the training of the young. Nought but evil can result from such up-bringing. 'Spare the rod and spoil the child' was ever my motto, and I have yet to learn that a better system of youthful training has been discovered."

"Hear, hear!" cried Dr. Busby, who had taken no part in the debate up to this point. "It was good enough for Westminster in my day, and should be good enough for the world to-day. Why, I flogged the poet Dryden and the philosopher Locke, and more than half a Bench of Bishops, in their youth. I flogged some of the finest men in England, and I tell you, Sir, they owed their greatness largely to the keenness of my birch."

"The now Prime Minister agrees with you, Sir," broke in a quiet voice from the back of the cave. "I was in the Press Gallery on the night of the debate on the Youthful Offenders' Bill, and I can assure you that his views were perfectly sound on the question." The pale-faced young man with the gentle voice turned out to be an over-worked journalist lately come across the river for reasons of health, not unconnected with the ventilation of our Houses of Parliament.

"And, by the way," he continued, "it may interest you to know that the Association for Child-Study is being severely criticized just now, and there promises to be a reaction against the modern craze for philosophic education. The writer of a brilliant article in a well known magazine has recently shown, to his own perfect satisfaction, that there is no such thing as a science of teaching, but only an art; that the best kind of schoolroom is one in which buckets full of tears are shed by the pupils, and that it is only the incompetent teacher who attempts that impossible feat to teach a child to think. A child's business is to learn what he has been set to learn, whether he likes it or not, and there's an end of the whole matter. An education is a perfectly simple and easy thing."

"Young man," said Dr. Johnson, "I should like to be brought acquainted with the writer. He is a man of sound sense and understanding."

"And have you nothing to say?" said another speaker, sharply turning to me, the silent listener to the debate. "We should like to hear what you have to tell of the latest developments. What is the conception of education now held by the experts?"

I expressed myself as very deeply interested in the discussion; but was bound to confess that, though there were still some who held enthusiastically to the views of Froebel and Pestalozzi, and there was an occasional controversy on the subject of corporal punishment in certain circles, the real interest of educationalists now centred round a very different point. The questions now being asked on all hands were these: "How shall we train our boys to be good Imperialists; and what equipment shall we give them for a life of national defence? Who will pay the cost of rifle corps, and what are the objections to conscription in schools?"

"But you should read the educational papers and talk to the headmasters."

"Rifle-shooting and cadet corps; leaving certificates of military proficiency; technical education," muttered the journalist, abstractedly, in a curious interjectional manner, as of one mentally jotting down heads for a newspaper article.

"But Lord Salisbury has just told us that rifle-shooting is not to be accepted as technical education," put in another new comer, who had just caught the remarks of the last two speakers.

"That may be so," said the other; "but it is likely to stand for every other kind of education—elementary, secondary, and University—if one can trust the signs of the times. We are all soldiers nowadays, and Mr. Kipling writes our educational treatises. . . ."

At that point I lost consciousness of my surroundings; the voices in the cave died away into a far distance, and the last thing I saw dimly through the oncoming darkness was the perplexed and troubled face of Friedrich Froebel, poring over the pages of "Stalky & Co." in the newest edition.

## Blackwoods' Illustrated Classical Texts.

General Editor—H. W. AUDEN, M.A., Assistant-Master at Fettes College.

NOW READY.

**CÆSAR.—GALLIC WAR. BOOKS IV., V.** By St. J. B. WYNNE WILLSON, M.A., Assistant-Master at Rugby. *With or without Vocabulary.* 1s. 6d. Vocabulary separate, 3d.

(Prescribed for the Oxford Local, London Matriculation, and College of Preceptors Examinations, 1900.)

"Mr. Willson has certainly succeeded in giving boys all the information and help they could possibly desire for translating Caesar, and we may say that a thorough acquaintance with the contents of this volume would be a considerable step towards a knowledge not only of Latin, but of Roman history and antiquities in general. . . . The notes are copious and accurate; while an appendix of proper names, with historical and geographical notes, is a good feature."—*Journal of Education.*

"A very attractively edited volume, with some quite successful pictures and good notes which reach a really high level of merit."—*Guardian.*

"We wonder how it can all be done at the price."—*Public Schools Magazine.*

**VIRGIL.—GEORGICS. BOOK IV.** By J. SARGEANT, M.A., Assistant-Master at Westminster. 1s. 6d.

(Prescribed for the Cambridge Higher Local Examinations, 1900, 1901.)

"A noteworthy book. . . . No boy with a live brain could fail to derive great benefit both in knowledge and stimulus from this book."—*Guardian.*

"The book is the best we have seen of the new type of school-books. If Messrs. Blackwood keep up to this standard, their series will stand high."—*Literature.*

"There is a pleasing freshness about this volume."—*Athenæum.*

"A most attractive edition."—*Journal of Education.*

**CICERO.—IN CATALINAM. BOOKS I.—IV.** By H. W. AUDEN, M.A., Assistant-Master at Fettes College. 1s. 6d.

"A good feature of the book is to be found in the illustrations, which will help the young reader to realise."—*Spectator.*

"Some striking illustrations. . . . A good section on the life of Cicero."—*Athenæum.*

"A very useful school edition. The notes are good, and the introduction upon Cicero particularly so. The illustrations which enliven the text are relevant and interesting."—*Public Schools Magazine.*

**OVID.—METAMORPHOSES (SELECTIONS).** By J. H. VINCE, M.A., Assistant-Master at Bradfield. 1s. 6d.

**DEMOSTHENES.—OLYNTIACS I.—III.** By H. SHARPLEY, M.A., formerly Assistant-Master at Marlborough. [Immediately.]

**XENOPHON.—ANABASIS. BOOKS I., II.** By A. JAGGER, B.A., Hymer's College, Hull. [Immediately.]

Other Volumes to follow.

## Blackwoods' English Classics.

With Frontispieces. In fcap. 8vo Volumes, cloth.

General Editor—J. H. LOBBAN, M.A., Editor of "English Essays," formerly Examiner in English in the University of Aberdeen.

**MACAULAY.—LIFE OF JOHNSON.** By D. NICHOL SMITH, M.A., Editor of "King Henry VIII." (Warwick Shakespeare). 1s. 6d.

"A most desirable edition. The introduction includes the life of the author, together with an excellent appreciation of his style and critical methods, whilst the one difficulty in Macaulay—his fondness for allusion—is overcome by a complete and interesting set of notes, involving considerable research in eighteenth century biography."—*Educational News.*

**GOLDSMITH.—TRAVELLER, DESERTED VILLAGE, AND OTHER POEMS.** By J. H. LOBBAN, M.A. 1s. 6d.

"Goldsmith has never appeared in more attractive garb than he does here, type and binding being alike beautiful. Nor do the literary accompaniments of the text, in the shape of introduction and notes, deserve less praise. . . . The editor's remarks on the poems are full of fine feeling and discrimination. . . . In short, this is not only an ideal edition for schools, but is well worthy of a place on the student's bookshelf."—*Educational News.*

**SCOTT.—LADY OF THE LAKE.** By W. E. W. COLLINS, M.A. 1s. 6d.

**MILTON.—PARADISE LOST. BOOKS I.—IV.** By J. LOGIE ROBERTSON, M.A., First English Master, Edinburgh Ladies' College. 2s. 6d.

"Introduction and notes show everywhere this writer's [Mr. J. Logie Robertson] scholarship in English literature, and experience in adapting his knowledge to educational purposes."—*Scotsman.*

"A most valuable text."—*Literary World.*

**COWPER.—THE TASK, AND MINOR POEMS.** By ELIZABETH LEE, Author of "A School History of English Literature." 2s. 6d.

"The notes in this volume are excellent."—*Literary World.*

**JOHNSON.—LIVES OF MILTON AND ADDISON.** By Prof. J. W. DUFF, M.A., the Durham College of Science, Newcastle-upon-Tyne. 2s. 6d.

**CARLYLE.—ESSAY ON BURNS.** By JOHN DOWNIE, M.A. 2s. 6d.

Other Volumes to follow.

**FIRST LATIN SENTENCES AND PROSE.** By K. P. WILSON, M.A., Assistant-Master at Fettes College. 2s. 6d. [Just published.]

**LOWER LATIN PROSE.** By K. P. WILSON, M.A. 2s. 6d.

\* KEY, 5s. net.

**LOWER GREEK PROSE.** By K. P. WILSON, M.A. 2s. 6d.

WILLIAM BLACKWOOD & SONS, EDINBURGH AND LONDON.

## OXFORD UNIVERSITY PRESS.

**Milton.—Areopagitica.** With Introduction and Notes by JOHN W. HALES, M.A. 3s.

— **Poems.** Edited by R. C. BROWNE, M.A. In Two Volumes. 6s. 6d.

Sold separately: Vol. I., 4s.; Vol. II., 3s. In paper covers: Lycidas, 3d.; Comus, 6d. Edited, with Notes, by O. ELTON, B.A.: Lycidas, 6d.; L'Allegro, 4d.; Il Penseroso, 4d.; Comus, 1s.

— **Paradise Lost.** Book I. Edited by H. C. BERCHING, M.A. 1s. 6d.; in parchment, 3s. 6d.

— **Paradise Lost.** Book II. Edited by E. K. CHAMBERS, B.A. 1s. 6d. Books I. and II. combined, 2s. 6d.

— **Samson Agonistes.** Edited, with Introduction and Notes, by J. CHURTON COLLINS, M.A. 1s.

**Scott.—The Tallman.** Edited, with Introduction, Notes, and Glossary, by the Rev. H. B. GEORGE, M.A. 2s.

— **Marmion.** Edited, with Introduction and Notes, by T. BAYNE. 3s. 6d.

**A Latin Prose Primer.** By J. Y. SARGENT, M.A. 2s. 6d.

**Passages for Translation into Latin.** Selected by J. Y. SARGENT, M.A. 2s. 6d.

\* A KEY to the above, price 5s. net. Supplied to Teachers only on application to the Secretary, Clarendon Press, Oxford.

**Cicero.—De Senectute.** Edited, with Introduction and Notes, by L. HUXLEY, M.A. 2s.

**Livy.** Books XXI.—XXIII. With Introduction and Notes. By M. T. TATHAM, M.A. Second Edition, Enlarged. 5s.

— Book XXI. By the same Editor. 2s. 6d.

**Plato.** With Introduction and Notes by ST. GEORGE STOCK, M.A. 8vo.

— **The Apology.** Third Edition. 2s. 6d.

— **Crilo.** 2s.

**Xenophon.—Anabasis.** Book II. With Notes and Map. By C. S. JERRAM, M.A. 2s.

**Lessing.—The Laocoon.** With English Notes by A. HAMANN, M.A. Revised, with an Introduction, by L. E. UPCOTT, M.A. 4s. 6d.

**Schiller.—Wilhelm Tell.** A Drama. Large Edition. With Map. By C. A. BUCHHEIM, Ph.D. 3s. 6d.

## FORECASTS AND COMMENTS.

August 1, 1900.

A COURSE of twelve lectures on "The Practice of Education" will be delivered at the College of Preceptors by Prof. Withers, of Owens College, beginning in the first week of October.

THE Council of the College are arranging for a Winter Meeting of Teachers, to be held in January, 1901, with courses of lectures and demonstrations on various subjects.

THE RIGHT HON. A. J. BALFOUR, M.P., will inaugurate the Summer Meeting of University Extension Students at Cambridge on Thursday, August 2, by an address in the Senate House.

THE Geoffrey Fellowship, and possibly another, will be awarded at Newnham College in August. Applications from former students of the college are invited, and should be sent on or before August 3, to the Principal, from whom the conditions of tenure can be obtained.

A PUBLIC HEALTH CONGRESS will be held at Aberdeen from August 2 to 7, under the auspices of the Royal Institute of Public Health. Among the papers promised may be mentioned the following:—"Disinfection," by Prof. Delépine; "Sewage," by Prof. Percy Frankland, F.R.S.; and "The Origin and Treatment of Malarial Fever," by Dr. Patrick Manson. There will also be submitted and discussed a report on the inquiry made into the chemical and bacteriological condition of the air in the London Board schools.

THE National Home-Reading Union is holding a Summer Meeting at Edinburgh, which will be concluded on Saturday next.

ON October 9 Convocation of London University will proceed to elect sixteen members of the Senate. The election of Senators by the various Faculties is fixed for October 12. The first meeting of the Senate under the new constitution will take place on October 24.

DR. WARRE, of Eton, has raised a lively educational controversy by his proposal to "enrol, for the purpose of instruction in drill, manœuvres, and the use of arms," all young men at the Universities and boys at the public secondary schools over the age of fifteen who are capable of bearing arms." Eighty-three out of a hundred and two headmasters who have been consulted say ditto to Dr. Warre; but, in the course of the correspondence, the "capable of bearing arms" has been altered to "willing and able to bear arms." Is all this "epoch making," or only a sort of *fougus de khaki*?

PROF. ARMSTRONG, a member of the Consultative Committee, has taken part in this correspondence mainly by way of advocating science teaching as the foundation, not merely of neo-militarism, but apparently of all education. Speaking of last year's Joint Board Certificate Examination, he says:

Winchester and Eton College head the list, the former gaining sixty-eight and the latter fifty-nine certificates; of these Winchester gained

two in "science" but Eton none, although in 1898 and 1897 Eton had the distinction each year of gaining one certificate in a scientific subject. Bradford Grammar School and Oundle were the only two schools to score double figures in science in 1899; yet they did as well as Eton in Latin and Greek. I have no wish to exaggerate the value of such figures, but they at least show the way the wind blows, and also afford some indication of the extent to which Huxley's advice to make science "a foundation of education" is taken in the school.

\* \* \*

THE BISHOP OF LONDON, when he opened the new buildings of the Kilburn Grammar School, practically supported the plea for better scientific method in our teaching. The necessity for this, he said, had been impressed on his mind by what had been happening in South Africa, where, though the raw material was as good as ever it was, yet it was impossible not to feel that there were great blanks in the capacity of some. Somehow or other we had not cultivated knowledge, and the application of the best knowledge to whatever had to be done.

\* \* \*

THE endowment fund of Birmingham University now exceeds £400,000. Sir James Chance has given £50,000, and Lord Calthorpe has bestowed on the University some twenty-five acres of land, valued at between £15,000 and £20,000.

\* \* \*

A COUNTY COUNCIL can hardly be a pious donor; though, no doubt, its members may be held pious in their regard for education. The Bangor Council has offered six acres as the site of new buildings for Bangor University College, on the erection of which a sum of £20,000 will be expended.

\* \* \*

HERE is the University athletic record for the past year:—To the credit of Oxford: Boxing and fencing, Association football, billiards double, billiards single, golf, point-to-point steeplechase, athletic sports, racquets double, racquets single, lawn tennis single, and ice hockey—total, 11. The Cambridge successes are: Cross-country, Rugby football, hockey, chess, Boat Race, swimming, &c., lawn tennis double, tennis double, and tennis single—total, 9.

\* \* \*

WE mentioned some time ago that the London School Board had asked the Charity Commission to facilitate in various ways the entrance of their scholars, by the scholarship ladder, into St. Paul's School. They invited the Commissioners to provide that English grammar might be regarded as an alternative for Latin grammar in the entrance scholarship examinations; but the Commissioners have not been able to comply with this request.

\* \* \*

AT the St. Paul's Apposition, on July 25, the High Master, referring to the new scheme of the Commissioners, said there was much in it which did not commend itself to his judgment; but, taking it as a whole, the present Commissioners had done what their predecessors failed to do, and had put an end to a state of things which was very damaging to St. Paul's.

\* \* \*

THE Almoners of Christ's Hospital, whilst proceeding with the erection of new school buildings for boys, on the estate recently acquired by them at Horsham, where it was also intended to build a school for girls, have, it is said, induced the Charity Commissioners to vary their scheme so far as to sanction the retention of the girls' school at Hertford, and to increase it by the addition of new class-rooms.

\* \* \*

THE Canadian Government makes an interesting invasion of the mother country by offering bronze medals for competition in British and Irish schools, by an examination to be held at Christmas in the history and geography of Canada.

Appointments and Vacancies. THE Chair of Moral and Mental Philosophy in the University of Cambridge, vacated by the resignation of Dr. Henry Sidgwick, has been filled by the appointment of Mr. Sorley, Professor of Moral Philosophy in Aberdeen University.

\* \* \*

MR. WALTER RALEIGH, of University College, Liverpool, has been appointed to succeed Mr. Bradley (resigned) as Professor of English Language and Literature in the University of Glasgow.

\* \* \*

THE QUEEN has appointed Prof. McCall Anderson, Professor of Clinical Medicine in the University of Glasgow, to the Chair of Systematic Medicine, vacant by the resignation of Sir W. Gairdner.

\* \* \*

THE Council of King's College, London, have elected the Rev. A. Nairne, M.A., late Fellow of Jesus College, Cambridge, to the Professorship of Hebrew and Exegesis of the Old Testament, in succession to the late Dr. Stanley Leathes.

\* \* \*

THE Council of King's College have also appointed Mr. H. G. Atkins, M.A., First Class Honours (with special distinction in German), Medieval and Modern Languages Tripos, Cambridge, Instructor at the Royal Naval College, Greenwich, to the Professorship of German, in succession to the late Dr. Buchheim.

\* \* \*

IN October the electors to the Chichele Professorship of Modern History will proceed to the election of a Deputy-Professor. Candidates should send in their names to reach the Registrar of the University before August 31. The stipend is fixed at half the emoluments of the present Professor (Mr. Burrows), and the half will amount to about £500 per annum. The Deputy-Professorship will cease when the present Professor's tenure of office expires, and at the next vacancy the payment of the Professorship will be fixed at £900 a year. The Professor is required to lecture and give instruction principally on the History of Great Britain and Ireland, and the British Colonies and Dependencies. He may also treat of other parts of Modern History.

\* \* \*

THE Scottish Education Department have appointed Principal Grant-Ogilvie, of the Heriot-Watt College, Edinburgh, to be the Director of the Museum of Science and Art, Edinburgh.

\* \* \*

THE Governors of St. Peter's School, York, have appointed the Rev. E. C. Owen, assistant-master at Bromsgrove School since 1893, to the Headmastership of the school. Mr. Owen was formerly a scholar of Pembroke College, Oxford, and graduated with a First Class in the Final Classical School in 1892. He will take up his work at the commencement of next term.

\* \* \*

MR. R. T. ROBINSON, M.A., B.Sc., late scholar of Peterhouse, Cambridge, and senior mathematical master of the Wyggeston School, Leicester, has been appointed Headmaster of the Grammar School, Burton-on-Trent.

\* \* \*

MR. H. REDMOND THOMPSON, M.A. Oxon., assistant-master at Sherborne, has been appointed Headmaster of Eastbourne College, in succession to the Rev. M. A. Bayfield, whose retirement is due to ill health.

\* \* \*

MR. C. CARGILL, B.A., of Ilminster School, has been appointed Headmaster of Mirfield Grammar School, in succession to the Rev. C. T. Raynham, retired.

\* \* \*

THE REV. J. W. DAVISON, M.A., of Shaftesbury Grammar School, succeeds Mr. R. Stead, B.A., as Headmaster of Folkestone Grammar School.

\* \* \*

At the annual meeting of Old Taylorians at the end of June Prebendary Baker announced that he would retire from the Headmastership of Merchant Taylors' School next Christmas. Mr. Baker will then have completed a term of thirty years as Headmaster.

\* \* \*

THE Headmastership of Bedford Modern School will be vacant next Christmas by the resignation of the Rev. Dr. Poole.

\* \* \*

WE regret to note the death of the Rev. A. R. Vardy, Headmaster of King Edward's School, Birmingham, at the early age of fifty-nine. Mr. Vardy had been Headmaster for twenty-one years.

\* \* \*

MISS FRANCES H. MELVILLE, M.A. Edin., has been appointed to the post of Warden of the University Hall, St. Andrews, recently rendered vacant. Miss Melville was the first woman to take the M.A. degree at the University of Edinburgh with First Class Honours in Philosophy. For three years she acted as assistant to Prof. Seth, of Edinburgh, and latterly occupied the position of Lecturer in Mental and Moral Science at the Ladies' Training College, Cheltenham.

\* \* \*

THERE have been some notable changes in the staff of the girls' high schools. Miss H. M. Jones having retired from the Notting Hill School, she has been succeeded as Headmistress by Miss E. Gavin (Girton), Headmistress at Shrewsbury. Miss Wise, assistant-mistress at Notting Hill, has been appointed to succeed Miss Gavin. The new Head of Kensington High School is Miss Home, of Clapham High School. Notting Hill loses four of its assistants in addition to Miss Jones.

\* \* \*

THE International Association of Academies is now constituted, and it includes the eighteen following Academies:—Academy of Sciences, Amsterdam; Prussian Academy of Sciences, Berlin; Academy of Sciences, Literature, and the Fine Arts, Brussels; Hungarian Academy of Science, Budapest; Academy of Sciences, Christiania; Society of Sciences, Göttingen; Academy of Sciences of Denmark, Copenhagen; Academy of Sciences of Saxony, Leipzig; Royal Society, London; Academy of Sciences of Bavaria, Munich; Academy of Inscriptions and Literature, Paris; Academy of Sciences, Paris; Academy of Moral and Political Sciences, Paris; Academy of Sciences, St. Petersburg; Accademia dei Lincei, Rome; Swedish Academy of Sciences, Stockholm; Academy of Sciences, Washington; Academy of Sciences, Vienna. The Association is divided into two sections, one of Literature and the other of Science. There will be a general international meeting once in three years.

\* \* \*

THE London Mathematical Society send us their "Complete Index of all the Papers printed in the Proceedings of the Society" (Francis Hodgson). The "Proceedings" occupy thirty volumes; and, without a general index, the search for particular papers must often have been a tedious occupation. The date of the earliest paper, we note, is 1865.

\* \* \*

WE need hardly say that this list of papers includes some of the most brilliant output of the most original mathematicians of this country during a third of a century, including Cayley, W. K. Clifford, A. De Morgan, Clerk Maxwell, H. J. S. Smith, Sylvester, and others. We note a contribution of Mrs. Bryant's, "On the Ideal Geometrical Form of Natural Cell-Structure," and several early indications of the genius of the ill-fated Arthur Buchheim, son of the late Prof. Buchheim.

\* \* \*

THE *English Historical Review* for July continues Mr. R. S. Rait's study of "The Scottish Parliament before the Union," and Mr. Basil Williams's "Foreign Policy of England under Walpole." Mr. Henry Bradley, noting the variants which are

found in old manuscripts of the Latinized name of Manchester, makes a somewhat fanciful suggestion of "Mammium"—or, in Celtic form, "Mammion"—as the original name—"a derivative, perhaps, of *mammā*, 'mother.'" Anyhow, Mr. Bradley bids us discard "Mancunium." We will take it *ad referendum*.

\* \* \*

A VOLUME of much interest has been compiled by Mr. Horace Hart, M.A., Printer to the University of Oxford. It is entitled, "Notes on a Century of Typography at the University Press, Oxford, 1693-1794, with Annotations and Appendices." Mr. Hart's knowledge of the printing art is extensive. He is probably the greatest living authority on the subject, and the information which he gives is, therefore, most valuable.

\* \* \*

THE Copyright Bill, which had almost passed the House of Lords, has gone by the board, owing to the old-fashioned fallacy that Parliament has not time to carry into law as many measures as may be required for public purposes in each succeeding Session.

\* \* \*

TEACHERS and their pupils buy more books than any other class of readers, and they will be interested in the statement that the booksellers are urging the publishers—who will be nothing loth—to produce a larger percentage of "net books." The Booksellers' Association have just addressed the Publishers' Association to that effect. A circular with the suggestion is being sent round the members of the latter body, and no doubt there will be some result. Scientific and technical books, it is argued, should be brought under the net system.

\* \* \*

VERY good prices were paid at a recent sale of children's books at Messrs. Sotheby's. A Horn Book of the seventeenth century, covered in leather, with a figure of Charles I. on horseback, fetched £23. 5s.; while a somewhat similar one of the same century, with a nearly obliterated figure of St. George and Dragon, although silvered on the back, only reached £15. To us, a more human interest seems to attach to the nearly obliterated St. George than to the more perfect alphabet decorated with the figure of Charles. Tiny fingers must have often wandered from the dreary letters to the exciting picture for a solace which the Charles I. Horn Book, although containing the full alphabet, with an additional S, could not give.

\* \* \*

THESE books, with many others, were the property of the late Mr. Andrew Tuer, whose recent works on children's books are well known. Charles and Mary Lamb's "Poetry for Children" realized £81. Perhaps there is still a glorious future for many an old battered "Public School Latin Primer."

## THE GREEK PLAY AT BRADFIELD.

By E. C. MARCHANT, M.A.

I do not propose to set before the readers of this journal a detailed criticism of the "Agamemnon" as performed at Bradfield during the last days of June—to indicate over again the several degrees of success with which Clytæmnestra and the King, Talthybius, best of heralds, and the ill-starred Cassandra overcame the difficulties that beset them. Perhaps at no season of the year is *crambe repetita* so unwelcome a dish as in the torrid heat of August. But, now that the stage picture has faded, it may not be amiss to attempt to estimate the effect of these unique performances at Bradfield on those who take part in them and on those who watch them.

The story of the Bradfield plays is known to everybody. A disused chalk-pit, delightfully situated, and in close proximity to the college, has been transformed by the energy of Dr. Gray into a most pleasant open-air theatre, wherein everything may very well pass for Greek. The seating capacity of the auditorium cannot fall far short of two thousand; and the seats are sufficiently uncomfortable to put one in mind of the jests in Aristophanes. In the centre of the orchestra there is an altar of Dionysus, and the stage and its buildings are elaborate enough to shock Dr. Dörpfeld. None but the extreme purist will quarrel with these concessions to the modern taste. More doubtful is

the seating for the musicians, that occupies the extreme corner of the stage on the O.P. side, where Mr. Abdy Williams, looking quite genuine as a tragic poet, directs in modern fashion his white-robed minstrels. It is no easy task, this direction of the music—for the members of the chorus cannot see Mr. Williams, and so not infrequently it happens that the singers go before and the minstrels follow after, or *vice versa*. But nobody who has had to do with school music will deny that Mr. Williams overcomes the considerable difficulties that beset him in a masterly fashion. It may indeed be here set down that the critics are too apt to overlook the many awkward problems involved in casting a Greek play entirely with English schoolboys. One who has both figured in a Greek play and directed a school band and choir is glad to record here that the Bradfield performances are a monument to the patience and care of those concerned in their production.

The centre of the stage presents the palace of Agamemnon, and on the right is the watch-tower, from which the beacon was desecrated. The watchman, be it noted, was not portrayed as a low comedian such as some of the editors regard him. He did not even execute a breakdown when he delivered the passage "I will dance the prelude." I believe that this view of the part is correct, and that Æschylus did not intend his watchman to be such a funny fellow as the editors are apt to make him.

The chorus streamed in by a single *parodos* on the spectators' right. Instead of twelve—which is supposed to be the correct number in the "Agamemnon"—there were fourteen singers and a leader, according to the number doubtless adopted in ancient reproductions of the "Oresteia."

The proceedings of the Bradfield chorus are somewhat curious. When they are not striding through their evolutions they lead the slackest existence possible, lolling about the steps that communicate with the stage, utterly heedless of what is doing before them, despite the bustling, fussy, interventions of the *coryphaeus*. At times the leader seems to be making frantic efforts to galvanize his followers into life; but they presently relapse again into the old listlessness. Clytæmnestra's harangue on Marconi signalling; the herald's account of the storm and the loss of Menelaus; the arrival of their monarch, with whom they profess to sympathize so deeply; the Queen's embarrassment, so marvellously conveyed in a speech directly addressed to the chorus; the ravings, coherent or incoherent, of inspired Cassandra; nay, the very murder of their sovereign lord—all these things pass before the old gentlemen like pictures in a dream, and leave them slumbering on, until, on a sudden, they start out of their lethargy in the same unaccountable way as a man awakes from a dream, bustle about, and discuss, with energy transient enough, what is to be done. Presently this show of interest fades away, and the latter portion of the play becomes a mere dialectical dispute, in which the chorus delegate their part to their spokesman, and once more recede out of the action. The effect of this detachment of the chorus is that the choric songs themselves seem to the spectator wholly irrelevant. They do not blend with the rest of the play, but gape apart from it; one gets heartily sick of the doddering old fellows, and feels thankful enough that the authorities have cut down their part. No doubt Greek acting was statuesque, quiet, restrained; but really the persons who bear an important part in the play, and whose presence is essential to the working out of the plot, must have displayed in action some signs that they were not merely bored spectators. How would the Bradfield chorus manage the two remaining plays of the "Oresteia"?

The stage picture when Agamemnon entered in his chariot, dragged by slaves, followed by attendants, and attended by two companies of soldiers, was worthy of the highest praise. The King preserved the requisite dignity in a trying situation while Clytæmnestra got through her long speech. This is, perhaps, the most difficult part of the play to perform, the speech making as great demands on the actor's skill as the famous counterfeiting business in "As You Like It." It is not to be expected that the Bradfield players should rise to heights seldom reached on the professional stage. But they handicapped themselves unnecessarily by taking the whole play at one unvarying pace. Distinctness of enunciation is commendable, but too much is sacrificed to it when it becomes impossible for the spectator to detect the confusion of Clytæmnestra. She spoke the rapid verses as deliberately as a judge pronounces a verdict. The effect of this extreme deliberation on the spectator is an impression of monotony; and those who are without a knowledge of Greek sufficient to supplement the deficiencies of the actors frankly admit that they are bored. But not only is the utterance in parts excessively slow; the words are spoken in a detached manner which is wholly unlike the Greek method. The Greeks, as we know, ran their words into one another—there were no gaps. Aristophanes tells us that an actor made *γαλῆνὰ δρῶ* sound like *γαλῆνι δρῶ*—no doubt because he detached the words just as they do at Bradfield. One very ugly result of this method is that the elided enclitics are separated from the word that precedes and attached closely to that which follows. But, apart from the general question of pronunciation, it is manifest that some lines in Clytæmnestra's greeting require to be delivered more rapidly than others.

Of what value are these performances? First they leave an indelible impression on the minds of those who take part in them, and who watch them. Despite the absence of mask and buskin, and other necessary

concessions, they enable the student to understand the Greek drama much better than he understood it before. No doubt the necessary preparation breaks into the ordinary school work and causes considerable inconvenience. But masters who object on this ground to such occasional variations of the routine forget that the lessons learned from the Greek or Latin play stay in the mind throughout life, and are at least of no less value than the lessons that it temporarily supplants. That the Bradfield authorities are partly prompted by a mere sordid motive would be a wholly unjustifiable statement. But any outsider who sets himself to weigh the *pros* and *cons* cannot fail to see that the value of the advertisement secured is not to be overlooked. Notices in the newspapers before and after, special trains conveying multitudes of persons from remote towns, the display of the school and its surroundings to many who otherwise would never have visited the place—such things must count for much. As for the spectators, the function is one which they are glad to have attended. The natural beauty of the surroundings, the soft colours of the dresses set off by the green of the trees, the twittering of the Greek lyres, the birds flying in and out among the players, the concrete seats successfully defied with the aid of a little pad; these, and many other details, are the source of pleasant memories thereafter.

### JOHN WEBSTER.

By Prof. FOSTER WATSON.

PROF. CROOM ROBERTSON, in his monograph on Holles, thus refers to Webster. Early in the year 1654, "came forth a work entitled 'Examen of Academies,' by the Rev. John Webster, an army chaplain, inveighing, in the fashion of the day, against the whole system of academic study, and, in the fashion of the century, against Aristotle as answerable for it all." Prof. Robertson has prominently before his mind the clever reply of Ward, and hardly, I think, does justice to Webster. He is evidently impressed by the first half of Webster's title-page: "Academiarum Examen; or, the Examination of Academies. Wherein is discussed and examined the Matter, Method, and Customs of Academic and Scholastic Learning, and the insufficiency thereof discovered and laid open."

But the second half is more suggestive: "As also some Expedients proposed for the Reforming of Schools, and the perfecting and promoting of all kind of Science. Offered to the judgements of all those that love the proficiencie of Arts and Sciences, and the advancement of Learning (1654)."

Webster's chief objection to academic learning is that it seems to pose as a substitute for religion—with which it has nothing to do. School theology he abhors. Even the teaching of languages seems to him a *pis aller*. Webster, in his fantastical manner, longs for the universal language of all living things. "The mind receiveth but one single and simple image of everything, which is expressed in all by the same motions of the spirits, and doubtlessly in every creature hath radically, and naturally the same sympathy in voice and sound, but, men not understanding these immediate sounds of the soul, and the true schematism of the internal notions impressed, and delineated in the several sounds, have instituted and imposed others, that do not altogether concord, and agree to the innate notions, and so no care is taken for the recovery and restauration of the catholic language in which lies hid all the rich treasury of Nature's admirable and excellent secrets."

The labour which is spent in learning foreign languages Webster looks upon as disproportionate to the results. He insists that, even if a man had perfect knowledge of many, nay, all languages, so that "he could give unto man, beast, bird, fish, plant, mineral, or any other numerical creature, or thing, their distinct and proper names in twenty several idioms or dialects, yet knows he no more thereby than he that can only name them in his mother tongue, for the intellect receives no other nor further notion thereby, for the senses receive but one numerical species or ideal-shape from every individual thing, though by institution and imposition, twenty, or one hundred names be given unto it, according to the idiom of several nations."

The mental discipline of language study does not appeal to Webster. He admits that by reading other languages the intellect may be enriched by the gathered knowledge. But it is knowledge of things, rather than words, that constitutes the treasure. "Excellent," says he, "and worthy was that attempt of the renowned and learned Comenius in his 'Janua Linguarum' (if it had been as well understood and seconded by others) to lay down a platform and seminary of all learning and knowable things, that youth might as well in their tender years, receive the impression of the knowledge of matter and things, as of words, and that with as much ease, brevity, and facility."

Webster points out the fact that, by use and exercise, those who travel and live in divers countries will learn two or three languages, whilst we are "hard tugging" to gain one by rule and method. How necessary, therefore, if a language is to be learned by grammatical rules, to choose the simplest and most certain way! He praises the Clausulary Method\* of Dr. Webbe, which would enable students, he

\* Account of Webbe—reference to teaching of the dumb.

thinks, to obtain perfection in a comparatively short time; and he is of opinion that, if that system had been followed, the advantage to the nation would have been incredible. "But we are in this like tradesmen, who all bandy and confederate together to suppress any new invention, though never so commodious to the Commonwealth, lest thereby their own private gain should be obstructed or taken away." It is, therefore, the dark and confused method of teaching Latin which is obnoxious to Webster. He has praise for Comenius as a reformer. So, too, he speaks of the elaborate pains of our countryman, Mr. Brinsley, who therein deserves great commendation. Yet it is for the universal language he longs, so as to repair the ruins of Babel. He listens with more than half-belief to the traveller's story, told by Sir Kenelm Digby, of one in Spain, deaf and dumb, yet taught to speak and understand others. Examples from the Chinese and the Rosicrucians are quoted to show the possibility of a primordial language of Nature.

With regard to language, therefore, Webster's position is: the universal language of Nature for all living beings if possible; failing that, simplification of method of teaching foreign languages. The fact is that Webster's interest is in the practical. He objects to logic, because it leads men to "babble, argue, and say very much, but still to remainnescious and ignorant." His complaint against mathematics is that the treatment is that of argumentation without any solid practice; whereas he affirms that "their superlative excellency transcends most of all other sciences in their perspicuity, veritude, and certitude, and also in their uses and manifold benefits." He advocates more arithmetic and geometry. Music, which he includes in mathematics, he complains is only developed on that vulgar and practical side "which serves as a spur to sensuality and voluptuousness, and seems to be the companion of melancholics, fantastics, courtiers, ladies, taverns and tap-houses . . . yet for the mysterious part thereof, which consists in the discovering the nature, quality, distinction, sympathy, dispathy, significancy, and effects of all sounds, voices, and tones that are in Nature, these are altogether unknown and neglected; as also how far it might be serviceable to Natural Philosophy, and the laying open of the universal harmony of the whole mundane fabric, that remains untried and unattempted."

Astrology receives high praise from Webster, who greatly admired Mr. Ashmole, Mr. William Lilly, Mr. Booker, Mr. Sanders, and Mr. Culpepper. The other parts of mathematics of which he approves are statics, architecture, pneumatarithmetic, stratarithmetic—these arts were praised, he tells us, by Dr. John Dee. He asks if to be supinely neglectful of these is consistent with a nation being the fountain of learning and well-spring of science.

He makes a vigorous attack on the scholastic philosophy. He is wroth because magic is condemned. He claims that chemistry or pyrotechny deserves more study. So, too, medicine and surgery require better study. The Universities do not study the inner nature of things, nor magnetical philosophy, towards which Dr. Gilbert had done so much. From all which he concludes that Aristotle ought to be superseded.

Webster offers remedies or "expedients" in theology, grammar, logic, and mathematics. In theology he wishes that men no longer style themselves "divines," that they do not pretend through their learning to a knowledge of God's Word; and that what can be discovered of God and supernatural things by the power of reason and the light of Nature may be handled as a part of natural philosophy. In grammar, again, he recommends Brinsley and Comenius. In logic, he expresses the desire that induction, which is the chiefest and most beneficial part, may be serviceable and helpful for the discovering of science. In mathematics, he wants to see Copernicus, Kepler, Tycho Brahe, Galileo take the place of Aristotle and Ptolemy.

His expedients or suggestions concerning custom and method must be given at length.

1. Webster desires that men may not be tied up all to one method or way, lest, however good it may be, it shall hinder them from following a better. "It is clear," he says, "that there may be many ways to one place and divers methods for attaining the same end of knowledge, so that we would not exclude men from trials that they may find out the best; so we would not tie them to any one, lest it prove the worst."

2. "That time be not misspent or trifled away, which is an irreparable loss and utterly irrevocable and therefore I could wish that Apelles' motto might be had in everlasting remembrance, *Nulla dies sine linea*; and therefore long vacations and intermissions are to be looked upon as Scylla and Charibdis, the rocks and shelves whereon young men may easily suffer shipwreck."

3. "That degrees should be given according to merit, industry, and proficiency, and not according to years, sufficiency, and formality."

4. "That exercises should be not only verbal and disputative, but practical and operative. As Nature has given them two hands and but one tongue, so they may learn to work more and speak less."

5. "That exercises be in English as well as other tongues."

6. "That neither antiquity nor novelty may take place above verity, lest it debar us from a more diligent search after truth and science. Neither is it fit that Authority (whether that of Aristotle or any other) should enchain us, but that there may be a general freedom to try all things and to hold fast that which is good, that so there might

be a philosophical liberty to be bound to the authority of none, but truth itself; then will men take pains, and arts will flourish."

7. "That the order of studying subjects be: Mathematics, Natural Philosophy and other Sciences, the Tongues, Physics, Logic, Metaphysics, &c."

In answer to Webster's book appeared a tract with the title: "Histrio-Mastix: A Whip for Webster (as 'tis conceived) the quondam Player. 1654." This *examen examinis* is written by Thomas Hall, B.D., Pastor of King's Norton. He contends that Webster lands himself in contradictions—by at one moment approving of human learning, and the next saying that human learning disables men for the ministry. And, again, he argues that Webster forbids teaching children by grammar rules, whilst he "cries up" Mr. Brinsley's way of teaching, "which every one knows hath reference to rules." Hall makes much fun of Webster's advocacy of magic and astrology as studies. He goes on: "Add to this his praising the study of Physiognomy as an excellent, laudable, and profitable science (which yet the learned judge vain and foolish); also his extolling of chemistry and preferring it before Aristotelian philosophy and advising scholars to leave their libraries and fall to laboratories, putting their hands to the coals and furnace (so they may quickly find, *pro thesauro, carbones*, beggary instead of learning, and, walking thus in the sparks of their own fire, lie down in sorrow. Isaiah 1. 11)." So, too, Webster is criticized for his attitude to Galen: "Having railed on Aristotle, the prince of philosophers, next he falls foul on Galen, the father of physicians, only for building on Aristotle's principles; out of his ignorance he calls him an ignorant pagan, an idol, a blind guide."

Thomas Hall was the master of the Grammar School at King's Norton. He is said to have been a contributor and collector of books for the library at Birmingham Grammar School. He founded a similar library in his own school at King's Norton. He edited in 1651 "Wisdom's Conquest," and in 1655 "Phaeton's Folly," both consisting of translations from Ovid, in which he followed, as a confessed disciple, the pedagogic method of John Brinsley. He wrote many theological books. His most famous work was the "Vindiciæ Literarum: The Schools Guarded; or, The excellency and usefulness of Arts, Sciences, Languages, History, and all sorts of humane Learning, in subordination to Divinity and preparation for the Ministry, by ten arguments evinced, ten cavils against it, by Familists, Anabaptists, Antinomians, Lutherans, Libertines, &c., are repelled and answered and many calculations to prevent all mistakes are added."

It is from the consideration of such men's writings that one sees how much the educational reformers had to accomplish. Hall was a University man, with a good deal of force of character, which is seen on the educational side by his founding of school-libraries and his acceptance of Brinsley's leading in classical translations. He pronounced himself a lover of learning; yet the advocacy by Webster of experimental science study is contemptuously met by *pro thesauro, carbones*. Nor is there any recognition of Webster's suggestions for improvement in language teaching.

It is interesting to note the mixture of what we now recognize as sound and unsound in Webster, and to see how neatly Hall avoids the reforms, and hits on Webster's weak points of astrology and magic. It must be in transitional ages, and, indeed, in all ages, that some reformers carry along with them the *impedimenta* which it never occurs to them to throw away or exchange, although their use is gone. Truth and error are clung to with equal constancy, and progress is thus retarded. Yet, even the Websters help; their weak points are discredited by the Halls. Lover of learning as is Thomas Hall, John Webster, in his own generation, and later, counts for even more, viz., as a lover (it is his delight to call himself so) of the *advancement* of learning. It is on account of this attitude, rather than from any material contribution of his to pedagogy, that I venture to speak of him in higher terms than does Prof. Croom Robertson.

In histories of movements we chiefly have our attention drawn to the few clear-sighted, and often one-ideaed men, who stand out as leaders. But, when an impetus in any particular direction arises, there are always men who should be included in a comprehensive survey, who unite in themselves different grades of combinations of the new truth with the older errors. It is difficult to estimate how much is due to these. They bridge over the transition from the old to the new by retaining something of what is familiar. They help us to realize how strong is the sense of continuity. Hence they carry along with them to the new truth others who are on a similar plane of thought with themselves.

### THE LATTER END OF ASSISTANT-MASTERING.

[We take the following article to be a somewhat pessimistic estimate of the position of assistant-masters in English schools—or the record of an unfortunate experience. But we print it because it is vouched for as a true statement by a former assistant and headmaster.—EDITOR.]

WHAT becomes of our assistant-masters? The evidence of one observer may be interesting, and perhaps throw a little light on the

subject. I will describe something of the later history of certain assistant-masters whose career has come under my personal observation.

I started my scholastic life in a country grammar school, of about ninety boys, which mustered a staff of five assistants under the direction of a headmaster. Salaries ran from £30 to £60, the senior assistant receiving an unknown sum, which we ordinary assistants had good reason to believe did not exceed £100. These were "resident" salaries, and therefore additional to board and residence, but not washing. One of the five was a German of the paternal government and military discipline type. He believed in all the boys kneeling down to pray in the dormitory at a given signal, and concluding the prayer at another signal. As the headmaster declared that he would have no rules in the school, because a boy once used the book receptacle of his desk as a spittoon, and excused himself on the ground that there was no rule against such an act, our German and his headmaster soon parted company. For one term he lived "on tick" in a friendly lodging house. Then he obtained a post in a private school in the North, which practised co-education on the strict separation system. One day the girls, under the headmaster's wife, met the boys, under our German, in the public streets. The boys "passed by on the other side" and did not raise their hats to the girls. The head's wife remonstrated. Our German backed his flock, and wrote me a long letter, in support of his conduct, teeming with misogynist criticisms. On my urging the "inexpediency" of quarrelling with your head's better half, whatever the abstract merits of the quarrel may be, I received a curt letter terminating our acquaintance on account of my unworthy complaisance. Thereafter only the gods know what became of this Don Quixote among pedagogues. But, as his views on matrimony, which he thought should be not a mating of passion but something after the nature of Prof. Sully's "pædotrophic partnership," cut him off from the refuge of a wealthy marriage, and as his views on life and death were distinctly peculiar, he has probably long since "shuffled off this mortal coil."

He was replaced by a Swiss, who claimed to be of high birth, affected the dress and manners of a Mayfair dandy, and asserted, in his fits of pseudo-righteous indignation, that he must be made of different flesh from his colleagues. At first our head took to him and advanced even to the familiarity of his Christian name. But it was presently discovered that our friend had entered on a flirtation with a lady who was among those unofficial *attachés* to be found in the entourage of every country boarding school. There was never, I believe, any real evidence on the matter, but the headmaster thought there was, and the Swiss followed the German. I heard of him again in a wealthy Jews' college, and soon after in a small sea-side school, obviously a step down. Once I saw him on the beach of another sea-side town; but the refuge of a friendly bathing-shed spared me a meeting. Lastly I heard he was travelling about with a small circus company. Doubtless he is still circulating upon ever lower rungs of social status, whence he is not likely, I fear, to rise again. This man had powers, but no backbone. The third assistant retired to the serene air of journalism. There, I was given to understand, he "made more" than ever he did as a schoolmaster. He referred, of course, to pounds, not pupils. Later I learnt that he was a thorn in the flesh of his editor for his irregularity, but indispensable for his "champagne style," whenever he could be induced to supply copy. The remaining members of this staff, including another Swiss, who replaced the dandy, pursued less chequered careers. The Swiss is still an assistant. Two others are headmasters of public schools. One, passing through two years of stormy conflict in the headmastership of a proprietary school eventually slain by the united competition of polytechnics and Board schools, entered the ranks of journalism and now sits in an editorial chair.

Another school of which I had some knowledge was a first-grade public school. Here there appeared to be four exits for assistant-masters—a headmastership, retirement (not on a pension, but on savings), suicide, and death. One only, to my knowledge, personally released himself from the prospect of penury-cum-senility; but many passed out of assistant-mastering by the narrow way through which there is no re-admittance.

The last staff that came under my observation was that of the proprietary school already mentioned. When my friend took up the headship he did not forget the days of his assistant-mastering. He was a man belonging to the class called "viewy." He endeavoured to put new wine into old bottles, and had quixotic notions of profit-sharing. His assistants drew full salaries to the last day. He himself received as his last term's salary fifteen shillings, and started life again with a wife and child and £150 in the Savings Bank. Him also journalism saved from the workhouse. The junior assistant on the staff handed over to him, when he became a headmaster, was drawing £40 non-resident, and left very shortly to "work for a degree." The senior assistant, who was drawing £100 non-resident, took a curacy under the out-going head. The two others remained with my friend. They came, however, to look upon the profit-sharing plans, not as a benevolence, but as a mere concession of bare justice, and his new wine soon burst their old wine-skins. They set up a college in a private house, and have there attained the measure of success reserved for private

ventures in a poor neighbourhood with mean ideals of the dignity and usefulness of education. Of the two men who replaced them, one is still an assistant, the other has recently attained to the honour and toils of a headmastership—perhaps also (which Heaven forbid!) to its latter end of poverty and despair.

These men I knew, and their careers, so far as I know them, I have sketched from personal observation. But one does not pass through several schools without hearing the fate of many men besides those with whom one comes into personal contact. Thus several figures rise before me, as if appealing for some word of sympathetic mention. Sad faces all, and marked with the brand of a mute despair, they have passed through the rough ways of assistant-mastering, and sat in the coveted seat of honour that is built up of capitation fees. Now they have fallen once more upon evil days. One, late a secondary-school headmaster, now teaches in a Board school, and ekes out his salary by lecturing in a polytechnic, so often, it would seem, an asylum for secondary-school failures. Another—only the gods know how he lives—but he stands and makes his plaint in the forefront of every discussion on the right of appeal from governors to some central board. Yet another, bowed down by years, gray-haired and grim, who once was buoyant and commanding, ekes out a small pension with any educational odd job that sympathetic spectators can send to his door. Another, I remember well, came seeking work at the hands of his old pupils and finding none. All these were once—in their youth, I presume—held to be good men and true. All, without exception, maintained their dismissal to be an outrage on gratitude and common justice. No one of them admitted either honest incapacity or approaching senility. Yet even the attainment of headmastership has not preserved them from an old age of penury, humiliation, and despair.

The humiliation of a headmaster fallen upon evil days, with "none so poor to do him reverence"—who shall gauge its bitterness? Outside of Russia no man stands in such a post of despotic exaltation as the English headmaster, and, when he slips upon the treacherous paths of scholastic reputation, his fall is proportionately heavier and his humiliation proportionately more profound. Some are luckier, and, falling, glide gently into the lap of literature, art, or even commerce. Of those who do not fall, but release themselves from the bondage of the blackboard and the ferule, many rise to eminence. One of our greatest modern dramatists once sat on the pedagogue's stool. Mr. H. G. Wells, the latter-day Poe among English novelists, is also, I believe, blood-brother of the race of ushers. Another, who mingles dramatic essays with the conduct of a junior form in a small public school, told me recently that it is surprising how many minor actors once played the pedagogue's rôle on the boards of a less public stage. Many assistant-masters, as all the world knows, find a haven from the persecutions of schoolboy malice—but not, I fear, from the pinch of poverty—in the broad bosom of the Church or the humbler sphere of the Nonconformist pulpit. One I have known who found rest and security in a wealthy marriage.

Such variety is there even in the small company that one man embraces in his experience. Could the witness of others be added to it, how intensely interesting would be the recital, how strange the diversity of fate! Even the travelling circus, I fear, is not the lowest circle of the *inferno* of unsuccessful or superannuated teaching. Who has not, at times, suspected the *quondam* usher in the stately bow, grave glance, and measured voice that accompanied the presentation of that vulgar necessity of life, a tram ticket? And many a sandwich-board, we know, has covered the manly breast that was once the "glass of fashion and the mould of form" to admiring, if tremulous, youth. But these have fallen, being tripped up by the snares of weakness and indulgence. Those I have portrayed above were honest men, and, withal, Christians and gentlemen. If they were incapable—a point not always proven—their incapacity was honest, and they fell beneath the heel of circumstances, not of crime; and to that extent they have a claim against the State that allowed them to be lured on by the semblance of security to an old age of penury without any provision against the caprice of fate, and a just grievance against the eternal laws of right.

## REVIEWS.

### OUR BEST BOOK OF REFERENCE.

*The Dictionary of National Biography.* In Sixty-three Volumes. Edited by Leslie Stephen and Sidney Lee. Vol. LXIII. (Smith, Elder, & Co.)

This colossal cyclopædia of British biography is now brought to a close, and the title which has appeared in our review columns for more than fifteen years past will appear there no more. We have so constantly recognized the exceptional value of this contribution to the written annals of Great Britain and Ireland, and spoken of the place which it must occupy amongst our historical and literary authorities, that we have only to repeat and confirm our former judgments in dealing with the work as a whole.

The concluding volume is prefaced by a statistical account of the Dictionary, and contains many interesting details of its conception and achievement. The number of separate notices amounts to 29,120, and the varying character of the lives thus recorded is analyzed with much care by the writer of the "statement":—

It is believed that the names include all men and women of British or Irish race who have achieved any reasonable measure of distinction in any walk of life; every endeavour has been made to accord admission to every statesman, lawyer, divine, painter, author, inventor, actor, physician, surgeon, man of science, traveller, musician, soldier, sailor, bibliographer, book-collector, and printer whose career presents any feature which justifies its preservation from oblivion. No sphere of activity has been consciously overlooked. Niches have been found for sportsmen and leaders of society who have commanded public attention. Malefactors whose crimes excite a permanent interest have received hardly less attention than benefactors. The principle upon which names have been admitted has been from all points of view generously interpreted; the epithet "national" has not been held to exclude the early settlers in America, or natives of these islands who have gained distinction in foreign countries, or persons of foreign birth who have achieved eminence in this country.

The notables who have found their way into these volumes number 36 to the end of the fifth century, 81 in the sixth century, 134 in the seventh century. After that the number falls again. In the fourteenth century it is 678, in the fifteenth, 659; in the sixteenth, 2,138; in the seventeenth, 5,674; in the eighteenth, 5,789. The nineteenth century has 12,608 names of distinction. Comparing these numbers with the total of the population who may be supposed to have reached the age of four-and-twenty, we may say that about one in five thousand has gained distinction; but in the nineteenth century—partly, no doubt, because the records are more abundant—the rate has risen to about one in four thousand.

Eighteen articles in the Dictionary are over twenty pages in length. Mr. Lee's Shakespeare runs to 49 pages; Col. Lloyd's Duke of Wellington, 34; Dr. Gardiner's and Dr. Fowler's Bacon, 32; Mr. Firth's Cromwell, 31; Dr. Jessop's Queen Elizabeth, 28; Mr. Leadam's Walpole, 28; Mr. Stephen's Marlborough, 26, and his Scott, 25. Of the whole Dictionary (29,000 pages), Mr. Sidney Lee has written 1,370 pages, Mr. Leslie Stephen and Professor Laughton, 1,000 each; and altogether thirty-four contributors have written over two hundred pages. The occasional contributors are naturally more numerous than those who have written the greater part of the Dictionary. They include men like Canon Ainger, Mr. Sidney Colvin, the late E. A. Freeman, Professors Hales, Herford, Jebb, Goldwin Smith, Silvanus Thompson, and Tyndall, Sir Alfred Milner, Mr. John Morley, and the Deans of Ripon and Winchester, who have given us memoirs of well known men based on their personal acquaintance and kindred experience.

On the whole, the editors of this invaluable work of reference justly claim that it may be held to serve the national and beneficial purpose of helping the present and future generation to realize the character of "their ancestors' collective achievement, of which they now enjoy the fruits." In some countries a work of this magnitude and general utility has been produced under the auspices of a State-aided Academy, or subsidized from the national exchequer. The "Dictionary of Biography" has cost its publisher, Mr. George Smith, something like £150,000, and has been written by the literary men of the last two decades, and privately edited, without the dignity or rewards of an Academy. Mr. Smith could not have devoted his wealth to a better purpose. He has performed a national service, and has earned the thanks of every individual Englishman.

#### GREEK EDUCATION.

*The Education of the Young in the Republic of Plato.* Translated into English, with Notes and Introduction, by Bernard Bosanquet, M.A., LL.D. (Cambridge University Press.)

The author of the "Companion to Plato's Republic" here supplies an introduction to Plato's ideas which ought to be very helpful to beginners in the study of the philosophy of education. This introductory work contains only a portion of the educational scheme of Plato. It translates part of Book II. and Books III. and IV., but the translation is supplemented by a very suggestive commentary and by versions from the author's own hand. Like Plato's own work, these comments are partly descriptive and partly speculative. Plato, in the first instance, discussed the education of the young as he found it in his day, and later on he tried to sketch an ideal scheme of education which would carry

the human mind to the fullest practical and theoretical efficiency. It is the former part of the work, namely, that which dealt with actualities, that is considered here. The question to be solved is not how to make the very best of a human mind and human society, but how to explain on theory the why and the wherefore of the methods of the Greek educators. Plato thought the originators of the system of his day builded better than they knew. Of the true principles which underlay their work they themselves were unconscious, and these Plato sought to reveal. We may, in these days, envy the simplicity of the task. The Greek citizen's son, in the best age of Greece, was taught reading and writing, a little practical arithmetic, and the elements of geometry; he was taught to sing and to play, and was instructed in dancing and in athletic exercises by special teachers. Then, as now, "efficiency in war was a duty, and a fine physical development an end in itself." True, the arithmetical notation in use was cumbersome, and books were costly. Words were not separated, and the learner had to acquire the power of interpunction, or dividing word from word within the sentence, as he learnt to read. These were, therefore, simple matters in the simple curriculum which would occupy time, but which, our author points out, would also have educational value in the then condition of the human mind.

The author reminds us that "we suffer from an *embarras de richesses* in the intellectual world; and we can hardly see the wood for the trees." One of the most useful hints he draws for us from Plato is that, instead of teaching a number of things at the same time as the most convenient way of making room for all that seems necessary to learn, we should aim at bringing before the growing mind just so much, and no more, of the best experience as it is able to appropriate with advantage to its growth. This lesson he enforces by deriving the word "school" from a Greek word meaning "leisure." This conception of leisure is not that of amusement or holiday making. It is opposed both to this and to the pressure of bread-winning industries, and indicates the space and atmosphere needed for the human plant to throw out its branches and flowers in their proper shape. "To have leisure for any occupation was to devote yourself to it freely because your mind demanded it; to make it, as it were, your hobby. It does not imply useless work; it implies work done for the love of it. Wherever a mind is really and truly growing, the spirit of leisure must be there."

#### SCHOOL GEOGRAPHIES.

- (1) *A School Geography of the World.* By Lionel W. Lyde, M.A., F.R.G.S. (Black.) (2) "Royal Osborne Geography Readers."—VI. *The British Empire.* (Nelson.) (3) *Object Lessons in Geography and Science, Part II.* By David Frew, B.A. (Blackie.)

(1) Teachers of advanced geography have long been seeking a satisfactory text-book to put in the hands of their pupils. The best of lessons and lectures without a book are apt to be unsatisfactory in their results—even when copious notes are taken. What is required is a text-book that provides the nucleus of lessons, rather than the lessons themselves—one that suggests lines of thought, rather than pursues them, leaving a large share of research to the pupils—one that is well arranged, without being a mere catalogue—one that is readable, without being "chatty"—full of information, without being dull. All this, we think, and more, will be found in Mr. Lyde's manual. Perhaps he has shown his greatest wisdom in his omissions. Geography is so inexhaustible that text-books which attempt to be complete always succeed in being confusing. To name, for instance, all the exports of Hamburg is to induce stupidity. Statistical tables can always be referred to, if necessary, but they are out of place in a school book. Mr. Lyde has not only avoided this very common error, but has shown remarkable restraint in every direction, so that, although attractive enough, the book leaves the cream of the interest for the teacher to develop in the class. Thus any paper taken at random might be set to pupils (who had "done" their various countries in lower forms) to work out by themselves, with the help of a good atlas. We are pleased to note, by the way, that no space is wasted with maps, the pupils being evidently intended to use an atlas intelligently. The matter is sometimes so condensed as to be obscure to the average pupil, but the lessons would elucidate everything; and we hardly think this kind of obscurity a drawback in advanced forms. That the book is intended exclusively for elder pupils is obvious from the problem paper at the end, which, we hope, will cause astonishment and reformation in many a headmaster who has

hitherto considered any one of his staff competent to teach geography. There is no new method in all this, but it is geography treated rationally, and calculated to become, as our author says, second only to literature in educational value.

(2) There is little in the "Royal Osborne" volume to distinguish it from a host of other geographical readers—the usual attempt to attract the pupil who has no foundation of knowledge, by flashes of "interesting" facts, graphically presented statistics, and descriptions couched in rather oppressively ornate language, with ordinary illustrations and maps. The chapters, however, are full of information and far from dull. No doubt this book will be found useful to those who have no time allowed for treating geography properly. Standards VI. and VII. must be very peculiar in their mental requirements to judge by the "Notes." Very many simple words (*e.g.*, "abruptly," "vividly") are explained, while such words as "plateau," "diameter," "the movement of a port," are left to the standards' imagination.

(3) The second part of Mr. Frew's "Geography and Science" is as practical and ingenious as the first. The aim throughout is to arouse the interest of young children in the world around them, and to connect ideas of locality and geography with constant observation and experiment. Good teachers will be thankful for the hints and aids which are given them in this volume. The method is unquestionably based on a scientific principle. Used intelligently, it can hardly fail to make the geography lesson interesting.

#### HELLENICA.

*A Commentary on the Hellenica of Xenophon.* By G. E. Underhill. (Clarendon Press.)

We do not like the "Hellenica." Take it as a whole, it is a singularly dull and confused work, though relieved here and there by a bright and interesting episode. It would, indeed, require a genius for dullness to write an uninteresting account of the trial of the Generals and the trial of Theramenes. Of such great topics as the restoration of Athenian democracy, the rise of Thebes, and the peace of Antalcidas Xenophon has made nothing; and large portions of his history are calculated to depress and repel all who are not forced to consult it. The work is formless and without any definite plan—casual, slipshod, unworthy of the respectable talents of its author. In short, we unhesitatingly subscribe to all the hard things that modern writers have written of it. And Mr. Underhill does not demur to this unfavourable judgment; but sets himself, in an elaborate discussion of the circumstances under which the "Hellenica" was composed, to explain the grounds on which it rests. This section and, indeed, the whole of the introduction are a valuable contribution to the study of the subject. Mr. Underhill has brought together the views of the modern experts, and, after a long discussion, he arrives at the following conclusion:—

Xenophon was animated, like many another man, with an irresistible impulse to write a history of his own times. For nearly half a century he must have kept a diary, or common place book. These notes at various times in his life he attempted to work up into a more or less continuous history. But he never succeeded . . . in viewing the course of events from a high and lofty watch-tower. In many of them he played no inconsiderable part himself, and in all he takes no pains to conceal his own personal feelings and predilections.

What is all this but an admission that Xenophon had not the qualifications of a historian? Mr. Underhill, it is true, makes this excuse for him, that he is a more accurate authority for the period than the orators, than Diodorus and Plutarch. But, after all, this amounts merely to this, that a contemporary historian, however bad, is necessarily a better authority for the facts of history than a contemporary advocate or than a very bad historian and a memoir writer who wrote centuries later.

In another section of the introduction Mr. Underhill struggles manfully with the muddled chronology of Xenophon, and does all that can be done to put things straight. This is a matter in which it is easy to gauge the competence of Xenophon for the task that he felt such an irresistible impulse to undertake. And of the chronology he has contrived to make such a tangle as is well-nigh inextricable. Mr. Underhill has drawn together all the information that has been brought to bear on this unspeakably dull subject, and has done all that can be done to clear up the many problems that Xenophon has set us.

In an appendix Mr. Underhill deals in a masterly way with several historical points—the political history of Athens between the Four Hundred and the close of the Peloponnesian War; the

internal and external history of Sparta during the period covered by the "Hellenica"; the efforts of Athens to recover her lost empire; and other matters of less magnitude but equal interest. In dealing with every one of these intricate questions Mr. Underhill displays the results of wide research and a ripened judgment; and the information he gives in a convenient compass will be a boon to all students of this period. Mr. Underhill has doubtless dedicated many years to his task, and, were it not that Xenophon is the author of much better works than the "Hellenica," we should say that the rich diadem with which Mr. Underhill has crowned him is a great deal more than he deserved to receive.

RUSKIN.

*John Ruskin.* By Mrs. Meynell. (Blackwood.)

An essay of three hundred pages, intended to be "principally a handbook of Ruskin" was a well-nigh impossible task, and we hardly think the difficulty has been lessened by the mode of treatment. The chief *desiderata* are clear ideas of Ruskin in his separate capacities of art critic, social reformer, and writer of English, with some guidance as to the order in which his books should be approached. Instead of this, we have the twenty-seven chapters devoted one by one to his chief books taken chronologically, and very slight expository and critical notes on the points, apparently, that struck Mrs. Meynell as interesting, with the inevitable extracts. Considering the small space at her command, and the mass of material to be dealt with, some of her over-nice criticisms of Ruskin's English seem misplaced, even whimsical, and we could wish that she had devoted more of her book to such good material criticisms as she gives us on "The Two Paths," and to such interesting glimpses of Ruskin's endeavours to carry out his principles as she gives in the chapter on "Fors Clavigera." To those who know their Ruskin the book will prove very inadequate, and to those who do not it will be to a great extent unintelligible. But there is a large class of readers who know him a little, and know that little wrong, and to them Mrs. Meynell's chapters ought to be helpful, for she points out how he has been misunderstood, and reconciles his apparent inconsistencies wherever she can, and this, too, in a judicial spirit.

It must be admitted, however, that Ruskin is the last person to need expository treatment. Lucid as daylight (in spite of his tendency to use "which" instead of "that"), he only needs to be read, and to be read "exquisitely closely," to use Mrs. Meynell's happy expression. As for comments, he has made them quite delightfully himself, and as for inconsistencies and exaggerations they are half his charm. In short, "you must love him ere to you he shall seem worthy of your love." All he has suffered from are the misunderstandings and misrepresentations of second-hand acquaintances, and we fear that this volume may add to their number.

#### A FRENCH GLOSSARY.

*French Words and Phrases.* By J. G. Anderson and F. Storr. (Rice.)

This *vocabulaire systématique* has been put together to meet a want felt by the compilers in their teaching, and has had the advantage of some years' practical use in a less complete form. Like many teachers, they have been struck with the gaps in the vocabulary of schoolboys, however carefully their reading may have been directed, and have returned to the plan, which used to be commoner than it now is, of making a systematic catalogue of words. One or two such vocabularies of Latin and Greek words have, if we remember right, been recently published. The book is arranged under the ordinary headings, including "social" and "political and civil," which ought to be very useful. Perhaps the best chapter, as it certainly must have been the most difficult to compile, is that entitled "Sentiments," including phrases like *faire la part de, se demander si, à contre-cœur, &c.* A good deal of space is given to games, among them Rugby football—probably "socket" has not yet acquired *droit de cité* in France. In another edition chess, draughts, and cards might be included. Perhaps ladies would like a little more attention given to their dress, which is treated with somewhat Spartan simplicity—we mean that of *Sparte sans Hélène, or Paris sans Froufrou*. A "dress," by the way, is rather *toilette, or costume*, than *robe*. Other minor points are—*un fort en thèmes*, rendered "a promising scholar," which is often used in rather a depreciatory sense, of a good mark-getter without much real ability; *distingué*, "of good address," which really means a little more, and approaches more nearly to "a perfect gentleman." The last phrase appears as the rendering for *un galant homme*, not much used in that sense in modern

French. *Professeur de rhétorique*, so often mistranslated, might also be inserted under the heading "Education." But the book is, on the whole, extremely well put together, and supplies a real want. The idioms and proverbs in the concluding chapters are well selected.

## GENERAL NOTICES.

### CLASSICS.

The *Aeneid* of Virgil, *Books VII.-XII.*, edited by T. E. Page (Macmillan), is the third and concluding volume of Mr. Page's "Virgil," in the "Red Series." Notwithstanding the great number of editions in existence, this skilful and able editor has not failed to find a place for himself; and his commentary will be consulted with pleasure and profit by readers who appreciate the combination of learning and literary skill that he has at his command. Mr. Page once more exhibits his familiarity with Latin poetry, and his sound common sense, that prompts him to brush aside pedantic and strained explanations, however strongly supported by his predecessors. To the interpretations that he substitutes for those which he rejects we do not always assent. Thus, for example, at X. 361, *haeret pede pes densusque viro vir*, he tells us that *haeret pede*, "is held gripped with foot," is parallel with *densus viro vir*, "close locked with man." Both the manner of Virgil and the Homeric parallel which Mr. Page quotes seem rather to show that *haeret* belongs also to *viro*; but it is not to be denied that the current "ways of taking" the line are not free from objection. Mr. Page occupies a considerable amount of space in setting Conington right, and he occasionally comes down somewhat heavily on Mr. Sidgwick. At XII. 283, *diripuerunt aras*, which "all the editors explain of despoiling the altars so as to get lighted brands to fight with," means, says Mr. Page, "the altars are hastily broken up." Part of his very interesting note on this passage we here transcribe: "While overhead the 'whirling tempest' and 'iron hail' of missiles fill the air, in the centre of the plain we see . . . the scared snatching at the sacred vessels to save them, while Latinus himself secures the images of the gods and flies." All this looks plausible enough, and, no doubt, if we accept in detail his paraphrase of the lines, "the picture," as Mr. Page says, becomes "absolutely clear." But, when we read the Latin, we at once begin to doubt, if only because "the whirling tempest and the iron hail" are sandwiched by Virgil between *diripuerunt aras* and *craterasque foscose ferunt*. There appears to be no "striking contrast," such as Mr. Page finds between the action of the altar-breakers and that of the fighting men. He should have noted, too, that Servius already explained *diripuerunt* as *dejecerunt*, *dissipaverunt*; and surely there must be good reason why "all editors" have agreed to reject the interpretation which Mr. Page regards as self-evident. We cannot help thinking that in this case the ingenious editor has neglected one half of his favourite *castigatque auditque dolos*; he has remembered to "chastise," but has perhaps forgotten to give a patient hearing to the subtleties of the critics. Every reader, however, will find in this edition much to instruct, and not a little to amuse. As to the soundness of Mr. Page's brilliant suggestions each will judge for himself.

*Cæsar, de Bello Civili, Book III.*, edited by A. G. Peskett (Cambridge University Press) is a careful and thorough piece of work well worthy of its position in the "Pitt Press Series." Mr. Peskett is well acquainted with the works of all the chief authorities, both on the matter and the diction of Cæsar; but he is able, whenever there is any call for it, to exercise an independent judgment. The historical notes are particularly thorough, and the grammatical are adequate. The insertion of *rebus* after *quibus cognitis* in chapter 62, is a good emendation; for Cæsar "nowhere else uses the neuter *quibus* in the sense of 'which things.'" Of course such a use is essentially silver. Mr. Peskett has used such books as Mensel's "Lexicon" and Dräger's "Historical Syntax" with diligence and discrimination. In textual matters he is conservative.

*Ovid, Metamorphoses, Selections*, edited by J. H. Vince (Blackwood), is one of the neat volumes of an illustrated series that is very suitable for middle forms. Mr. Vince endeavours to interest the pupil in magic and mythology. The selection is a good one, and the editing is competent and thorough. We think, however, that the critical notes and the parallel passages, which are plentiful in the volumes of this series, might well be cut down. Young pupils learn very little from such comments. The type, paper, and illustrations leave nothing to be desired.

*Easy Greek Syntax and Exercises*, by H. E. Haig Brown (John King), is a little collection of elementary rules made by the editor for the special benefit of his own pupils. The book reaches the standard of the scholarship examinations in public schools. The rules are illustrated by brief exercises. This book will not be of any use to average pupils, for it covers a great deal of ground in a very few pages. We cannot but regret that the severe competition among scholarship candidates necessitates such publications, which are entirely opposed to sound educational methods. In matters of scholarship Mr. Haig Brown is not a safe guide. Thus, he confuses  $\lambda\acute{\epsilon}\gamma\omega$  and

$\phi\eta\mu\acute{\iota}$  in his examples; writes *οὐδὲν οὐκ ὀφείλει . . . οὐδὲν* for *οὐδὲν οὐδὲν ὀφείλει*; gives *οὐ σὲ ἀποκτενῶ καὶ εἰ ἐχθρὸς εἰ* where he means *οὐδ' εἰ ἐχθρὸς εἰ*; and so on. But, despite its defects, the book will enable the poor, clever boy to scramble over a lot of ground in a short time. Whether he will assimilate much of this pemmican we doubt.

### MODERN LANGUAGES.

*Le Bourgeois Gentilhomme*. Edited by F. Spencer. (Dent.)  
The preface to this edition contains a very questionable sentence:—"The difficulties of French grammar must indeed be overcome, and the art of intelligent translation acquired, by a process of more or less laborious training. But this training should be obtained elsewhere than in the masterpieces of literature." No doubt there is some truth in this as far as grammar is concerned, but surely the masterpieces of literature are the very field for acquiring the art of intelligent translation. It is just those masterpieces which will bear close and comparatively slow reading; whereas second-rate stories about the adventures of a *piou* or a showman's apprentice hardly deserve it. The notes consist mainly of renderings, mostly good, of difficult phrases, but they are too apt to leave the pupil without any indication of how they are arrived at. Thus *chatouillantes* is simply rendered "flattering," and *vous avez le caquet bien agilé*, "you chatter very glibly," without any hint of how the words come to have the sense given to them. There are a few grammatical notes, good of their kind, but sometimes expressed in rather too technical language for schoolboys. We should have liked to see a little more in the way of illustration; for example, attention should have been called to the sly humour of the contrast between M. Jourdan's good old song "Je croyais Jeanneton . . ." and the affected nonsense of his tutor. Nor would a very simple explanation of the "categories" and the syllogism, or of "*carte and tierce*" have been out of place.

*First French Book for Children*. By V. Spiers. (Simpkin.)

This book has the advantage of being written directly for English children, and not adapted from the German. Thus, no use is made of Hölzel's wall pictures, which, as the author points out, are specially adapted to an agricultural population. The course consists of thirty lessons. Each deals with some point of elementary grammar, and most of them contain a short piece of poetry or a song to be committed to memory. The grammatical part of the lessons is really a series of practical suggestions to teachers how to frame exercises securing constant repetition. The suggestions are well adapted to their purpose, and ought to produce lively lessons. All the "stage directions" are in French, which may be suggestive to the teacher; they are hardly likely to benefit his pupils. The songs, vocabularies, and other important parts of the lessons are given in an appendix in phonetic spelling for those who desire to use it. There is music for several of the songs, and the book concludes with an elementary grammar, summing up the points taught in detail, and written in English. The range is that of the Third Class of the College of Preceptors. There are some pretty illustrations, one of the prettiest being to the song "La Ville de Paris renversée." Altogether, the book, in the hands of a teacher who will take the trouble to follow its directions, and will not spare himself, ought to produce good results in a class of children. Perhaps it does not quite solve the problem for schoolboys as distinguished from children—it is a singularly difficult one.

*A Short History of French Literature*. By L. E. Kastner and H. G. Atkins. (Blackie.)

Without doubt a convenient handbook of French literature is needed—one which would tell the story of the great writers in a thoroughly attractive form, and which would incorporate the results of the latest research without any show of erudition. The writer would require a fair share of the critical faculty, but he would do well not to write in too subjective a strain. The book before us, while evidently compiled with considerable care, hardly succeeds in supplying adequately what is wanted. For purposes of reference it is not sufficiently full. There are a number of Gallicisms, due no doubt to the authors' familiarity with French literary criticism. There are, on the other hand, very few errors in matters of fact, and it is quite clear that much time and thought has been given to the book.

*F.-M. Luzel's Deux Légendes Bretonnes*. Edited by J. Duhamel. (Rivingtons.)

The stories of "La Princesse du Soleil" and "Mao Kergerac" are Breton folk-tales, taken down and translated faithfully into French by Luzel, who was himself a Breton deeply interested in the life and ways of the simple people of Brittany. The legends, edited with good notes by Mr. Duhamel, are excellent specimens of their kind, and they form a welcome addition to our stock of reading books for beginners. The text runs to only thirty-six pages; there is no vocabulary.

*Longmans' Elementary French Unseen*. By T. H. Bertenshaw. (Longmans.)

This is a collection of seventy-five extracts, mostly from modern authors, the average length being about twenty-five lines. A few notes at the bottom of the page call attention to the unusual pronunciation of certain words; there are further notes dealing with matters

of grammar, or actually suggesting translations. A vocabulary is added, so that the book contains a good deal more than the title would lead one to suspect. There is also a "Teachers' Edition," published at a slightly higher price, and containing a dozen pages of additional notes. The idea is a good one, and the editor has done his work carefully: the pieces are suitable and the notes are well expressed.

*Histoires d'Animaux.* Selected from A. Dumas. Edited by T. H. Bertenshaw. (Longmans.)

An amusing reading book, with good illustrations by H. J. Ford and Lancelot Speed. The stories are taken from "Le Capitaine Pamphile" and the "Histoire des mes Bêtes." They are annotated in much the same way as the "Elementary Unseens" noticed above. There are in this book also a number of "imitative exercises," phrases and sentences for translation into French. The "Teachers' Edition" contains the translation of these passages, as well as additional notes on subjects suggested by them. The practice of issuing separate editions for teachers should be extensively followed.

*Le Songe d'Or, and other Stories.* Edited by E. Weekley. (Blackie.) This "reader for middle and upper forms" is edited on somewhat novel lines. It contains five tales: Nodier's "Le Songe d'Or," Töpffer's "Le Lac de Gers," "Méricée's "L'Enlèvement de la Redoute," Gautier's "Le Pied de Momie," and Nerval's "Emilie," and they are all capital representatives of the French short story. The notes are in French. We believe that only one other school edition has appeared in England in which this feature also occurs; the idea is a sound one, as is the advice given by Prof. Weekley in his preface: "Each tale should be read aloud and used as the basis of some simple conversational practice before being translated into English." There is an appendix, containing sentences for retranslation, taken from the text, and illustrating "what most teachers perhaps find to be the four constructions which present most difficulty to their pupils, viz., the subjunctive, the use of *on*, the use of *en*, and the inversion after the accusative relative."

*A Simplified French Conversational Manual.* By Louise Littla. (David Nutt).

This is a handy little book, intended to assist the traveller by providing vocabularies and useful sentences. It also describes the principal routes to Paris and places of interest in the French capital. There are some hints on pronunciation which would have been better omitted. "Zhr krawr" is a poor change for "Je crois." Phonetics run mad again!

(1) *Russisches Lesebuch.* (2) *Deutsch-russisches Wörterbuch u. Gesprächsbuch.* By Prof. L. Fuchs. (Frankfurt: Carl Jügel.)

The study of the Russian language, which has hitherto been neglected in this country, seems now, by reason of commercial requirements, to be gradually asserting its claims to attention. It is noticeable that at the last examination of the Society of Arts several candidates presented themselves offering Russian, and the needs of commercial students are being met by the provision of teachers at various educational institutes, whilst the old Universities now provide for the higher study of this language. Probably those who foster commercial education as a means of promoting British trade interests conceive that, if Germans are able to secure an advantage over British competitors in the Russian markets mainly through knowledge of the language of the country which fits them for the work of commission agents and travellers, Englishmen should not shrink from the difficulties it presents in order to win back lost ground. The books under notice respectively afford practice in reading and in conversation, and should be extremely useful to any who have previously learnt German. The reader is provided with an excellent vocabulary at the end, whilst the conversation book is divested of everything trivial, and supplies just the materials wanted for practical purposes. As things are, English students stand in need of some grammar of Russian better than any yet in the market. We trust that this will ere long be supplied.

We have also received Keys to the Appendices to several volumes of the series edited by Prof. Siepmann, viz.:—"La Tour des Maures," "L'Émeraude des Incas," "Die Humanisten," and "Herr Walthier von der Vogelweide" (Macmillan).

#### MISCELLANEOUS.

(1) *Analysis of English History.* With Appendix and Maps. By W. C. Pearce and Dr. S. Hague, LL.B. Revised by W. F. Baugust, of the United Westminster Schools. (Thomas Murby.) (2) *Chambers's School History of the Colonies: Greater Britain, its Rise and Growth.* With many Illustrations and Coloured Maps. (W. & R. Chambers.) (3) *Alfred: the Model of English Kings.* (Cassell.) (4) *Theal's Little History of South Africa.* (T. Fisher Unwin.) (5) "Chambers's School History of the Victorian Era."—*The Reign of Queen Victoria.* (W. & R. Chambers.)

These five little books are examples of the various forms which text-books on history must take to meet the requirements of the times. No. 1 is a complete compendium of English history. Pearce and Hague's history has had a course and a popularity very much like

the more ancient Ince's "Outlines," and the latest revision gives it new life, bringing it up to the needs of the moment. Nos. 2 and 4 are histories of portions of space, 3 and 5 of portions of time. The former deal with the English colonies and the district of special interest at the present moment—namely, South Africa—the latter with the two greatest sovereigns this island has seen—Alfred the Great and Victoria the Good. All are low priced and within the reach of elementary schools. To Theal's "Little History of South Africa" is added a very reasonable account of the origin of the present war.

*A First Geometry Book.* By J. G. Hamilton, B.A., and F. Kettle, B.A. (Edward Arnold.)

Every thoughtful attempt to smooth the entrance on systematic geometrical reasoning deserves to be encouraged. A preliminary training which will make the mind really acquainted with the elementary properties of lines and figures is a necessity for quick and smooth success. Such a preliminary course should, however, foreshadow the processes to follow, and in no cases should it create new difficulties by the introduction of methods of reasoning not in conformity with the methods to be used subsequently. This work of Messrs. Hamilton and Kettle fulfils these conditions, and is a carefully prepared and useful contribution to an important and always interesting educational problem.

*The Contents of the Fifth and Sixth Books of Euclid.* Arranged and explained by M. J. M. Hill, M.A., D.Sc., F.R.S. (Cambridge University Press.)

Many have been the attempts to replace Euclid's difficult Fifth Book by a reasoned system of proportions equally sound and applicable to the Sixth, and, at the same time within the comprehension of ordinary students. Such attempts have not succeeded; and the Fifth Book is still omitted, with the exception of the fifth definition, required for the first and thirty-third propositions of the Sixth Book. Prof. De Morgan's suggestions on the subject have probably found most favour; and Prof. Hill bases his treatment and notation on those of De Morgan. He reduces the number of definitions required, and, by the use of the Theory of Relative Multiple Scales, proves all that Euclid does, and more. The abstract character of the Fifth Book in part accounts for its difficulty; hence Prof. Hill mixes the two books by taking up propositions from the Sixth as soon as a sufficient number of propositions from the Fifth have been established. It is not easy to prophesy on this subject, but the difficulties seem to be almost wholly cleared away in Prof. Hill's work.

*The Metric System. A Practical Manual.* By Léon Delbos, M.A. (Methuen.)

The metric system has usually been imperfectly treated in chapters that are mere appendices to the arithmetical text-books. Here it receives full and adequate treatment. The problems are numerous and well arranged.

"Builders of Greater Britain."—*Sir Stamford Raffles: England in the Far East.* By Hugh Edward Egerton, M.A. (Fisher Unwin.)

In writing the biography of a famous Englishman, Mr. Egerton has made use of a considerable number of papers preserved at the India Office, some written by, and some relating to, Raffles; in addition to which he has drawn on a large mass of correspondence. The abundance of materials has enabled him to produce a full and trustworthy account of a man who was highly popular with his countrymen early in the century, and to whose adventurous energy and firm administration we owe the acquisition and building up of our Straits Settlements, and especially of Singapore. Apart from his connexion with the East India Company and his service to the nation, Raffles won much distinction as a naturalist. The foundation of the Zoological Society, in which he was associated with Sir Humphry Davy, was his idea, and he did more than any one else to make it a success from the beginning. The volume is good reading. It would have been improved by a serviceable map or two. Those actually printed are useless for the general reader, even though they were the work of Raffles.

*The Economics of Modern Cookery; or, a Younger Son's Cookery Book.* By M. M. Mallock. (Macmillan.)

This is a revised edition of a sensible, well written, and very instructive cookery-book, which was published four years ago under the second of the two titles printed above. It is well adapted for the practical teaching of intelligent young householders.

*Handbooks of English, I.-IV.* (Blackie & Son.)

Elementary class-books, containing poetry for recitation, rules and exercises in English grammar, paraphrase and composition, with spelling and word-building. They are well arranged, on a simple progressive plan.

*Text-Book for Holy Communion, Baptism, and Confirmation.*

By Rev. Septimus Buss. (Livingtons.)

Mr. Buss has written an explanatory comment on three Offices in the Book of Common Prayer, intended both for the general reader and for students. It gives a clear account of the origin of the various services

or sacraments, and the changes through which they have passed into their present form.

*Studies of Heads, after the Originals by Henry Ryland, R.I. (C. W. Faulkner.)*

Four black-and-white studies on plate-marked folio sheets, very suitable for copying with pencil or crayons. They are delicately drawn and excellently printed.

Amongst the reprints of the month are Jane Austen's *Sense and Sensibility*, with an introduction by Austin Dobson, and illustrations by Hugh Thomson (Macmillan); Charles Kingsley's *At Last: a Christmas in the West Indies* (Macmillan); Sir Walter Scott's *Quentin Durward*, with introduction and notes by H. W. Ord. B.A. (A. & C. Black); George Borrow's *Lavengro*, with an introduction by Theodore Watts-Dunton (Ward, Lock, & Co.); Captain Marryat's *Snarleyyou*, with an introduction by David Hannay (Macmillan); Charles Kingsley's *Glaucus, or the Wonders of the Shore* (Macmillan); Defoe's *Robinson Crusoe*, with introduction by Henry Kingsley (Macmillan); Captain Marryat's *The Pirate and The Three Cutters* (Macmillan); Jane Austen's *Pride and Prejudice* (Macmillan).

An excellent text with notes is Mr. Nicklin's *Old Mortality* (Cambridge University Press). A short introduction gives us a few pages on the novel before Scott, a life of Scott, and an estimate of this particular "tale of my landlord." The text is elucidated by footnotes, and Mr. Nicklin has added a historical appendix and a glossary. In "Blackwoods' English Classics" we have Johnson's *Lives of Milton and Addison*, edited by J. Wight Duff; Macaulay's *Life of Johnson*, edited by D. Nichol Smith; and Scott's *Lady of the Lake*, edited by W. E. W. Collins. Mr. Nicol Smith also edits Dryden's *Essay of Dramatic Poesy* (Blackie & Son). In the "Swan Edition" of Shakespeare (Longmans) we have a good edition of *King Henry V.*, by D. Ferguson. Messrs. Nelson & Son print, with a few notes, *Little Nell*, from "The Old Curiosity Shop," and *David Copperfield's Boyhood*. Goldsmith's *Traveller*, with ample notes on every page, is reprinted by Messrs. Moffatt & Paige.

WE HAVE ALSO RECEIVED the following publications and new editions:—

*University Correspondence College Calendar, 1900* (Burlington House, Cambridge)—with articles on the "special subjects" for 1901.

*Synopsis of Townsend Warner's Brief Survey of British History* (Blackie)—a *multum in parvo*, very useful for private students.

*The Laws of Law*, by T. Baty (Effingham Wilson)—a valuable essay on the basis of the science of law.

*Early English Church History for Elementary Schools*, by the Rev. F. L. H. Millard, M.A. (Kendal: T. Wilson)—an excellent little record of National Church history.

*A Rational Manual of Spelling*, by F. H. Shoosmith, Ph.D. (A. G. Dawson); *Kindred Idea Spelling for the Lower Classes* (same publisher)—two useful helps for the specific teaching of spelling.

*Little Stories for Little Readers* (W. & R. Chambers)—a first reading-book.

*Passing Thoughts*, by Mrs. Septimus Buss (Elliot Stock)—a book of amiable verse, dedicated to the memory of Frances Mary Buss.

*Elements of Algebra*, by W. W. Beman and D. E. Smith (Boston: Ginn & Co.).

CORRESPONDENCE.

CAMBRIDGE UNIVERSITY EXTENSION SUMMER MEETING.

To the Editor of the Educational Times.

SIR,—I venture in the name of the Syndicate to ask you to do us the kindness of permitting me, through your columns, to inform such of your readers as are intending to come up to Cambridge for the Summer Meeting in August that they should make application without delay. The general subject chosen for this year's gathering is so appropriate to the closing year of the century that the number of applications for admission already received is largely in excess of the number at the corresponding period on the last occasion. It is possible the Syndicate may have to restrict the numbers, in view of the limited accommodation. Already it has been found necessary to refuse all applications for special admission to the inaugural address to be delivered by Mr. Balfour in the Senate House on August 2, and to confine the admission to members of the Meeting. The accommodation offered by certain colleges is already allotted, but convenient lodgings will easily be obtainable in the town. I shall be glad to give further information to any who may be desirous of attending the Meeting.—I am, &c.,

R. D. ROBERTS.

Syndicate Buildings, Cambridge.  
July 14, 1900.

ST. PAUL'S SCHOOL.

To the Editor of the Educational Times.

DEAR SIR,—I thank you for the kindly mention of my name in your last number of the *Educational Times*; but the rumour of my resignation is baseless. I still find my happiness in my work. Perhaps the mistake has arisen from a confusion of St. Paul's with Merchant Taylors'.—Faithfully yours,

St. Paul's School, West Kensington, W. FRED. W. WALKER.  
July 1, 1900.

[We relied on a weekly contemporary. Apparently all headmasters were expected to resign at the close of the century: Mr. Walker is the third or fourth victim of unfortunate vaticination.—EDITOR.]

LONDON INTER. ARTS.

To the Editor of the Educational Times.

SIR,—The following is taken from the afternoon mathematical paper set at the recent Inter. Arts Examination of the London University:—

"The whole surface of a cone is 20 square feet, and the radius of the inscribed sphere is 3 feet. Show that the volume is 20 cubic feet."

The volume of a sphere of radius 3 feet is given by

$$\frac{4}{3}\pi r^3 = \frac{4}{3} \times \pi \times 27 = 113 \text{ cubic feet approximately.}$$

How can such a sphere be inscribed in a cone the volume of which is 20 cubic feet?

Indignor quandoque bonus dormitat Homerus.

Derby, July 23.

W. P. GOUDIE.

ADJOURNED MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

AN adjourned meeting of the Council was held at the College on July 21. Present: Dr. Wormell (Vice-President) in the Chair; Mr. Barlet, Rev. J. O. Bevan, Mr. Bidlake, Mr. Butler, Mr. Charles, Mr. Eve, Mr. Harris, Mr. Leatham, Mr. Pinches, Dr. R. P. Scott, Mr. Sergeant, Rev. J. Stewart, and Mr. Walmsley.

It was resolved that a memorial should be sent in to the President of the Board of Education, in reference to the constitution of the Consultative Committee.

Diplomas were awarded to the successful candidates at the Midsummer Examination of Teachers as follows:—

<i>Licentiate ship.</i>		
Clark, R.	Skelly, T. W. K.	Sterrey, C. E.
Jones, R. J.		
<i>Associate ship.</i>		
Acock, Miss A. F.	Gwinn, F.	Neill, J. C.
Baldock, Miss L.	Hall, Miss B.	Nevin, R.
Beattie, R.	Hampson, W.	Nevin, Mrs. B. J.
Bermingham, Miss M. E.	Handsford, H.	Peppiette, C. H.
Blakemore, W.	Harris, A. E.	Pilkington, G. O.
Boughey, Miss M. E.	Ineson, J. S.	Pye, W. H.
Brinnicombe, J. R. M.	Jones, S.	Rahztz, F. J.
Bury, Miss H.	Jordan, A. V.	Reynolds, Miss E.
Carter, E.	Kearns, Miss A. C.	Robson, J.
Cheetham, W. H.	Ketcher, Miss F. F.	Roe, A.
Claxton, W. J.	Kibblewhite, V. G.	Roff, Miss M. A.
Cook, T. H. P.	Knight, Miss A. M.	Rogers, Miss M. H.
Cooke, R.	Knight, Miss L. M.	Sharpe, H. E.
Cooper, H.	Lacey, H. C.	Shimwell, Miss J. E.
Cushing, J. H.	Lambert, W.	Sillett, W. E.
Davies, G.	Leeming, W. T.	Simon, W. H.
Davies, D. N.	Leighton, F. T.	Skinner, G. E. A.
Day, Miss C. C.	Lelliott, J. E.	Snape, A.
Debenham, Miss E. M.	Lindsay, A. S.	Stapley, Miss J.
De Levante, Miss F. M.	Longstaff, J. L.	Stark, Miss A. L.
Dyall, Miss E.	Lorriman, J.	Stephens, H. H.
Dyer, S. H.	Lowe, J. E.	Stroud, T.
Eley, G. C.	McLay, G.	Taylor, A.
Ellidge, Miss E. A.	Marsh, J.	Taylor, F.
Ellison, T. W.	Mason, A. J.	Tucker, Miss A.
Enderby, J. E.	Mather, Miss E. M.	Twigg, T. L.
Evans, W.	Mercer, A.	Wagg, H. J.
Fish, Miss H. M.	Minchington, C. H.	Walker, M. F.
Frost, E.	Mold, Miss H.	Walton, W.
Gedge, C.	Morgan, E. J.	Ware, Miss A. M.
Gillham, Miss E. G.	Morris, D. L.	Watkin, S.
Giedhill, J. R.	Mulrooney, W.	Willbee, Miss A. S.
Glenny, Miss E. F.	Naumann, Miss E.	Young, A. W.
Greentree, Miss A.		

Certificates of Ability to Teach were awarded to the following, who had passed the required practical examination:—G. T. Aston, S. I. Butler, A. E. Jobbins, F. A. King, A. Lane, E. F. W. Mondy, F. J. Rahtz, A. E. Roberts.

## TEACHERS' DIPLOMA EXAMINATION—PASS LIST, JULY, 1900.

*Theory and Practice.*

MATHEMATICS.

14481. (H. M. TAYLOR, M.A., F.R.S. Suggested by Quest. 14382.)—On the sides of a triangle A'B'C', triangles B'C'A, C'A'B, A'B'C are constructed similar to three given triangles. Having given the triangle ABC and the three triangles, reconstruct the triangle A'B'C'.

Solution by the PROPOSER.

ABC (Fig. 1) is the given triangle having been formed by constructing on the sides of the triangle A'B'C' the triangles AB'C', BC'A', CA'B' similar and homologous to the given triangles LX Y, MXY, NXY

Fig. 1.

Fig. 2.

Fig. 3.

Fig. 4.

(Fig. 2) respectively; it is required, from these data, to reconstruct the triangle A'B'C'.

[The triangles ABC in Figures 1 and 3 are identical, but they are drawn apart merely for the sake of clearness.]

Construction.—Take any point P (Fig. 3), and construct  $\Delta PCQ$  similar and homologous to  $\Delta XNY$ ; and  $\Delta QAR$  similar and homologous to  $\Delta XLY$ ; and  $\Delta RBS$  similar and homologous to  $\Delta XMY$ .

Next take a point o (Fig. 4), and describe  $\Delta poq$  similar and homologous to  $\Delta PCQ$ ,  $\Delta qor$  similar and homologous to  $\Delta QAR$ ,  $\Delta ros$  similar and homologous to  $\Delta RBS$ .

Now (in Fig. 3) describe  $\Delta POS$  similar and homologous to  $\Delta pos$  of Fig. 4. We shall prove O to be coincident with A'.

[The rest in Volume.]

14511. (JOHN C. MALET, M.A., F.R.S.)—If, in the sextic algebraic equation  $x^6 - p_1x^5 + p_2x^4 - p_3x^3 + p_4x^2 - p_5x + p_6 = 0$ ,

the sum of three roots is equal to the sum of the other three, (1) prove

$$4p_6Q_4 - Q_4Q_6^2 - p_6Q_2^2 + p_6Q_3Q_3 - p_6^2 = 0,$$

where  $Q_2 \equiv p_2 - \frac{1}{3}p_1^2$ ,  $Q_3 \equiv p_3 - \frac{1}{3}p_1p_2 + \frac{1}{3}p_1^3$ ,  $Q_4 \equiv p_4 - \frac{1}{3}p_1p_3 + \frac{1}{3}p_1^2p_2 - \frac{1}{18}p_1^4$ ; (2) solve the equation.

I. Solution by the PROPOSER; H. W. CURJEL, M.A.; and Prof. SANJANA.

(1) Let  $x_1, x_2, x_3, x_4, x_5, x_6$  be the roots of the equation; then

$$x_1 + x_2 + x_3 = x_4 + x_5 + x_6 = \frac{1}{3}p_1.$$

Let now  $x_1x_2 + x_2x_3 + x_3x_1 = u_1$ ,  $x_4x_5 + x_5x_6 + x_6x_4 = u_2$ ,

$$x_1x_2x_3 = v_1, \quad x_4x_5x_6 = v_2;$$

and we find

$$u_1 + u_2 = Q_2 \dots \dots \dots (i).$$

$$v_1 + v_2 + \frac{1}{3}p_1(u_1 + u_2) = p_3; \text{ therefore } v_1 + v_2 = Q_3 \dots \dots (ii).$$

$$u_1u_2 + \frac{1}{3}p_1(v_1 + v_2) = p_4;$$

therefore

$$u_1u_2 = Q_4, \quad v_1u_2 + v_2u_1 = p_5, \quad v_1v_2 = p_6 \dots (iii., iv., v.).$$

From (i.) and (iii.), we have

$$2u_1 = Q_2 + \sqrt{(Q_2^2 - 4Q_4)}, \quad 2u_2 = Q_2 - \sqrt{(Q_2^2 - 4Q_4)};$$

and from (ii.) and (v.),

$$2v_1 = Q_3 + \sqrt{(Q_3^2 - 4p_6)}, \quad 2v_2 = Q_3 - \sqrt{(Q_3^2 - 4p_6)};$$

Substituting for  $u_1, u_2, v_1, v_2$  in (v.) and rationalizing, we get the required condition.

(2) The roots of the sextic are the roots of the cubics

$$2x^3 - p_1x^2 + \{Q_2 \pm \sqrt{(Q_2^2 - 4Q_4)}\}x - \{Q_3 \pm \sqrt{(Q_3^2 - 4p_6)}\} = 0.$$

II. Solution by G. H. HARDY, B.A.

It is interesting to consider this equation from the point of view of the GALOIS theory.

The function  $\phi_1 \equiv x_1 + x_2 + x_3 \equiv [123]$  has, in general, 20 values, viz.: [123], [124], [125], [126], [134], [135], [136], [145], [146], [156], [234], [235], [236], [245], [246], [256], [345], [346], [356], [456]; and satisfies an equation  $\phi_{20}(\phi) = 0 \dots \dots \dots (i).$  The group of  $\phi_1$  is of order  $(3!)^2 = 36$ ; and the solution of (i.) involves the complete solution of the sextic, for, if  $x_1 + x_2 + x_3, \dots$  are known, so are  $x_1, x_2, x_3, \dots$

[The rest in Volume.]

14534. (W. S. COONEY.)—Let  $O_1, O_2, O_3$  be the centres of squares described externally, and  $\omega_1, \omega_2, \omega_3$  the centres of squares described internally on the sides  $a, b, c$ , respectively, of triangle ABC. Join  $O_1$  to  $\omega_2$  and  $\omega_3$ , meeting side BC in P, P';  $O_2$  to  $\omega_3$  and  $\omega_1$ , meeting CA in Q, Q';  $O_3$  to  $\omega_1$  and  $\omega_2$ , meeting AB in R, R'. Prove that A', B', C', the intersections of P'R, Q'P, R'Q are the centres of the insquares of ABC, and that, if AA', BB', CC' meet sides of A'B'C' in  $\alpha, \beta, \gamma$ , then triangle  $\alpha\beta\gamma$  is similar to ABC.

Solution by the PROPOSER.

From Quest. 14473 and from figure,

$\Delta AO_2\omega_3 = \Delta A\omega_2O_3$ ; therefore the perpendiculars AD and AE are equal. Draw O<sub>1</sub>S perpendicular to AC and O<sub>1</sub>T to AB.  $\Delta CQO_2$  is similar to  $\Delta CP'O_1$ , and  $\Delta DQ$  is similar to  $\Delta CSO_1$ . Therefore

$$\frac{CQ}{CP'} = \frac{CO_2}{CO_1} = \frac{AC}{BC};$$

therefore QP' is parallel to AB, and, similarly, PR' and RQ' are parallel respectively to CA and BC.  $\Delta DQ$  and  $\Delta CSO_1$  are similar. Therefore

$$\frac{AQ}{AD} = \frac{CO_1}{SO_1};$$

also

$$\frac{AR'}{AE} = \frac{BO_1}{TO_1};$$

but AD = AE

$$\text{and } CO_1 = BO_1;$$

therefore

$$\frac{AQ}{AR'} = \frac{TO_1}{SO_1},$$

therefore diagonal of completed parallelogram P'QAR'P passes through O<sub>1</sub> and also through A' (since Q'R is parallel to PP', and bisects QR' in  $\alpha$ . Similarly, BO<sub>2</sub> and CO<sub>3</sub> pass through B' and C', bisecting P'R and P'Q' in  $\beta$  and  $\gamma$ . Therefore sides of  $\alpha\beta\gamma$  are parallel to sides of ABC. Angles of  $\Delta BR'O_3$  are  $45^\circ, 90^\circ - B$ , and  $45^\circ + B$ . Therefore

$$\frac{BR'}{(c \cos B)/(B)}, \text{ where } (B) = \sin B + \cos B.$$

$$\text{Also } \frac{AR}{(c \cos A)/(A)} \text{ and } \frac{RR'}{(c \cos C)/(C)}.$$

$$\text{Similarly, } \frac{QQ'}{(b \cos B)/(A)(C)}, \frac{PR'}{(b/c)BR'} = \frac{(b \cos B)/(B)}{(b/c)BR'}$$

$$\frac{\sin BAB'}{\sin CAB'} = \frac{R'B' AQ}{B'Q AR'} = \frac{PR' TO_1}{QQ' SO_1} = \frac{(A)(C) \sin(B + 45^\circ)}{(B) \sin(C + 45^\circ)} = \frac{(A)(C)(B)}{(B)(C)}$$

$$= (A) = \frac{\sin(A + 45^\circ)}{\sin(45^\circ)} = \frac{\sin BA O_2}{\sin CA O_2}.$$

Therefore A. BB'CO<sub>2</sub> is a harmonic pencil, as is also C. BB'AO<sub>2</sub>. Therefore lines drawn through B' parallel to AO<sub>1</sub> and CO<sub>3</sub> will make angles of  $45^\circ$  with AC, and have the parts intercepted by the sides AC and AB, and AC and CB bisected at B'. Therefore B' is centre of insquare to AC. Therefore, &c.

14222. (Professor ELLIOTT, F.R.S.)—If  $P + a_0Q$ , in which P and Q are free from  $a_0$ , is annihilated by  $a_0 \frac{\partial}{\partial a_1} + 2a_1 \frac{\partial}{\partial a_2} + 3a_2 \frac{\partial}{\partial a_3} + \dots$  to  $\infty$ ,

show that  $\frac{\partial}{\partial a_1} Q = 0$ , and that, when  $m > 1$ ,

$$\frac{\partial}{\partial a_m} Q = -\frac{1}{2} \sum_{r=1}^{m-1} \frac{\partial^2}{\partial a_r \partial a_{m-r}} P.$$

Solution by G. D. WILSON, B.A.

By hypothesis,  $(a_0 \frac{\partial}{\partial a_1} + \sum_{n=1}^{\infty} (n+1) a_n \frac{\partial}{\partial a_{n+1}})(a_0Q + P) \equiv 0$ ,

and P and Q are free from  $a_0$ . Hence

$$\frac{\partial Q}{\partial a_1} = 0, \quad \frac{\partial P}{\partial a_1} + \sum_{n=1}^{\infty} (n+1) a_n \frac{\partial Q}{\partial a_{n+1}} = 0, \quad \sum_{n=1}^{\infty} (n+1) a_n \frac{\partial P}{\partial a_{n+1}} = 0$$

Therefore  $0 = \frac{\partial^2}{\partial a_r \partial a_{m-r} n+1} \sum_{n=1}^{\infty} (n+1) a_n \frac{\partial P}{\partial a_{n+1}}$  [from (iii.)]  
 $= \sum_{n=1}^{\infty} (n+1) a_n \frac{\partial^2 P}{\partial a_{n+1} \partial a_r \partial a_{m-r}} + (r+1) \frac{\partial^2 P}{\partial a_{r+1} \partial a_{m-r}}$   
 $+ (m-r+1) \frac{\partial^2 P}{\partial a_r \partial a_{m-r-1}}$

Therefore

$$\sum_{n=1}^{\infty} (n+1) a_n \frac{\partial}{\partial a_{n+1}} \left( \sum_{r=1}^{m-1} \frac{\partial^2 P}{\partial a_r \partial a_{m-r}} \right) = -2 \sum_{r=1}^{m-1} (r+1) \frac{\partial^2 P}{\partial a_{r+1} \partial a_{m-r}}$$

$$= -2 \sum_{r=2}^m r \frac{\partial^2 P}{\partial a_r \partial a_{m+1-r}}$$

But, from (ii.),  $\sum_{n=1}^{\infty} (n+1) a_n \frac{\partial}{\partial a_{n+1}} \frac{\partial Q}{\partial a_m} = - \frac{\partial^2 P}{\partial a_1 \partial a_m} - (m+1) \frac{\partial Q}{\partial a_{m+1}}$ ;

hence  $\sum_{n=1}^{\infty} (n+1) a_n \frac{\partial}{\partial a_{n+1}} \left( \sum_{r=1}^{m-1} \frac{\partial^2 P}{\partial a_r \partial a_{m-r}} + 2 \frac{\partial Q}{\partial a_m} \right)$   
 $= -2 \sum_{r=1}^m r \frac{\partial^2 P}{\partial a_r \partial a_{m+1-r}} - 2(m+1) \frac{\partial Q}{\partial a_{m+1}}$   
 $= -(m+1) \left( \sum_{r=1}^m \frac{\partial^2 P}{\partial a_r \partial a_{m+1-r}} + 2 \frac{\partial Q}{\partial a_{m+1}} \right)$

Putting  $m = 1, 2, \dots$ , &c., in this, we obtain the result stated.

**14532.** (Rev. J. CULLEN, P.)—Let  $\Delta$  be any conic in the plane of a given triangle ABC. A point P is taken on  $\Delta$ , and parallels through P to BC, CA, AB meet  $\Delta$  again in  $A', B', C'$ . Prove that AP, BP, CP intersect  $B'C', C'A', A'B'$  in three collinear points L, M, N. (A particular case is that the intersections of the symmedian lines with the corresponding sides of BROCARD'S triangle are collinear.)

Prove also that, if  $\Delta$  be the circumcircle, then LMN is at right angles to the SIMSON-line of P.

Remarks by Professor SANJANA.

The first part is proved readily by trilinears. I append a geometrical proof of the last part.

The triangle  $A'B'C'$  is inversely similar to ABC. Hence  $\angle MA'N = A = BAC = MPN$ ;  
 therefore M, P, A', N are concyclic; so also are N, P, L, B' and L, P, M, C'. Thus  $\angle PMN = 180^\circ - \angle PA'N = 180^\circ - \angle PC'L = 180^\circ - \angle PML$ ,  
 so that LM, MN are in a straight line.

Let the arc PA subtend an angle  $\alpha$  at the circumference; let LMN meet  $A'P$  in Q; and let  $POP'$  be the diameter. The angle made by LMN with BC =  $\angle PQL = \angle PLM - \angle APA' = \angle PB'A' - \angle APA' = \alpha = \frac{1}{2} \angle POA$ . But the angle which the SIMSON-line of P makes with BC =  $\frac{1}{2} \angle POA$ ; hence LMN is at right angles to the SIMSON-line. See the Lemma on p. 73, Vol. LXVII.

**14454.** (Professor SANJANA, M.A.)—Solve, in rational numbers, the equation  $M^2 - 2xN^2 = x^2 - 1$ , where  $x$  stands for any one of the natural numbers 2, 3, 4, 5, 6, ... [The solution gives  $N^2 + 1$  as the difference of two squares. I have reason to believe that 5 is the only small value of  $x$  admissible. For the method see CHRISTAL, xxxiii., §§ 15-19.]

Solution by H. W. CUMJEL, M.A., and Lt.-Col. ALLAN CUNNINGHAM, R.E.  
 $x$  cannot be even, for  $M^2 + 1$  cannot be divisible by 4; and, since  $M^2 + 1 \equiv 0, \text{ mod } x$ , all the prime factors of  $x$  must be of the form  $4n + 1$ .

A large number of values of  $x$  will be excluded by the condition that  $2x$  must be a quadratic residue of all factors which occur in  $x^2 - 1$  to an odd power. This condition excludes the following values less than 100: 13, 25, 29, 41, 53, 61, 73, 85, 89, 97;  $x = 5, 17, 37, 65, 101$  give solutions  $x = 5, M = 8, N = 2$ , the remaining solutions may be deduced with the help of  $19^2 - 10 \times 6^2 = 1$ ;  $x = 17, M = 72, N = 12$ , the remaining solutions with the help of  $35^2 - 34 \cdot 6^2 = 1$ ;  $x = 37$ , all solutions are easily deduced from  $43^2 - 5^2 \cdot 74 = -1$  and  $6^2 - 74 = -38$ , since 74 is a non-residue of 9;  $x = 65$ , all solutions from  $8^2 - 130 = -66$  and

$57^2 - 5^2 \cdot 130 = -1$ ;  $x = 101$ , all solutions from  $10^2 - 202 = -102$ , and  $3141^2 - 202 \times 221^2 = -1$ , since 202 is a non-residue of 25.

**14188.** (SALUTATION.)—Bisect AB (= unity) in C, and AC in D; on AB describe a semicircle; from A, D draw parallel lines intersecting the semicircle in P, Q respectively; S, T being the projections of P on AB, and of S on DQ, prove that  $4ST$  is the sine of an angle =  $3PAB$ .

Solution by G. BIRTWISLE, B.A.;  
 Professor T. SAVAGE; and many others.

$AP = \cos \theta$ ;  
 therefore  $AS = \cos^2 \theta$ ;  
 therefore  $DS = \cos^2 \theta - \frac{1}{4}$ ;  
 therefore  $ST = \sin \theta (\cos^2 \theta - \frac{1}{4})$ ;  
 therefore  $4ST = \sin \theta (3 - 4 \sin^2 \theta)$   
 $= \sin 3\theta$ .

**14299.** (Rev. T. MITCHESON, B.A.)—Let  $P_1Q_1R_1$  be an equilateral triangle such that  $P_1$  is on one side of a square,  $Q_1$  and  $R_1$  on the adjacent sides,  $Q_1R_1$  parallel to the other side, and O the mid-point of  $Q_1R_1$ ; and let PQR be any other equilateral triangle, whose angular points are the same sides, QR passing through O, and let  $P_1Q_1$  meet PQ in S,  $P_1R_1$  meet PR in T. Then the circle passing through P, P<sub>1</sub>, S, T touches QR in O, and circles passing through O, T, R,  $R_1$  and O, S, Q,  $Q_1$ , respectively, are each one third of the first circle. (An echo of Quest. 14235.)

Solution by I. ARNOLD and the PROPOSER.

Let ABCD be the square, and  $P_1Q_1R_1$  an equilateral triangle inscribed; O the mid-point of  $Q_1R_1$ , and QR passing through it meeting BC in R and AD in Q. From O draw OP perpendicular to QR meeting BA in P; then is RPQ the other equilateral triangle. A circle described on OP as diameter passes through PSTP<sub>1</sub>, touching QR in O.

It is also evident that QO is the diameter of the circle passing through QSQ<sub>1</sub>O, and that OR is the diameter of the circle passing through OR<sub>1</sub>RT<sub>1</sub>, and these diameters are equal. But  $OP^2$  is equal to  $3OR^2$ , and, circles being as the squares of their diameters, this makes either of the smaller circles one third of the larger circle.

QUESTIONS FOR SOLUTION.

**14623.** (Professor G. B. MATHEWS, F.R.S.)—Prove that

$$\sum E(\frac{1}{2}n) x^n = (x^2 + x^3) / \{(1-x)(1-x^2)\},$$

and show how to find a similar expression for  $\sum E\{an/(a+b)\} x^n$ . [As usual, E(x) is the integer defined by  $E(x) \leq x < E(x) + 1$ .]

**14624.** (Professor E. LEMOINE.)—Soit en coordonnées normales  $a(m-n), b(n-l), c(l-m)$  les coordonnées d'un point M de la droite de LEMOINE; soit  $A_1B_1C_1$  le triangle formé par les perpendiculaires abaissées de M respectivement sur BC, CA, AB; soit un triangle  $A'B'C'$  homothétique à  $A_1B_1C_1$ . (1) Si  $AA', BB', CC'$  concourent en O, le lieu de O est une hyperbole équilatère circonscrite à ABC; si  $AB', BC', CA'$  concourent en O', ou  $AC', BA', CB'$  concourent en O'', les lieux de O' et de O'' sont aussi des hyperboles équilatères circonscrites à ABC. (2) Donner les équations des trois courbes.

**14625.** (Professor E. J. NANSON.)—Tangents are drawn from  $x'y'z'$ ,  $x''y''z''$  to conics touching the lines  $x = 0, y = 0, z = 0, lx + my + nz = 0$ ; show that the locus of their intersection is  

$$(lx + my + nz) \{ l(x''/x) + m(y''/y) + n(z''/z) \}$$

$$= (lx' + my' + nz')(lx'' + my'' + nz'').$$

**14626.** (Professor NEUBERG.)—Une ellipse de grandeur invariable se déplace dans son plan de manière que ses foyers glissent sur deux droites données. Construire le point de contact de cette ellipse avec son enveloppe.

**14627.** Professor S. SIRCOM.—Trace the curve  

$$(x-2)^2 \{ (x-2)y^2 - (6-x)x^2 \}^2 = 64(3-x)x^2y^2,$$
 with special reference to its shape in the neighbourhood of the origin.

**14628.** (Professor FRANZ ROGEL.)—Prove that the number of all numbers  $< n$  and prime to  $n$

$$\phi(n) = n + 2 \left[ \left( \frac{1}{4 \cdot 2! S_2} - \frac{1}{2 \cdot 3!} \right) (2\pi)^2 - \frac{S_2}{S_2} \right] n^3$$

$$- 2 \left[ \frac{1}{4 \cdot 4! S_2} - \frac{1}{2 \cdot 5!} \right] (2\pi)^4 - \frac{(2\pi)^2 S_2 + S_4}{3! S_3 + S_6} n^5$$

$$+ 2 \left[ \left( \frac{1}{4 \cdot 6! S_2} - \frac{1}{2 \cdot 7!} \right) (2\pi)^6 - \frac{(2\pi)^4 S_2 + (2\pi)^2 S_4 + S_6}{5! S_3 + 3! S_5 + S_7} \right] n^7 \dots,$$

where  $S_r$  denotes  $\frac{1}{1^r} + \frac{1}{2^r} + \frac{1}{3^r} + \frac{1}{4^r} + \frac{1}{5^r} + \dots$

**14629.** (J. A. THIRD, M.A., D.Sc.)—If a variable conic touch the sides BC, CA, AB of a triangle at X, Y, Z, and if the locus of its centre be the join of the symmedian point and the GERGONNE point, show that the locus of the point of concurrence of AX, BY, CZ is the circumscribed equilateral hyperbola having as centre the point of contact of the nine-point circle and the in-circle. Similar theorems hold for the ex-circles.

**14630.** (Professor COCHEZ.)—Courbe  $\rho = 2 \tan \omega / (1 - 2 \sin \omega)$ .

**14631.** (Professor SANJANA, M.A.)—A, B, C being the angles of a triangle, prove that

$$\cos A \sin^2 A \sin^4 (B - C) + \cos B \sin^2 B \sin^4 (C - A) + \cos C \sin^2 C \sin^4 (A - B)$$

$$= \sin A \sin B \sin C \{ \sin^2 (A - B) \sin^2 (C - A) + \sin^2 (B - C) \sin^2 (A - B) + \sin^2 (C - A) \sin^2 (B - C) \}.$$

**14632.** (Professor UMES CHANDRA GHOSH.)—Determine the area of the quadrilateral formed by joining the feet of the four normals drawn from a given point to a central conic.

**14633.** (D. BIDDLE.)—A certain group of cubic equations of the form  $x^3 + qx + r = 0$ , where  $q$  and  $r$  are both minus quantities, is capable of transformation into  $y^3 - 2y - 2 = 0$ , by taking  $y = mx$ . Prove that, with the same values of  $q$  and  $r$  respectively,  $x^3 + x^2 + \frac{1}{2}(q \pm r) = 0$  and  $x^3 - x^2 - \frac{1}{2}(q \mp r) = 0$  have a root in common. Also, from the foregoing law, deduce a method of finding either of the two equations in  $x$ , having given the fellow to it only.

**14634.** (R. TUCKER, M.A.)—O' is the in-centre of ABC. AO' produced meets the circum-circle in A'. Tangents from A' to the in-circle meet the circum-circle in  $a_1, a_2$ . Prove that  $Aa_1 = Aa_2 = AO'$ , and that the in-circle of ABC is also the in-circle of A'a<sub>1</sub>a<sub>2</sub>. (Analogous results, of course, for B and C.) Also

$$\sin \frac{1}{2} A \cdot \sin \frac{1}{2} A' = r/2R; \quad Aa_1 \cdot BA' = 2Rr = AO' \cdot O'A' = \&c.$$

**14635.** (R. F. DAVIS, M.A.)—Prove that (1) the trilinear coordinates of the foci of the ellipse touching the sides of the triangle of reference ABC at the feet of the perpendiculars are given by the equations  $\beta/\gamma + \gamma/\beta = t \cos A, \gamma/\alpha + \alpha/\gamma = t \cos B, \alpha/\beta + \beta/\alpha = t \cos C$ , where  $t^2 \cos A \cos B \cos C - t + 2 = 0$ ; (2) these foci all lie on the conics  $a^2 \cot A + \beta\gamma \operatorname{cosec} A = \dots$ ; (3) F is a focus when, HL being drawn perpendicular upon AG (Quest. 13878), KF is taken a mean proportional between KA and KL, and bisects the angle between them. [G = centroid, H = orthocentre, K = symmedian point.]

**14636.** (R. C. ARCHIBALD, M.A.)—Given a parabola  $y^2 = 4ax$ , with focus S, a circle  $x^2 - 10ax + y^2 + 9a^2 = 0$ , and the fixed point  $(-3a, 0)$ . If any line through the fixed point cuts the parabola in  $P_1, P_2$ , and the circle in  $P_3, P_4$ , show that (1) the circle  $SP_1P_2$  touches the parabola; (2) the circle  $SP_3P_4$  touches the parabola in  $P_1$ ; (3) the circle  $SP_4P_2$  touches the parabola in  $P_2$ ; where the lines  $P_1P_3, P_2P_4$  do not intersect without being produced. Conversely, a circle touching a parabola and passing through its focus S cuts the curve in two points  $P_1, P_2$  such that the line  $P_1P_2$  passes through a fixed point. The circle through S, tangent to the parabola at  $P_1$ , meets the line in  $P_3$ , and the circle through S, tangent to the parabola at  $P_2$ , meets the line  $P_1P_3$  in  $P_4$ . The points  $P_3, P_4$  lie on a fixed circle through S.

**14637.** (EDWARD V. HUNTINGTON, A.M. Generalization of No. 14134 and No 14608.)—Let two equal epi- or hypo-cycloids be so situated on the same fixed circle that a cusp A of one and a vertex V of the other lie in line with the centre O. Call OA = a and OV = h; a and h need not be commensurable. Then (1), if A and V are on the same side of O, a line of length  $h - a$ , sliding between the curves, will envelop an epi-

or a hypo-cycloid according as  $h - a$  is positive or negative; (2) if A and V are on opposite sides of O, a line of length  $h + a$  will envelop an epi- or a hypo-cycloid according as  $h - 3a$  is positive or negative. In either case the enveloped curve has twice as many cusps per circumference as the given curves.

**14638.** (Rev. T. ROACH, M.A.)—Let TP be a tangent to a parabola meeting the axis in p. Prove the following construction for the second tangent:—Centre S, radius ST, describe circle cutting Sp in R, and let

$$Sp : SR = SR : Sq;$$

then Tq is the second tangent.

**14639.** (G. H. HARDY, B.A.)—If  $\sum_0^\infty u_n(X)$  be a summable divergent

series, having the sum  $\int_0^\infty e^{-ax} u(X, a) da$ , where  $u(x, a) = \sum_0^\infty \frac{a^n}{n!} u(X)$ ,

prove that it may be integrated term by term in  $(x_0, X)$ , provided (i.)  $u(X, a)$  may be integrated term by term, and (ii.) the order of integration in  $\int_0^\infty e^{-ax} da \int_{x_0}^X u(X, a) dX$

may be changed. Deduce, and verify independently, that if

$$\phi(x, a) = e^{-a(1+\cos X)} \cos(X - a \sin X),$$

$$\psi(x, a) = e^{-a(1-\cos 2mX)} \cos(mX + a \sin 2mX) / (1 + X^2);$$

then  $\int_0^{2\pi} dX \int_0^\infty \phi da = \pi, \int_0^\infty da \int_0^{2\pi} \phi dX = 0;$   
 $\int_0^\infty dX \int_0^\infty \psi da = 0, \int_0^\infty da \int_0^\infty \psi dX = \frac{1}{2} \frac{\pi}{e^{2m} - e^{-2m}}.$

**14640.** (R. P. PARANJPE, B.A.)—A pseudo-periodic function  $\phi(u)$  satisfies the equations  $\phi(u + 2\omega) = \phi(u) + 2a, \phi(u + 2\omega') = \phi(u) + 2\beta$ , and has no essential singularity at a finite distance. Find its most general expression. [ $a$  and  $\beta$  are any constant quantities.]

**14641.** (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Solve in integers in a general form the equation  $N_1 N_3 = N_2 N_4$ , where

$$N_r = (x^r + 3^r y^r) / (x^r + 3y^r),$$

and give numerical examples.

**14642.** (ROBERT W. D. CHRISTIE.)—Establish directly, by use of the quintic roots of minus unity, Dr. REUSCHLE's *Einfach Factor* of the prime 11, and, if possible, extend same to other primes.

**14643.** (J. J. BARNIVILLE, B.A.)—Prove that

$$\frac{1}{1+11} - \frac{1}{4-11} + \frac{1}{11+11} - \frac{1}{29-11} + \dots = \frac{1}{2\sqrt{5}},$$

$$\frac{1}{1+19} - \frac{1}{5-19} + \frac{1}{19+19} - \frac{1}{71-19} + \dots = \frac{5}{22\sqrt{3}},$$

$$\frac{1}{1+71} - \frac{1}{9-71} + \frac{1}{71+71} - \frac{1}{559-71} + \dots = \frac{\sqrt{3}}{22\sqrt{5}},$$

$$\frac{1}{1+1} - \frac{1}{17-1} + \frac{1}{271+1} - \frac{1}{4319-1} + \dots = \frac{\sqrt{7}}{6},$$

$$\frac{1}{1+1} - \frac{1}{19+1} + \frac{1}{341+1} - \frac{1}{6119-1} + \dots = \frac{1}{\sqrt{5}}.$$

**14644.** (V. DANIEL.)—If a chord of the parabola  $y^2 = 4ax$  and the tangents at its extremities form a triangle of constant area  $\frac{1}{2}\lambda^2 a^2$ , the pole of the chord lies on the parabola  $y^2 = 4ax + \lambda^2 a^2$ .

**14645.** (W. R. HUGHES.)—PP', PM are diameters of an ellipse and a circle, osculating at P, and MP' meets the ellipse again in Q. Prove that the tangents at M and Q and the common chord PR meet in a point.

**14646.** (R. KNOWLES.)—Prove that the sum of the first  $r$  terms in the expansion of  $(1-x)^{-n}$  is

$$\left[ 1 - 1/(n-1)! \{ (r+1)(r+2)(r+3) \dots (r+n-1) x^r \right.$$

$$- p_1 r(r+2)(r+3) \dots (r+n-1) x^{r+1} + p_2 r(r+1)(r+3) \dots (r+n-1) x^{r+2}$$

$$\pm p_{n-2} r(r+1) \dots (r+n-3)(r+n-1) x^{r+n-2}$$

$$\left. \mp r(r+1)(r+2) \dots (r+n-3)(r+n-2) x^{r+n-1} \right] + (1-x)^n,$$

in which  $p_r$  is the coefficient of  $x^r$  in the expansion of  $(1+x)^{n-1}$ , for instance, if  $n = 5, p_1 = 4, p_2 = 6, p_3 = p_{n-2} = 4$ .

**14647.** (SALUTATION.)—ABC being any plane triangle, produce CA to A', AB to B', and BC to C', so that A'B'C' may be similar to another given triangle, and  $m$  times as large as ABC.

**14648.** (Prebendary WHITWORTH, M.A.)—If a straight line be divided at random into four parts, the expectation of the sum of the squares on the greatest and least parts is to the expectation of the sum of the squares on the other two parts as 53 to 19. (Solution by Algebra.)

**14649.** (H. W. CURJEL, M.A.)—If in hyperspace of  $n$  dimensions we call the hypersphere of highest possible dimensions simply a sphere, and a space of  $(n-1)$  dimensions simply a plane, and the figure corresponding to a triangle in space of 2 dimensions and a tetrahedron in space of 3 dimensions a  $(n+1)$ -hedroid, prove that the following theorem is true if  $n$  is even and not true if  $n$  is odd:—In space of  $n$  dimensions the  $n+2$  spheres circumscribing the  $n+2$   $(n+1)$ -hedroids determined by  $n+2$  planes meet in a point.

**14650.** (Professor LANGHORNE ORCHARD, M.A., B.Sc.)—An oblate spheroid, of mass  $m_1$  and angular velocity  $\omega$ , describes under gravity an ellipse about another oblate spheroid, of mass  $m_2$ , placed at one focus, which last spheroid itself is simultaneously describing, with velocity  $v$ , a similar ellipse about a mass  $m_3$  placed at one focus. Find the whole velocity of  $m_1$  at any point on its path.

#### OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

**6672.** (J. GRIFFITHS, M.A.)—If four pairs of points are so arranged on a plane that any three of the pairs form a group of six points on a conic, prove that (1) the four pairs must all lie on the same conic; and hence (2) the eight points of contact of two conics with their common tangents lie on another conic.

**6675.** (C. TAYLOR, M.A.)—Find the positions of a chord of a given curve of the  $n$ th degree which subtends angles equal to  $\alpha$  and  $\beta$  at given points A and B respectively.

**6679.** (Rev. T. R. TERRY, M.A., F.R.A.S.)—Show that the value of the continued fraction  $\frac{N}{1 + \frac{N_1}{1 + \frac{N_2}{1 + \frac{N_3}{\dots}}}}$ , where  $N = nx$  and  $N_r = \frac{n^2 - r^2}{(2r-1)(2r+1)} x^2$ , is  $\frac{(1+x)^n - (1-x)^n}{(1+x)^n + (1-x)^n}$ .

**6684.** (R. A. ROBERTS, M.A.)—Show that an ellipse, inscribed or circumscribed to a triangle self-conjugate with regard to a conic, cannot meet the conic in more than two real points.

**6685.** (W. R. WESTROFF ROBERTS, M.A.)—Show that, if, in the plane  $lx + my + nz = \phi$ ,  $l, m, n, \phi$  be functions of two variables of the form  $ax^2 + by^2 + 2cxy + 2dpx + 2fpy + e$ , then the plane will envelope a cubic surface in which curves of the families  $u = \text{constant}$ ,  $v = \text{constant}$  will be touched at their intersection by conjugate tangents of the surface.

**6689.** (J. R. HARRIS, M.A.)—A tetrahedron is cut by a plane so that the section shall be a rhombus. Prove that the side of the rhombus is half the harmonic mean between a pair of opposite edges.

#### NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to D. BIDDLE, Esq., Charlton Lodge, Kingston-on-Thames.

#### THE LONDON MATHEMATICAL SOCIETY.

At the October meeting (1899) of the Council it was agreed that an "Index" to the first thirty volumes of the Society's "Proceedings," and a complete List of Members from the foundation of the Society should be drawn up by the Secretaries in consultation with the Treasurer.

The "Index" of papers, which was recently issued to members, consists of three parts. In the first part the papers are arranged in alphabetical order of authors' names; in the second part they are classified under subject headings; and in the third part the titles of the papers contained in the several volumes are arranged in the order in which they are printed.

Further, at the March meeting, it was ordered that one thousand copies of the first part of the "Index" should be printed for gratuitous distribution. Upwards of five hundred copies have been so distributed by Mr. F. Hodgson, 89 Farringdon Street, E.C. Mr. Tucker (Hon. Sec.) will be happy to receive a limited number of names of gentlemen who are members of scientific societies to whom this part is likely to be of service.

The "List of Names" has also been issued, and shows that about four hundred and forty persons have at one time or other been on the roll. The complete "Index" (112 pages), and the "List of Names" (16 pages), can be obtained from the Society's publisher, at the above address, for the respective sums of 2s. 6d. and 6d.

## CAREY'S "GRADUS AD PARNASSUM,"

WITH THE ENGLISH MEANINGS.

Revised, Corrected, and Augmented by a Member of the University of Cambridge.

Post 8vo, cloth, price 7s.

THE STATIONERS' COMPANY, STATIONERS' HALL, LONDON.

# CASELL'S EDUCATIONAL BOOKS.

## THE BEST AND CHEAPEST DICTIONARIES.

**CASELL'S FRENCH DICTIONARY.** (French-English and English-French.) 575th Thousand. 1,150 pages. Cloth, 3s. 6d.; half-morocco, 5s.

**CASELL'S GERMAN DICTIONARY.** (German-English and English-German.) 237th Thousand. 1,120 pp., demy 8vo. Cheap Edition, cloth, 3s. 6d.; half-morocco, 5s.

**CASELL'S LATIN DICTIONARY.** (Latin-English and English-Latin.) 122nd Thousand. Cheap Edition, 3s. 6d.; half-morocco, 5s.

### OUR GREAT CITY: or, London the Heart of the Empire.

By H. O. ARNOLD-FORSTER, M.P. About 300 pages. Crown 8vo. With a Series of Full-page Illustrations. Strongly bound in cloth, price 1s. 9d.; or, bound in cloth, with gilt edges, for presentation, 2s. 6d.

"I have carefully been through 'Our Great City,' and have concluded that it is the best and most useful of the School History Readers at present on the market."—Mr. F. RICHARDSON, Cowley's Foundation School.

Cheap Edition, now ready, price 6d.

**THE COMING OF THE KILOGRAM.** By H. O. ARNOLD-FORSTER, M.P. A Plea for the Adoption of the Metric System of Weights and Measures.

Third Edition, Revised, 5s.

**A HISTORY OF ENGLAND.** By H. O. ARNOLD-FORSTER, M.P. Fully Illustrated. Extra crown 8vo, 816 pp. Or, bound in cloth, with gilt edges, for presentation, 6s. 6d.

Entirely New and Revised Edition.

**CASELL'S LESSONS IN FRENCH.** Part I., containing 240 pp., crown 8vo, bound in cloth, 2s. Part II., containing 260 pp., crown 8vo, bound in cloth, 2s. Or, Complete in One Vol., 3s. 6d.

"After a careful examination of this revised edition, we cordially recommend it as a very suitable book for pupil teachers and candidates generally preparing for examination in French."—*Pupil Teacher.*

Cassell's Educational Catalogue will be sent, post free, on application.

CASELL & CO., LTD., LUDGATE HILL, LONDON, E.C.

## NEW TEXT-BOOKS ON THE SCIENCE AND ART OF EDUCATION.

By JOSEPH H. COWHAM

(Lecturer on Education, Westminster Training College, S.W.).

**COWHAM'S SCHOOL JOURNEY.** Fully illustrated. Price 2s. 6d. A new method of teaching Geography, Physiography, and Elementary Science.

"This is the best way to teach Geography."—*Sir Evelyn Oakeley, H.M.I.*

**COWHAM'S NEW SCHOOL METHOD.** (Complete.) Price 4s. 6d.

"I know of no manual so thorough and practical."—*Sub-Inspector of Schools.*

"We certainly like the book."—*Journal of Education.*

**GRAPHIC LESSONS IN PHYSICAL AND ASTRONOMICAL GEOGRAPHY.** Price 4s. 6d. "A Teacher's model lesson book." With 200 Outline Blackboard Sketches. Invaluable for teaching purposes.

"Exceedingly well done."—*Journal of Education.*

**PRINCIPLES OF ORAL TEACHING AND MENTAL TRAINING.**

Being an Introduction to Psychology and Ethics for Teachers. Price 3s. 6d.

"The best for students."—*Journal of Education.*

*The late R. H. Quick wrote:*—"A young teacher who digested half your book would have a good insight into the theory of his calling."

**SCHOOL ORGANIZATION, HYGIENE, AND DISCIPLINE.**

(SCHOOL ETHICS.) Price 3s. 6d.

"This manual will be most valuable, for it is founded on practical experience."—*Daily Telegraph.*

Westminster School Book Depot, S.W.; also of Simpkin, Marshall, Hamilton, Kent, & Co., Limited, and all Booksellers.

## EXAMINATION PAPER

AS USED BY THE

## COLLEGE OF PRECEPTORS.

In strict accordance with the College requirements, and each Sheet bears their Watermark.

Packed in Reams of 480 Sheets... .. per Ream, 2s. 6d.

" " 960 " " " " 5s. 0d.

Bookkeeping Paper, ruled for Ledger, Cash Book, and Journal, 1s. per 100 Sheets.

Remittance should accompany Order.

HEWARD & SHELBOURNE, Wholesale and Retail Stationers,  
63 HIGH HOLBORN, LONDON, W.C.

# MACMILLAN & CO.'S EDUCATIONAL PUBLICATIONS.

*Text-Books suitable for the College of Preceptors and other Examinations.*

## GRADUATED SERIES OF ENGLISH GRAMMARS.

By J. C. NESFIELD, M.A. *For use in Secondary Schools.*

**The Uses of the Parts of Speech.** Price 6d., cloth.

A general outline, with a large number of Exercises, showing the main purpose or purposes for which each part of speech is used in the construction of a sentence. For the use of students up to the age of ten or thereabouts.

**Outline of English Grammar.** Price 1s. 6d., cloth.

A short and easy guide to Accidence, Parsing, Analysis of Sentences, Conversion of Sentences from one form to another, Sequence of Tenses, Analysis of Words, the Sounds, Symbols, and Spellings in present use, the origin and history of the chief inflections and of words in common grammatical use. With copious and carefully graded Exercises throughout.

**A Short History of English Literature.** By Prof. G. SAINTSBURY. 8s. 6d.

**Children's Treasury of Lyrical Poetry.** Selected by F. T. PALGRAVE. Part I. 1s.

**Shakespeare.—As You Like It.** With Introduction and Notes. By K. DEIGHTON. 1s. 9d.

**Milton.—Paradise Lost.** Books III. and IV. With Introduction and Notes. By M. MACMILLAN, B.A. 1s. 3d. each; sewed, 1s. each.

**Scott.—The Lay of the Last Minstrel.** With Introduction and Notes. By G. H. STUART, M.A., and E. H. ELLIOT, B.A. Cantos I. to III., 1s. 3d.; sewed, 1s.

**Marmion.** With Introduction and Notes. By M. MACMILLAN, B.A. 3s.; sewed, 2s. 6d.

**Macaulay.—Lays of Ancient Rome.** With Introduction and Notes. By W. T. WEBB, M.A. 1s. 9d. (Contains the Prophecy of Cyprius, Ivry, and The Armada.)

**English Grammar.** By Rev. R. MORRIS. 1s.

**Exercises on Morris's Primer of English Grammar.** By JOHN WETHERELL, M.A. 1s.

**English Grammar Exercises.** By R. MORRIS, LL.D., and H. C. BOWEN, M.A. 1s.

**Elementary Lessons in Historical English Grammar.** By Rev. R. MORRIS, LL.D. 2s. 6d.

**A Method of English for Secondary Schools.** By JAMES GOW, Litt.D., Headmaster of the Nottingham High School. 2s.

**Word-Building and Composition.** By R. S. WOOD. Book VII. 1s.

**A First Book in Writing English.** By E. H. LEWIS, Ph.D. 3s. 6d.

**A First Manual of Composition.** By E. H. LEWIS, Ph.D. 3s. 6d.

**Primer of English Composition.** By Prof. NICHOL. 1s.

**Questions and Exercises on English Composition.** By Prof. NICHOL and W. S. McCORMICK. 1s.

**Principles of English Composition** through Analysis and Synthesis. By P. GOYEN, Inspector of Schools, New Zealand. 2s. KEY, 4s. net.

**Primer of English Literature.** By STOPFORD BROOKE, M.A. 1s.

**A First Sketch of English History.** Part I.: 449-1307. Part II.: 1307-1689. Part III.: 1689-1895. By E. J. MATHEW, M.A. 2s. each. Complete, 3s. 6d.

**History of England.** By EDITH THOMPSON. 2s. 6d.

**A History of England for Beginners.** By A. B. BUCKLEY. 3s.

**A Primer of English History.** By A. B. BUCKLEY. 1s.

**Short History of the English People.** By J. R. GREEN, M.A. 8s. 6d. Also, in FOUR PARTS, with Analysis. I.: 607-1265. II.: 1265-1540. III.: 1540-1689. IV.: 1660-1873. 3s. each.

**A Short Geography of the British Islands.** By J. B. GREEN, LL.D., and A. S. GREEN. With Maps. 3s. 6d.

**Geography of the British Isles.** By Sir A. GEIKIE, F.R.S. 1s.

**The Elementary School Atlas.** By J. BARTHOLOMEW, F.R.G.S. 1s.

**Class-Book of Geography.** By C. B. CLARKE, F.R.S. 2s. 6d.; sewed, 2s.

**Class-Book of General Geography.** By H. P. MILL, D.Sc. 3s. 6d.

**Geography of Europe.** By J. SIME, M.A. Illustrated. 2s.

**Geography of India, Burma, and Ceylon.** By H. F. BLANFORD. 2s.

**Geography of Africa.** By EDWARD HEAWOOD. 2s. 6d.

**Man and his Markets.** By LIONEL W. LYDE. Illustrated. 2s.

**Easy Arithmetical Exercises for Beginners.** By J. G. BRADSHAW, M.A. 2s. With Answers, 2s. 6d.

**A School Arithmetic.** By R. F. MACDONALD. 2s. 6d.

**Manual of English Grammar and Composition.** Price 2s. 6d., cloth. KEY, 2s. 6d. net.

A Guide to Parsing and Analysis, Composition, the Figures of Speech, Enlargement of the Vocabulary by Affixes and Metaphors, the main divisions of Prose Composition, the peculiarities of Poetic Diction, and an outline of the History of the Language. With copious and carefully graded Exercises.

**English Grammar Past and Present.** Price 4s. 6d., cloth. KEY, 2s. 6d. net.

A full account of Modern English Grammar, some peculiarities of Idiom and Construction, the Origin and Growth of English, a History of Sounds, Symbols, Spellings, and Accents, the Growth of Accidence from Anglo-Saxon and other sources, the origin and use of Prefixes and Suffixes. With Appendices on Prosody, Synonyms, the Changed Meanings of Words, and other outlying subjects. With copious and carefully graded questions selected from the London Matriculation Examinations.

**Arithmetic in Theory and Practice.** By J. BROOKSMITH, LL.B. 4s. 6d. KEY, 10s. 6d.

**Arithmetic for Beginners.** By J. and E. J. BROOKSMITH. 1s. 6d. KEY, 6s. 6d.

**Rules and Examples in Arithmetic.** By Rev. T. DALTON, M.A. With Answers, 2s. 6d.

**Arithmetic for Schools.** By S. L. LONEY, M.A. With and without Answers. 4s. 6d. Examples, 3s. Answers, 6d.

**Arithmetic for Schools.** By Rev. BARNARD SMITH, M.A. 4s. 6d. KEY, 8s. 6d.

\* \* \* *The same, Revised by Prof. W. H. Hutson, 4s. 6d.*

**Arithmetic for Schools.** By Rev. J. B. LOCK, M.A. New Edition, Revised and Enlarged. 4s. 6d. Examples, 3s. Answers, 6d. KEY, 10s. 6d.

**Arithmetic for Beginners.** By Rev. J. B. LOCK, M.A. 2s. 6d. KEY, 8s. 6d.

**Arithmetical Exercises and Examination Papers.** By H. S. HALL, M.A., and S. R. KNIGHT, B.A. 2s. 6d.

**Shilling Book of Arithmetic for National and Elementary Schools.** By Rev. BARNARD SMITH, M.A. Answers, 6d. With Answers, 1s. 6d. KEY, 4s. 6d.

**Rules and Examples in Algebra.** By Rev. T. DALTON, M.A. Part I., 2s. Part II., 2s. 6d. KEY to Part I., 7s. 6d.

**Algebraical Exercises.** By Rev. C. A. JONES, M.A., and C. H. CHEYNE, M.A. 2s. 6d. SOLUTIONS, 7s. 6d.

**Algebra for Beginners.** By I. TODHUNTER. New Edition, thoroughly Revised by S. L. LONEY, M.A. 3s. 6d. With Answers, 4s. 6d. KEY, 8s. 6d.

MACMILLAN & CO., LIMITED, ST. MARTIN'S STREET, LONDON, W.C.

London: Printed by C. F. HODGSON & SON, 2 Newton Street, High Holborn, W.C.; and Published by FRANCIS HODGSON, 89 Farringdon Street, E.C.

# Blackie's Illustrated Latin Series

**General Editor—Professor R. Y. TYRRELL, Litt.D.**

Examiner to the Universities of London and Glasgow, &c.

This new Series, issued under the editorship of Professor TYRRELL, is distinguished by several important features for the first time introduced into English school books.

Palladium, from the West Pediment of the Temple of Aigina. Sixth century B.C.

Illustrated with full-page coloured reproductions of vase paintings, &c.: photographs of bas-reliefs, statues, and famous paintings; and numerous black and white illustrations specially drawn for this Series. Crown 8vo, cloth.

THE PUBLISHERS WILL BE PLEASED TO SEND SPECIMEN COPIES TO TEACHERS WITH A VIEW TO INTRODUCTION.

**Eutropius.—Books I. and II.** Edited by W. CECIL LAMING, M.A., Classical Master in Edinburgh Academy. 1s. 6d.

**Livy.—Book V.** Edited by W. CECIL LAMING, M.A. 2s. 6d.

**Tacitus.—Agricola.** Edited by W. C. FLAMSTEAD WALTERS, M.A., formerly of Christ's College, New Zealand. 1s. 6d.

**Virgil.—Aeneid III.** Edited by Professor SANDFORD, M.A., Queen's College, Galway. 1s. 6d.

**Horace.—The Odes. Books I., II., III., and IV.** Edited by STEPHEN GWYNN, B.A., late Scholar and Hulmean Exhibitioner of Brasenose College, Oxford. 1s. 6d. each.

**Cicero.—The First Catiline Oration.** Edited by Professor C. H. KEENE, M.A., Queen's College, Cork. 1s. 6d.

**Cicero.—The Catiline Orations. (COMPLETE.)** Edited by C. H. KEENE, M.A. 2s. 6d.

**Sallust.—The Catiline Conspiracy.** Edited by the Rev. W. A. STONE, M.A., Assistant-Master in Bristol Grammar School. [In September.]

**Virgil.—Georgics I.** Edited by S. E. WINBOLT, M.A., Assistant-Master in Christ's Hospital. 1s. 6d. [In September.]

**Livy.—Book VI.** Edited by W. CECIL LAMING, M.A. [In September.]

## FORTHCOMING VOLUMES.

**Livy.—Book I.** Edited by Professor JOHN BROWN, Wellington University, New Zealand.

**Caesar.—The Gallic War. Books I. and V.** Edited by Professor JOHN BROWN.

**Livy.—Books XXI and XXII.** Edited by G. G. LOANE, M.A., Assistant-Master in St. Paul's School.

**Virgil.—Georgics II.** Edited by S. E. WINBOLT, M.A., Assistant-Master in Christ's Hospital.

**Virgil.—Aeneid VI.** Edited by H. B. COTTERILL, M.A., formerly Assistant-Master at Haileybury.

**Virgil.—Aeneid II.** Edited by Professor SANDFORD.

**Cicero.—Pro Lege Manilia.** Edited by W. J. WOODHOUSE, M.A., formerly Assistant-Lecturer in Classics, University College of North Wales.

Dardan Shepherds, wearing the tunic, Phrygian cap, cothurnus, and carrying the baculus.

# CAMBRIDGE UNIVERSITY PRESS.

## COLLEGE OF PRECEPTORS' EXAMINATIONS, 1900.

### THE PITT PRESS SHAKESPEARE FOR SCHOOLS.

*Athenaeum*.—"The Pitt Press Shakespeare can stand in competition with any of the numerous editions of the sort now showered upon reviewers."

*Guardian*.—"Mr. Verity is an almost ideal editor of school texts."

**As You Like It.** With Introduction, Notes, Glossary, and Index, by A. W. VERITY, M.A., sometime Scholar of Trinity College, Cambridge. 1s. 6d.

*Guardian*.—"Mr. Verity, the editor, has provided material for all sorts of students. For the beginner we have the notes and a reprint of Charles Lamb's outline of the story. For older readers we have copious extracts from Lotze's 'Rosalynde.' For the examinee, the etymologist, and the curious student, we have the glossary, the index of the important words and phrases, and the notes on metre and on the date and sources of the play. All of these aids evince patient research, accurate scholarship, and thoughtful judgment."

### CAMBRIDGE MILTON FOR SCHOOLS.

*Guardian*.—"This edition will, we feel sure, long continue to be the standard school text of 'Paradise Lost.'"

**Paradise Lost, Books III. and IV.** Edited, with Introduction and Notes, by A. W. VERITY, M.A. 2s.

### PITT PRESS SERIES.

AUTHOR.	WORK.	EDITOR.	PRICE.
Macaulay.....	Lays of Ancient Rome (with Ivory and The Armada) .....	J. H. Flather .....	s. d. 1 6
<i>School World</i> .—"In thorough keeping with the other volumes of this series, an evidence of patient labour, and no mean tribute to Macaulay himself. . . . The notes are brief and pointed, and two useful maps are appended. The introduction is brief, but exceedingly well done."			
Scott .....	Marmion .....	J. H. B. Masterman... ..	2 6
<i>Guardian</i> .—"Far and away the best school edition of the poem we have seen; and it will be difficult, probably impossible, to improve on it."			
Scott .....	Lay of the Last Minstrel .....	J. H. Flather .....	2 0
<i>Guardian</i> .—"It is one of the very best edited school-texts ever placed before the public."			
Caesar .....	De Bello Gallico, Books IV.-V. (Subject, Bk V.) .....	A. G. Peskett .....	1 6
" .....	De Bello Gallico, Book VI. ....	" .....	1 6

### CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

General Editor—W. H. WOODWARD, of Christ Church, Oxford; Principal of University (Day) Training College, Liverpool; and Lecturer on Education in Victoria University.

#### The Education of the Young in the Republic of Plato.

Translated into English, with Notes and Introduction, by B. BOSANQUET, M.A., LL.D., Author of "A Companion to Plato's Republic." Crown 8vo, 2s. 6d.

*Literature*.—"A scholarly translation, with notes and an introduction, sketching well and concisely the history of Greek education."

#### The Making of Character: some Educational Aspects of Ethics.

By JOHN MACCUNN, Balliol College, Oxford; Professor of Philosophy in University College, Liverpool. Crown 8vo, cloth, 2s. 6d.; cloth extra, gilt top, 3s. 6d.

*Literature*.—"An acute and thoughtful book."

#### A Short History of the Expansion of the British Empire, 1500-1870.

By W. H. WOODWARD, Christ Church, Oxford; now the Principal of University (Day) Training College, Liverpool, and Lecturer on Education in Victoria University. With 7 Maps. Crown 8vo, cloth, 4s.; cloth extra, gilt top, 5s.

*Athenaeum*.—"Thoroughly to be recommended."

#### Educational Aims and Methods. Lectures and Addresses by Sir

JOSHUA FITCH, M.A., LL.D., late Her Majesty's Inspector of Training Colleges, and Author of "Lectures on Teaching," "The Arnolds and their Influence on English Education." Crown 8vo, 5s.

*Speaker*.—"There is an admirable chapter on grammar schools, an account of Thring's life and work, and a discussion of the modern provision for women's education. The volume is full of instruction and suggestion for students of education in all its aspects."

### CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

*School Guardian*.—"Exact and scholarly, and at the same time simple, text-books. The University Press are to be congratulated upon having secured as editors such eminent scholars; their names are a guarantee of their work. These text-books will find their way into numberless preparatory schools and lower forms of public schools; they deal so thoroughly and clearly with the subject in each case that nothing better could be desired by master or pupil. Among others, there is this immense advantage: each volume is its own note-book and dictionary; the student, however elementary his knowledge, needs only the book in hand and a simple grammar."

The following editions have COMPLETE VOCABULARIES.

AUTHOR.	WORK.	EDITOR.	PRICE.
Caesar .....	De Bello Gallico, Books V. and VI. ....	E. S. Shuckburgh .....	each s. d. 1 6
Vergil .....	Aeneid, Books VI. and XII. ....	A. Sidgwick .....	" 1 6
Xenophon .....	Anabasis, Books III. and V. ....	G. M. Edwards .....	" 1 6

\*.\* *Cambridge Editions of Caesar, Vergil, and Xenophon*.—The attention of Schoolmasters is called to the fact that there are now two editions of some of the works of these authors in the *Pitt Press Series* and the *Cambridge Series for Schools and Training Colleges*. The Editions in the *Cambridge Series for Schools and Training Colleges* have *Complete Vocabulary*s. If, in ordering, the Edition required is not specified, the *Pitt Press Edition*, without vocabulary, will be sent.

### ENGLISH GRAMMAR.

New and Enlarged Edition (Thirty-sixth to Forty-fifth Thousand).

**The Elements of English Grammar.** By A. S. WEST, M.A., Trinity College, Cambridge. Fcap. 8vo, 2s. 6d.

*Prefatory Note to the Enlarged Edition*.—Some hundreds of additional Questions and Examples are given in the present edition, and in a few places the wording of the text has been altered. The numbers of the paragraphs remain the same.

*School World*.—"The larger work shows a master hand. It is adapted to the higher forms, and its historical survey contains just what is wanted for examination purposes. . . . Both books deserve a large sale."

**An English Grammar for Beginners.** By A. S. WEST, M.A. 1s.

*School World*.—"The smaller of these two works ought to be extensively used for the teaching of junior forms. Its matter is arranged with the greatest care, its explanations are full and easily adapted to juvenile intelligences. . . . Altogether the book is worthy of high commendation."

#### Geometrical Drawing. With Notes and Examples. By W. H.

BLYTHE, Jesus College. Part I. Plane and Elementary Solid. 2s. 6d.—Part II. Solid or Descriptive Geometry. 2s.

*Extract from Preface*.—"Part I. contains Plane Geometrical Drawing and Solid Geometry, so far as it is included in the Syllabus, Geometrical Drawing (Art), Subject 1A, page 231, *Science and Art Directory*, 1899. In Part II. is added a course of instruction in Solid Geometry suited to the Elementary Stage of Science Subjects as given on page 78 of the above Directory. This book will also be found of use to all Army Candidates."

#### Geometry for Young Beginners. An Introduction to Theoretical

and Practical Geometry. By F. W. SANDERSON, Headmaster of Oundle School. 1s. 4d.

### PITT PRESS SERIES.—NEW VOLUMES.

**Scott**.—*Old Mortality*. Edited, with Introduction, Notes, and Glossary. By J. A. NICKLIN. 2s. 6d.

**Caesar**.—*De Bello Civili. Book III.* Edited by A. G. PESKETT, M.A., Fellow of Magdalene College, Cambridge. 2s. 6d.

# CLASS LIST

## OF PUPILS WHO HAVE PASSED THE MIDSUMMER EXAMINATION OF THE COLLEGE OF PRECEPTORS.

[Throughout the following List, bracketing of names implies equality.]

- A MANUAL OF ENGLISH LITERATURE.** For the use of Colleges, Schools, and those preparing for Competitive Examinations. With an Appendix on Recent Literature, by Sir H. CRAIK, K.C.B., M.A., LL.D. From the larger work by Dr. CRAIK. Eleventh Edition. Crown 8vo, cloth, 7s. 6d.  
 "Needs no recommendation."—*The Spectator*.

LONDON: CHARLES GRIFFIN & CO., LTD., EXETER STREET, STRAND.

# PROFESSOR MEIKLEJOHN'S SERIES.

Crown 8vo, 410 pp. Price 2s. 6d.

## A SCHOOL GEOGRAPHY.

WITH SPECIAL REFERENCE TO COMMERCE AND HISTORY.

*With Maps and Diagrams.*

BY

J. M. D. MEIKLEJOHN, M.A., Professor of the Theory, History, and Practice of Education in the University of St. Andrews, AND  
 M. J. C. MEIKLEJOHN, B.A., sometime Adam de Brome Exhibitioner of Oriol College, Oxford; F.R.G.S.

"After examining this new production with both interest and care, the verdict is, perforce, 'admirable.'"—*The Teachers' Monthly*.

"In this, the latest work issued from 11 Paternoster Square, our expectations have been fully realized."—*The School Teacher*.

"It furnishes a useful step between the 'Short Geography' and the 'New Geography.' It is not an abridgment of the latter, but an entirely distinct work, written on the Comparative Method, and replete with useful and interesting information."—*The Practical Teacher*.

"This is a well-planned book, with many good features, and the promise of the title-page is sedulously fulfilled."—*The Educational Times*.

"The whole plan of the book has been carefully thought out, and as the result we have a good School Geography."—*The School Guardian*.

**A New Spelling Book.** With Side Lights from History. Eighth Edition. Crown 8vo, 152 pp. 1s.

"We agree with the main principle here followed—that spelling should be learnt through the eye rather than through the ear."—*The School Guardian*.

**The Spelling List.** For Civil Service and other Examinations. With a Key to Correct Spelling. Fourth Edition. Crown 8vo, 146 pp. 1s.

"Your 'Spelling List' is a very decided advance in the right direction, ably conceived and brilliantly written. We shall certainly strongly recommend it to our pupils."—*The Rev. H. P. Gurney, M.A. (Messrs. Wren & Gurney), Powis Square, London.*

**A New Poetry Book** for the Use of Schools and Families. Fourth Edition. 156 pp. 1s.

"This neatly bound little collection, which is one of Professor Meiklejohn's series of school manuals, may be confidently recommended to teachers in search of new selections for recitation."—*The Schoolmaster*.

**Fifty New Lessons in English.** Being a Historical Method of Parsing. By Professor J. M. D. MEIKLEJOHN, M.A. Crown 8vo, 102 pp. 1s. 6d.

"A very interesting little book of exercises in simple English philology."—*The Journal of Education*.

**The New Freehand Drawing Cards.** By FRANK G. JACKSON, of the Birmingham Municipal School of Art; Author of "Lessons in Decorative Art" and "Theory and Practice of Design." Standards III., IV., and V., 2s. each.  
 Standards VI. and VII., 2s. 6d. each.

"Nothing so good has yet been offered to teachers of drawing as this excellent series of cards."—*The Schoolmaster*.

LONDON: A. M. HOLDEN, 11 PATERNOSTER SQUARE.

# PROFESSOR MEIKLEJOHN'S SERIES.

## ARITHMETIC AND ALGEBRA.

**A New Arithmetic.** By G. A. CHRISTIAN, B.A. (Lond.) and G. COLLAR, B.A., B.Sc. (Lond.). Fourth Edition. Crown 8vo, 562 pp. 4s. 6d.

"We consider it so satisfactory that we have at once placed it on our list of books."—*Rev. G. H. S. Walpole, D.D., Principal, Bede College, Durham.*

**A Short Arithmetic.** By G. A. CHRISTIAN, B.A., and A. H. BAKER, B.A. Crown 8vo, 196 pp. 1s. With Answers, 1s. 6d.

"A book of well graduated examples, and just as much theory as will explain the methods of their solution."—*The Educational Times.*

**A School Algebra for Junior Forms.** By F. OSCAR LANE, B.Sc. Lond., Assistant-Master, King Edward's School, Birmingham. Crown 8vo, 232 pp. 1s. 6d. With Answers, 266 pp. 2s. 0d.

"A very trustworthy book for beginners, extending to indices, surds, and progressions."—*The University Correspondent.*

## COMPOSITION.

**The Art of Writing English.** A Manual for Students. With Chapters on Paraphrasing, Essay Writing, Précis Writing, Punctuation, and other matters. By J. M. D. MEIKLEJOHN, M.A. Second Edition. Crown 8vo, 340 pp. 2s. 6d.

"The Art of Writing English" teems with good advice."—*The Literary World.*  
"Whatever Prof. Meiklejohn writes is sure to be vigorous and racy, and, on the subject of English composition, he is peculiarly well qualified to speak."—*The Journal of Education.*

**One Hundred Short Essays in Outline.** By Professor MEIKLEJOHN. Second Edition. 110 pp. 1s. 0d.

"This is undoubtedly one of the most useful books for pupil teachers, Scholarship and Certificate students, ever produced."—*The Practical Teacher.*

**General Intelligence Papers; with Exercises in English Composition.** By GERALD BLUNT, M.A. Crown 8vo, 130 pp. 2s. 0d.

"This little book is likely to be very useful. It avoids the faults of so many books of the same class; the questions are not too difficult."—*Rev. Joseph Wood, D.D., Headmaster of Harrow School.*

## ENGLISH LANGUAGE.

**The English Language: its Grammar, History, and Literature.** By J. M. D. MEIKLEJOHN, M.A. Nineteenth Edition. Enlarged, with Exercises and additional Analyses. Crown 8vo, 470 pp. 4s. 6d.

"I gave it to a girl candidate for an English scholarship; she got first place, and valued the help she got from the book."—*W. Johnson, Esq., B.A., Elmfield College, York.*

**A New Grammar of the English Tongue.** With Chapter on Composition, Versification, Paraphrasing, and Punctuation. With Exercises and Examination Questions. Eighteenth Edition. Crown 8vo, 280 pp. 2s. 6d.

**A Short History of the English Language.** Crown 8vo, 76 pp. 1s. 0d.

**An Outline of the History of English Literature.** Crown 8vo, 110 pp. 1s. 6d.

**A Short Grammar of the English Tongue, with Three Hundred and Thirty Exercises.** Eleventh Edition. 1s. 0d.

This little book is written in the clearest and simplest style for beginners. It contains:—

- |                                 |   |
|---------------------------------|---|
| i. The Simplest Definitions.    | iv. Graduated Methods of Parsing.       |
| ii. Slowly graduated Exercises. | v. Bad Grammar Corrected, with Reasons. |
| iii. Clearly printed Tables.    | vi. Analysis, with Plain Diagrams.      |

## GEOGRAPHY.

**A New Geography on the Comparative Method.** With Maps and Diagrams and an Outline of Commercial Geography. By J. M. D. MEIKLEJOHN, M.A. Twenty-fourth Edition. 135th Thousand. Crown 8vo, 630 pp. 4s. 6d.

"A most useful manual for examiners, and full of stimulating matter for students of geography. Its picturesqueness of description and vividness of style make it almost as interesting and enjoyable reading as a book of travels."—*The Journal of Education.*

**A School Geography.** With special reference to Commerce and History. With Maps and Diagrams. By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 410 pp. 2s. 6d.

"This is a well-planned book, with many good features, and the promise of the title-page is sedulously fulfilled."—*The Educational Times.*

**A Short Geography, with the Commercial Highways of the World.** Sixteenth Edition. Crown 8vo, 196 pp. 1s. 0d.

"Terse, practical, informative, and statistic. This shilling Geography is exactly what a School Geography needs to be."—*The Teachers' Aid.*  
"Clearness and conciseness exemplified."—*The Private Schoolmaster.*

**The Comparative Atlas.** By J. G. BARTHOLOMEW, F.R.G.S., and Edited by Professor MEIKLEJOHN. Containing 64 Plates and a General Index. 2s. 6d.

"No atlas that we know at anything like the price gives so much so well."—*The Teachers' Monthly.*

**Europe: its Physical and Political Geography, with Chapters on Latitude and Longitude, Day and Night, and the Seasons.** With a Double-Page Map in Colour. By M. J. C. MEIKLEJOHN, B.A., F.R.G.S. 96 pp. 6d.

**Africa: its Geography, Resources, and Chronicle of Discovery up to 1897.** By M. J. C. MEIKLEJOHN, B.A. Oxon. Third Edition. Crown 8vo, 76 pp. 4d.

**The British Colonies and Dependencies: their Resources and Commerce.** With Chapters on the Interchange of Productions and Climatic Conditions. By M. J. C. MEIKLEJOHN, B.A. Third Edition. Crown 8vo, 96 pp. 6d.

**The United States: their Geography, Resources, Commerce, and History.** By M. J. C. MEIKLEJOHN, B.A. 92 pp. 6d.

**Australasia: its Geography, Resources, Commerce, and Chronicle of Discovery.** By M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 86 pp. 6d.

## HISTORY.

**A New History of England and Great Britain.** With Maps and Tables. By J. M. D. MEIKLEJOHN, M.A. Fourteenth Edition. Crown 8vo, 688 pp. 4s. 6d.

"I am very pleased with the concise statements and orderly marshalling of facts: such an improvement on our ordinary Histories."—*R. A. Little, Esq., M.A., The College, Buxton.*

**A New History of England and Great Britain.** With Maps and Tables. PART I.—From B.C. 55 to A.D. 1509. Ninth Edition. Crown 8vo, 320 pp. 2s. 6d.

**A New History of England and Great Britain.** Part II.—From 1509 to 1890. Tenth Edition. Crown 8vo, 380 pp. 2s. 6d.

**Outlines of the History of England and Great Britain to A.D. 1890.** Fifth Edition. Crown 8vo, 84 pp. 6d.

**A Short History of England and Great Britain.** B.C. 55 to A.D. 1890. Twelfth Edition. Crown 8vo 1s. 0d.

"In the 'Short History' there is plenty of anecdote, ballad, and stray gems of literature; and we find, though not with its usual emphasis, the Professor's expertness in the use and disposition of type."—*Education.*

LONDON: A. M. HOLDEN, 11 PATERNOSTER SQUARE, E.C.

# THE EDUCATIONAL TIMES,

AND  
**Journal of the College of Preceptors.**

Vol. LIII.] New Series, No. 473. SEPTEMBER 1, 1900. { Price to Non-Members, 6d.  
By Post, 7d.

YORK PLACE, BAKER STREET, W.

### DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.

(Recognized by the Cambridge Syndicate.)

Head of the Department—Miss H. ROBERTSON, B.A.

The Third Term of the Session 1900 begins on Thursday, October 4th.

The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge, held annually in December.

The Council will, in December, award a Gilchrist Travelling Studentship, value £70.

Full particulars on application to Miss ROBERTSON.

## THE MARIA GREY TRAINING COLLEGE FOR WOMEN TEACHERS,

SALTSBURY ROAD, BRONDESBURY, LONDON, N.W.

Principal—Miss ALICE WOODS.

A Full Course of Professional Training is offered to ladies who desire to become Teachers in Secondary Schools or in Kindergartens.

The Course for students preparing for the Cambridge Teachers' Certificate or for the London Teachers' Diploma begins in September or January, and lasts for one or two years. The Course for Kindergarten students preparing for the Higher Certificate of the National Froebel Union begins in September, and takes two years and one term.

Ample opportunities are given for Practice in Teaching in the School and Kindergarten of 150 pupils on the premises, as well as in other Schools.

The Winkworth Hall of Residence, close to the College, accommodates 20 students.

Scholarships to the amount of £230, from public and private sources, are annually awarded.

For all particulars as to qualifications for entrance, terms, scholarships, &c., apply to Miss ALICE WOODS, at the College.

## THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.

Principal—Miss M. PUNNETT, B.A. (Lond.).

The object of this College is to give a professional training to educated women who intend to teach. In addition to the course of training, it offers the advantages of a College life and one year's residence in Cambridge.

The Students attend the Cambridge University Lectures on Teaching, in addition to those of the Resident and Visiting Lecturers, and are prepared for the Cambridge Teachers' Certificate (Theory and Practice). Ample opportunity is given for practice in teaching science, languages, mathematics, and the other usual school subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Wollaston Road, Cambridge.

## HOME AND COLONIAL SCHOOL SOCIETY.

(Incorporated for Examination and Certificate purposes with the National Froebel Union.)

### TRAINING COLLEGE FOR SECONDARY TEACHERS.

HIGHBURY HILL HOUSE, LONDON, N.

Principal—The Rev. DAVID J. THOMAS, M.A.

Vice-Principal—Miss PENSTONE.

Students (Resident and Non-resident) trained for the Examinations of the National Froebel Union, and for the Teachers' Diploma of the College of Preceptors.

A High School for Girls, Transition Class, and Kindergarten are attached to the College for purposes of Demonstration and Practice.

## THE MIDDLESEX HOSPITAL MEDICAL SCHOOL.

The WINTER SESSION will open on Monday, October 1, at 5 p.m. T. CLIFFORD ALLBUTT, Esq., M.D., F.R.C.P., F.R.S., Regius Professor of Physic in the University of Cambridge, will distribute the prizes gained during the previous year, and deliver an Address. The ANNUAL DINNER of the Past and Present Students and their friends will take place the same evening at the Trocadero at 7 o'clock. Mr. W. LANG, F.R.C.S., in the Chair.

### HOSPITAL STAFF AND LECTURERS.

Consulting Physicians—Dr. S. Coupland, Sir R. Douglas Powell, Bart., M.D.

Physicians—Dr. Cayley, Dr. J. K. Fowler, Dr. W. Pasteur.

Assistant Physicians—Dr. W. E. Wynter, Dr. A. F. Voelcker, Dr. F. J. Wethered, Dr. H. C. Thomson.

Obstetric Physician—Dr. W. Duncan.

Assistant Obstetric Physician—Dr. R. Boxall.

Consulting Physician to the Skin Department—Dr. Robert Livinge.

Physician to the Skin Department—Dr. J. J. Pringle.

Consulting Surgeons—Mr. Nunn, Mr. George Lawson, Surgeons—Mr. Henry Morris, Mr. Andrew Clark, Mr. A. Penrice Gould.

Assistant Surgeons—Mr. J. Bland-Sutton, Mr. John Murray, and Mr. T. H. Killock.

Ophthalmic Surgeon—Mr. William Lang.

Aural Surgeon—Mr. Stephen Page.

Consulting Dental Surgeon—Mr. J. S. Turner.

Dental Surgeon—Mr. W. Hern.

Assistant Dental Surgeon—Mr. W. S. Nowell.

Other Lecturers—Dr. Robinson, Dr. Young, Dr. Kellas, Dr. W. J. Mickle, Dr. Crombie, Mr. A. G. R. Foulerton.

The Hospital contains 320 beds. There are Special Departments for Cancer, Syphilis, Diseases of Women and Children, Diseases of the Eye, Skin, Throat, and Ear, and for cases requiring Electrical treatment.

There are eighteen Resident Clinical Appointments open to Students of the Hospital annually.

Two open Entrance Scholarships (value £100 and £60) will be competed for on September 25, 26, and 27, and one Entrance Scholarship (value £60) in Anatomy and Physiology (open to Oxford and Cambridge Students only) on September 25 and 26. Notice in writing to be sent to the Dean on or before September 18.

Composition Fee 135 guineas, or by three yearly instalments of 60 guineas, 50 guineas, and 35 guineas.

Special terms are made in favour of University and other Students who have already commenced their medical studies, and of University of London Students who have passed the Preliminary Scientific Examination.

The New School Buildings, which provide large and fully equipped laboratories for Physiology, Pathology, and Bacteriology, as well as a new Dissecting Room and Chemical Department, are now in regular use.

The Residential College adjoining the Hospital provides accommodation for thirty Students.

For further information apply to

W. PASTEUR, M.D., Dean.

## GUY'S HOSPITAL MEDICAL SCHOOL.

The WINTER SESSION will begin on Monday, October 1st, 1900. Five Open ENTRANCE SCHOLARSHIPS of the combined value of £410 are offered for competition in September next, and numerous Prizes, Medals, and Scholarships are awarded annually.

The COLLEGE accommodates 60 residents, and contains Reading Rooms, Dining Hall, and Gymnasium for the general use of the students. During last year more than 7500 patients have been treated in the Wards of the Hospital. The Preliminary Scientific Class for Students who matriculated at London University in July will begin on October 1st. The Clubs' Union Athletic Ground at Honor Oak Park is easily accessible from the Hospital. A handbook of information for students about to enter the profession will be forwarded on application.

For further particulars, or Prospectus of the School, apply personally or by letter to the DEAN, Guy's Hospital, London Bridge, S.E.

## ST. BARTHOLOMEW'S HOSPITAL AND COLLEGE.

The WINTER SESSION will begin on Monday, October 1st, 1900.

Students can reside in the College within the Hospital walls subject to the collegiate regulations.

The Hospital contains a service of 750 beds.

Scholarships and prizes of the aggregate value of nearly £900 are awarded annually.

The Medical School contains large Lecture Rooms and well-appointed Laboratories for practical teaching, as well as Dissecting Rooms, Museum, Library, &c.

The Amalgamated Clubs Ground (ten acres) is at Winchmore Hill, within easy reach of the Hospital.

For further particulars apply personally or by letter to the WARDEN of the College, St. Bartholomew's Hospital, E.C. A handbook forwarded on application.

LADY, experienced, good teacher, desires Re-engagement. Has attended Training Lectures at College of Preceptors, and passed all subjects but two for A.C.P. Diploma. Usual subjects: Drawing (certificated South Kensington), Needlework, Kindergarten.—Brixton, 277 Brixton Road, Brixton, S.W.

*Professors.*

Mechanical Engineering	T. Hudson Beare, M.I.C.E.
Electrical Engineering	J. A. Fleming, D.Sc., F.R.S.
Municipal Engineering	Osbert Chadwick, M.I.C.E., C.M.G.
Civil Engineering	L. F. Vernon Harcourt, M.I.C.E.
Architecture	T. Roger Smith, F.R.I.B.A.
Physics	H. L. Callendar, F.R.S.
Chemistry	W. Ramsay, F.R.S.
Applied Mathematics	K. Pearson, F.R.S.
Economic Geology	T. G. Bonney, F.R.S.
Mathematics	M. J. M. Hill, F.R.S.

The New Wing of the College, opened by H.R.H. the Duke of Connaught in May, 1893, contains spacious Mechanical and Electrical Engineering Laboratories, Workshops, Drawing Office, Museum and Lecture Theatres. The Laboratories are fitted with all the best appliances for practical work and for research work of the most advanced character.

**ST. THOMAS'S HOSPITAL MEDICAL SCHOOL,**

ALBERT EMBANKMENT, LONDON, S.E.

The **WINTER SESSION** of 1900-1901 will open on Tuesday, October 2, when the prizes will be distributed at 3 p.m. by Sir **WILLIAM MACCORMAC, Bart., K.C.V.O.,** in the Governors' Hall.

Three Entrance Scholarships will be offered for competition in September, viz., one of £150 and one of £60, in Chemistry and Physics, with either Physiology, Botany, or Zoology, for First Year's Students; one of £50 in Anatomy, Physiology, Chemistry (any two) for Third Year's Students from the Universities.

Scholarships and Money Prizes of the value of £300 are awarded at the Sessional Examinations, as well as several Medals.

Special Classes are held throughout the year for the Preliminary Scientific and Intermediate M.B. Examinations of the University of London.

All Hospital Appointments are open to students without charge.

Club-rooms and an Athletic Ground are provided for students.

The School Buildings and the Hospital can be seen on application to the Medical Secretary.

The fees may be paid in one sum or by instalments. Entries may be made separately to Lectures or to Hospital Practice, and special arrangements are made for students entering from the Universities and for Qualified Practitioners.

A Register of approved lodgings is kept by the Medical Secretary, who also has a list of local Medical Practitioners, Clergymen, and others who receive students into their houses.

For Prospectus and all particulars apply to **Mr. RENDLE, the Medical Secretary.**

H. G. TURNEY, M.A., M.D., Oxon., Dean.

**UNIVERSITY OF ABERDEEN.**  
**FACULTY OF MEDICINE.**  
 WINTER SESSION, 1900-1901.

The WINTER SESSION commences on Tuesday, October 16, 1900. The Preliminary Examination will commence on September 29.

The Degrees in Medicine granted by the University are—Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), Master of Surgery (Ch.M.). They are conferred only after examination, and only on Students of the University. A Diploma in Public Health is conferred, after Examination, on Graduates in Medicine of any University in the United Kingdom.

The total cost for the whole curriculum, including Hospital Fees and Fees for the Degrees of M.B. and Ch.B., is usually about £120. Bursaries, Scholarships, Fellowships, and Prizes, to the number of 50, and of the aggregate annual value of £1,185, are open to Competition in this Faculty.

A Prospectus of the Classes, Fees, &c., may be had free on application to the SECRETARY OF THE MEDICAL FACULTY.

The University also grants the following Degrees in Arts, Science, Divinity, and Law:—In Arts: Doctor of Letters, Doctor of Philosophy, and Master of Arts. In Science: Doctor of Science, Bachelor of Science (in Pure Science and in Agriculture). In Divinity: Doctor of Divinity (Honorary) and Bachelor of Divinity. In Law: Doctor of Laws (Honorary) and Bachelor of Law (B.L.).

Particulars may be had on application to the SECRETARY OF FACULTIES.

**UNIVERSITY OF ST. ANDREWS.**  
 UNIVERSITY HALL.

RESIDENCE FOR WOMEN STUDENTS.

Warden—MISS FRANCES H. MELVILLE, M.A., with First Class Honours in Mental Philosophy.

The Hall accommodates twenty-five Women Students. There are some vacancies for next Session.

Students are received in residence during the Preliminary and other University Examinations in September.

The Classes and Degrees of the University, and some Bursaries and Scholarships, are open to Women.

For further information apply to the WARDEN, University Hall, St. Andrews, N.B.

**CAMBRIDGE TRAINING COLLEGE**  
 FOR WOMEN TEACHERS.

The Council are about to appoint a LECTURER for January next. Stipend from £90 to £120, and residence. Special knowledge of Languages or Science required. Applications, with fifteen copies of testimonials, should be sent by October 13th, to the PRINCIPAL, Cambridge Training College, Wollaston Road, Cambridge, from whom further particulars may be obtained.

**ARMY SCHOOLMASTERS.**—There are a few vacancies in the Corps of Army Schoolmasters. Civilian Schoolmasters only will be accepted who have passed on second year's papers in the First or Second Division, or who hold a certificate, qualifying them to superintend pupil teachers, from the Board of Education. Students in Training Colleges will also be accepted under certain conditions. Candidates must not be over twenty-four years of age. Further particulars can be obtained on application, in writing, to the DIRECTOR OF ARMY SCHOOLS, War Office, London, S.W.

**JOINT AGENCY FOR WOMEN TEACHERS.**

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families: Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged. Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

**JOINT AGENCY FOR ASSISTANT-MASTERS.**

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. P. TAYLOR, M.A. Cantab.

The Joint Agency for Assistant-Masters and Tutors is under the management of a Joint Committee composed of representatives of the following Bodies:—

Headmasters' Conference.  
 Incorporated Association of Headmasters.  
 College of Preceptors,  
 Teachers' Guild.  
 Welsh County Schools' Association.  
 Private Schools' Association.  
 Association of Headmasters of Preparatory Schools.  
 Association of Headmasters of Roman Catholic Schools.  
 Assistant-Masters' Association.  
 Association of Technical Institutions.  
 &c. &c.

As the Agency is not working with a view to profit, but to benefit Assistant-Masters, the rates of commission are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m., Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

**GIRLS' GRAMMAR SCHOOL.**

BRISBANE, QUEENSLAND.—Required, for February, 1901, Resident MUSIC MISTRESS. Special subjects: Piano, Theory, Harmony, Class Singing. Applicants must have high qualifications and successful experience in the preparation of pupils for the Practical and Theoretical Examinations of the R.A.M. and Trinity College Junior, Senior, and Higher Divisions. Salary £150 and residence. Passage money advanced if desired. Applications, stating age, full particulars of qualifications and experience in above and any other subjects, with copies of testimonials, to be sent on or before September 20, to the AGENT-GENERAL FOR QUEENSLAND, 1 Victoria Street, S.W., from whom further information can be obtained.

**HINTS ON FRENCH SYNTAX.**

By F. STORR,

Chief Master of Modern Subjects in Merchant Taylors' School.

"The merit of the book is its simplicity and brevity, and we have no hesitation in saying that these *Hints* would prove a valuable supplement to any grammar that might be in use. . . . Neatly printed in clear, bold type, and interleaved throughout, this book is one we can confidently recommend not only to teachers for class use, but as an invaluable aid to students preparing for the Scholarship, Certificate, and London Matriculation Examinations."—*The Practical Teacher*, January, 1900.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

**OXFORD LOCAL SHAKESPEARE, 1901.**

DINGLEWOOD SHAKESPEARE MANUALS, BY STANLEY WOOD, M.A.

**HENRY THE FIFTH, QUESTIONS AND NOTES. 1s.**

"A little brochure of some fifty pages, which will suggest some useful thoughts to masters teaching the play."—*Journal of Education*.

**MERCHANT OF VENICE, QUESTIONS AND NOTES. 1s.**

"Cannot but prove useful to candidates for whom these plays are set."—*Scotsman*.

**CAMBRIDGE LOCAL SHAKESPEARE, 1900.**

**AS YOU LIKE IT, QUESTIONS AND NOTES. 1s.**

"They will tend rather to discourage 'gram' than otherwise. . . . We can recommend the book as a distinctly useful 'aid.'"—*Guardian*.

Each of the Manuals contains about 250 Questions, of which all the most difficult (about one-third of the whole number) are fully answered as models.

**STEEL PENS.**

Professor **MEIKLEJOHN'S** SERIES.

Just Published. Crown 8vo, 120 pp. 1s.

**A FIRST FRENCH BOOK.**

BY

J. DE CUSANCE.

"It is an uncommonly good French grammar, full of valuable material, and will make a thoroughly practical text-book."—*The Educational News.*

"The merit of these lessons is that the sentences illustrating the rules are sensible, short, and of the kind continually employed in daily conversation."—*The Girls' and Infants' Mistress.*

SPECIMEN PAGES ON APPLICATION.

**A New Spelling Book.** With Side Lights from History—  
Eighth Edition. Crown 8vo, 152 pp. . . . . 1s.

"We agree with the main principle here followed—that spelling should be learnt through the eye rather than through the ear."—*The School Guardian.*

**The Spelling List.** For Civil Service and other Examinations. With a Key to Correct Spelling. Fourth Edition. Crown 8vo, 146 pp. . . . . 1s.

"Your 'Spelling List' is a very decided advance in the right direction, ably conceived and brilliantly written. We shall certainly strongly recommend it to our pupils."—*The Rev. H. P. Gurney, M.A. (late of Messrs. Wren & Gurney), Powis Square, London.*

**A New Poetry Book** for the Use of Schools and Families.  
Fourth Edition. 156 pp. . . . . 1s.

"This neatly bound little collection, which is one of Professor Meiklejohn's series of school manuals, may be confidently recommended to teachers in search of new selections for recitation."—*The Schoolmaster.*

**Fifty New Lessons in English.** Being a Historical Method of Parsing. By Professor J. M. D. MEIKLEJOHN, M.A. Crown 8vo, 102 pp. . . . . 1s. 6d.

"A very interesting little book of exercises in simple English philology."—*The Journal of Education.*

"In the fifty lessons here given, Professor Meiklejohn has demonstrated fully and ably that it is possible to make the examination of the words of a simple sentence a most interesting process."—*The Practical Teacher.*

**The New Freehand Drawing Cards.** By FRANK G. JACKSON, of the Birmingham Municipal School of Art; Author of "Lessons in Decorative Art" and "Theory and Practice of Design." Sets III., IV., and V., 2s. each.  
Sets VI. and VII., 2s. 6d. each.

"Nothing so good has yet been offered to teachers of drawing as this excellent series of cards."—*The Schoolmaster.*

LONDON: A. M. HOLDEN, 11 PATERNOSTER SQUARE.

# PROFESSOR MEIKLEJOHN'S SERIES.

## ARITHMETIC AND ALGEBRA.

**A New Arithmetic.** By G. A. CHRISTIAN, B.A. (Lond.), and G. COLLAR, B.A., B.Sc. (Lond.). **Fourth Edition.** Crown 8vo, 562 pp. . . . . 4s. 6d.

"We consider it so satisfactory that we have at once placed it on our list of books."—*Rev. G. H. S. Walpole, D.D., Principal, Bede College, Durham.*

**A Short Arithmetic.** By G. A. CHRISTIAN, B.A., and A. H. BAKER, B.A. Crown 8vo, 196 pp. . . . . 1s. With Answers, 1s. 6d.

"A book of well graduated examples, and just as much theory as will explain the methods of their solution."—*The Educational Times.*

**A School Algebra for Junior Forms.** By F. OSCAR LANE, B.Sc. Lond., Assistant Master, King Edward's School, Birmingham. Crown 8vo, 232 pp. . . . . 1s. 6d. With Answers, 266 pp. 2s. 0d.

"A very trustworthy book for beginners, extending to indices, surds, and progressions."—*The University Correspondent.*

## COMPOSITION.

**The Art of Writing English.** A Manual for Students. With Chapters on Paraphrasing, Essay Writing, Précis Writing, Punctuation, and other matters. By J. M. D. MEIKLEJOHN, M.A. **Second Edition.** Crown 8vo, 340 pp. . . . . 2s. 6d.

"The Art of Writing English' teems with good advice."—*The Literary World.*  
"Whatever Prof. Meiklejohn writes is sure to be vigorous and racy, and, on the subject of English composition, he is peculiarly well qualified to speak."—*The Journal of Education.*

**One Hundred Short Essays in Outline.** By Professor MEIKLEJOHN. **Second Edition.** 110 pp. . . . . 1s. 0d.

"This is undoubtedly one of the most useful books for pupil teachers, Scholarship and Certificate students, ever produced."—*The Practical Teacher.*

**General Intelligence Papers;** with Exercises in English Composition. By GERALD BLUNT, M.A. Crown 8vo, 130 pp. 2s. 0d.

"This little book is likely to be very useful. It avoids the faults of so many books of the same class; the questions are not too difficult."—*Rev. Joseph Wood, D.D., Headmaster of Harrow School.*

## ENGLISH LANGUAGE.

**The English Language:** its Grammar, History, and Literature. By J. M. D. MEIKLEJOHN, M.A. **Nineteenth Edition.** Enlarged, with Exercises and additional Analyses. Crown 8vo, 470 pp. . . . . 4s. 6d.

"I gave it to a girl candidate for an English scholarship; she got first place, and valued the help she got from the book."—*W. Johnson, Esq., B.A., Elmfield College, York.*

**A New Grammar of the English Tongue.** With Chapter on Composition, Versification, Paraphrasing, and Punctuation. With Exercises and Examination Questions. **Eighteenth Edition.** Crown 8vo, 280 pp. . . . . 2s. 6d.

**A Short History of the English Language.** Crown 8vo, 76 pp. . . . . 1s. 0d.

**An Outline of the History of English Literature.** Crown 8vo, 110 pp. . . . . 1s. 6d.

**A Short Grammar of the English Tongue,** with Three Hundred and Thirty Exercises. **Eleventh Edition.** . . . . 1s. 0d.

This little book is written in the clearest and simplest style for beginners. It contains:—

- |                                 |   |
|---------------------------------|---|
| i. The Simplest Definitions.    | iv. Graduated Methods of Parsing.       |
| ii. Slowly graduated Exercises. | v. Bad Grammar Corrected, with Reasons. |
| iii. Clearly printed Tables.    | vi. Analysis, with Plain Diagrams.      |

## GEOGRAPHY.

**A New Geography on the Comparative Method.** With Maps and Diagrams and an Outline of Commercial Geography. By J. M. D. MEIKLEJOHN, M.A. **Twenty-fourth Edition.** 135th Thousand. Crown 8vo, 630 pp. . . . . 4s. 6d.

"A most useful manual for examiners, and full of stimulating matter for students of geography. Its picturesqueness of description and vividness of style make it almost as interesting and enjoyable reading as a book of travels."—*The Journal of Education.*

**A School Geography.** With special reference to Commerce and History. With Maps and Diagrams. By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 410 pp. . . . . 2s. 6d.

"This is a well-planned book, with many good features, and the promise of the title-page is sedulously fulfilled."—*The Educational Times.*

**A Short Geography,** with the Commercial Highways of the World. **Sixteenth Edition.** Crown 8vo, 196 pp. . . . . 1s. 0d.

"Terse, practical, informative, and statistic. This shilling Geography is exactly what a School Geography needs to be."—*The Teachers' Aid.*  
"Clearness and conciseness exemplified."—*The Private Schoolmaster.*

**The Comparative Atlas.** By J. G. BARTHOLOMEW, F.R.G.S., and Edited by Professor MEIKLEJOHN. Containing 64 Plates and a General Index . . . . . 2s. 6d.

"No atlas that we know at anything like the price gives so much so well."—*The Teachers' Monthly.*

**Europe:** its Physical and Political Geography, with Chapters on Latitude and Longitude, Day and Night, and the Seasons. With a Double-Page Map in Colour. By M. J. C. MEIKLEJOHN, B.A., F.R.G.S. 96 pp. . . . . 6d.

**Africa:** its Geography, Resources, and Chronicle of Discovery up to 1897. By M. J. C. MEIKLEJOHN, B.A. Oxon. **Third Edition.** Crown 8vo, 76 pp. . . . . 4d.

**The British Colonies and Dependencies:** their Resources and Commerce. With Chapters on the Interchange of Productions and Climatic Conditions. By M. J. C. MEIKLEJOHN, B.A. **Third Edition.** Crown 8vo, 96 pp. . . . . 6d.

**The United States:** their Geography, Resources, Commerce, and History. By M. J. C. MEIKLEJOHN, B.A. 92 pp. 6d.

**Australasia:** its Geography, Resources, Commerce, and Chronicle of Discovery. By M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 86 pp. . . . . 6d.

## HISTORY.

**A New History of England and Great Britain.** With Maps and Tables. By J. M. D. MEIKLEJOHN, M.A. **Fourteenth Edition.** Crown 8vo, 688 pp. . . . . 4s. 6d.

"I am very pleased with the concise statements and orderly marshalling of facts: such an improvement on our ordinary Histories."—*R. A. Little, Esq., M.A., The College, Buxton.*

**A New History of England and Great Britain.** With Maps and Tables. PART I.—From B.C. 55 to A.D. 1509. **Ninth Edition.** Crown 8vo, 320 pp. . . . . 2s. 6d.

**A New History of England and Great Britain.** Part II.—From 1509 to 1890. **Tenth Edition.** Crown 8vo, 380 pp. . . . . 2s. 6d.

**Outlines of the History of England and Great Britain** to A.D. 1890. **Fifth Edition.** Crown 8vo, 84 pp. . . . . 6d.

**A Short History of England and Great Britain.** B.C. 55 to A.D. 1890. **Twelfth Edition.** Crown 8vo . . . . . 1s. 0d.

"In the 'Short History' there is plenty of anecdote, ballad, and stray gems of literature: and we find, though not with its usual emphasis, the Professor's expertness in the use and disposition of type."—*Education.*

# Bell's Illustrated Classics.

Edited by E. C. MARCHANT, M.A., late Classical Master at St. Paul's School.

Full Illustrated Prospectus of this Series post free on application.

THE special object of this Series is to make the editions as interesting and helpful as possible to the intelligent learner; and, with this object, numerous Illustrations have been introduced. Though based on authentic sources, these are not mere copies of antiquities, such as are to be found in every Classical Dictionary, but pictures drawn with a view to bringing the reality of Greek and Roman life before the reader.

Photographic views of places, as well as Maps and Plans, are also freely introduced.

The volumes are equipped with Introductions, Notes, Grammatical Appendices, and, in some of the prose authors, Exercises on the Text. Vocabularies are also given, but the volumes may be had without the Vocabularies if preferred.

The volumes are printed at the Oxford University Press, post 8vo, and are issued in three forms:

1. With Notes and Vocabulary complete, 1s. 6d.
2. Without Vocabulary, 1s. 6d.
3. With Vocabulary, but without Notes, 1s.

THE FOLLOWING VOLUMES ARE NOW READY, UNLESS OTHERWISE STATED:—

- Caesar. De Bello Gallico.—Book I.** Edited by A. C. LIDDELL, M.A., Assistant-Master at the High School, Nottingham. With Exercises.
- Caesar. De Bello Gallico.—Book II.** Edited by A. C. LIDDELL, M.A. With Exercises.
- Caesar. De Bello Gallico.—Book III.** Edited by F. H. COLSON, M.A., Headmaster of Plymouth College, and G. M. GWYTHER, M.A., Assistant-Master.
- Caesar. De Bello Gallico.—Book IV.** Edited by the Rev. A. W. UPCOTT, M.A., Headmaster of St. Edmund's School, Canterbury.
- Caesar. De Bello Gallico.—Book V.** Edited by A. REYNOLDS, M.A., Assistant-Master at Merchant Taylors' School. With Exercises.
- Caesar. De Bello Gallico.—Book VI.** Edited by J. T. PHILLIPSON, M.A., Headmaster of Christ's College, Finchley. With Exercises.
- Cicero Speeches against Catiline, I. and II.** Edited by F. HERRING, M.A., Assistant-Master at Blundell's School, Tiverton. With Exercises.
- Selections from Cicero.** Edited by J. F. CHARLES, B.A., Assistant-Master at the City of London School. With Exercises.
- Cornelius Nepos. Epaminondas, Hannibal, Cato.** Edited by H. L. EARL, M.A., Assistant-Master at the Grammar School, Manchester.
- Enropius.—Books I. and II.** Edited by J. G. SPENCER, B.A., Assistant-Master at St. Paul's Preparatory School.
- Horace's Odes.—Book I.** Edited by C. G. BOTTING, B.A., Assistant-Master at St. Paul's School.
- Horace's Odes.—Book II.** Edited by C. G. BOTTING, B.A. [Preparing.]
- Horace's Odes.—Book III.** Edited by H. LATTER, M.A., Assistant-Master at Cheltenham College.
- Livy.—Book IX., cc. i.—xix.** Edited by W. C. FLAMSTEAD WALTERS, M.A., Lecturer in Classics at University College, Cardiff, formerly Composition Master at Christ's College, New Zealand.
- Hannibal's First Campaign in Italy.** Selected from Livy, Book XXI., and edited by F. E. A. TRAYES, M.A., Assistant-Master at St. Paul's School.
- Ovid's Metamorphoses.—Book I.** Edited by G. H. WELLS, M.A., Merchant Taylors' School.
- Selection from Ovid's Metamorphoses.** Edited, with Introduction and Notes, by J. W. E. PEARCE, M.A., Morton Court Preparatory School, Sidcup; formerly Assistant-Master at University College School, London.
- Ovid's Tristia.—Book III.** Edited by H. R. WOOLRYCH, M.A., Headmaster of Blackheath School.
- Phaedrus. A Selection.** Edited by the Rev. R. H. CHAMBERS, M.A., Headmaster of Christ's College, Brecon.
- Stories of Great Men.** Edited by the Rev. F. CONWAY, M.A., Assistant-Master at Merchant Taylors' School.
- Vergil's Aeneid.—Book I.** Edited by the Rev. E. H. ESCOTT, M.A., Assistant-Master at Dulwich College.
- Vergil's Aeneid.—Book II.** Edited by L. D. WAINWRIGHT, M.A., Assistant-Master at St. Paul's School.
- Vergil's Aeneid.—Book III.** Edited by L. D. WAINWRIGHT, M.A.
- Vergil's Aeneid.—Book IV.** Edited by A. S. WARMAN, B.A., Assistant-Master at the Grammar School, Manchester.
- Vergil's Aeneid.—Book VI.** Edited by J. T. PHILLIPSON, M.A., Headmaster of Christ's College, Finchley.
- Vergil. Selection from Aeneid, Books VII.—XII.** Edited by W. G. COAST, B.A., Assistant-Master at Fettes College.
- Xenophon's Anabasis.—Book I.** Edited by E. C. MARCHANT, M.A.
- Xenophon's Anabasis.—Book II.** Edited by E. C. MARCHANT, M.A.

## BELL'S ILLUSTRATED CLASSICS.

INTERMEDIATE SERIES. With numerous Illustrations and Maps. Crown 8vo.

- Caesar's Seventh Campaign in Gaul, B.C. 52. DE BELLO GALLICO.** Lib. VII. Edited, with Notes, Excursus, and Tables of Idioms, by the Rev. W. COOKWORTHY COMPTON, M.A., Headmaster of Dover College. Fourth Edition. 2s. 6d. net.
- "Mr. Compton has made an admirable effort. His maps are excellent. . . . The general character of the notes is excellent. After the notes are appended a few pages of 'idioms,' intended to teach the boys how to turn Latin into real English. We have seen few better bits of educational work than these idioms."—*Guardian*.
- "A really admirable class book. No one ought to find Caesar dull with these illustrations."—*Spectator*.
- Sophocles' Antigone.** Edited, with Introduction and Notes, by G. H. WELLS, M.A., Assistant-Master at Merchant Taylors' School. With numerous Illustrations. 3s. 6d.
- The Athenians in Sicily.** Being portions of Thucydides, Books VI. and VII. Edited, with Introduction and Notes, by Rev. W. COOKWORTHY COMPTON, M.A., Headmaster of Dover College. With numerous Illustrations and Maps. [In the Press.]
- Livy.—Book XXI.** Edited, with Introduction and Notes, by F. E. A. TRAYES, M.A., Assistant-Master at St. Paul's School. With numerous Illustrations and Maps. [Preparing.]

## BELL'S ILLUSTRATED LATIN READERS.

Uniform with the ILLUSTRATED CLASSICS. Price One Shilling each.

for Advanced Pupils. An Appendix contains a List of Subjects set for Woolwich  
and Sandhurst.

## BELL'S SCIENCE SERIES.

New Volumes.

Edited by PERCY GROOM, M.A., and Prof. G. M. MINCHIN, M.A., F.R.S.

**AN INTRODUCTION TO THE STUDY OF THE COMPARATIVE  
ANATOMY OF ANIMALS.** By GILBERT C. BOURNE, M.A., F.L.S., Fellow and  
Tutor of New College, Oxford; University Lecturer in Comparative Anatomy.

Vol. I.—Animal Organization. The Protozoa and Coelenterata. Crown 8vo.  
Illustrated, 288 pages, price 4s. 6d.

"His book is simply charming, and well worthy his reputation; and, while its  
literary style should alone ensure for it a wide circulation, it cannot fail to exercise  
a leavening and humanizing influence on the youthful mind."—*Nature*.

**THE STUDENT'S DYNAMICS.** Comprising Statics and Kinetics.  
By G. M. MINCHIN, M.A., F.R.S., Professor of Applied Mathematics in the  
Royal Indian Engineering College, Cooper's Hill. Crown 8vo, 3s. 6d.

Second Edition. Pott 8vo, 1s.

**FIRST EXERCISES IN LATIN PROSE.** By E. A. WELLS, M.A.,  
Highfield School, Southampton.

"A neat little Latin book, original and withal practical. A boy well drilled in its  
methods cannot fail to get a reasonable hold on Latin idiom."—*School Guardian*.

New Edition, thoroughly Revised, with New Figures throughout.

**THE ELEMENTS OF EUCLID.** (Books I.-VI., and part of  
Book XI.) Newly translated from the Greek Text, with Supplementary Propo-  
sitions, Chapters on Modern Geometry, and numerous Exercises. By HORACE  
DIGHTON, M.A., formerly Scholar of Queens' College, Cambridge, Headmaster  
of Harrison College, Barbados. Complete. Crown 8vo, 4s. 6d. Or in Parts:—  
Book I., 1s. Books I. and II., 1s. 6d. Books I., II., and III., 2s. 6d. Books  
I.-IV., 3s. Books III. and IV., 1s. 6d. Books V., VI., XI., &c., 2s. 6d. Key  
(for Teachers only), 5s. net.

WORKS BY

## CHARLES PENDLEBURY, M.A.,

Chief Mathematical Master at St. Paul's School.

**ARITHMETIC FOR SCHOOLS.** Twelfth Edition. Complete, with  
or without Answers, 4s. 6d.; or in Two Parts, 2s. 6d. each. Key to Part II.,  
7s. 6d. net.

**EXAMPLES IN ARITHMETIC.** 8,000 Examples extracted from  
the above Arithmetic. Tenth Edition, with or without Answers, 3s.; or in  
Two Parts, 1s. 6d. and 2s.

**A SHILLING ARITHMETIC.** Second Edition. Small crown 8vo,  
192 pages. Cloth, 1s.; or, with Answers, 1s. 4d. The Answers may be had  
separately, 4d. net.

This book is intended for the lower and middle forms of secondary schools. It  
will be found adapted especially for the use of candidates for the Oxford and  
Cambridge Junior Local Examinations, the Scottish Universities' Locals, County  
Council Scholarships, and for examinations conducted by the College of Preceptors,  
the Board of Intermediate Education for Ireland, &c., &c.

**ELEMENTARY ARITHMETIC.** Fifth Edition. Crown 8vo, 1s. 6d.,  
with or without Answers.

This book is essentially one for beginners, and is intended to serve as an intro-  
duction to the "Arithmetic for Schools." The examples and problems for written  
work are very abundant, and have been carefully graduated; and the numerous  
sets of examples for use in oral teaching form a very important feature. All the  
examples are different from those in the advanced book.

**COMMERCIAL ARITHMETIC.** Second Edition. Crown 8vo, 250  
pages, 2s. 6d.

This book is based upon Mr. Pendlebury's "Arithmetic for Schools," and upon  
the scheme suggested by the Education Department for students in Evening  
Continuation Classes. It also meets the requirements of pupils on the modern  
or mercantile side of secondary schools who may be preparing for a business career.

**COMMERCIAL ARITHMETIC.** Part I. Crown 8vo, 1s.

**GRADUATED ARITHMETIC.** For Private and Junior Schools. In  
cloth. Parts I., II., and III., 3d. each; IV., V., and VI., 4d. each; VII., 6d.  
Answers to Parts I. and II., 4d.; III., IV., V., VI., and VII., 4d. each.

**LONG TOTS AND CROSS TOTS (Simple and Compound).** Con-  
taining 864 Sums for the use of Pupils in Evening Continuation Schools and  
Day Schools under the Education Department. Price, 2d.; in cloth, 3d.  
Answers, cloth, 4d.

**EXAMINATION PAPERS IN ARITHMETIC.** Fourth Edition.  
Crown 8vo, 2s. 6d. Key, 5s. net.

This volume contains, in the first place, 140 papers, each consisting of seven  
straightforward questions; and, in the second place, a collection of 357 more  
difficult problems. In the third portion of the book are copies of the arithmetic  
papers set at some of the most recent examinations.

**ELEMENTARY TRIGONOMETRY.** Second Edition, Revised.  
Crown 8vo, 4s. 6d.

**A SHORT COURSE OF ELEMENTARY PLANE TRIGONOMETRY.**  
Crown 8vo, 2s. 6d.

This Short Course of Elementary Plane Trigonometry is intended for the use of  
Junior Students and of those others who do not require so complete a knowledge of  
the subject as would be obtained from a study of the author's larger work. In its  
range this book will be found sufficient for Candidates for the Oxford and Cambridge  
Local Examinations, the College of Preceptors, the Cambridge Previous Examina-  
tion, the London Intermediate Examination in Arts, the Science and Art Examina-  
tions, College Entrance Examinations, and other examinations of the same character.

# MACMILLAN & CO.'S

**Text-Books for the Oxford and Cambridge Local Exams., the Oxford and Cambridge Schools Exams., London University, and College of Preceptors Exams.**

## LATIN.

- MACMILLAN'S ELEMENTARY LATIN-ENGLISH DICTIONARY.** By Rev. G. H. NALL, M.A. 3s. 6d.  
**ENGLISH-LATIN AND LATIN-ENGLISH DICTIONARIES.** By Prof. C. D. YONGE. Each sold separately, 3s. 6d.; or, complete, 7s. 6d.  
**MACMILLAN'S LATIN COURSE.** By A. M. COOK, M.A., and W. E. P. PANTIN, M.A. First Part, 3s. 6d. Second Part, 4s. 6d.  
**MACMILLAN'S SHORTER LATIN COURSE.** Being an Abridgement of Macmillan's Latin Course. First Part, 1s. 6d. KEY, 4s. 6d. net. Second Part, 2s. KEY, 4s. 6d. net.  
**MEISSNER'S LATIN PHRASE BOOK.** Translated by H. W. AUDEN, M.A. 4s. 6d.  
**CÆSAR.—THE GALLIC WAR.** By Rev. JOHN BOND, M.A., and Rev. A. S. WALPOLE, M.A. 4s. 6d.  
 — With Notes and Vocabulary. **Book IV.** By CLEMENT BRYANS, M.A. 1s. 6d. **Book V.** By C. COLBECK, M.A. 1s. 6d. **Book VI.** By C. COLBECK, M.A. 1s. 6d.  
**CICERO.—THE CATILINE ORATIONS.** Edited by A. S. WILKINS, Litt.D. 2s. 6d.  
**PRO ROSCIO AMERINO.** Edited by E. H. DONKIN, M.A. 2s. 6d.  
**DE SENECTUTE.** With Notes and Vocabulary. By E. S. SHUCKBURGH, M.A. 1s. 6d.  
**EUTROPIUS.—Books I. and II.** With Notes and Vocabulary. By W. WEICH, M.A., and C. G. DUFFIELD, M.A. 1s. 6d.  
**HORACE.—ODES.** Books I., III., and IV. With Notes and Vocabulary. By T. E. PAGE, M.A. 1s. 6d. each. Edited by the same. 2s. each.  
 — **THE ODES AND EPODES.** By T. E. PAGE, M.A. 5s. Epodes separately, 2s.  
**EPISTLES AND AKS POETICA.** Edited by A. S. WILKINS, Litt.D. 5s.  
**LIVY.—Book V.** With Notes and Vocabulary. By J. ALFORD, 1s. 6d.  
 — **Book XXI.** With Notes and Vocabulary. By Rev. W. W. CAPES, M.A., and J. E. MELHUSH, M.A. 1s. 6d.  
 — **Book XXII.** With Notes and Vocabulary. By Rev. W. W. CAPES, M.A., and J. E. MELHUSH, M.A. 1s. 6d.  
**PHEDRUS.—FABLES.** With Notes and Vocabulary. By Rev. G. H. NALL, M.A. 1s. 6d.  
 — **SELECT FABLES.** With Notes and Vocabulary. By Rev. A. S. WALPOLE, M.A. 1s. 6d.  
**SALLUST.—CATILINA.** With Notes and Vocabulary. By Rev. G. H. NALL, M.A. 1s. 6d.  
 — **CATILINA.** Edited by C. MERIVALE, D.D. 2s.  
 — **BELLUM CATULINÆ.** Edited by A. M. COOK, M.A. 2s. 6d.  
**TACITUS.—THE HISTORIES.** Edited by A. D. GODLEY, M.A. **Books I. and II.** 3s. 6d. **Books III.-V.** 3s. 6d.  
**TERENCE.—ADELPHOE.** Edited by Prof. S. G. ASHMORE. 3s. 6d.  
 — **RAUTON TIMORUMENOS.** Edited by E. S. SHUCKBURGH, M.A. 2s. 6d. With Translation. 3s. 6d.  
**VIRGIL.—ÆNEID.** With Notes and Vocabulary. **Book I.** By Rev. A. S. WALPOLE, M.A. 1s. 6d. **Book I.** By T. E. PAGE, M.A. 1s. 6d. **Book II.** By T. E. PAGE, M.A. 1s. 6d. **Book VI.** By T. E. PAGE, M.A. 1s. 6d. **Book IX.** By Rev. H. M. STEPHENSON, M.A. 1s. 6d. **Book X.** By S. G. OWEN, M.A. 1s. 6d. **Book XI.** By T. E. PAGE, M.A. 1s. 6d. **Book XII.** By T. E. PAGE, M.A. 1s. 6d.

## GREEK.

- MACMILLAN'S GREEK COURSE.** Edited by the Rev. W. G. RUTHERFORD, M.A., LL.D., Headmaster of Westminster.  
**First Greek Grammar.** By Rev. W. GUNTON RUTHERFORD, M.A., LL.D. Accidence, 2s. Syntax, 2s. Together, 3s. 6d.  
**Easy Exercises in Greek Accidence.** By H. G. UNDERHILL, M.A. 2s.  
**Second Greek Exercise Book.** By Rev. W. A. BEARD, M.A. 2s. 6d.  
**Easy Exercises on the First Greek Syntax.** By Rev. G. H. NALL, M.A. 2s. 6d.  
**MACMILLAN'S GREEK READER.** With Notes, Vocabulary, and Exercises. By F. H. COLSON, M.A. 3s.  
**AN INTRODUCTION TO GREEK PROSE COMPOSITION.** By H. PITMAN, M.A. 2s. 6d. KEY, 5s. net.  
**PASSAGES FOR GREEK TRANSLATION FOR LOWER FORMS.** By G. H. PEACOCK, M.A., and E. W. W. BELL, M.A. 1s. 6d.  
**ZSCHYLUS.—PERSÆ.** Edited by A. O. PRICKARD, M.A. 2s. 6d.—**PROMETHEUS VINCTUS.** With Notes and Vocabulary. By Rev. H. M. STEPHENSON, M.A. 1s. 6d.  
**EURIPIDES.** With Notes and Vocabulary. **ALCESTIS.** By Rev. M. A. BAYFIELD, M.A. 1s. 6d.—**MEDÆA.** By Rev. M. A. BAYFIELD, M.A. 1s. 6d.—**ECUBA.** By Rev. J. BOND, M.A., and Rev. A. S. WALPOLE, M.A. 1s. 6d.—**ANDRONACHE.** Edited by A. R. F. HYSLOP, M.A. 2s. 6d.  
**HOMER.—ILIAD.** Edited by W. LEAF, Litt.D., and Rev. M. A. BAYFIELD, M.A. **Books XIII. to XXIV.** 6s.  
 — **ILIAD.—Books I., IX., XI., XVI.-XXIV.** **THE STORY OF ACHILLES.** Edited by J. H. PRATT, M.A., and WALTER LEAF, Litt.D. 5s.  
**PLATO.—CRITO AND PHÆDO.** (Ce. lviii. to end.) Edited by Prof. C. H. KEENE, M.A. 2s. 6d.  
 — **EUTHYPHRO, APOLOGY, CRITO, AND PHÆDO.** Translated by F. J. CHURCH, 2s. 6d. net.  
**THUCYDIDES.—Book III.** Edited by E. C. MARCHANT, M.A. [In preparation].  
 — **Books VI. and VII.** Edited by Rev. Percival Frost, M.A. With Map. 3s. 6d. **Book VI.** Edited by E. C. MARCHANT, M.A. 3s. 6d.  
 — **Book VII.** Edited by E. C. MARCHANT, M.A. 3s. 6d.  
**XENOPHON.—ANABASIS.** With Notes and Vocabulary. **Book I.** By Rev. A. S. WALPOLE, M.A. 1s. 6d.—**Book I.** With Exercises by E. A. WELLS, M.A. 1s. 6d.—**Book II.** By Rev. A. S. WALPOLE, M.A. 1s. 6d.—**Book III.** By Rev. G. H. NALL, M.A. 1s. 6d.—**Book V.** By Rev. G. H. NALL, M.A. 1s. 6d.

## DIVINITY.

- ST. LUKE'S GOSPEL.** Greek Text, with Introduction and Notes. By Rev. J. BOND, M.A. 2s. 6d.  
**THE GOSPEL ACCORDING TO ST. MATTHEW.** The Greek Text, with Introduction and Notes. By Rev. A. STOMAN. 2s. 6d.  
**AN INTRODUCTION TO THE CREEDS.** By Rev. G. F. MACLEAR, D.D. 3s. 6d.  
**THE ACTS OF THE APOSTLES.** The Greek Text, with Notes. By T. E. PAGE, M.A. 3s. 6d.  
**THE ACTS OF THE APOSTLES.** Authorized Version, with Notes. By T. E. PAGE, M.A., and Rev. A. S. WALPOLE, M.A. 2s. 6d.

## SCIENCE.

- ELEMENTARY GENERAL SCIENCE.** By A. T. SIMMONS, B.Sc., and L. M. JONES, B.Sc. 3s. 6d. (Adapted to the London Matriculation Course.)

MACMILLAN & CO., LIMITED, ST.

## The Educational Times.

### Anglo-French Education.

At the present time, when journalistic reprisals in France and Great Britain are forced upon us, it is pleasant and profitable to take note of factors that make for friendly relations between the two countries. We have already drawn attention to the good work carried on by the Franco-English Guild during the past ten years; a younger and smaller body, the Franco-Scottish Society, is ruled by the same motives, its sphere, of course, being a different one. Founded six years ago in Edinburgh, and established in Paris six months later, its object is threefold, viz.: to bring the Universities into connexion with each other by encouraging an interchange of students, to promote historical research concerning the ancient relations, to renew as far as possible the bonds of sympathy between the two countries by means of periodical meetings and other social intercourse. There are at this time 254 and 137 members on the Scottish and French rolls respectively; ladies make up just one-sixth of the former and about one-fifteenth of the latter number. Each section elects a National Council, with its own office-bearers. The Presidents chosen for the current year were Lord Kelvin and M. Casimir-Perier; and among the Vice-Presidents are the Duke of Fife, Sir Henry Campbell-Bannerman, the Principal of the University of Edinburgh, Sir Archibald Geikie, M. Gréard, Vice-Rector of the Academy and Rector of the University of Paris, M. Bréal, Professor at the Collège de France. It is interesting to see that three members of the Scottish branch are Chevaliers of the Order of the Legion of Honour, viz.: Mr. Thomas Barclay, President of the British Chamber of Commerce, Paris; Prof. Ramsay, of University College, London, and the Honorary Secretary, Mr. A. A. Gordon. In the ordinary course the anniversary meeting—postponed this year on account of the Exhibition—takes place in Scotland and France alternately. It is hoped that Grenoble may be the meeting place in 1901. Prof. Patrick Geddes holds the post of Secretary for Foreign Correspondence.

In this connexion it is specially opportune to notice the work and influence of one of the three lady members of the Consultative Committee chosen under the Board of Education Act. Miss Lydia Manley, Principal of the British and Foreign Society's Training College, Stockwell, is specially identified with the setting

up of friendly relations between French and English primary teachers in training by arranging an interchange of visits. She is also intimately and personally acquainted with the work carried on in the *écoles normales*. Some of her third-year students were among the earliest English *répétitrices* formally received in France, and a few have also been admitted to the college that provides the staff of the ordinary training colleges for primary teachers—the *école normale supérieure* at Fontenay-aux-Roses, near Paris, where the *répétitrice* system does not obtain. Miss Manley wrote one of the articles on "English Students in Foreign Training Colleges" for Mr. Sadler's "Reports." Another valuable contribution on the same subject is from the pen of Miss Williams, official representative of the French Minister of Public Instruction in this matter, and President of the Franco-English Guild. The third has been referred to above.

On the 1st of October fifty-four selected English candidates will enter French *écoles normales* in all parts of France as *répétitrices*. This position is well worth the consideration of girl and women students who wish to become practically acquainted—under excellent auspices—with the educational methods of our neighbours. It affords a favourable opportunity for studying the French interior on a large scale. The experience thus secured would form a valuable element in the equipment of intending language teachers at home. Again, the outlay cannot be considered a heavy one, seeing that a sum of 400 francs (£16) meets all ordinary expenses for board, lodging, and lectures during the scholastic year of ten months. These *écoles normales* are, it may be noted, secular State schools—where all religions are tolerated—for training elementary teachers, the work beginning at the age of sixteen. There are, roughly speaking, as many such schools as there are departments in France, and English forms part of the curriculum at fifty-four. The course of study is directed by the requirements for the *brevet supérieur*, which cover a wider range than do those for the ordinary "parchment" of our own Education Department. In them, as in all State schools, the general teaching for English is carried on by French teachers; the *répétitrices* are expected primarily to give the students "true and vivid impressions of English life and literature, and to make them familiar with English colloquially." This scheme, which has worked successfully for some seven years, is, of course, controlled by the French Minister of Public Instruction, while it is expressly approved by the Education Department. The posts

have been held by students from Girton and Newnham, from the Ladies' College, Cheltenham, from the Welsh University colleges, from training colleges under the Education Department, and by sixth-form girls entering directly from high schools. The next examination—to fill vacancies that will occur in October, 1901—will probably be held in London during Easter week.

### NOTES.

SEPTEMBER is, perhaps, the least favourable month in which to discuss the political aspects of educational problems, and we shall reserve for a later opportunity certain considerations which are suggested by the Education Bill introduced at the close of the Parliamentary Session. Meanwhile we note with satisfaction that the reorganization of the Education Department, which cannot be effected all at once, but which is essential for the administration of the vast and complicated work of the Department, is steadily advancing. We understand that the President of the Board proposes to appoint a Departmental Committee to co-ordinate the technological administration of the Board with the homogeneous work which is now being carried on by bodies other than that Board. This is strictly Departmental work; but the Committee is to be strengthened by a representation of the County Councils and the City and Guilds Institute. The appointment of Mr. Gilbert Redgrave, Senior Chief Inspector, as Assistant-Secretary for Technology, is another indication that the technological side of education is to be efficiently organized.

THE more closely the constitution of the Consultative Committee is analysed the less distinctly fitted does it seem to be for the actual work to be accomplished. Whatever may be the disposition of future Boards of Education, the present one is not likely to seek much in the way of extraneous assistance in solving problems in educational policy. The work of the Consultative Committee will, therefore, for the present, be mainly confined to the one statutory duty imposed on it by the Board of Education Act—to frame regulations for a Register of teachers. For this purpose one would suppose that the prime qualification would be experience in the working of secondary schools. We have, however, only three out of eighteen members constituting the Committee who can be said to have had any real experience in the administration of secondary schools—Mrs. Bryant, Dr. Gow, and Canon Lyttelton. We have already drawn attention to the glaring omission of a representative of the unendowed schools of England. To avoid injustice to many a deserving teacher, the widest knowledge of the infinite variety of existing secondary schools and their teachers is necessary, and we think that the Board of Education has unwisely weighted the Committee with “the views of Universities and other bodies” referred to in the fourth section of the Board of Education Act.

WHAT is a teacher? We suppose even a Sunday-school pupil would be prepared with an answer. On the threshold, however, of the Consultative Committee's deliberations in October next this question will have to be answered, and they may find the answer by no means easy. It is their duty to frame regulations for a register of teachers. This involves at the outset a deter-

mination of the meaning of the word “teacher”; and the Board of Education Act affords no assistance by an interpretation clause. It will be presumed that it is the Committee's duty to decide who shall be accounted a teacher, not, however, in the popular sense, but a “teacher” within the meaning of the Act. Now, by the Board of Education Act, the Board has jurisdiction over elementary and secondary educational institutions only, so that *prima facie* its jurisdiction over teachers would be confined to those engaged in teaching in elementary or secondary schools. University lecturers are thus apparently excluded from admission to the Register, and so are University Extension and County Council lecturers. Although the word is not defined, the word “teacher” has now become a technical term, the real significance of which it is the province of the Consultative Committee to determine. Are teachers of domestic economy, slojd, and horticulture statutory teachers? If they are, then on no principle of construction afforded by the Act can swimming masters and gymnastic instructors be excluded. The Committee will not lack debatable matter, for it has to determine questions which have, in the case of all other professions, been settled by the legislature alone. Of course, the Committee will not be bound by so strict an interpretation of the Act as that suggested above. They will be entitled and expected to take a liberal view as to the admission of teachers to the Register.

THE holiday season, with its varied joys, brings one beneficent influence to bear upon schoolmasters which they seldom appreciate in its true significance. It is the influence of the outside money-grubbing work-a-day life of the country with which the schoolmaster is rarely in contact during term time. How seldom do we hear of a secondary schoolmaster being elected upon a School Board, District Council, Board of Guardians, or other public body! Yet doctors, lawyers, and clergymen, whose professional duties are quite as engrossing as those of schoolmasters, find it possible to take a commanding part in the public life of the country. The opportunities, which fall in the way of schoolmasters during holiday time, of casting their professional sloughs are, indeed, not many, and, filled, as they are, with thoughts of mental and physical recreation, schoolmasters seldom avail themselves of them when they occur. This estrangement of the profession from public life is certainly undesirable, as it lessens its influence even in movements and measures directly affecting its own interests. We do not think a schoolmaster's real work would suffer by more frequent excursions from his shop, even in term time.

MUCH of what has been said in defence of the Court of the Merchant Taylors' Company in their determination to appoint a clerical Headmaster to succeed Dr. Baker seems to have been only half-hearted. When the alleged justification for a rule is that it “accords with a long-prevailing popular sentiment” it cannot be said to rest on a very sure foundation. Teaching is a profession the prevailing sentiment of whose members is clearly hostile to all forms of religious tests. In fact, the so-called rule which has prevailed in many of our schools has its origin in the circumstance that until the passing of the Endowed Schools Acts all masters of grammar schools were licensed by the Ordinary. It was, therefore, natural that all the most lucrative posts should be filled by clergymen, and the clerical

atmosphere has survived to influence school governors when their choice is in no way fettered by the necessity of seeking episcopal approval. In day schools there is assuredly no justification for such a serious limitation of the field of choice, and no instance can be given where difficulties have arisen owing to the appointment of a layman at the head of a public school. "Sweet reasonableness" will hardly be claimed as the monopoly of the clergy, nor, indeed, any other quality which goes to the making of a successful headmaster.

MANY of our readers will be glad to see the following appreciative notice of the late Dr. Buchheim from the last number of the *Periodical* :—

It is with much regret that we have to record the death of Dr. C. A. Buchheim, at the age of seventy-two. He was the editor of the well known "Clarendon Press German Classics." The demand for this series has been such that in it Becker's "Friedrich der Grosse" has reached a third edition; Goethe's "Egmont" a fourth, and "Iphigenie auf Tauris" a fourth, revised; Heine's "Harzreise" a third, "Prosa" (selections from his prose writings) a second; Lessing's "Minna von Barnhelm" an eighth, revised and enlarged; "Nathan der Weise" a second; and Schiller's "Historische Skizzen" a seventh, revised, "Jungfrau von Orleans" a second, "Wilhelm Tell" (large edition) a seventh, and the school edition a fourth. Other volumes in the series are Goethe's "Dichtung und Wahrheit," Halm's "Griseldis," and Schiller's "Maria Stuart." Prof. Buchheim also edited the "Modern German Reader," of which Part I. has reached a seventh and Part II. a second edition.

THE Irish Education Office has issued for circulation in the national schools of Ireland a set of rules dealing with the preservation of the teeth of children. They are similar to those recommended some time ago by a Committee of the British Dental Association, and may be described as emphasizing the necessity of extreme cleanliness and the avoidance of rough usage. Much more might be done by school authorities in the way of propagating simple and practical health maxims than is done at present. In boarding schools, where the masters stand more strictly *in loco parentis* than in day schools, some such precaution as that of having cards with simple rules of health placed in the dormitories should always be adopted. Yet how seldom it is done! Out of a thousand children's mouths examined it was found that the teeth of 86 per cent. required skilled treatment.

## SUMMARY.

### THE MONTH.

It would seem that the British Educational Section of the Paris Exhibition has obtained its full share of awards. In addition to the *grands prix* enumerated in the following official list, a large number of exhibitors have been awarded gold medals, silver medals, bronze medals, and honourable mentions:—1. Primary Education—Education Committee of the Royal Commission (Organization of English Section), Education Committee of the Royal Commission (Organization of Scottish Section), London School Board, British and Foreign School Society, National Society. 2. Secondary Education—Collective Exhibit of Preparatory and Public Schools, Girls' Public Day School Company, Collective Exhibit of Secondary Schools of Scotland, Collective Exhibit of Intermediate Schools of Wales. 3. Higher Education—University of Oxford, University of Cambridge, Victoria University, Education Committee of Royal Commission (Organization of English Section), H. Frowde (Oxford University Press). 4. Special Artistic Education—The Board of Education, South Kensington, for Collective Exhibit of Schools of Art of the United Kingdom. 5. Technical and Commercial Education

—London County Council (Central School of Arts and Crafts), City and Guilds of London Institute (Examinations Department). A *grand prix* has also been awarded to the Alliance Française, and a gold medal to the Franco-English Guild. Three *grands prix* have been awarded to the Oxford University Press, for "higher education," book-binding, and Oxford India paper.

A GRADUATES' UNION of the University of London has been formed for the purpose of dealing systematically with the various functions of the graduates under the new conditions of the University. The aims of the Union will be to support and strengthen the reconstituted University as a whole, to promote its interests, and to keep the graduates who are members of Convocation in touch with the University and informed of all important movements concerning it. The management of the Union will be in the hands of a General Committee, advised by Committees representing each of the groups of graduates as divided for electoral purposes (Arts, Laws, Science, Music, and Medicine), and by local branch committees now in course of formation. The officers are—President: P. H. Pye-Smith, M.D., F.R.S. Secretaries: H. J. Harris, B.A. (Arts); C. F. T. Blyth, LL.B., B.Sc. (Laws); F. W. Oliver, D.Sc. (Science); W. H. Sampson, B.A., B.Mus. (Music); L. E. Shaw, M.D., and W. Pasteur, M.D. (Medicine); and T. Gregory Foster, B.A. Ph.D. (General Secretary).

THE Committee of the Graduates' Association have sent a circular letter to members with respect to the October election of sixteen Convocation representatives to the Senate, in which they say:—"In order to safeguard the interests of the privately educated, or self-taught, external student, the Executive Council of the Association feel it to be essential that the sixteen representatives of Convocation should be graduates of the University whose knowledge, sympathies, and antecedents justify the belief that they may be relied on to support the system of high standard and impartial examinations, from matriculation upwards, upon which the reputation of our University has been mainly built. It is also deemed desirable that, as far as possible, all the representatives shall reside in or near London, so as to ensure their regular attendance at the meetings of the Senate and of the Council, which, at any rate at the outset, must of necessity be frequent and lengthy." Fifteen candidates are recommended for election:—In Arts: J. Fletcher Moulton, M.A., Q.C., M.P., F.R.S., Fellow of the University; T. Lambert Mears, M.A., LL.D.; T. Bateman Napier, LL.D., Fellow of the University; Sir Albert Kaye Rolitt, B.A., LL.D. (D.C.L.), M.P., Fellow of the University; J. Bourne Benson, B.A., LL.D.; John David McClure, B.A. (M.A. and LL.D. Camb.). In Laws: Joseph Walton, B.A., Q.C. In Medicine and Surgery: Sydney Ringer, M.D., F.R.S.; Arthur Quarry Silcock, M.D., B.S. In Science: Sir Philip Magnus, B.A., B.Sc., Fellow of the University; S. Russell Wells, M.D., B.Sc.; C. W. Kimmins, D.Sc.; Sophia Bryant, D.Sc.; Prof. Frank Clowes, D.Sc.; F. S. Macaulay, D.Sc. The representative in Music is not yet nominated.

THE University Extension Summer Meeting at Cambridge was opened by Mr. A. J. Balfour, M.P., by an address on "The Nineteenth Century"—the general subject of the meeting—to which we refer in another column. On Saturday afternoon, August 4, there was a public conference in the Senate House, which was presided over by the Bishop of Bristol, Dr. G. Forrest Browne, the former secretary to the University Local Examinations Syndicate. He was supported by the Vice-Chancellor, Prof. Sir R. C. Jebb, M.P., the Masters of Trinity and Downing, Dr. Roberts, &c. The last named opened the discussion on "The Co-ordination of Educational Agencies." Among other speakers were the Vice-Principal of Reading College, Miss Montgomery, of Exeter, and the Principal of Exeter College.

ON August 7 Sir Joshua Fitch presided at a conference on "The Conditions of Admission to the Register of Teachers to be formed under the provisions of the Board of Education Act." The Rev. R. D. Swallow, Chairman of the Training of Teachers Joint Committee appointed by the Headmasters, Headmistresses, College of Preceptors, Preparatory Schools Association, and other bodies, brought under notice a memorandum adopted by that Committee. Teachers at the present time divided themselves into three classes—those in the profession, those who will

Join in the next five years, and those who will join after 1905. The Committee suggested that those who are already teachers should be admitted to the register on easy terms (which the memorandum set forth), and a similar elasticity must be allowed in the case of those who shall become teachers within the next five years. For those who would seek admission on or after April 1, 1905, these should be the conditions: (1) that candidates for admission should be graduates of a British University, or should be in possession of a diploma equivalent to a pass degree; (2) that they should hold a certificate, approved by the Consultative Committee, that they had followed a course of training in the theory and practice of education subsequent to their graduation; (3) that they should give proof of two years' efficient service in a school approved for the purpose. In reference to condition (2), a considerable minority of the Committee were of opinion that, under exceptional circumstances, this course of professional training might be concurrent with the period of study for the degree. Prof. H. L. Withers, secretary of the Committee, trusted that the register would be something more than a directory. Miss Foxley hoped that those already teachers would meet with very generous treatment. Miss Hughes urged that the training of teachers should be post-graduate study. The chairman spoke of the great value of the register to parents, and urged that each University should provide a special training department, with a professor of education and master of method.

ON August 14 there was a discussion on "The Teaching of the Mother Tongue and National Literature in Schools and Universities." Prof. Sir Richard Jebb, M.P., who presided, said that our schools were rather the best schools of other countries in this respect. "Complaints were made that in the teaching of the mother tongue in our schools too much stress was laid on the teaching of English grammar and grammatical analysis, and too little on the work of developing ease and accuracy of expression. The result, no doubt, was that very often English boys and girls of sixteen and seventeen were singularly deficient in putting sentences together. That difficulty, of course, accompanied them into later life, to their great disadvantage." Our national character, he thought, had something to do with it. "The reserve and slowness of speech which characterized not a few English people were qualities which were received with great tolerance in our school system of education. Be that as it may, there could be no doubt that there were other countries which taught their mother tongue very much better than we did our own. He understood that in France, in Germany, in Holland, and in the United States, the habit of oral recapitulation was more used in teaching than it was in England, the result being that the people acquired a habit of prompt and coherent statement, as well as the power of logical narrative in writing." Papers were contributed by Prof. E. T. Smith, of the University College, Sheffield, and Mr. Russell, of University College School, the last named urging that the form master should give way to the specialist. The discussion was continued by Mr. W. E. Bryan (Cambridge), Dr. Arends and Dr. Imelman, of Germany, Mr. E. S. Shuckburgh (Cambridge), and others.

ON August 16 Miss E. P. Hughes opened a discussion on "The drawing together of different Nations in Educational Matters and the Limitations on the Interchange of (1) the Methods and (2) the Ideals of different Countries." The Master of Downing College (Dr. Hill) presided, and observed that the University Extension meeting had the one common ground which seemed to have abolished all distinctions of position and wealth, of politics, and even of nationality. Miss Hughes began by asking: "Is it possible to learn from foreign nations in educational matters, and is it desirable?" She submitted that it was extremely desirable, but that the practical problem was how to learn. They must not copy or imitate foreign countries; they must not transplant methods or ideals, but educational principles, which, of course, would be modified by the special conditions of each country. Dr. Hauch (Denmark), said they were aiming at no chimera, and difficulties must not deter them from the pursuit of their object. That very Extension meeting, with the many foreigners accepting invitations, was an evidence of what could be done; and they had to thank Cambridge for instituting the movement, which was the beginning of drawing different nations together. Each country could learn much

from the other. M. Courtois (Antwerp) said the feature of drawing different nations together was the study of languages. If the English people would pride themselves less on their insularity, and give more study to foreign languages, they would come to understand other countries better.

THE first annual report of the Central Church Council of Secondary Education for the Province of Canterbury has been published. It shows that every effort is being made to watch legislation on the subject with which it is concerned, and to safeguard the denominational principle as far as possible. The Council consists of six members of the Upper House, six of the Lower, and six members of the House of Laymen, including Lord Cranborne and Mr. J. G. Talbot, M.P. Oxford and Cambridge Universities send four representatives each, and every diocese in the province sends one; while twelve members are nominated by the Archbishop of Canterbury, among them being the Bishops of Winchester and Bristol, the Headmasters of Marlborough, Haileybury, and Dulwich, Lord Hugh Cecil, M.P., and Chancellor Dibdin. Archdeacon Sandford is the Secretary. The Council has appointed a "Law Committee," to consider legislative proposals brought forward by Government, and watch them, in the interests of religious education. Its general Committee has concerned itself with schemes for a systematic examination of secondary schools in religious knowledge, for the religious instruction of teachers on University Extension lines, and for diocesan organizations throughout the province which shall deal with secondary education in its relation to the Church and religious instruction.

THE following diplomas and certificates have been awarded in connexion with the examination held under the joint auspices of the Oxford Delegacy for the Extension of Teaching beyond the limits of the University and Reading College (affiliated) (under degrees of Convocation [2], [3], June 2, 1896), June and July, 1900:—Diploma in Agriculture:—passed final examination: Arthur Ernest Davis, Thomas Edward Gunter. Passed second examination: Arthur Percy Cox, Harold Charles Jefferys. Passed first examination: Thomas Charles Martin, Albert Fedarb Sandys. Dairy Teacher's Certificate:—passed final examination: S. Blanche, J. Forrester, Arthur Myers Smith. Certificate in Dairying:—passed final examination: Margaret Robertson McDuff. Passed theoretical examination: Marianne P. Gardner, Elizabeth Constance Hoare, Beatrice Elleray Thomson. Certificate in Horticulture:—passed final examination: Edna Mary Gunnell, Edward T. B. Reece. Passed theoretical subjects: Mabel Mary Rayner. Certificate in Aviculture:—passed in all theoretical subjects: Miss Muriel Johnson. The external examiners were Prof. Sollas, F.R.S., R. W. T. Günther, M.A., W. W. Fisher, M.A., W. J. Henman, Leonard G. Sutton, Prof. Sir G. Brown, R. Newstead, J. A. Voelcker, M.A., Ph.D., and J. Douglas.

HER MAJESTY'S COMMISSIONERS for the Exhibition of 1851 have made appointments to science research scholarships for the year 1900, on the recommendation of the authorities of the respective Universities and colleges. The scholarships are of the value of £150 a year, and are ordinarily tenable for two years (subject to a satisfactory report at the end of the first year) in any University at home or abroad, or in some other institution approved by the Commissioners. The scholars are to devote themselves exclusively to study and research in some branch of science the extension of which is important to the industries of the country. A limited number of the scholarships are renewed for a third year where it appears that the renewal is likely to result in work of scientific importance. The Commissioners have made fifteen appointments, fourteen of the scholars being men, and the fifteenth a woman. The list is as follows:—Charles Edward Fawcitt, B.Sc.; Vincent James Blyth, M.A.; James Moir, M.A., B.Sc.; William Mansergh Varley, B.Sc.; John Charles Willis Humfrey, B.Sc.; Samuel Smiles, B.Sc.; Norman Smith, B.Sc.; Lorenzo Lyddon Lloyd; Alice Laura Embleton, B.Sc.; John A. Cunningham, B.A.; William Sloan Mills, B.A.; John Patterson, B.A.; William Coombs Baker, M.A.; James Barnes, M.A.; and John Jerry E. Durack, B.A.

their Minute establishing higher elementary schools. The following letter was written on August 14 to the Bradford School Board, which had asked for the recognition of a new commercial (higher-grade) school:—

SIR,—Adverting to your letter of the 16th ultimo, I am directed by the Board of Education to state that the Higher Elementary Schools Minute was framed for the establishment and maintenance of schools of science of an elementary character, where such were needed, and that the school now proposed by the Bradford School Board seems to be of a different type, and, therefore, could not be recognized by the Board of Education under that Minute. You will remember that, in the time-table submitted with your letter on 20th June, the school was described as a "commercial school," and I may add that the hours allotted to science and mathematics fell considerably short of the time to be given to those subjects in higher elementary schools. In addition to the requirements of Article 9 of the Minute in regard to curriculum, I may also refer you to Article 7a, and, with respect to the above, remark that the Minute contemplated the establishment of higher elementary schools only "where such were needed." I may point out that, before recognizing a higher elementary school, the Board of Education must be satisfied that this article also (Article 7a) is complied with.—I have, &c., JOHN WHITE.

AFTER distributing the prizes to the successful scholars of the Hampton Grammar School, the Bishop of London said that he always thought it would be a good thing that every boy should have some definite manual work. He was not sure that digging would not be a good thing—digging hard for an hour. "Every one ought to know what hard manual labour meant, and he should be glad to see its application take a place side by side with the more highly developed curriculum of which we were so proud. Every boy would do his work better if, in the first instance, he had to face hard manual labour; and he would know what manual work meant for the rest of his life. The great lesson we all had to learn, as life went on, was to work hard. Life was much too easy for us."

FROM a report of an inquiry into the eyesight of children, which has been recently drawn up, it appears that, of 338,920 children, 259,523, or 76.6 per cent., had good sight; and 79,167, or 23.3 per cent., defective vision. The large number of 2,675 children were only able to see the enormous top letter of the test card at a distance of 20 ft.—a letter which is meant to be read at a distance of about 200 ft. The eyesight appeared to be worse in the more crowded parts of London, and best in those parts where the houses are less dense and there are more open spaces. The elder children seemed to show better sight than the younger, but it is probable that knowledge of the letters had something to do with this. The sight of the girls seemed to be inferior to that of the boys, which has been attributed to the strain of doing needlework.

THE death is reported of a well known man of science and naturalist, Dr. John Anderson, F.R.S. He graduated as M.D. (and gold medallist) of the University of Edinburgh in 1861. From 1864 to 1886 he was Superintendent of the India Museum, Calcutta, and during the greater part of the same period Professor of Comparative Anatomy in the Medical College of that city. In 1868-9 and 1874-5 he served as scientific officer in the expeditions to Western China which were organized by the Indian Government, and of which he published accounts in several forms. In 1881 he investigated the marine zoology of the Mergui Archipelago, off the coast of Tenasserim; his book on the subject appearing in 1889. Among his other publications were "English Intercourse with Siam in the Seventeenth Century," 1890; "Herpetology of Arabia," 1896; and the first part of a work on the "Zoology of Egypt," 1898.

THE following elections have taken place at Bradfield College to foundation scholarships, value ninety guineas per annum:—R. M. J. Martin, Rev. R. J. Martin's, St. Leonard's School, St. Leonards-on-Sea; D. P. McDonald, Mr. A. M. Kilby's, Lindisfarne, Blackheath; W. L. Misken, Rev. H. B. Allen's, Temple Grove, East Sheen. To a Warden's Exhibition, value fifty guineas per annum: A. G. B. Buchanan, Bradfield College. To exhibitions, value thirty guineas per annum: J. H. Morris, King's School, Peterborough; M. P. Shaw-Smith, Mr. R. Paddison's, Woodcote

House, Windlesham; E. F. Mathews, Mr. R. Paddison's, Woodcote House, Windlesham; W. H. H. Thompson (Army), Mr. E. H. Parry's, Stoke House School, Stoke Poges.

THE Council of the Cambridge Training College for Women Teachers have recently made the following awards:—A Council Scholarship of £30 to Miss W. Boyd, M.A. Glasgow with Honours in English; a Council Scholarship of £20 to Miss C. E. Browne, B.Sc. Wales, from University College, Cardiff; the Gilchrist Scholarship of £25 to Miss N. Howlin, B.A. Royal University of Ireland, with Honours in Modern Literature, from Alexandra College, Dublin; the Old Students' Guild Scholarship of £20 to Miss A. F. Marks, B.A. London, from Mason College, Birmingham.

## UNIVERSITIES.

(From our Correspondents.)

THE Matriculation List of the University of Wales Wales. for the present year shows that fifty-five candidates passed the whole examination in the First Division and twenty-nine in the Second Division. Fifty-four candidates completed the examination by passing in their one remaining subject, while nine were successful in passing in their two remaining subjects. Fifty candidates passed in four out of the five subjects, and thirty-seven in three. It is probable that the leading avenue to the University of Wales from the county schools will be by means of the Senior Certificate of the Central Welsh Board, which is now recognized by the University of Wales subject for subject. The results of the annual examination of the Central Welsh Board for 1900 have not yet been made known. They will probably be communicated to the schools about the middle of September, in time for the re-opening after the holidays.

A striking illustration of the excellent quality of the work done in some of the Welsh county schools is afforded by the success of Mr. Phillips, a boy of seventeen, from the County School, Machynlleth, Montgomeryshire, who gained First Class Honours in History at the recent Intermediate Arts Examination of London University. This year, too, Mr. Wykes, Mathematical Scholar of Balliol, and recently a pupil of the Grove Park County School, Wrexham, was placed in the First Class in Mathematical Moderations at Oxford. These and other successes show that the Welsh county-school system, while not neglecting the majority of the children in the schools, gives distinct stimulus and encouragement to the higher secondary work. The aim of the Central Welsh Board is to encourage the growth of the county schools upon truly educational lines, in the light of all that is best and most progressive in modern educational science, while retaining the most valuable traditions of the education of the past. The Chairman of the Central Board, Mr. A. C. Humphreys-Owen, M.P., has been recently appointed a member of the Consultative Committee to the Board of Education, and will be doubtless able to render the Board and the Committee very valuable assistance in organizing English secondary education.

In the recent B.D. Examination of the University of Wales, the degree was awarded, for the first time in the history of the University, to the Rev. Richard Morris, M.A. Glasgow, and the Rev. Howel Harris Hughes, B.A. London, both students of the Bala Theological College. The University of Wales B.D. is a post-graduate degree, and requires as a necessary condition for obtaining it a three years' course of training at an approved theological college.

## CORRESPONDENCE.

### AN OFFER FROM CANADA.

To the Editor of the Educational Times.

SIR,—The Canadian Government is very desirous of encouraging the study of the history, geography, and resources of Canada in the schools of the United Kingdom; and, with this object in view, has had prepared two books for use in schools—one an atlas, and the other a reader about Canada. Copies are enclosed herewith.

The books will be supplied in sufficient numbers to schools prepared to take the matter up after the summer holidays. The offer will be confined, in the first place, to schools in the rural districts, and in the smaller towns and villages—the centres of agricultural neighbourhoods. It is intended to present a bronze medal for competition in each

school. The medal will be given to the boy or girl who proves to be the most proficient in the subjects when the schools close for the Christmas holidays. An examination should be held about the time specified, and the best two papers in each school forwarded to me, when I shall decide, as soon as possible after they are received, to which of the papers the medal is to be awarded.

The adoption of the proposal cannot fail to be of advantage from an Imperial as well as from a Canadian point of view, and nothing but good results can follow a better knowledge of Canada among the rising generation. Both directly and indirectly it ought to be beneficial in a commercial sense in making the products of Canada better known than at present; and, again, the more the rising generation know about Canada and the colonies the more likely are those of them who may decide upon emigration in the future to remain within the limits of the Empire.

I shall be glad to hear from schoolmasters who view the suggestion favourably, and will furnish them with atlases and readers on learning the numbers required and the date on which they will be needed. The applications will be recorded in order of priority, and will be dealt with on the lines mentioned until the available supply of the books is exhausted.—I am, Sir, your obedient servant,

Office of the High Commissioner for Canada, STRATHCONA.  
17 Victoria Street, London, S.W.

#### SCIENCE AT ETON.

To the Editor of the Educational Times.

SIR,—In your August number you quote Prof. Armstrong's criticisms on the few certificates that have been gained from Eton in "science" during recent years. May I be allowed to draw attention to two points? First, as a rule, boys who wish to devote extra time to science are encouraged to pass the Certificate or some corresponding Examination (e.g., Responsions at Oxford), before giving up a large part of their classical work in favour of science. This will account in some measure for the paucity of boys who take up a scientific subject in the Certificate Examination; though, of course, it is to be deplored that the amount of time given to science in the ordinary curriculum is insufficient for this purpose. Secondly, it is indeed strange for one who listened last January to Prof. Armstrong's vehement denunciations of examinations of this type to find him now finding fault with a school because so few of its boys are sent up for the very examinations he holds in such scorn.

Personally, I should be the last to deny that the present state of science teaching in our public schools in general, and at Eton in particular, is capable of being vastly improved. Those to whom such teaching is entrusted are only too glad of outside criticism given by competent judges who have taken the trouble to acquaint themselves with the details of the system they are criticizing. They will gain little help from the vague accusations and inaccurate statements which recently characterized Prof. Armstrong's methods of controversy.—I am, Sir, yours faithfully,  
M. W. HILL,  
Savile Club, 107 Piccadilly, W. Assistant-Master, Eton College.  
August 10.

#### REGISTRATION OF MUSIC TEACHERS.

To the Editor of the Educational Times.

SIR,—There is a Bill in Parliament, recently read for the first time which is a distinct source of danger to many members of the scholastic and musical professions. I refer to the Teachers of Music Registration Bill. This measure, which is drafted by a small section or party of musicians, seeks, to all intents and purposes, to make registration compulsory, and Clause 9b says: "Or, at the time of the passing of this Act, he or she has been engaged for not less than two years in teaching or practising music as a profession and means of livelihood. . . ." The italics are mine. This clause, combined with what is stated in the memorandum on the front of the Bill, makes it very apparent that it is not intended to register those who teach other subjects besides music. The consequence to thousands of teachers would be disastrous if this measure succeeded, and equally so to heads of schools. It behoves all to use their influence to prevent such a scheme from becoming law.—Yours, &c.,  
TEACHER.  
August 11, 1900.

[The words quoted by our correspondent would include all who teach music professionally, whatever else they may teach in addition.—EDITOR.]

## A SELECTION FROM CASSELL'S EDUCATIONAL BOOKS.

### NEW BOOKS.

Just Published. Price 5s.

#### LANDSCAPE PAINTING IN WATER COLOURS.

By J. MACWHIRTER, R.A. With 23 Coloured Plates.

"This volume cannot be too highly recommended to the amateur sketcher. The twenty-three examples in colour—wonderfully successful as reproductions—are from the artist's own sketches, and are of Nature in her every mood—sky, sea, snow, moor, and cloud. Nothing more widely shows the progress made in art-teaching than a comparison of this masterly handbook to water-colour painting with similar ones of some twenty or thirty years back. The young artist should at once possess himself of this volume, of which the value is enhanced by some useful 'Hints to Students' by Mr. MacWhirter, as well as by a practical introduction by Mr. Edwin Bale, R.L."—*Daily News*.

**A PRACTICAL METHOD OF TEACHING GEOGRAPHY.** (ENGLAND AND WALES. Part II.) Agricultural Industries, Seaports, Sectional Maps, and Continental Connexions with the British Isles. By J. H. OVERTON. 6d.

**OUR GREAT CITY;** or, London the Heart of the Empire. By H. O. ARNOLD-FORSTER, M.A. Profusely Illustrated. 1s. 9d.

**THE TROUBADOUR.** Selections from English Verse. Edited and Annotated by PHILIP GIBBS, Author of "Founders of the Empire," &c. 1s. 6d.

#### HISTORY.

**FOUNDERS OF THE EMPIRE.** By PHILIP GIBBS. 256 pages, Extra crown 8vo, bound in cloth. With 4 Coloured Plates and numerous Illustrations. Price 1s. 8d. This Work has already been reprinted.

**IN DANGER'S HOUR; or, Stout Hearts and Stirring Deeds.** With Introduction by H. O. ARNOLD-FORSTER, M.A. With 4 Coloured Plates and numerous Illustrations. Price 1s. 8d.; or, bound in cloth gilt, 2s. 6d. "Forty years' experience of reading books, for boys both in large and small schools, tells me that no book will prove to be more popular than 'In Danger's Hour.'"—PRINCIPAL, High School, Thurks.

Third Edition, Revised. Price 5s.

**A HISTORY OF ENGLAND.** By H. O. ARNOLD-FORSTER, M.A. Fully Illustrated. Extra crown 8vo, 816 pp.

*The Scotsman* says:—"The picturesqueness of its manner, its fine national spirit, its insistence on those parts of the story that have most use and interest for the modern world, its numerous choice of appropriate and interesting illustrations—all these things make it a book not for the cloistered student, but for everybody who wishes, not merely to be instructed, but to be won to an interest in a study too often made repellent by the Dryasdusts. . . . Few popular histories, if any, have been better done."

#### THE BEST AND CHEAPEST DICTIONARIES.

**CASSELL'S FRENCH DICTIONARY.** (French-English and English-French.) 515th Thousand. Revised and Corrected from the Seventh and Latest Edition of the Dictionary of the French Academy. 1,150 pages. Cloth, 3s. 6d.; half-morocco, 5s.

**CASSELL'S GERMAN DICTIONARY.** (German-English and English-German.) 222nd Thousand. By ELIZABETH WEIR. 1,120 pp., demy 8vo. Cheap Edition, cloth, 3s. 6d.; half-morocco, 5s.

**CASSELL'S LATIN DICTIONARY.** (Latin-English and English-Latin.) 112th Thousand. Thoroughly Revised and Corrected and in part Rewritten, by J. R. V. MARCHANT, M.A., Master of St. Paul's School, and formerly Scholar of Wadham College, Oxford; and J. F. CHARLES, B.A., Assistant-Master at the City of London School. Cheap Edition, 3s. 6d.; half-morocco, 5s.

#### CASSELL'S NEW LATIN PRIMER SERIES.

## RIVINGTONS SINGLE TERM LATIN READERS, WITH NOTES, EXERCISES, AND VOCABULARIES.

Suited for a full Term's work, allowing time for revision and examinations. From 8d. to 1s. 4d. each Book.

### FIRST TERM. Three Books, 8d. each.

Separate Sentences, the Simple Sentence, and very easy Constructions only.

### SECOND TERM. Three Books, 1s. each.

Continuous Stories, with easy Adverbial Clauses.

### THIRD TERM. Three Books, 1s. each.

The Accusative and Infinitive.

### FOURTH TERM. Three Books, 1s. each.

Easy Latin pieces, modelled on easy Caesar.

### FIFTH TERM. Three Books, 1s. 4d. each.

Easy Latin pieces, similar to Fourth Term, but a little harder.

### SIXTH TERM. Three Books, 9d. each.

Easy Selections from Ovid, increasing in difficulty, to be read with the Books of the Fourth and Fifth Terms.

*Exercises are given at the end of each Book, except the First and Sixth Terms.*

## RIVINGTONS SINGLE TERM GREEK READERS. With Notes and Vocabularies.

### FIRST TERM. Three Books, 9d. each.

Sentences and Short Stories constructed with a view to illustrate the easy Accidence.

### SECOND TERM. Three Books, 9d. each.

Easy Stories, with aids to find such irregular forms as occur.

### THIRD TERM. Three Books, 9d. each.

Easy Selections from Xenophon, simplified.

## RIVINGTONS MIDDLE FORM CLASSICS.

Edited, with Maps, Introduction, and Notes.

### Livy, Books I., II., and V.

By A. F. HORT, M.A., Assistant-Master at Harrow School. 2s. each, sold separately.

### Scenes from Hercules Furens of Euripides.

By A. F. HORT, M.A. 1s. 6d.

### The Retreat from Syracuse, from Thucydides.

By W. H. D. ROUSE, M.A., Assistant-Master at Rugby School. 1s. 6d.

### Pylos and Sphacteria, from Thucydides.

By W. H. D. ROUSE, M.A. 1s. 6d.

### The Siege of Plataea, from Thucydides.

By J. M. SING, M.A., Assistant-Master at St. Edward's School, Oxford. 1s. 6d.

### Brasidas in Thrace, from Thucydides.

By J. M. SING, M.A. 1s. 6d.

## THE MODERN GERMAN SERIES.

### A Primer of German Grammar. 2s. net.

### Primary German Exercises. 2s. net.

### A First German Writer. 3s. 6d.

▲ German Version, 6s. 2d. net, post free, from the Publishers only to Teachers.

### Beginners' Texts. 4 vols. 9d. each net.

### Elementary Texts. 7 vols. 1s. each net.

### Advanced Texts. 8 vols. 2s. each net.

*A detailed List of these Texts may be had on application to the Publishers.*

# COLLEGE OF PRECEPTORS' EXAMINATIONS.

SUITABLE BOOKS IN THE  
University Tutorial and Preceptors' Series.

## English.

**Arithmetic, The Tutorial.** By W. P. WORKMAN, M.A. [*In preparation.*]  
**Biology, Text-Book of.** By H. G. WELLS, B.Sc. Lond., F.Z.S., F.C.P. Part I.: Vertebrates. 2s. 6d. Part II.: Invertebrates and Plants. 2s. 6d.  
**Book-keeping, Practical Lessons in.** By THOMAS CHALICE JACKSON, B.A., LL.B. Lond. 3s. 6d. Exercise Books ruled Ledger, Journal, or Cash. 3d.  
**BOOK-KEEPING, THE PRECEPTORS'.** By the same Author. [*In preparation.*]  
**Botany, First Stage.** By A. J. EWART, D.Sc., Ph.D., F.L.S. 2s.  
**Chemistry, The Tutorial.** By G. H. BAILEY, D.Sc. Lond., Ph.D. Edited by WM. BRIGGS, LL.D., M.A., F.C.S.  
 Part I.: Non-Metals. 3s. 6d. Part II.: Metals. 3s. 6d.  
**Chemistry, Synopsis of Non-Metallic.** With an Appendix on Calculations. By WM. BRIGGS, LL.D., M.A., F.C.S., F.R.A.S. Interleaved. 1s. 6d.  
**Euclid, Books I-IV.** By RUPERT DRAKIN, M.A. Lond. and Oxon., Headmaster of Stourbridge Grammar School. 2s. 6d. Books I. and II. 1s.  
**Hydrostatics, An Elementary Text-Book of.** By WM. BRIGGS, LL.D., M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. 2s.  
**Hygiene, First Stage.** By R. A. LYSTER, B.Sc. 2s.  
**Magnetism and Electricity, Text-Book of.** By R. W. STEWART, D.Sc. *Fourth Edition.* 3s. 6d.  
**MECHANICS, THE PRECEPTORS'.** By F. ROSENBERG, M.A., B.Sc. 2s. 6d.  
**Mensuration of the Simpler Figures.** By WM. BRIGGS, LL.D., M.A., F.C.S., and T. W. EDMONDSON, M.A. *Second Edition.* 2s. 6d.  
**Sound, Light, and Heat, First Stage.** By JOHN DON, M.A., B.Sc. 2s.  
**Trigonometry, The Tutorial.** By WM. BRIGGS, LL.D., M.A., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. 3s. 6d.  
**TRIGONOMETRY, THE PRECEPTORS'.** By WM. BRIGGS, LL.D., M.A., F.C.S., F.R.A.S. 2s. 6d.

COMPLETE CATALOGUE of the University Tutorial Series, and List of Books classified for COLLEGE OF PRECEPTORS, London University (including the Special Subjects for 1901 and 1902), Science and Art Department, and other Examinations, free on application.

London: UNIVERSITY TUTORIAL PRESS (University Correspondence College Press).

## FORECASTS AND COMMENTS.

September 1, 1900.

THE Lectures for Teachers, by Prof. Withers, on Fixtures. "The Practice of Education," being the second course of the twenty-sixth annual series, will be delivered at the College of Preceptors on Saturday afternoons, at 5 o'clock, beginning on October 6. We print the syllabus this month.

\* \* \*

THE Professional Preliminary Examination of the College will be held on the 4th, 5th, and 6th of this month.

\* \* \*

AN examination for one geographical scholarship, of the value of £60, will be held at Oxford on October 9. Candidates, who must have taken Honours in one of the final schools of the University, should send in their names to Mr. H. J. Mackinder, Christ Church, not later than October 3. The scholar elected will be required to attend the full course of instruction at the School of Geography during the academic year 1900-1901, and to enter for the University Diploma in Geography in June, 1901.

\* \* \*

DURING the coming session evening science courses will be held in connexion with the Technical Education Board at University College, King's College, and Bedford College. At University College Prof. J. A. Fleming, F.R.S., will give a course of ten lectures, followed by laboratory practice, in advanced electrical measurements. A course of lectures on the electric motor and its application to electric traction will be given by Prof. C. A. Carus-Wilson, each lecture to be followed by an experimental demonstration or by a class for the practical working of numerical examples in connexion with the subject. A course will be given by Prof. E. Wilson at King's College on direct and alternating currents. In mechanical engineering, Prof. T. Hudson Beare will give a course of ten lectures, at University College, on the theory of steam engines and boilers, with laboratory work on the testing of steam engines and boilers. Prof. Beare will also give a course of five lectures on the theory of gas and oil engines, combined with laboratory work.

\* \* \*

THE following Saturday morning courses for teachers have been arranged by the London Technical Education Board:—A course of about ten lectures on the teaching of mathematics will be given by Prof. Hudson at King's College. The object of these lectures is to help those who are practically engaged in teaching and wish to become acquainted with modern methods and improvements in order to render their teaching more effective. A course on physics will be given under the direction of Prof. W. Grylls Adams and Mr. S. A. F. White. The course will consist of practical work in the Wheatstone Laboratory, the object of the instruction being to enable students to obtain an intimate knowledge of the methods employed in physical measurements and familiarity with the use of apparatus. A course of twenty lectures on physiology will be delivered by Prof. Halliburton. The object of the course is to acquaint teachers with the modern methods of teaching physiology by objective methods. A course of ten lectures on the teaching of physical geography, each lecture followed by a class for practical work, will be given by Miss Catherine A. Raisin, D.Sc., at Bedford College.

Education Gossip. WE are informed by the Privy Council, through the *London Gazette*, that "whereas the Faculty of Laws in the University of London have failed to exercise the power of appointing one member of the Senate by reason of there being no persons entitled to be members of the said Faculty"—a very good reason for their (?) failure—"Her Majesty is pleased, by and with the advice of Her Privy Council, to appoint the Right Hon. Horace Baron Davey, to be a member of the Senate of the said University."

\* \* \*

THE *Gazette* also announces that, whereas by the Statutes made by the University of London Commissioners it is provided that four members of the Senate of the University shall be appointed by Her Majesty in Council, the Queen is pleased to appoint Sir John Wolfe Wolfe-Barry, K.C.B., F.R.S., Sir Henry Enfield Roscoe, F.R.S., Mrs. Eleanor Mildred Sidgwick, and the Hon. W. Pember Reeves, Agent-General for New Zealand, to be members of the Senate.

\* \* \*

LORD STRATHCONA, the High Commissioner for Canada, asks us to state, in reference to his letter in another column, that the proposal is not confined to elementary schools, but may be taken advantage of by both evening continuation schools and secondary schools; and that he will be glad to receive applications for the atlases and readers from those who are connected with such institutions.

\* \* \*

At the invitation of the Committee of the Paris International Assembly, the Rev. J. O. Bevan, who attended the Assembly as a representative of the College of Preceptors, delivered two lectures at the Bureau in the Palace of Education within the Exhibition: the first, on August 14, dealing with child-study; and the second, two days afterwards, with school hygiene. The addresses were well received.

\* \* \*

WITH regard to our note last month on the restriction of age in candidates for a headmastership, several correspondents point out that the greater public schools show a very considerable majority of appointments above the age of forty. For instance, the last four appointments at Rugby are:—Hayman, 1869, *at* forty-six; Jex-Blake, 1874, *at* forty-two; Percival, 1887, *at* fifty-one; James, 1895, *at* forty-nine.

\* \* \*

A FELLOWSHIP, for which the funds have been collected by the Association of Newnham College, has been offered to and accepted by Miss Jane E. Harrison. She is engaged on a work on the mythology and ritual of primitive Greece. The Geoffrey Fellowship, vacant by the resignation of Miss Elsbeth Philipps, has been awarded to Miss G. L. Ellis.

\* \* \*

THE Headmasters of Bradfield, Cheltenham, and Clifton have established classes to prepare boys for the Navy, and have agreed on a common standard for entrance at the age of thirteen and a half.

\* \* \*

BRISTOL UNIVERSITY COLLEGE has been enlarged by the erection of a library, an examination hall, and several new classrooms, at a cost of about £6,000.

\* \* \*

THE MARQUIS OF BUTE has given £20,000 to St. Andrews University for the endowment of a Chair of Anatomy.

\* \* \*

WE have once more the oft-repeated and still necessary warning to governesses in search of foreign engagements. The lady superintendent of the Victoria Home for British Governesses in Vienna tells of two English governesses who were recently turned out of their places in Russia at a moment's notice, in a penniless condition, with only their tickets to London.

\* \* \*

THE Oxford Local Examinations Syndicate appears to have

recognized that to fix a low minimum of marks for a Senior or Junior pass is a mistaken policy. At the last examination the percentage of passes amongst the Senior candidates fell from 67.6 to 51.7. The percentage of the Juniors, however, increased from 66.8 to 67.30. "Natural Science" was offered by 716 "Preliminary" candidates, and 50 per cent. of them passed.

\* \* \*

At the recent congress in London of the Associated Chambers of Commerce of the Empire a resolution was passed to the effect that the Government should be asked to give specific grants in aid of commercial education, as they do for technical education. A resolution of this kind will be moved by Sir Albert Rollit at the forthcoming autumnal meeting of the Chambers of Commerce of the United Kingdom shortly to be held in Paris.

\* \* \*

THE eighth of a series of International Art Exhibitions will be held at Munich in 1901, and will be promoted by the Munich Artists' Club and the Plastic Art Union of Munich. It will be conducted for the most part on the same principles as the last exhibition (the seventh), which was held in 1897. Special efforts will be made to secure success in view of the eightieth birthday of the Prince Regent of Bavaria. The co-operation of British artists is cordially invited. The exhibition of 1897 comprised painting, sculpture, etching and engraving, and design, both as illustrated by drawings and as carried out in materials. Further information can be obtained upon application to the Secretary of the Artists' Club (Künstler Genossenschaft), Munich.

\* \* \*

Appointments and Vacancies. It is fitting that a college in a teaching University should be represented by a Principal. University College, London, has hitherto had a President and a Vice-President, but no head of the teaching staff. The Council announce that they have appointed Mr. G. Carey Foster, B.A., F.R.S., Principal of the College. Mr. Carey Foster is a Fellow of the College, and has held the offices of Professor of Experimental Physics and of Quain Professor of Physics; he is also a Fellow of the University of London, in which University he acted as examiner previous to his election to the Senate.

\* \* \*

OWING to this appointment and to the retirement of Mr. J. M. Horsburgh, the Secretary of the College, there will be a reorganization of the administrative and executive department of the College. Pending the completion of this reorganization, the Council have invited Dr. Gregory Foster, Fellow of the College and Professor of English Language and Literature at Bedford College, to hold the office of Secretary.

\* \* \*

THE QUEEN has been pleased to appoint Dr. Thomas McCall Anderson, M.D., Professor of Clinical Medicine in the University of Glasgow, to be Professor of Practice of Medicine in the said University, in place of Prof. Sir William Tennant Gairdner, M.D., who has retired.

\* \* \*

MR. ALEXANDER MACPHAIL, M.B., C.M., Senior Demonstrator of Anatomy in Glasgow University, has been appointed Professor of Anatomy in St. Mungo's College, Glasgow.

\* \* \*

PROF. J. G. MCGREGOR, of Dalhousie University, Halifax (N.S.), has been appointed Professor of Physics in the University of Liverpool, in succession to Prof. Lodge.

\* \* \*

APPLICATIONS for examinerships for the College of Preceptors in Physics and Physiology should be addressed to the Dean of the College not later than October 1.

\* \* \*

THERE is a vacancy for the Principalship of Heriot Watt College, Edinburgh. September 1 is the latest day for applications.

MR. ERNEST L. WATKIN, late scholar of St. John's, Cambridge, has been appointed Lecturer in Mathematics at Bristol University College, in succession to Mr. J. F. Hudson.

\* \* \*

MR. THOMAS SMITH MURRAY, D.Sc., senior assistant in the Chemical Department of the University of Aberdeen, has been appointed Headmaster of the Science Department in the High School of Dundee, in succession to Mr. Frank W. Young, who has been appointed one of Her Majesty's Inspectors of Science and Art Schools.

\* \* \*

MR. G. L. BRETHERTON, B.A., one of the senior assistant-masters at the Wyggeston School, Leicester, has been appointed to the Headmastership of Hipperholme Grammar School, Yorks.

\* \* \*

THE REV. T. ALLISON, M.A., has been appointed Vice-Principal of St. John's Hall, Highbury. Mr. Allison was for some time Deputy Professor of Economic History at Harvard.

\* \* \*

DR. WALLACE STEWART has resigned the post of Principal of the Hartley College, Southampton.

\* \* \*

THE REV. W. E. SHERWOOD, M.A., retires from the Headmastership of Magdalen College School, Oxford, which he has held since the year 1886.

\* \* \*

DR. T. S. MURRAY, D.Sc. Aberdeen, has been appointed Headmaster of Dundee High School.

\* \* \*

THE Council of Mason University College has appointed Mr. Frank Roscoe to the post of Master of Method in the Day Training Department, which in October will be transferred to the Birmingham University. Mr. Roscoe succeeds Mr. C. O. Tunstall, B.A.

Literary Gossip. THE Oxford University Press has a splendid collection of books at the Paris Exhibition, many of them being sumptuously bound. One of these, valued at £150, is "A Century of Oxford Almanacks," including rare old line engravings, some of great value. The prices of the forty-seven volumes specially distinguished reach a total of upwards of £1,100. Several volumes were sold almost as soon as they were shown, chiefly to representatives of various science and art museums. The single volumes with the most costly binding are the "Ancient MS. of the Yasna," edited by Prof. L. H. Mills, and Dr. Fortnum's historical treatise on "Maiolica."

\* \* \*

ACCORDING to Mr. Frowde's *Periodical*, the Yasna MS. is bound in crushed levant morocco, dark green in colour, with a design of tulips and a panel of sunflowers, and a diamond of solid stops inlaid with red and blue. The "Maiolica" is bound with a flexible back. "The edges have been gaufered with a pattern of outline tools of roses and vine, the pattern starting at the centre of the fore-edge and ending at the head-bands. The book is covered with bright blue levant morocco, with design of tulips and vine. On the side the vine forms a border, the leaves being inlaid with a soft reseda green, which colour also occurs in the centre panel of the doublures. The decoration of the doublures is an elaboration of the dentille. The four corners have a pattern of tulips, which continue to the centre of the sides and overlay into the centre panel of green leather. The flyleaf is of green *moiré* silk."

\* \* \*

PROF. DIETZ, of Berlin University, has a high opinion of the future position of the English language, which seems to him to be destined to assume sway throughout the world:—

Apart from the immense political influence which the United States and the United Kingdom with her colonies exercise upon the world, as well as the supremacy which the English-speaking population alone

exercises by its numerical preponderance, the English language, even by its structure, seems destined to be the language of the universe. It has, in the first instance, freed itself early from all superfluous ballast of declensions and conjugations, and, being founded on roots, is a most suitable language of command for a governing race.

\* \* \*

THE annual report of the Cambridge University Library for the year 1899 has been published. Mr. H. G. Aldis has been appointed Secretary, and Mr. E. G. Browne, Fellow of Pembroke, Curator in Oriental Literature. The number of titles printed for the general catalogue during 1899 was 7,860. The number of new books catalogued in 1899 was 5,280. The number of persons not members of the University to whom tickets of admission to the library for purposes of study have been granted during the year is 82. The number of books borrowed from the library during the year was 28,650, as compared with 24,727 in 1898. Of this number 496 were borrowed under the rule which requires the librarian's order. The number of manuscripts, &c., borrowed on bond by grace of the Senate was five. The number of manuscripts and other reserved books entered as having been consulted in the library was 924.

\* \* \*

THE examiners for the Hare Prize at Cambridge announce that it will be offered in 1901 for the best English dissertation on the following subject:—"A Study of the Imperial Administration under Trajan." Candidates must be actual members of the University and graduates of not more than ten years' standing from their admission to their first degree at the time when the exercises are sent in. The exercises must be sent in to the Vice-Chancellor before the division of the Easter term, 1901.

\* \* \*

THE International Congress of Publishers, which met at Paris in 1896, at Brussels in 1897, and at London in 1899, has arranged to hold its next gathering, in 1901, at Leipzig. This venerable seat of the oldest European book-market is still the metropolis of the modern German, Austrian, and Swiss book trades. Publishers from all parts of Europe and America will discuss the question of copyright in its international aspects. Albert Brockhaus, the head of the ancient firm, has been chosen President of the Congress. The foreign honorary presidents for the 1901 Congress are Mr. Murray, of London; M. Fouret-Hachette, of Paris; and M. Bruylant, of Brussels.

\* \* \*

A NEWLY revised edition of the "Imitation of Christ" will be published shortly, possessing the following new features:—The translation is absolutely faithful to the original Latin of Thomas à Kempis: "No word or phrase has been altered in the interests of any school or party." The traditional arrangement into verses, which rests on no authority whatsoever, and dates only from the seventeenth century, has been abandoned in favour of an arrangement according to the original paragraphs. All direct quotations from Holy Scripture are printed in italics; marginal references are given not only for these, but for all allusions to or indirect quotations from the Bible. The Clarendon Press will publish this volume.

\* \* \*

MR. JOHN MURRAY has decided to publish a new monthly periodical, the *Monthly Review*, under the editorship of Mr. Henry Newbolt. It will be illustrated, and will include a regular "editorial" department. This department is to be "under the direct and effective control of the Editor," and its articles will be unsigned. The first (October) number is to appear on September 19.

\* \* \*

THE late Sir William Stokes was Hon. President of the International Medical Congress at Paris, 1900. He was distinguished in the world of letters, as well as in medicine. He contributed largely to the medical and surgical papers on clinical and operative surgery; and in 1898 he published in Mr. Fisher Unwin's "Masters of Medicine Series" an exceedingly able biography of his father William Stokes, and his work in the cause of medicine.

### A TRIUMPH OF EDUCATION.

ON the last page of the "Helen Keller Souvenir," a handsome volume published by the Volta Bureau, Washington, "to commemorate the Harvard Final Examination for admission to Radcliffe College," is a *facsimile* of a certificate of admission dated July 4, 1899, wherein we read that Helen Keller passed the examination "with credit in advanced Latin." The subjects taken also comprised advanced Greek, geometry, and algebra. This would be counted no mean achievement for an ordinary young girl of considerable talent. In the case of one who has been totally deaf, and blind as well, from infancy, it is nothing less than wonderful.

How this transformation was accomplished, by what untiring labour and patience, may best be learnt in the interesting account of her clever and devoted teacher, Miss Annie Sullivan. She, as the girl says in her own description of her education, was eyes and ears for her, "more like a part of myself than a teacher." "Helen," says Miss Sullivan, "is not an extraordinary genius," but "simply a very bright and lovely child, unmarred by self-consciousness or any taint of evil." She tells us how, in the early days of her charge, she waited long, eager, and impatient, "before that beleaguered citadel, anxious for some sign from the soul within." One day Helen was taken to the pump-house to feel the water as it flowed, and, as she felt it, the word "water" was spelled into her hand, and so suddenly it dawned upon her what language meant. As she herself charmingly puts it: "That word, meaning water, startled my soul, and it awoke. . . . Until that day my mind had been like a darkened chamber, waiting for words to enter, and light the lamp, which is thought." From that day we read that she went forward steadily in daily mental growth, never falling back a step, to the delight of herself and the surprise of all who watched her. It was all pure joy to her. "She impresses me every day," says her teacher, "as being the happiest child in the world; and so it is a special privilege to be with her."

And here we may note a few facts in Miss Sullivan's demonstrably successful method of teaching the deaf. The sign-language had no part in Helen's training, nor oral instruction. She was not taught to speak till she had mastered the English language in her mind. Up to then Miss Sullivan employed only the manual alphabet, spelling into the child's hands just such words and sentences as she would have spoken to her had she been able to hear—not picked language, but ordinary idiomatic English. "I invariably used language," she tells us, "as a medium for the communication of *thought*; thus the learning of language was coincident with the acquisition of knowledge." One great obstacle to the progress of ordinary children was removed from Helen's path—there was nothing external to distract a wandering attention. This absolute concentration was doubtless an ally in her struggle. The child "acquired language in an objective way, by practice and habit rather than by study of rules and definitions." Books were the second great factor in Helen's education. As soon as she had learned the raised letters—for we must remember she was in worse plight than the merely deaf child—books were her constant companions. Long before she could read them she would amuse herself over them for hours each day and scream with delight whenever she found a word she knew. The number of books to which she had access was necessarily limited. "I am confident," says Miss Sullivan, "that the ease and fluency with which she uses language are in large part due to the fact that embossed books were placed in her hands as soon as she had learned the letters."

The great principle of Miss Sullivan's method seems to have been one well known in teaching an ordinary child. The words and sentences were presented first before they were understood, as a model for imitation. Ordinary children, as Dr. Graham Bell says in one of the introductory essays of the "Souvenir," learn by frequent hearing, the deaf by frequent seeing, and those doubly afflicted by constant touching.

Three years after beginning to learn the manual alphabet Helen had her first lesson in oral speech. "How do the blind girls know what to say with their mouths?" she would ask. "Do deaf children ever learn to speak?" And when told they could see their teacher's mouth, she said she was sure she could feel it. No difficulties daunted her. In a few lessons she learned nearly all the English sounds; in less than a month she was able to pronounce many words quite distinctly. Of course the complete attainment of this object, to speak like other girls, must take many years of patient labour. But for that she was always prepared. It was in 1896 that she entered the Cambridge School for Girls, to be prepared for college, accompanied always by Miss Sullivan as her interpreter. She was now to be taught in classes

of "normal" pupils by ordinary teachers. She had made good progress in English and French, and had done some Latin. It was proposed that she should pass the entrance examinations to Harvard College in English history, advanced French, and advanced German. She was also to study arithmetic. Helen would enter the examination at a great disadvantage, as the others could read and re-read their papers, and all that they had written as they went on. There was difficulty, too, in getting the books which she required made quickly enough, that is, getting them put into "Braille," a raised type used by the blind. But obstacles to a nature like hers were but fresh incentives. The German teacher, touched and interested, learned to read to her with her hand, and others followed suit, we are told. Helen made such progress in Latin that, after studying it for half the time allowed to ordinary pupils, she was pronounced by the teacher fit to take it with her other subjects. Indeed, it is clear that the girl's mental powers were far in advance of the average, and, when once the initial difficulty of being able to enter for an examination at all was surmounted, her teachers had reason to believe her "able to accomplish any mental feat that is possible to woman."

The examination approached. Helen sat at her typewriter with Dr. Gilman, the head of the school, as interpreter at her side, in place of Miss Sullivan. He read the whole paper through, and then re-read it sentence by sentence. She repeated the words as his hands made the signs, to make doubly sure she had fully understood him. In the event she was successful in every subject, and took Honours in English and German. Indeed, she won the highest marks of all in English. And she had only been working "on college preparatory lines" for one year. "No one," says Dr. Gilman, "had prepared for these examinations in so short a time before." And all this was due to concentration of mind and purpose, to the long and careful instructions of her teachers, and especially to the devotion of Miss Sullivan. "When a required book was not in raised print," says Helen, "her fingers spelled it all out on my hand with infinite patience." Even so the result seems little short of miraculous. Helen's career at the Cambridge School was unexpectedly cut short. The classes were too large for her to have the special instruction she needed at the start. "Miss Sullivan was obliged to read everything to me, as well as interpret for the teachers, and, for the first time in eleven years, it seemed as if her dear hand would not be equal to the task." But it was finally due merely to some difference of opinion as to whether she was being tried beyond her strength that Helen was withdrawn. She was then placed under the direction of Mr. Merton Keith.

From the beginning of 1898 down to the summer of 1899 she and Miss Sullivan boarded with friends in Massachusetts, living an outdoor life, boating, bathing, and bicycle-riding, and Mr. Keith came to give her lessons, chiefly in mathematics (by no means Helen's favourite study), and also in Greek and Latin. It had been arranged by Dr. Gilman that she was to take the three years' course of study for the Radcliffe College final examinations. Would she be able to do the entrance examination in 1899? "Every one," says Mr. Keith, "including the persistent, energetic, indomitable Miss Sullivan, seemed utterly discouraged over the algebra and geometry." Mr. Keith, despite Helen's distaste for mathematical studies, and the fact that Mr. Gilman had fears of a breakdown, seems to have encouraged the idea of her achieving the task. He considered that Helen "needed the drill in accuracy and in logic" afforded thereby. History, literature, and languages were as child's play to her unwearying brain in comparison. "Her joy in life and her power of service to the world will find their chief sources there." In them he believed she could attain anything, for the bent of her mind was essentially poetic and imaginative. Helen was not adverse to mathematical study—far from it. A task, however formidable, meant but the opening of new delights to her. Her ambition, her eager thirst for knowledge, made her determined to succeed against all obstacles. To onlookers it might seem cruel to put pressure on this child. But she welcomed the burden, and her teachers seem not to have overrated her power or miscalculated her nervous force. After all, the winning of educational laurels was almost, if not all, her means of joy in life. The private teaching suited best her peculiar needs. She now found her progress quicker than in class-work at school. Greek was an absorbing pleasure to her. "I admire Greek very much indeed," she says in one of her letters. "It is easier to read than Latin, I think, and much more spontaneous and beautiful. I wish algebra and geometry were only half as easy for me as languages and literature."

When one reads an account of Helen's rapid advance, not only in the things she loved, but in the distasteful and thorny paths of

mathematical knowledge, one is lost in admiration for this undaunted soul. Mr. Keith says: "I set out to discover how far I could rely on her eager attention, tenacity of mental grasp, and memory to save her the time and weariness of paper-work." And the discoveries were rich in promise of success. "We sometimes did theorems wholly in the mind." Much of the algebra, too, was carried on by purely mental process. And the upshot? "She has acquired new qualities of mind, or, at least, developed or strengthened latent ones. She has seen new beauty and heard new harmony," is the final verdict.

It would be interesting to go more fully into this account of Helen's studies. But it must suffice to note that she read much of Xenophon and Thucydides, on which she passed examinations without dictionary or grammar. She read Homer, too, which, from the start, was "Paradise to her." The study of the "Iliad" and "Odyssey" opened up a whole fresh dream-world to her vivid imagination. Mr. Keith remarks that she took to Greek even more easily than to Latin. We must not forget that some of the books she was unable to get in "Braille," and they were read under difficulties. She also read something of Cicero, whom she could ultimately translate into idiomatic English, and of Virgil, in which more than any other book she was primarily her own teacher. "It seems easy and natural for her to see the meaning and appreciate the inner feeling of the great Roman poet." She translated him in "highly poetic" language. "I believe," says her tutor, enthusiastically, "Miss Keller is capable of giving the world, at some future time, in rhythmical prose, a new version of Virgil, which would possess high and peculiar merit." To sum up, in thirteen months she was fit to pass the Radcliffe examinations in elementary algebra and plane geometry, Latin, and Greek. The examination in languages, we learn, includes mostly translations at sight, and questions on the grammar and subject-matter of the pieces set for translation. Half the geometry paper is "sight-work" and half book-work. When the time came for her final test, Mr. Eugene Vining, of the Perkins Institute, who had had no educational or personal relations with her, was engaged to reproduce the papers in "Braille." It was arranged that he should send her a few days previously some sample papers transcribed by him in "Braille." The plan was found to work well in the languages, but in mathematics it was different. The method of writing the various signs and symbols varies somewhat. Poor Helen had a fresh and unforeseen difficulty to meet. Two days before the examination she found that her examiner used a different notation from the one she was accustomed to, and she had to sit down to master this. Even so, the poor girl was sadly hampered in both mathematical papers. "But I do not blame any one," she says, with her never failing patience. "They did not realize how difficult they were making the examinations for me."

Once again, in spite of all, she overcame the obstacles, and finished her examination perfectly bright and fresh, showing no trace, we are told, of nervousness or fatigue. And the outcome was the aforementioned certificate.

Helen Keller's two great gifts we gather to be memory and power of inference. Her powers have been strengthened in latter years, and she has acquired more patience in the collecting and comparing of facts and in logical thought. But, above all, she has been sustained by the moral qualities of her soul, ambition, courage, confidence, patience, and faith. She has refused defeat and defied difficulties. Her "persistent will" has been the main-spring of her accomplishment. For her brave fight against overwhelming odds, for her conquest of a destiny that seemed dark indeed, we can but do her honour. And so we leave her on the borders at least of a land very fair in promise. In the annals of education this book reads like a fairy-tale. D. M. G. S.

## REVIEWS.

### EXCURSIONS IN HISTORY.

- (1) *A Short History of the British Empire for the Use of Junior Forms.* By G. E. Green, M.A. (Dent & Co.) (2) *The Making of the British Colonies.* (Manchester: Heywood.) (3) *A Preparatory Historical Reader.* (McDougall.) (4) *The Nineteenth Century: an Inaugural Address delivered in the Senate House, Cambridge.* By the Rt. Hon. A. J. Balfour, M.P. (Cambridge University Press.)

The miscellaneous quartet of books whose titles are here set forth have little in common, except the fact that they deal with British history in summary fashion, and for youthful and un-

critical readers—though Mr. Balfour's lecture was originally given to an audience which included a sprinkling of University dons amongst a crowd of Extension students. The first three volumes are written expressly for use in schools, and of these Mr. Green's "Short History" has a special claim on our attention, being a careful attempt by a competent writer to produce a new story of the national growth on somewhat novel and attractive lines. His book has much to recommend it. To begin with, it is well planned, being divided into three parts of twenty chapters each; it is not overlaid with constitutional facts or philosophic deductions, but, at the same time, it aims at including "the main stages in the development of every side of national life." The space gained by abstention in regard to constitutional detail has been given to industrial and literary records, which occupy eight of the sixty chapters; and, perhaps, this is a little in excess of what is necessary, or even advisable, for the junior forms. Still, there may be many teachers who will be glad to have these commercial chapters as an alternative to the more detailed consideration of charters, laws, and the institutions of government. An intelligent boy will be able to assimilate them, and they will furnish his mind with useful ideas. We can scarcely feel the same confidence in regard to the literary chapters, which are too much in the nature of catalogues to be taken to kindly by a young reader. A very good feature of this volume is its sixty-seven illustrations and sixteen maps, distributed over 236 pages of type. The pictures are no perfunctory collection of blocks and indifferent cuts; nearly all are from contemporary manuscripts, tapestries, tombs, ornaments, or early printed books, and the origin of each is carefully assigned. This adds considerably to the historical value of the book. On the whole, it is one which we are disposed to recommend for use, not as a first history, but for boys and girls of twelve or thirteen. Mr. Green is occasionally rather loose in expression. It is hardly precise to say that "a hundred years before Lydgate there was a book published in English which might almost be called a story-book. It is Sir John Maundeville's 'Travels,' for [!] they contain many tales which are as entertaining as they are incredible." Also, he is a little too didactic, as in page 129, line 2, and line 8 from the bottom.

(2) "The Making of the British Colonies" is described as "a short account for schools and general reading, a series of sketches for young and old." The net that is to catch so many fish, big and little, is made accordingly—big meshes in one part and little meshes in other parts. Dates are omitted from the text, for, "where the date comes in at the door, the interest for readers of the younger generation too often flies out at the window." "A few landmarks only, such as 1588," should be "kept constantly in view." There are no maps. "Such little maps as can be inserted in a volume of this size"—a fair octavo—"must perforce be trumpery." "Finally, be it said"—we quote a whimsical preface—"where long, or foreign, or classical words have been used, it has been done to afford teachers more scope."

(3) "McDougall's Preparatory Historical Reader" extends from Cæsar to Victoria. It is simply written for young children, interspersed with poetry, and freely illustrated—by no means a bad book for its purpose.

(4) Mr. Balfour began his lecture at Cambridge by apologizing for tackling the nineteenth century in a single speech, and for seeming to teach when he could only profess to generalize. "The Nineteenth Century" was the general subject of the Cambridge Summer Meeting, and Mr. Balfour simply came to open the courses of lectures. That he did so in an interesting manner may be taken for granted. He took samples of the century, and freely declared his preference for some samples over the others.

The middle third of the nineteenth century does not, I acknowledge, appeal to me. It is probably due to the natural ingratitude which we are apt to feel towards our immediate predecessors. But I justify it to myself by saying that it reminds me too much of Landseer's pictures and the revival of Gothic; that I feel no sentiment of allegiance towards any of the intellectual dynasties which then held sway; that neither the thin lucidity of Mill nor the windy prophesings of Carlyle, neither Comte nor yet Newman, were ever able to arouse in me the enthusiasm of a disciple; that I turn, with pleasure, from the Corn Law squabbles to the great War, from Thackeray and Dickens to Scott and Miss Austen, even from Tennyson and Browning to Keats, Coleridge, Wordsworth, and Shelley.

From mere preferences of this kind, Mr. Balfour passes on to philosophic speculations, and ends with a prediction, manifestly intended to console us; though there may be some whom it will rather tend to depress.

If the goal to which, consciously or unconsciously, the modern

physicist is pressing be ever reached, the mechanical view of things will receive an extension and a completeness never before dreamed of. There would then, in truth, be only one natural science—namely, physics; and only one kind of explanation—namely, the dynamic. . . . Would this conception, in its turn, foster a new and refined materialism? For my own part, I conjecture that it would not. I believe that the very completeness and internal consistency of such a view of the physical world would establish its inadequacy. The very fact that within it there seemed no room for Spirit would convince mankind that Spirit must be invoked to explain it. I know not how the theoretic reconciliation will be effected, for I mistrust the current philosophical theories upon the subject; but that, in some way or other, future generations will, each in its own way, find a practical *modus vivendi* between the natural and the spiritual, I do not doubt at all.

We have said that Mr. Balfour's lecture was interesting. It did not aim at being profound; though it manifestly touched some very profound problems. A philosophic politician has an immense advantage in being able to manipulate the infinite with a light and airy touch, which would be manifest desecration as applied to a proposition of Euclid.

#### CANADA.

(1) *Canada: a Descriptive Text-Book.* By E. R. Peacock, M.A. (Toronto: Warwick Brothers & Rutter.) (2) *Canadian Atlas for use in Schools.* (Issued by the direction of the Minister of the Interior, Ottawa, Canada.)

If a watchword were wanting to the British nation, to remind it in the future of the loyal enthusiasm of the Colonies during the war in South Africa, it is found in the words "Sursum corda!" used by Burke at the close of his great speech on conciliation with America. He said, truly, that the Colonies would only become dangerous when the nation failed to elevate its mind to the greatness of the trust to which it was called. The dense ignorance of the average Englishman of Burke's day as to the condition and resources of the Colonies has only been partially removed. How can it be dispelled? It seems, indeed, as if nothing short of war can induce us, as a nation, to take even a spasmodic interest in geography. In spite of all our efforts, the subject still languishes in our schools. It has never been alive at the Universities; and no exception is made in favour of the geography of our Colonies. Fortunately, at last, the importance of a real knowledge of the Colonies is admitted on all sides; but even Froude, Dilke, and Seeley have failed to move the Universities to give geography the measure of recognition without which it must remain both unfashionable and insipid.

The great trust of which Burke spoke must remain incomprehensible, unless we are taught in a living way the natural and social features of the Colonies, and what manner of men our kin are fashioning themselves into by the result of their industry. This is clearly the province of geography teachers and writers of text-books. Hitherto, with few exceptions, the geographies used in our schools have repelled learners by their dry-as-dust style and bald statement of facts, devoid of local colouring. As a contrast to such books, we wish to draw pointed attention to Mr. Peacock's "Canada," for two reasons. It will be a revelation to schoolmasters of the way in which a geography should be written; and every master and pupil will be fascinated by its human and practical interest. The book has admittedly been written for a purpose, and may have to overcome some prejudice on that account. As Dr. Grant, Principal of Queen's University, Kingston, states, in an introduction: "There is place now for a text-book in British schools on the Dominion of Canada"; and the Canadian Government, through Lord Strathcona, High Commissioner for Canada in England, has taken steps to encourage the study of Canada in our schools. The High Commissioner's letter, explaining how this can be done, will be found elsewhere in this number.

We sincerely hope that a considerable number of schools will seize the opportunity of becoming acquainted with a refreshing and at the same time thorough book. Written, as it is, in a simple direct style, without any flavour of false jingoism, and full of real and practical information, it cannot fail to foster a noble conception of the destinies of our race. Even if in some cases the exigencies of examinations make it impossible to arrange for a modification of the school syllabus for the coming term, the book might well be set as extra work out of school-hours. We are bold to think the boys would be grateful, for Mr. Peacock has shown a wonderful insight into the requirements and tastes of his prospective readers. They will enjoy the vivid picture of Canadian life, and long for the things that are left unsaid and only cunningly suggested; they will enjoy, perhaps unconsciously,

the fact that the language is not obviously brought down to a child's level; and above all they will enjoy the complete absence of notes. There is a charm about such words as "tomahawks," "papooses," "scalps," and "squaws" that notes would quite destroy. If the book is intended to attract English settlers, nothing could be better calculated to effect this end than the descriptions of the various industries of the country. It is continually pointed out by the author that in all of them—fishing, lumbering, ranching, mining—hard work, self-denial, and even heroism are frequently demanded of the young colonial; but the very freshness and freedom of the open-air life, and the independence of mind and love of sport that go along with the hardships, are equally presented to the reader. We could perhaps wish that some of the summaries of facts at the close of the chapters were a little less congested; there is room here for a teacher's discretion. In conclusion, we may say that the manner in which history is woven in with the geography throughout shows how well the latter subject may be made interesting in a legitimate way.

We cannot, however, commend the accompanying Atlas. Not only are the maps overcrowded, but the letterpress is a mass of information which we trust will be used strictly for reference only. The illustrations in both books are plentiful and well chosen.

#### ROME at HER WORST.

*History of the City of Rome in the Middle Ages.* By Ferdinand Gregorovius. Translated by Annie Hamilton. Vol. VII., Part II. (1497-1503). (Bell & Sons.)

The seventh volume of Mrs. Hamilton's translation of the voluminous history of Gregorovius brings us to the closing phase of the middle ages, to the dawn of the Renaissance, and to the most terrible and ghastly epoch in the annals of the Papacy. Gregorovius notices, but does not quite endorse, the claim that the spiritual history of Rome must be held distinct from the personal history of the Popes, and that the continuity of spiritual authority could not be destroyed by the unworthiness of some of the fallible men in whom it was vested. The distinction, of course, is reasonable and necessary; and, without such discrimination, it would surely have been impossible that the Roman Church should have retained her supremacy after the opprobrium and contempt incurred by Popes and Cardinals at the end of the fifteenth and the beginning of the sixteenth century.

The Jubilee of 1500 brought many thousands of pilgrims to Rome, which they found no longer a sacred city, but a sink of every kind of iniquity. They saw Lucrezia Borgia, a daughter of the Pope Alexander VI., riding on horseback from the Vatican to St. Peter's, a magnificently clad pilgrim, attended by a hundred other women, also on horseback and magnificently clad. They saw gigantic bonfires burning in the city, and were told that they celebrated a victory of the Pope's bastard son Caesar, a renegade Cardinal, who had recently killed his brother under circumstances too horrible and atrocious even to hint at. The whole story of the Borgias, who prostituted a corrupt Church and ruined a demoralized nation, is a sickening and disgusting record:

At no period of Rome's deepest darkness, such as had been denounced by satirists or saints, from Pier Damiani to Clemange, had her corruption equalled that of the time of the Borgias, when the light of Humanism only made the shadows of the Vatican appear the darker. Here, under the ruins of the ancient Church, and also of the ancient communal freedom of Rome, sat father and son in their sumptuous chambers, absolute rulers, surrounded by complaisant servants, deeming themselves justified, like Tiberius in former days, in despising their time, the corrupt people, and the Senate which obeyed them. . . . Thirst for power and pleasure were the motives of an age in which the doctrines of Epicurus had vanquished Christianity. Almost every prominent man of this period seems abandoned to sensuality, and Alexander VI. found Rome a sink of immorality. . . . The Borgias represented the renaissance of crime such as had been witnessed in the days of Tiberius and other emperors. They possessed the most audacious courage in this respect, but crime itself in their hands became a work of art.

One third of the present volume is devoted to the papacy of Alexander VI., and the remainder to the Renaissance in Italian literature and art. The discovery of ancient authors, the enrichment of the Vatican Library, the arrival of the Byzantine fugitives, the work of the Medici and the Colonna, of Poggio, Chrysoloras, Argyropoulos, and Reuchlin, amongst philologists, collectors, and archaeologists, the growth of poetry and the drama, the achievements of painters, sculptors, and architects, the production of bronzes, busts, medals, and gems, the collection of antiquities, the recovery of the Apollo Belvedere and of innumerable

able statues and inscriptions—these things Gregorovius tells us with much detail, and we read them with a zest all the greater for the sombreness of the preceding narrative. This description of the learning and zeal of Rome in the Renaissance, this demonstration of an art and a literature extending over seventeen centuries, seems to emphasize a true and venerable saying: "Corruptio optimi pessima."

#### CHAPTERS FROM ARISTOTLE.

*Chapters from Aristotle's Ethics.* By J. H. Muirhead, M.A. (Murray.)

Neither the learned commentaries of Sir Alexander Grant and Prof. Stewart nor several translations of unequal excellence can be said to furnish the "general reader" with ready access to the "Ethics" of Aristotle. Even if the very name does not warn off the non-classical scholar, the simple translation itself needs to be translated into modern terms and forms of thought; and, while there have been such advances in psychology and general philosophy since Sir Alexander Grant's time that a fresh interpretation of the Aristotelian ideas has been rendered necessary, it is only scholars that can profitably tackle Prof. Stewart's most able work. Prof. Muirhead's object, accordingly, has been "to bring some of the leading conceptions of the 'Ethics' into connexion with modern ideas for the sake of the general reader." In this connexion we cannot but recall Mr. St. George Stock's "Lectures in the Lyceum" (with the alternative title of "Aristotle's Ethics for English Readers"), which came before us some three years ago—really a more elaborate and not less popular treatment than Prof. Muirhead's, though not on lines exclusive of the latter. We do not observe that the Professor makes any reference to Mr. Stock's excellent book.

Still there is room enough for Prof. Muirhead's "Chapters." These retain marks of "their origin in a course of lectures to teachers." Nor are they any the worse for that; on the contrary, they are all the better, in simplicity, ease, and flexibility. The distinctive note of them, however, is the very full reference to modern philosophy, so that Aristotle is reinterpreted in the terms of the latest philosophical developments, and compared or contrasted with modern views. The process is very interesting as well as useful; and all the more so in that the author not only has a firm grip of the philosophies, but is able to join literary grace and skill with lucidity of expression and fertility of illustration. If he brings the Stagirite face to face with Hobbes, J. S. Mill, T. H. Green, Herbert Spencer, or even Dr. Ward or Dr. Stout, he is also ready to cast upon his doctrine rays of literary light from Stevenson, William Morris, and Stephen Crane. To his readers, as to his original hearers, he makes Aristotle live and move and have his being as if he were a professor in the newest University of to-day lecturing to a class of Extension students. We hope the volume will find a very wide, popular circulation, in spite of its rather deterrent title. Whether Aristotle is the best introduction to ethics opens up a question that need not be discussed now; even if not the best, it is sufficiently good. The volume, we should add, will be found serviceable as a collateral help to University students; also the "selected passages" from Aristotle's text (in translation) form an all but indispensable appendix.

#### MR. SHUCKBURGH'S CICERO.

*The Letters of Cicero.* Translated by E. S. Shuckburgh. Vol. III. (Bell.)

Mr. Shuckburgh has published a third volume of his translation, the first instalment of which was noticed in our columns some months ago. To our general estimate of the considerable merits, and some defects, of the translation we have nothing to add; but there are one or two features in the present volume which call for notice. The Letters included in it cover the important period from January, 48, to February, 44—that is, from the time when Cicero joined Pompey's camp in Epirus to just before the murder of Caesar—a period marked, moreover, by great literary activity on the part of the orator. The translator has prefixed a brief and interesting introduction, dealing with the position and feelings of Cicero under the new régime, and giving a well balanced estimate of the point of view which led him, after reluctant acquiescence in Caesar's rule, to exult over what he justly calls "the stupid crime of the Ides of March." Certainly, though modern historians have pronounced against Cicero's views of the whole situation as short-sighted, no one better deserves the full benefit of the motto "Tout comprendre, c'est tout pardonner." Besides the introduction, this volume contains an appendix, giving a chronological list of the events of Roman history during the life of Cicero, with references to the Letters of each year.

## GENERAL NOTICES.

### CLASSICS.

*Sophocles, Antigone*, edited by G. H. Wells (Bell & Sons), belongs to an intermediate series of illustrated classics which Messrs. Bell are issuing. Of the style in which this volume is printed, bound, and illustrated, it is impossible to speak too highly. The introduction, profusely illustrated, is divided into short sections, each of which is devoted to a separate branch of the subject—the Greek theatre, Greek drama, tragedy, and other more special matters connected with the play. Mr. Wells writes in a manner that is likely to attract intelligent pupils. He makes reference to many authors, and, in a short space, provides the learner with plenty of information and plenty to think about. For the candidate in honours examinations he has erected a convenient little storehouse, in which are to be found, neatly arranged, all the facts and all the references to authorities that he can require in the time of need. The notes are short and practical. There are no critical notes proper; but the corrections received or favoured are duly commented upon in the general notes. There is at the end a handy collection of grammatical points and idioms; but there are no remarks on metre beyond bare statements, which will not be of much use to beginners—altogether a highly meritorious edition at a moderate price, which should certainly make its way in schools.

*The Æneid of Virgil, Book III.*, edited by P. Sandford (Blackie), contains a rather heavy introduction, a scholarly commentary, appendices on translations and metre, a grammatical index, and a vocabulary. Among the illustrations only the view of Mount Etna is of much account. Two of the others—Ulysses and Scylla, and Andromache giving up Astyanax—have only an indirect connexion with the text. The notes are very richly supplied with quotations, and these quotations are likely enough to interest advanced students; but we cannot think they are well placed in a volume that includes a vocabulary. For beginners, indeed, the notes are, in our judgment, quite unsuitable; but they would prove stimulating to an intelligent and well taught sixth form. The same remarks apply to the two appendices. We should be sorry to be condemned to use this edition in a class that requires a vocabulary; but it is a meritorious production, notwithstanding.

Of "Murray's Handy Classical Maps," we have lately received *Palestine, &c.*, and *Germania, &c.* (John Murray). The former includes maps of the countries mentioned in the Old and New Testaments and of Jerusalem. The latter contains the countries that made up what we may call the permanent north-western provinces of the Roman Empire, from the German Ocean to the Black Sea. These maps are excellent, both as regards scale and system of colouring, and we hope that they will be ultimately collected in an atlas. We should certainly recommend the two before us to divinity and history students.

*Xenophon's Anabasis, Book I.* (Bell & Sons), is edited by Mr. E. C. Marchant for the publishers' "Illustrated Classical Series." It contains a map, three plans, and twenty-seven illustrations; it has also a simple vocabulary; but the text may also be had without vocabulary. The editor warns us that "there is absolutely no trace of erudition between these covers"; but there are the short notes and syntax rules of an accomplished teacher, together with an admirable introduction. This is indisputably the best elementary edition for schools of the first book of Xenophon.

### SCIENCE.

*Elementary Lessons in Electricity and Magnetism.* By Silvanus P. Thompson. (Macmillan.)

This well known book needs no commendation. It is not often that the author of a standard scientific work remains in the forefront of his science twenty years after the writing of the first edition. Such is the case here, and we can, therefore, recommend Prof. Thompson's handbook, which is neither out of date nor tinkered, as new editions of twenty-year-old books too often are. The copy before us appears to be a reprint, without alterations, of the 1895 edition, which was, in large measure, a new book.

*Blackie's Science Handbook: Standard IV.* By H. Rowland Wakefield. (Blackie.)

Instructions for performing a number of simple experiments on the properties of bodies, physical and chemical, are given, with a sketch of the reasoning to be based on the results. We note that chemical experiments on chalk are included, but the very necessary warning as to the nature of modern blackboard chalk is not given. For teachers and scholars outside the districts where chalk-quarries are found it might be better to speak of "whiting" than of "chalk."

*Elementary Physics and Chemistry.* (McDougall's Educational Co.)

The beginning of this book we do not like. In the first chapter we have explained to us more than twenty different "properties of matter," mostly with long names, and only ten experiments to illustrate the lot. This is not the way to train children to thorough work, or to give them real knowledge as distinct from knowledge of words.

Afterwards, however, the method improves, and, if the teacher will take care to modify the opening portion, he will find it a serviceable book as an introduction to a school of science course.

*The Elements of Inorganic Chemistry.* By W. A. Shenstone, F.R.S. (Edward Arnold.)

Finding that there is a general want of co-ordination between introductory and advanced text-books of chemistry, Mr. Shenstone has tried to combine in one volume the material of both preliminary and subsequent courses in such a way as to leave the precise delimitation of the former to the teacher's discretion. So far as can be judged from a perusal of the book, he has succeeded in his object, and has, therefore, supplied a work the want of which must have been felt by a large number of teachers. It is intended to be supplemented by an excerpt edition containing the laboratory work only, to save damage to the present volume. The whole range of an ordinary advanced work is taken, including even some of the rare metals (though the now commercially important thorium is, strangely enough, passed over). The book is well written and clearly printed. As a small detail, we note that in the enumeration of the uses of iron-slag its use for railway ballast is not mentioned; though this now absorbs an enormous amount.

*Elementary Practical Chemistry for Schools of Science.* By Thomas Cartwright, B.A., B.Sc. (Nelson.)

A good introduction to the science of a thoroughly practical character. The instructions for preparing apparatus, &c., are particularly good.

*Elementary Inorganic Chemistry: Metals.* By S. R. Trotman, M.A., F.I.C. (Rivingtons.)

A rather dreary collection of facts about the metals. The extreme brevity of statement may sometimes lead to misunderstanding; e.g., on page 15 it is implied that an amorphous substance is one that is not capable of assuming a crystalline form.

*Elementary Chemistry (Second Year's Course).* By T. A. Cheetham, F.C.S. (Blackie.)

Though it contains only a hundred and fifty pages, this book includes two parts: the first devoted to the laboratory, the second to the classroom. The two are arranged in a parallel manner, and include the study of equivalents and of the properties of the commoner elements and their compounds. There is a sense of compression everywhere in the book, which may be regarded as advantageous or the reverse, according to circumstances.

*Elementary Practical Chemistry and Qualitative Analysis.* By Frank Clowes, D.Sc., and J. Bernard Coleman, A.R.C.Sc. Third Edition. (Churchill.)

This systematic handbook to the work of the chemical laboratory has, by attaining a third edition, acquired the right to be considered a standard work. It is pre-eminently a practical book, and the student who carefully follows the instructions it contains, from the first handling of apparatus up to the full qualitative analysis of an elaborate mixture, will only have himself to blame if he is not an expert manipulator.

*Elements of Mineralogy.* By Frank Rutley, F.G.S. Twelfth Edition, Revised and Corrected. (Murby.)

This perennial work has once again renewed its youth and will continue its career of usefulness. Considerable additions and improvements have been made, chiefly in the crystallographic section. Including the index there are now two hundred and forty pages of small print—a good quantity for the price.

#### MODERN LANGUAGES.

*Buch der Lieder.* Von H. Heine. (Dent.)

This is a dainty new edition of Heine's poems—the "Junge Leiden," the "Lyrisches Intermezzo," the "Heimkehr," "Aus der Harzreise," and "Die Nordsee." Type, paper, and binding are all that could be desired, and there is a characteristic portrait of the poet for frontispiece.

*German Prepositions at a Glance.* By C. Kaiser and A. Thouaille. (Sampson Low.)

This little book is by two teachers of the Gouin School of Languages at Liverpool. It contains pictures of a *Schützenfest*, a ship, a wounded soldier, and a railway-bridge; each detail of the picture being labelled with its appropriate preposition and its case. Thus, one boat is lying *neben dem Schiff*, and another is rowing *an das Schiff*; a tramcar is running *oberhalb des Viadukts*, and *Kraft des Motors*. The text consists of a good many short descriptive sentences for conversational practice, which a teacher might utilize and add to.

*Winke für junge Kaufleute.* (Stuttgart: Metzler.)

This handy guide to commercial office-work, put forth by a German commercial association by the aid of local teachers, embraces all that a mercantile apprentice may be expected to know by the end of his probation, when he should pass one of the examinations instituted in the year 1884. The contents embrace Historical Development of Trade; Organization of Trade; Buying and Selling, Travellers, Agents; Forwarding, Customs, Insurance; Ordering of Goods, Calculations, Payments; Weights and Measures, Moneys; Bills of Exchange; Banking; Correspondence, Bookkeeping; Questions in the order of the

text. In this country, unhappily, the system of apprenticeship in commercial work has died out, a raw schoolboy of fifteen receiving a "salary" (e.g., £100 spread over five years), which foreign youths only dream of until they become competent clerks. In the meantime, these are not left dependent entirely on their own "wits." The British custom hampers the development of commercial education amongst us. A book like the present may, however, well find a place in a school of commerce. It will be especially useful to students who take up the study of commercial German—for which it serves as a reading-book—and wish to gain some idea of the complexion of business done by German houses. It deserves the attention of teachers of business practice, and may be recommended to intending examinees of the London Chamber of Commerce, for either grade of its examinations, as a useful auxiliary to such English works as those by Whitfield, Hooper, and Graham, &c.

*Traité de Prononciation française.* By Albert Liet. (Paris: Boyveau & Chevillet.)

Any attempt to smooth the difficulties experienced by students of French in the pronunciation of that language will always be welcome, especially when the result is so satisfactory as in the work of M. Liet, which represents lessons given by him whilst specially engaged by the School Board for London to instruct its certificated teachers. Occasionally a doubt may be felt whether the author is altogether right, as when he divides *élasticité* into "é-la-sti-ci-té" instead of "é-las-ti-ci-té" (page 13). Again, one misses a note of qualification, as under "Liaison" (pages 15-16), where he gives *aimer à lire, deux et deux font quatre*, where the fusion is not compulsory, or in *voire avis est court et bon*, where the *liaison* of *court* and *et* should be avoided in ordinary conversation, and the second case, in *Prenez un peu de tabac en poudre*, not to be recommended. The "Lectures Simples" at the end are excellently marked for correct pronunciation of each word, and the English student can hardly fail to benefit by use of the book.

"Small Language Manuals."—III., *Lezioni Italiane.* By A. Scanferlato. (Leipzig: Teubner.)

This is the Italian volume of a series of manuals the aim of which is, besides giving rules of grammar, with conversations as exercises, to supply reading lessons conveying useful information as to the country concerned, which illustrate both the several grammatical rules and a vocabulary arranged systematically. Useful maps and plates are appended. The present part would serve as a good second book; but, as German is the medium employed, can, of course, be used only by those who have already acquired some knowledge of that language. To such the book may be recommended.

#### MISCELLANEOUS.

*Tales from Tennyson.* By the Rev. G. C. Allen, M.A. (Constable.)

We must say that Mr. Allen has performed his task—the reduction of Tennyson's "Idyls of the King" into prose—well enough; but we gravely doubt whether the task was worth performing. Boys to whom the Arthurian legend is likely to "say something" have already the "Idyls" and the old "Chronicle" of Malory within reach; and one sees not the necessity for this new setting, nor the likelihood of its attracting those who have turned away from Tennyson and the "Morte d'Arthur." It is a mistake to think that young people are repelled by the poetic form; on the contrary, they love the ringing march of great heroic lines, of such lines as:—

"So all day long the noise of battle roll'd  
Among the mountains by the winter sea."

It is a mistake, too, to imagine that children will turn away from such a style as Malory's—from the ancient form of speech and the strange words—since children revel in the strange and mysterious, and find a curious poetry and religion of their own in phrases which, logically, they cannot understand. Of course, there are the "less poetic boys"; but to these all fine literature, new or old, prose or verse, is odious.

*The School and Society.* By John Dewey, Professor of Pedagogy in the University of Chicago. (P. S. King.)

In no sphere of thought, perhaps, is the contrast between the old times and the new sharper than in the whole treatment of the method of education. We know the old way—Johnson described it to Boswell: The master suddenly asked a boy the Latin for "candlestick." The boy did not know; and the boy was there and then beaten savagely. Here, surely, we have the true "elementary" education. And how vast the difference—"immane quantum discrepat!"—between these simple methods and the other way, as expounded by Prof. Dewey! Education is no longer the acquiring information somehow or other—usually through the medium of the stick—it is a discipline of all the faculties; or, as the author expresses himself: "What we want is to have the child come to school with a whole mind and a whole body, and leave school with a fuller mind and an even healthier body." It is the purpose of these lectures to show how this entirely satisfactory result may be obtained.

"Monographs on Artists."—V., *Dürer.* By H. Knackfuss. Translated by Campbell Dodgson. (Grevé & Co.)  
We have spoken before of this admirable series of monographs, so

well written and admirably translated, in which Raphael, Holbein, Rembrandt, and Van Dyck have already appeared, and Rubens, Michelangelo, and Leonardo da Vinci are to follow. The Dürer volume has 134 illustrations from the artist's pictures, woodcuts, engravings, and drawings; and this handsome large octavo, with its artistic binding of chocolate and white, with gilt lettering and page tops and its protecting case, is sold at a remarkably low price. This is decidedly one of the most artistic books of the year, and its cost brings it within the reach of the poorest art student. Dürer is an education in himself. After nearly four hundred years many of his pictures stand out with the truth, dignity, and feeling of the best craftsmanship of our own day.

"Cambridge Series for Schools and Training Colleges."—*Geometrical Drawing: Part II., Solid or Descriptive Geometry.* By W. H. Blythe, M.A. (Cambridge University Press.)

This is a sequel, with continuous chapters and pages, to the little book on plane geometrical drawing noticed here a few months ago. It will be of special use to Army candidates, and the two parts together make a serviceable and simple text-book of geometrical drawing, with numerous examples and explanatory notes.

*Commercial Correspondence and Office Routines (Second Year).* By G. R. Walker. (Chambers.)

A good commercial handbook, suggested by the Evening Continuation Code. It is such a book as every junior clerk who hopes for a shift upwards would do well to master.

(1) *Text-Book for the Three Creeds.* (2) *Text-Book for the Church Catechism.* By the Rev. Septimus Buss. (Rivingtons.)

These are companion volumes to the "Text-Book for Holy Communion," by the same author, noticed in August, and the previous "Text-Book on the Morning and Evening Prayer." They are written in the same clear, expository style, and the completed series will be a valuable historical companion to the Prayer Book.

*Tennyson: The Lotus Eaters, Ulysses, Ode on the Death of the Duke of Wellington, Maud, The Coming of Arthur, The Passing of Arthur.* With Introductions and Notes by F. J. Rowe, M.A., and W. T. Webb, M.A. (Macmillan.)

It is useless to protest against the annotation of the most beautiful poems. Such books as this may make Tennyson known and loved by many who would not otherwise know him. And, if a great poet must pass into the guise of a little school-book, the transformation could not be better done than it is by Messrs. Rowe and Webb. The paraphrase of "Maud" is a skilful piece of work.

*Over the Alps on a Bicycle.* By Elizabeth Robins Pennell.

Illustrated by Joseph Pennell. (Fisher Unwin.)

This book reminds us of a characteristic saying of Dr. Johnson, when Boswell expressed his astonishment that a certain dancing pig should dance so well. "Sir, the wonder is not that it should dance so well, but that it should dance at all." We can understand Mrs. Pennell's satisfaction in having established a record; although the title of her book must not be taken literally, as the journey entailed a good deal of pushing when she was certainly not on the bicycle. The text and Mr. Pennell's sketches have, we think, appeared some time ago in the pages of a magazine. The sketches are interesting, as examples of rapid and effective work, and illustrate Mr. Pennell's well known sense of artistic selection, although he is sometimes unkindly used by the process block. Mrs. Pennell's advice as to roads will be found useful to any one ambitious enough to do a fair day's work in pushing for the delights of a good deal of hazardous "coasting."

*King Alfred Readers: Introductory Book.* (Edward Arnold.)

This is a capital little book for children just able to read—simple words, good print, very pretty pictures. The words are old and new, the pictures black and white or coloured.

*Preliminary and Intermediate Arithmetic for Civil Service and other Public Examinations.* By W. Stewart Thomson, M.A. (Simpkin & Co.)

Seventy-four worked examples and a large number of miscellaneous examples and problems. A very serviceable little volume.

*Metric Weights and Measures, with an Appendix on Decimal Coinage.* By J. Lingham Lees, B.A. Lond. (Relfe Bros.)

A plain and systematic explanation of the decimal system, with many easy examples.

*Language Lessons for Junior Classes, Books I.—III.* (Edward Arnold.) Very simple drilling for the simplest sort of children.

*Synthetical Maps.* By W. B. Taylor. (A. & C. Black.)

Judging from the "Germany" sent us as a specimen, this should be a very useful and instructive series. There are three maps of Germany on an extended and folded sheet; the first with named and numbered towns, rivers, and mountains; the second with the numbers but not the names, products and industries being indicated in small capitals; the third a mere outline for testing, with the numbers (1-30) of the towns. On the backs of the maps are notes on historical development.

From Messrs. Jarrold & Sons we have a *School Punishment Book*, designed to meet the requirements of the Education Department's "revised instructions."

MATHEMATICS.

12561. (C. E. HILLYER, M.A.)—(1) A, B are two fixed points on a circle whose centre is O, and C is any third point on the circumference; BC meets the tangent at A in D, CA the tangent at B in E, and AB the tangent at C in F. Prove that DEF is a straight line which envelops a conic of eccentricity  $\epsilon$ , where  $\epsilon^2 = 3OA^2/AB^2$ . (2) Generalize the above and Quest. 12462 (solved in Vol. LXII., p. 89) by reciprocation.

Solution by the PROPOSER.

Draw CB' equally inclined with CB to AB; then  $\angle FBC = CB'A$ ,  $\angle FCB = CAB'$ ; therefore the triangles FBC, CB'A are similar; therefore  $FC/FB = CA/B'C = CA/BC$ , and similarly  $DA/DC = AB/CA$ ,  $EB/EA = BC/AB$ ; therefore  $DA \cdot EB \cdot FC = DC \cdot EA \cdot FB$ .

But, since  $DB \cdot DC = DA^2$ , we have  $DB/DC = DA^2/DC^2$ , and similarly  $EC/EA = EB^2/EA^2$  and  $FA/FB = FC^2/FB^2$ ; therefore

$$DB \cdot EC \cdot FA = DC \cdot EA \cdot FB.$$

Therefore DEF is a straight line.

Let the tangents at A and B meet in G, and draw GC meeting DE in X and AB in H. Draw from X  $X\alpha, X\beta, X\gamma$ , and from C  $CP, CQ, CR$  perpendicular respectively to GA, GB, BA; then G, X, C, H form a harmonic range; therefore  $XG/CG = \frac{1}{2}(XH/CH)$ ; therefore  $X\alpha/CP = X\beta/CQ = \frac{1}{2}(X\gamma/CR)$ , and therefore  $X\alpha \cdot X\beta/CP \cdot CQ = \frac{1}{2}(X\gamma^2/CR^2)$ ; but, since C is on the circumference of the circle,  $CP \cdot CQ = CR^2$ ; therefore  $X\alpha \cdot X\beta = \frac{1}{2}X\gamma^2$ ; therefore the locus of X is a conic touching GA, GB at A and B; also, since F, B, H, A form a harmonic range, GH is the polar of F with respect to the conic; therefore DEF touches the conic at X.

[The rest in Volume.]

14394. (Professor THOMAS SAVAGE.)—Discuss,  $n$  being integral and positive,  $(1+1/x)^n < 2$ , but  $(1+1/x)^{n+1} > 2$ .

Solution by H. MACCOLL, B.A.

This question, as I understand it, will afford an instructive example of the application of symbolic logic to ordinary algebra. We are required to find the real limits of  $x$ . Let A denote the statement  $(1+1/x)^n < 2$ , and B the statement  $(1+1/x)^{n+1} > 2$ . My result is

$$n^e (AB = x_{\beta,1}) + n^o (AB = x_{\beta,1} + x_{\beta,2}),$$

which asserts (see *Definitions and Table of Limits*) that either  $n$  is even and AB equivalent to the statement that  $x$  lies between the superior limit  $x_2$  and the inferior limit  $x_1$ , or else  $n$  is odd and AB equivalent to the statement that  $x$  lies either between  $x_2$  and  $x_1$  or between zero and the negative inferior limit  $x_1$ .

*Definitions.*—The symbol  $n^e$  asserts that  $n$  is even;  $n^o$  that  $n$  is odd;  $a^+$  that  $a$  is positive;  $a^-$  that  $a$  is negative;  $x_m^+$  that  $x_m$  is a superior limit to  $x$ ;  $x_m^-$  that  $x_m$  is an inferior limit to  $x$ ;  $x_m^+, n^+, r^+$  that  $x_m$  and  $n$  are superior, and  $x_r$  and  $x_r^-$  inferior, limits to  $x$ .

Table of Limits.

$x_0 = 0$	$y_0 = 0$
$x_1 = 1/y_1$	$y_1 = 2^{1/n} - 1$
$x_2 = 1/y_2$	$y_2 = -(2^{1/n} + 1)$
$x_3 = 1/y_3$	$y_3 = 2^{1/(n+1)} - 1$
$x_4 = 1/y_4$	$y_4 = -(2^{1/(n+1)} + 1)$

It will be convenient to put  $y$  for  $1/x$ , and first find the limits of  $y$  as follows:—

$$n^e A = n^e \{ (1+y)^n - 2 \}^o = n^e \{ (1+y) - 2^{1/n} \}^o \{ (1+y) + 2^{1/n} \}^o \\ = n^e \{ y - (2^{1/n} - 1) \}^o \{ y + (2^{1/n} + 1) \}^o = n^e y_{1,2}$$

$$n^o B = n^o \{ (1+y)^{n+1} - 2 \}^o = n^o \{ (1+y) - 2^{1/(n+1)} \}^o \\ = n^o \{ y - (2^{1/(n+1)} - 1) \}^o \{ y + 2^{1/(n+1)} \}^o = n^o y_{3,4}$$

∴  $n^{\circ}AB = n^{\circ}y_{1,2,3} = n^{\circ}y_{1,3}$ , for  $y_3$  implies  $y_2$ .  
 $n^{\circ}A = n^{\circ}\{(1+y)^n - 2\}^f = n^{\circ}\{(1+y) - 2^{1/n}\}^f$   
 $= n^{\circ}\{y - (2^{1/n} - 1)\}^f = n^{\circ}y_1$ ;  
 $n^{\circ}B = n^{\circ}\{(1+y)^{n+1} - 2\}^u = n^{\circ}\{(1+y) - 2^{1/(n+1)}\}^u$   
 $+ n^{\circ}\{(1+y) + 2^{1/(n+1)}\}^v$   
 $= n^{\circ}\{y - (2^{1/(n+1)} - 1)\}^u + n^{\circ}\{y + (2^{1/(n+1)} + 1)\}^v = n^{\circ}(y_3 + y_4)$ ;  
 ∴  $n^{\circ}AB = n^{\circ}y_1(y_3 + y_4) = n^{\circ}(y_{1,3} + y_{1,4}) = n^{\circ}(y_{1,3} + y_4)$ ,  
 for  $y_4$  implies  $y_1$ . Thus the statement for the limits of  $y$  is  
 $n^{\circ}(AB = y_{1,3}) + n^{\circ}(AB = y_{1,3} + y_4)$ .

From this statement, the limits of  $x$  are readily found; for, since  $y = 1/x$ , and  $y_1$  and  $y_3$  are positive and  $y_4$  negative, it is clear that  $y_{1,3} = x_{v,1}$ , and that  $y_4 = x_{v,4}$ .

The above contains every step—more than would be needed in actual practice—of the symbolic process for finding the limits. The whole reasoning presupposes but an elementary knowledge of common algebra.

**14479.** (SALUTATION.)—I is the incentre of the triangle ABC, of which A is the greatest angle. P is a point on the incircle, and through P lines are drawn parallel to the three sides of the triangle, and meeting the incircle again in Q, R, S, respectively. QR, RS being joined, prove that the quadrilateral PQRS is a maximum when AIP is a right angle, and find its mean area.

Solution by J. H. TAYLOR, M.A.; Rev. T. ROACH, M.A.; and G. W. PRESTON, B.A.

The greatest quadrilateral must have the centre I within it. a, b, c are points of contact. Take a point P between cI and BI, and draw PQ, PR, PS parallel to AB, BC, CA, respectively. Let

$cIP = \theta = cIQ$ ;  
 therefore  $QIP = 2\theta$ ;  
 $SIP = 2(A - \theta)$ .  
 $\Delta QIP = \frac{1}{2}r^2 \sin 2\theta$ ;  
 $\Delta SIP = \frac{1}{2}r^2 \sin 2(A - \theta)$ ;  $\Delta SIR = \frac{1}{2}r^2 \sin 2C$ ;  $\Delta QIR = \frac{1}{2}r^2 \sin 2B$ .  
 The convex quadrilateral PQRS is the sum of these four triangles and, since  $\theta$  is the only variable, is a maximum when  $\sin 2\theta + \sin 2(A - \theta)$  is a maximum, i.e., when  $\sin A \cos(2\theta - A)$  is a maximum. These factors increase together until  $2\theta - A = 0$ , i.e., till  $\theta = \frac{1}{2}A$ . But  
 $\angle CIA = 90^\circ - \frac{1}{2}A$ .

Therefore, when the quadrilateral PQRS is a maximum,  
 $\angle PIA = 90^\circ$ .  
 [The second part of the Question remains still unsolved.]

**10358.** (R. W. D. CHRISTIE.)—If  $\omega_2$  and  $\omega_3$  are irrational cube roots of unity, prove that, if  $n + 2$  is a prime number,

$$\omega_2^n + \omega_3^n + \frac{n+1}{2!}(\omega_2^{n-2} + \omega_3^{n-2}) + \frac{n \cdot n + 1}{3!}(\omega_2^{n-4} + \omega_3^{n-4}) + \frac{n-1}{4!} \cdot \frac{n \cdot n + 1}{5!}(\omega_2^{n-6} + \omega_3^{n-6}) + \dots = 0.$$

Solution by H. J. WOODALL, A.R.C.S.

The series  
 $= \{(\omega_2 + 1/\omega_2)^{n+2} + (\omega_3 + 1/\omega_3)^{n+2} - \omega_2^{n+2} - \omega_3^{n+2} - \omega_2^{-(n+2)} - \omega_3^{-(n+2)}\} / (n+2)$   
 $= \{ \{(\omega_2^2 + 1)^{n+2} - \omega_2^{2(n+2)} - 1\} / \omega_2^{n+2} + \{(\omega_3^2 + 1)^{n+2} - \omega_3^{2(n+2)} - 1\} / \omega_3^{n+2} \} / (n+2)$   
 But,  $\omega_2, \omega_3$  being irrational cube roots of unity, we have  
 $(\omega_2^2 + 1)^{n+2} = (-\omega_2)^{n+2} = -\omega_2^{n+2}$  and  $(\omega_3^2 + 1)^{n+2} = -\omega_3^{n+2}$   
 ( $n$  being odd). The proposed series becomes  
 $= - \{ \{ \omega_2^{2(n+2)} + \omega_2^{n+2} + 1 \} / \omega_2^{n+2} + \{ \omega_3^{2(n+2)} + \omega_3^{n+2} + 1 \} / \omega_3^{n+2} \} / (n+2)$   
 $= - \{ \frac{\omega_2^{3(n+2)} - 1}{\omega_2^{n+2}(\omega_2^2 - 1)} + \frac{\omega_3^{3(n+2)} - 1}{\omega_3^{n+2}(\omega_3^2 - 1)} \} / (n+2) = 0,$

because the numerators are each zero, the denominators being always  $\neq 0$ .  
 [The PROPOSER observes:—The general term is

$$\frac{n+1}{n-m+2! \cdot m!} (\omega_2^{n-2m+2} + \omega_3^{n-2m+2}).$$

Now  $(\omega_2^n + \omega_3^n) = 2$  if  $n = 3k$ , and  $= -1$  if  $n = 3k \pm 1$  (v. TODHUNTER'S *Algebra*, p. 213).

And by a well known theorem (v. CARR'S *Synopsis*, 284, p. 94 *Algebra*),  $S = 0$  if  $n$  be of the form  $6m \pm 1$ . The result necessarily follows.]

**14504.** (R. KNOWLES.)—The circle of curvature is drawn at a point P of a parabola; PQ is the common chord; an ordinate from P to the diameter through the focus meets the parabola in R, and a diameter through Q in O. If T be the pole of PQ with respect to the parabola, prove that TO, PQ, and the tangent at R are parallel.

Solution by Professor A. DROZ-FARNY; and J. H. TAYLOR, M.A.

Soit PL la tangente en P à la parabole. S, le sommet de cette dernière, est le point milieu de la soustangente. D'après le théorème suivant lequel les couples de côtés opposés d'un quadrilatère ayant pour sommet les points d'intersection d'un cercle avec une conique sont également inclinés sur les axes de la conique, on obtiendra la direction de la corde PQ en construisant la symétrique de PL par rapport à l'ordonnée. Le centre de gravité des quatre points d'intersection d'un cercle avec une parabole coïncidant avec l'axe de cette dernière, comme trois des points d'intersection du cercle de courbure coïncidant avec P et un avec Q, on obtiendra Q en prolongeant PN d'une longueur  $NQ = 3PN$ . Soit M le point milieu de PQ; comme  $PN = NM$ , le diamètre passant par M contiendra R et coupera PL au pôle T de PQ. Comme  $TR = RM$ ,  $TL = LP$  et  $PR = RO$ , il est évident que les droites PQ, LR et TO sont parallèles.

Remarques.—LR est la tangente en R car elle est symétrique de PL par rapport à l'axe: TQ est la tangente en Q; on verrait que TQ divise RO dans le rapport de 1 : 2.

**14425.** (Professor U. C. GHOSH.)—Prove that

$$\int_0^\pi x \phi(\sin x) dx = \frac{1}{2} \pi \int_0^\pi \phi(\sin x) dx,$$

and hence evaluate  $\int_0^\pi \frac{x \sin x (1 - \sin^n x)}{1 - \sin x} dx$ .

Solution by H. W. CURJEL, M.A.; and CONSTANCE I. MARKS, B.A.

$$\int_0^\pi x \phi(\sin x) dx = \int_0^{\pi/2} [x \phi(\sin x) + (\pi - x) \phi(\sin(\pi - x))] dx$$

$$= \pi \int_0^{\pi/2} \phi(\sin x) dx = \frac{1}{2} \pi \int_0^\pi \phi(\sin x) dx.$$

Hence

$$\int_0^\pi \frac{x \sin x (1 - \sin^n x)}{1 - \sin x} dx$$

$$= \pi \int_0^{\pi/2} \frac{\sin x (1 - \sin^n x)}{1 - \sin x} dx = \pi \int_0^{\pi/2} (\sin x + \sin^2 x + \dots + \sin^n x) dx$$

$$= \pi \left\{ 1 + \frac{2}{3} + \frac{2}{5} + \dots + \frac{1}{2} \pi \left( \frac{1}{2} + \frac{1}{4} + \frac{1}{6} + \dots \right) \right\}$$

$$= \pi \left( -1 + \frac{1}{2} + \frac{1}{4} + \dots + \frac{2m+1 \pm 1}{2m \pm 1} \right) + \frac{\pi^2}{2} \left( -1 + \frac{1}{2} + \frac{1}{4} + \dots + \frac{2m+1}{2m} \right),$$

where

$$n = 2m + \frac{1}{2} \pm \frac{1}{2}.$$

**14372.** (R. C. ARCHIBALD, M.A.)—Parabolas with a common focus pass through a fixed point. Show (1) that the locus of their vertices is a cardioid whose cusp is at the common focus and whose vertex is the fixed point; (2) that the locus of the points of intersection with the parabolas, of the lines through the focus making a constant angle with their axes, is a cardioid.

Solution by the PROPOSER.

(1) S is the common focus, A the fixed point, P the vertex of any parabola passing through A and with focus at S.

If  $SA = 4a$ ,  $\angle PSA = \theta$ ,  $SP = r$ , we have at once from the equation of the parabola, as the locus of P,  $r = 2a(1 + \cos \theta)$ , which defines a cardioid. Geometrically, it is well known that the circle on the radius vector of a parabola as diameter is always tangent to the tangent at the vertex of the parabola. Hence, the locus of P is the pedal of the circle on SA as diameter with respect to the point S of its circumference: a well known cardioid definition.

(2) If P' be a point of intersection and  $\alpha$  the constant angle made by  $SP'$  with  $SP$ , we easily find the locus of P' to be the cardioid defined by the equation  $r = \frac{4a \{1 + \cos(\theta + \alpha)\}}{1 + \cos \alpha}$ .

**14461.** (Rev. W. ALLEN WHITWORTH, M.A.)—If a straight line be divided at random into three parts  $x, y, z$ , show that the expectation of the volume  $(y+z)(z+x)(x+y)$  is 14 times the expectation of the volume  $xyz$ .

I. Solution by H. W. CURJEL, M.A.

If the straight line is taken of unit length  $z = 1 - x - y$ , and if the integrals are taken over all positive values for which  $x + y < 1$ ,

$$\frac{\text{expectation of } \pi(y+z)}{\text{expectation of } xyz} = \frac{\iint (y+z)(z+x)(x+y) dy dx}{\iint xyz dy dx} = \frac{6 \iint x^2 z dy dx + 2}{\iint xyz dy dx}$$

$$= \frac{6 \iint \{x^2(1-x) - yx^2\} dy dx}{\iint \{yx(1-x) - xy^2\} dy dx} + 2 = \frac{6 \int_0^1 \frac{x^2 - 2x^3 + x^4}{2} dx}{\int_0^1 \frac{x - 3x^2 + 3x^3 - x^4}{6} dx} + 2 = 14.$$

II. Solution by R. CHARTRES.

Let the length be one unit, and the parts  $x, y, z$ , then  $1^3 = (x+y+z)^3$ , which has ten terms each being of the same mean value,  $\frac{1}{10}$ ; therefore mean value of  $xyz = \frac{1}{30}$ ; and mean value of  $(x+y)(y+z)(z+x)$ , or

$$\Sigma (x^2y) + 2xyz = \frac{1}{3} + \frac{2}{30} = \frac{4}{15};$$

therefore mean value of the latter = 14 times that of the other.

[See the PROPOSER'S Expectation of Parts.]

**14432.** (R. TUCKER, M.A.)—PSQ is a focal chord of a parabola, and PQR is the maximum triangle in the segment cut off by PQ. Prove that the equation to the circle PQR is

$$8(x^2 + y^2) - 2(7p^2 + 20)ax + p(3p^2 - 4)ay + 6p^2a^2 = 0,$$

where  $p = m - 1/m$  (P is  $am^2, 2am$ ).

The locus of the centre is a cubic, and, if O is the fourth point of section, the locus of the mid-point of OR is a parabola, and the envelope of the chord OR is another parabola.

Solution by the PROPOSER; CONSTANCE I. MARKS, B.A.; and F. H. PEACHELL, B.A.

The triangle is a maximum when R is the vertex of the diameter corresponding to the chord PQ. The coordinates of P, Q, R are  $(am^2, 2am), (a/m^2, -2a/m), (\frac{1}{4}ap^2, ap)$ , where  $p \equiv m - 1/m$ .

By substitution it is readily verified that the circle through PQR is

$$8(x^2 + y^2) - 2(7p^2 + 20)ax + p(3p^2 - 4)ay + 6p^2a^2 = 0.$$

The coordinates of the centre are  $h, k$  where  $8h = (7p^2 + 20)a$ ,  $16k = -p(3p^2 - 4)a$ ;

therefore the locus is

$$343ak^2 = (2h - 5a)(11a - 3h)^2.$$

The fourth point (O) of section is found from  $0 = 2am - 2a/m + ap + y$ ; therefore  $y = -3ap$ , and hence  $x$ .

The midpoint of OR is given by  $y = -ap$ ,  $x = \frac{5}{2}ap^2$ ; therefore its locus is the parabola  $y^2 = \frac{5}{2}ax$ .

The equation to OR is  $2py + 4x = 3ap^2$ ; hence it envelops the parabola  $y^2 + 12ax = 0$ .

**14315.** (B. N. CAMA, M.A.)—If parabolas be described cutting an equiangular spiral orthogonally, and having their axes in the direction of the polar subtangent, the loci of the focus and the vertex are copolar spirals whose linear dimensions bear a constant ratio.

Solution by the PROPOSER.

Let S be the focus and vertex of one such parabola. Then, clearly,

$$OS = \frac{1}{2}(OG - OT) = \frac{1}{2}(r \tan \alpha - r \cot \alpha) \propto r.$$

Also the vectorial angles of OS, OP differ by a right angle. Therefore S describes a spiral copolar with the given one.

Also  $OA = \frac{1}{2}OT = \frac{1}{2}r \cot \alpha \propto r$ .

Therefore locus of A is also a copolar spiral, the ratio of the linear dimensions of the two loci depending upon the angle of the original spiral, and therefore constant.

**14284.** (Professor NEUBERG.)—Soient O, I, I<sub>a</sub>, I<sub>b</sub>, I<sub>c</sub> les centres des cercles circonscrit, inscrit et exinscrits au triangle ABC; soient D, E, F les pieds des hauteurs et A<sub>1</sub>, B<sub>1</sub>, C<sub>1</sub> les pôles de BC, CA, AB par rapport au cercle O. Les quatrièmes tangentes communes aux cercles (I, I<sub>a</sub>), (I, I<sub>b</sub>), (I, I<sub>c</sub>) forment un triangle  $a\beta\gamma$  homothétique aux triangles A<sub>1</sub>B<sub>1</sub>C<sub>1</sub>, DEF. Le centre d'homothétie des triangles  $a\beta\gamma$ , A<sub>1</sub>B<sub>1</sub>C<sub>1</sub> partage la droite OI dans le rapport R : r, et est le conjugué isogonal du point de GERGONNE de ABC : ses coordonnées normales par rapport au triangle  $a\beta\gamma$  sont  $1/a, 1/b, 1/c$ . Le centre d'homothétie des triangles  $a\beta\gamma$ , DEF a pour coordonnées normales, dans ces triangles,  $\tan \frac{1}{2}A, \tan \frac{1}{2}B, \tan \frac{1}{2}C$ .

Solution by Professor SANJANA.

On AB take

$$Ax_1 = AC,$$

on AC take

$$Ay_1 = AB;$$

then  $x_1y_1$  is the fourth tangent common to (I) and (I<sub>a</sub>). Draw the two lines similar to  $x_1y_1$ , and let the three form the triangle  $a\beta\gamma$ . As  $\angle Ax_1y_1 = C, \angle Ay_1x_1 = B, x_1y_1$  is anti-parallel to BC, and therefore parallel to B<sub>1</sub>C<sub>1</sub>. Thus the triangles A<sub>1</sub>B<sub>1</sub>C<sub>1</sub>,  $a\beta\gamma$  have corresponding sides parallel, and therefore are homothetic; so also are DEF,  $a\beta\gamma$ . As  $x_1y_1, \dots$  are tangents to the incircle, the triangle  $a\beta\gamma$  has I for incentre: and the triangle A<sub>1</sub>B<sub>1</sub>C<sub>1</sub> has O for incentre. Hence OI is the axis of perspective for these, and the centre of perspective divides OI in the ratio of the inradii of A<sub>1</sub>B<sub>1</sub>C<sub>1</sub> and  $a\beta\gamma$ , i.e., in the ratio R : r. The distance of this centre from BC

$$= (R \cos A \cdot r + r \cdot R) / (R + r) = a(s-a) / 2(R+r);$$

thus this point is  $a(s-a) : b(s-b) : c(s-c)$ , and is therefore conjugate to  $1/a(s-a) : 1/b(s-b) : 1/c(s-c)$ , the GERGONNE point of ABC. [The rest in Volume.]

**14464.** (EDWARD V. HUNTINGTON, A.M.)—The angle between the principal axes of two given concentric ellipses is  $90^\circ$ , and  $a+b = a'+b'$ . Show that a line of length  $a-b'$  (or  $a'-b$ ) sliding between these curves envelops an astroid; and that any line rigidly connected with this sliding line envelops an involute of an astroid. (Astroid = hypocycloid of four cusps.)

Solution by R. C. ARCHIBALD, M.A.

Inside a circle of radius  $a+b$  rolls a circle of half this radius. The ends of any given diameter of the fixed circle, and in these diameters lie the axes of the ellipses traced by the points in the given diameter, distant from the circumference  $b$  and  $a'$ , or  $b'$  and  $a$ . The diameter of the rolling circle envelops an astroid with the perpendicular diameters as axes of symmetry. Whence the theorem.

QUESTIONS FOR SOLUTION.

**14651.** (Professor G. B. MATHEWS, F.R.S.)—Let  $\alpha, \beta$  be any two given complex quantities, and let  $t$  be such that  $(\alpha + t\beta)/(1+t)$  is real. Prove that, if  $t = x + 2iy$ , the locus of  $(x, y)$  is, in general, a circle. How is this to be reconciled with the fact that the line joining two imaginary points  $(\alpha, \beta), (\gamma, \delta)$  contains only one real point?

**14652.** (Professor E. LEMOINE.)—(1) Le point  $\phi$  du triangle ABC, dont les coordonnées barycentriques sont  $a^2b^2 + a^2c^2 - b^2c^2, b^2c^2 + b^2a^2 - c^2a^2, c^2a^2 + c^2b^2 - a^2b^2$ , et qui jouit, d'ailleurs, de remarquables propriétés, est à l'intersection de la droite qui joint le milieu de la distance des points de BROCARD au barycentre, et sur chacune des trois droites qui joignent le symétrique d'un sommet par rapport au milieu du côté opposé, au pied, sur le côté, de la médiane partant du sommet opposé. (2) Soient A<sub>1</sub>, B<sub>1</sub>, C<sub>1</sub> les points où A $\phi$ , B $\phi$ , C $\phi$  coupent BC, CA, AB; les parallèles à AB et à AC menées par A<sub>1</sub> coupent respectivement AC et AB en  $\mu$  et  $\nu'$ ; les parallèles à BC et à BA menées par B<sub>1</sub> coupent respectivement BA et BC en  $\nu$  et  $\lambda'$ ; les parallèles à CA et à CB menées par C<sub>1</sub> coupent respectivement BC et BA en  $\lambda$  et  $\mu'$ . Cela posé, les points  $\lambda, \mu, \nu, \lambda', \mu', \nu$  sont concycliques.

**14653.** (Professor E. J. NANSON.)—If  $a = (x^2 - y^2)/(1 - xy)$ ,  $b = (y^2 - x^2)/(1 - xy)$ , prove that  $(a^2 - b^2)/(1 - ab) = x$ ,  $(b^2 - a^2)/(1 - ab) = y$ .

**14654.** (Professor NEUBERG.)—On donne dans un même plan deux droites O $x, O_y$  et un point A. Trouver un point M qui soit pour les poids donnés  $\alpha, \beta, \gamma$  le centre de gravité du point A et des projections B, C de M sur O $x, O_y$ . (Solution géométrique.)

**14655.** (J. A. THIRD, M.A., D.Sc.)—From the vertices of a triangle ABC lines AX, BY, CZ are drawn to the opposite sides, such that the angles CAX, ABY, BCZ, taken the same way round, are together equal to  $180^\circ$ ; and AX', BY', CZ' are drawn from the vertices to the opposite sides, parallel to CZ, AX, BY respectively. Show that the circumcentres of AX'X, BYY', CZZ' are collinear.

**14656.** (Professor K. J. SANJANA, M.A.)—(1) If  $a, b, c$  be positive quantities, every two of which are together greater than the third, prove that  $\Sigma a^2 - \Sigma a^2b + 3abc$  is never negative. Hence show that in a plane triangle the inradius is never greater than half the circumradius. (2) With the ordinary notation for a plane triangle, prove that  $\Sigma a^2b - \Sigma a^3 = 8S(R+r)$ .

**14657.** (Professor LANGHORNE ORCHARD, M.A., B.Sc.)—Show that  $3\{1^5 + 2^5 + 3^5 + \dots + n^5 - (1+2+3+\dots+n)^3\} = (1+2+3+\dots+n)^3 - (1+2+3+\dots+n)^2$ ,  $n$  being a positive integer.

**14658.** (Professor UMES CHANDRA GHOSH.)—If the cosine circle of a triangle ABC cuts the sides AB, BC, and CA in Z, Z', X, X', and Y, Y', and if  $R_1, R_2, R_3$  be the radii of the circumcircles of triangles AZY', BXZ', and CX'Y, and  $T_1, T_2, T_3$  the lengths of the tangents from A, B, C to the cosine circle, and  $r$  the radius of the cosine circle, prove that

$$(1) 1/R_1 + 1/R_2 + 1/R_3 = r^2/R_1R_2R_3. \quad (2) a^2T_1^2 + b^2T_2^2 + c^2T_3^2 = 2abc.$$

**14659.** (D. BIDDLE.)— $N$  being any odd number that is prime to 3 and 7, prove that  $N^6 \equiv 1 \pmod{168}$ .

**14660.** (R. TUCKER, M.A.)—PQ is a focal chord of a parabola (focus S), and is also the major axis of an ellipse. Find the locus of the other focus and the equation to the ellipse. If this ellipse cuts the axis in K, K', then  $1/SK + 1/SK' = 1/a$ , where  $4a$  is the latus rectum of the parabola (and also of the ellipse). Show also that the envelope of the ellipse is a confocal parabola of latus rectum  $8a$ , and that of the auxiliary circle is (beside the directrix) the circle  $x^2 + y^2 - ax = 2a^2$ . If  $\lambda = \cot \phi$  ( $\phi$  angle made by chord with axis), then the point of contact is  $x/a = -2(2\lambda^2 - 1)/(4\lambda^2 + 1)$ ,  $y/a = -6\lambda/(4\lambda^2 + 1)$ .

**14661.** (R. F. DAVIS, M.A.)—Prove that (1) the trilinear coordinates of the foci of an ellipse  $\sqrt{(a)} + \sqrt{(mb)} + \sqrt{(n\gamma)} = 0$  inscribed in the triangle of reference ABC are given by the equations  $\beta/\gamma + \gamma/\beta = l - 2 \cos A$ ,  $\gamma/\alpha + \alpha/\gamma = m - 2 \cos B$ ,  $\alpha/\beta + \beta/\alpha = n - 2 \cos C$ , where

$$lmn l^2 - l^2 + \dots + 2mn \cos A + \dots + 4(l \sin B \sin C + \dots) = 0;$$

(2) these foci lie on the conics

$$a\{l\alpha - (m+n \cos A)\beta - (m \cos A + n)\gamma\} + l\beta\gamma \cos A : \dots : \dots = \sin A : \sin B : \sin C.$$

**14662.** (R. C. ARCHIBALD, M.A.)—In the  $xy$ -plane, passing through the origin S, and with its centre on the  $x$ -axis, is a circle of radius  $a$ . On this circle is rolled an equal circle whose plane is always perpendicular to the  $xy$ -plane. The point P of this rolling circle, which was at the beginning of the motion in coincidence with S, traces out a curve C. Show that (1) the curve C lies both on a sphere of radius  $a\sqrt{2}$  and on the cone  $x^2 + y^2 = z^2$ ; (2) the orthogonal projection of C on the  $xy$ -plane is the cardioid whose axial circle is the given fixed circle; (3) the projection of C on the  $yz$ -plane is the cuspidal quartic called by the French a *toupe* or *piriforme*; (4) the projection of C on the  $xz$ -plane is a parabola.

**14663.** (G. H. HARDY, B.A.)—Prove the formulæ

$$(1) \int_{-1}^{1} \frac{e^{pi u}}{(\cos u)^a} \frac{e^{i(p+a-1)(\xi-u)}}{\sin(\xi-u)} du = -2\pi i \frac{e^{pi \xi}}{(\cos \xi)^a}, \quad 0,$$

according as the imaginary part of  $\xi$  is positive or negative; and

$$(2) \int_0^{\pi} \frac{e^{pi u}}{(\sin u)^a} \frac{e^{i(p+a-1)(\xi-u)}}{\sin(\xi-u)} du = -2\pi i \frac{e^{pi \xi}}{(\sin \xi)^a}, \quad 0.$$

Here  $a < 1$ ,  $0 < p + a$ ; and  $(\cos \xi)^a$ ,  $(\sin \xi)^a$  must be chosen suitably. Give the corresponding formulæ when  $\xi$  is real.

**14664.** (R. P. PARANJPE, B.A.)—Solve the equation

$$(2x-1)(d^2y/dx^2) - (dy/dx)(12x^2-4x+1) + 4y(4x^3-x+1) = 0.$$

**14665.** (H. MACCOLL, B.A.)—Each letter denoting a statement, and  $a'$  being the denial of  $a$ , show that  $(ax = ay)(a'x = a'z)$  and  $a(x = y) + a'(x = z)$  are equivalent when  $a$  is a constant ( $x, y, z$  being unrestricted), but not necessarily when  $a$  is a variable. [Def.: A statement is a constant when it is either certain or impossible; a variable when it is neither certain nor impossible.]

**14666.** (J. J. BARNIVILLE, B.A.)—Having  $u_n + u_{n+3} = 3u_{n+1} + 3u_{n+2}$

prove that

$$\frac{1}{4} + \frac{1}{5} + \frac{1}{28} + \frac{1}{95} + \frac{1}{364} + \dots = \frac{1}{2},$$

$$\frac{1}{3} + \frac{1}{8} + \frac{1}{33} + \frac{1}{120} + \frac{1}{461} + \dots = \frac{1}{2},$$

$$1 - \frac{1}{2} + \frac{1}{10} - \frac{1}{35} + \frac{1}{133} - \dots = \frac{1}{\sqrt{3}},$$

$$1 - \frac{1}{3} + \frac{1}{12} - \frac{1}{44} + \frac{1}{165} - \dots = \sqrt{3-1},$$

$$\frac{1}{5} - \frac{1}{7} + \frac{1}{38} - \frac{1}{130} + \frac{1}{497} - \dots = \frac{1}{\sqrt{3}} - \frac{1}{2}.$$

**14667.** (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Factorize completely (into prime factors)  $N = 7^{25} + 1$ .

**14668.** (ROBERT W. D. CHRISTIE.)—Prove the following modular equations for any prime:—

$$r^{2m-n} + r_1^n \equiv 0 \pmod{p} = 0 \pmod{4m+1},$$

$$r^{2m-n-1} + r_1^n = 0 \pmod{p} = 0 \pmod{4m-1},$$

$r$  and  $r_1$  being associated primitive roots, and  $n$  any integer whatever.

**14669.** (V. DANIEL.)—Triangles are inscribed one to another so that the sides of one are divided, in the same sense, by the vertices of the next in a constant ratio  $k/(1-k)$ . Show that the sides of the  $n$ th inscribed triangle, in terms of  $a, b, c$  (the sides of the outermost), are given by

$$-3a_n^2 = 4\lambda^n (a^2 \cos \theta_1 \cos \theta_2 + b^2 \cos \theta_2 \cos \theta_3 + c^2 \cos \theta_3 \cos \theta_1),$$

and two similar expressions with  $a, b, c$ , changed in cyclic order, where  $\cos \theta_1, \cos \theta_2, \cos \theta_3$  are the roots of the trigonometrical cubic

$$4 \cos^3 \theta - 3 \cos \theta + \sin 3\theta = 0,$$

$$\text{and } \phi = -\frac{1}{2}\pi + \sin^{-1} \frac{1}{2}\lambda^{-1} = \frac{1}{2} \cos^{-1} (\frac{3}{2}\lambda^{-1} - \frac{1}{2}\lambda^{-1}),$$

and

$$\lambda = 1 - 3k + 3k^2.$$

**14670.** (E. W. ADAIR.)—If the bisectors of the base angles of a triangle, drawn to the opposite sides, are equal, then is the triangle isosceles. [Set, but not solved, in HALL and STEVENS' *Euclid*.]

**14671.** (R. KNOWLES.)—If  $A$ , is the coefficient of  $x^n$  in the expansion of  $(1-x)^{-n}$ , prove that the sum of the series  $1 + A_1^2x + A_2^2x^2 + A_3^2x^3 + \dots$  ad inf. is a function of the form

$$(1 + p_1^2x + p_2^2x^2 + \dots + p_n^2x^{n-2} + x^{n-1})/(1-x)^{2n-1},$$

in which  $p_r$  is the coefficient of  $x^r$  in the expansion of  $(1+x)^{n-1}$ , e.g., if  $n = 5$ , the sum of the series

$$1 + 5^2x + 15^2x^2 + 35^2x^3 + \dots = (1 + 16x + 36x^2 + 16x^3 + x^4)/(1-x)^9.$$

**14672.** (SALVATION.)—Within the square ABCD the semicircle AIB is described; from A a straight line is drawn, cutting the semicircle in P; through P another line is drawn, perpendicular to AB, cutting CD in M; and finally MN is drawn perpendicular to AP produced. Find the locus of N.

**14673.** (REV. J. ROACH, M.A.)—A countryman, unversed in numbers, picks a bulrush, which he breaks into three pieces, and gives the longest to his eldest nephew Dick, the second to Sam, the next in age, and the third to Bob, the youngest. At the same time he promises each a ball of toffy as high as the length of his bulrush. Find the value of the expectation of each nephew, given that the whole bulrush was 24 inches long and that toffy costs  $1\frac{1}{4}$ d. a cubic inch, and taking the value of  $\pi$  as  $3\frac{1}{2}$ .

**14674.** (H. J. WOODALL, A.R.C.S.)—Solve  $x^{33} \equiv 1 \pmod{1933}$ .

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

**6692.** (Professor E. B. ELLIOTT, M.A.)—If  $\omega = 0$ , the tangential equation of a point in space-tangential coordinates be so prepared by a factor that its left-hand member  $\omega$  is the expression for the perpendicular from that point upon any plane whose coordinates are substituted in it, and if it contain two variable parameters  $a, b$ , so as to be the type point of a surface, then  $d\omega/da = 0$ ,  $d\omega/db = 0$ , taken simultaneously, are the equations of the line at infinity in the tangent plane at  $\omega = 0$ .

**6693.** (E. W. SYMONS, M.A.)—A parabola has four-point contact with a given ellipse; prove that its axis touches a polar reciprocal of the pedal of the evolute of a coaxial ellipse.

**6697.** (Professor SYLVESTER, F.R.S.)—M. Edouard Lucas has shown (*American Journal of Mathematics*, for June, 1879) that,  $n$  being the rational number,  $n^2 + n$  is the sum or difference (very probably both the one and the other) of two rational cubes. Prove that (1) the same is true of  $9(n^2 - 3n + 1)$ , with the exception of the case when  $n = -1, 2$ , or  $\frac{1}{2}$ ; and hence (2) that 17, 19, 31 are each of them the sum or difference (probably both the one and the other) of two rational cubes.

**6701.** (Professor CROFTON, F.R.S.)—Find a function X such that, whatever F be,  $F(\epsilon^D)X \equiv F(a)X$ .

**6702.** (Professor SEITZ, M.A.)—In the surface of a circle two lines are drawn at random in length and direction; find the chance that they intersect.

**6703.** (Professor MATZ, M.A.)—Show that the polar equation of the "Luminous Curve" to the circle, radius unity, when the incident rays are parallel to the axis of abscissæ, may be put in the form  $\rho = \pm \operatorname{cosec} \theta$ .

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to D. BIDDLE, Esq., Charlton Lodge, Kingston-on-Thames.

NOTICE.—Vol. LXXII. of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price, to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

"This method of showing physical features is most effective, and lends the maps a value which is possessed by no other classical atlas known to us. . . . We recommend all schoolmasters and students who care for geographical matters to look at these maps."—*Athenaeum*.  
". . . . May be taken as correct and up-to-date. . . . Both attractive to the eye and informing to the mind. . . . No school should be without a series of these maps."—*Manchester Guardian*.

**THE GREEK THINKERS.** By Prof. THEODORE GOMPERZ, of Vienna University. Translated by LAURIE MAGNUS, M.A., Magdalen College, Oxford. Volume I. Demy 8vo. [In the press.]

Volume II., containing **Plato**, is now nearly completed, and is already in course of translation.

This account of Greek Philosophy is inspired by the endeavour to do justice to the chief tendencies in all departments of ancient thought. Composed throughout in a clear and popular style, the work will be found to combine in a singular degree the resources of an almost encyclopedic learning with an appreciation of the results of modern science and of the dependence of the civilisation of the present on that of past ages. The "Greek Thinkers" in this sense include the leaders of religion, of literature, and of the special sciences.

**A GREEK GRAMMAR FOR SCHOOLS.** By JOHN THOMPSON, M.A., late Scholar of Christ's College, Cambridge, Senior Classical Master, High School, Dublin. Crown 8vo. [In the press.]

One of the chief objects of this book is to bring within the reach of the younger generation of students and schoolboys some of the results of the linguistic discoveries of the present day. It is, therefore, written in accordance with the philological views of the "Grundriss der Vergleichenden Grammatik" of Profs. Brugmann and Delbrück, of P. Giles's "Manual of Comparative Philology," of G. Meyer's "Griechische Grammatik," and of other scholars. Use has also been made of the Third Edition, revised by Drs. Blass and Gerth, of Kühner's "Ausführliche Grammatik der Griechischen Sprache," and of several school Greek grammars in use in Germany.

The Grammar consists of two parts in one volume, the Accidence and the Syntax. The forms and spelling in use in Attic Greek are given according to the latest authorities, and there are special notes on Homeric peculiarities. There are also tables of Greek verbs arranged on a new plan, including (a) a list of the chief type of verbs, (b) a list of common Attic verbs regular according to the types in (a), and (c) a list of the irregular verbs with the irregular forms printed in special type. This arrangement is intended to remove many misconceptions about Greek verbs. Brief notes on syntax, &c., are given with each verb, stating the ordinary constructions and any special uses. There will also be Appendices on (1) Greek Weights, Measures, and Dates, (2) Accents, and (3) Sound Changes. Particular attention has been given to the type, so that the essential parts of Greek grammar may be made specially clear, and that the beginner may have no difficulty in distinguishing the more important sections.

*An Entirely New and Cheaper Edition.*

**GREEK TESTAMENT READER.** For Use in Schools. Comprising consecutive Extracts from the Synoptic Gospels and Passages from the Epistles of St. Paul. By THEOPHILUS D. HALL, M.A. Crown 8vo, 2s. 6d. [Published.]

"A valuable epitome of the New Testament in the original, amply supplied with exegetical notes, and with a grammatical commentary and a vocabulary which fit it admirably for the instruction of beginners in the study of Greek."—*Scotsman*.

### THE STUDENT'S GREECE.

**A HISTORY OF GREECE FROM THE EARLIEST TIMES TO THE ROMAN CONQUEST.** With Supplementary Chapters on the History of Literature and Art. A New Edition. Thoroughly Revised and in part Rewritten. By G. E. MARINDIN, M.A. With many New Maps and Illustrations. Crown 8vo, 7s. 6d.

"The revision could not have been trusted to better hands. . . . Altogether the work has been so improved as to render it likely to hold its place with any competitors for another term of forty years."—*Glasgow Herald*.

**LITTLE ARTHUR'S HISTORY OF GREECE.** A Companion Volume to "Little Arthur's England" and "Little Arthur's France." By the Rev. A. S. WALPOLE, M.A. With Maps and Illustrations. 12mo, 2s. 6d. [In preparation.]

### THE STUDENT'S GIBBON.

Abridged from the Original Work by Sir WM. SMITH, D.C.L., LL.D. A New and Revised Edition in Two Parts. With Maps and Illustrations. Two Vols. Crown 8vo, 5s. each.

**Part I.—FROM THE ACCESSION OF COMMODOUS TO THE DEATH OF JUSTINIAN.** By A. H. J. GREENIDGE, M.A., Lecturer and late Fellow of Hertford College; Lecturer in Ancient History at Brasenose College, Oxford. [Published.]

**Part II.** nearly ready.

### A NEW FRENCH GRAMMAR.

**THE TECHNICAL SCHOOL FRENCH GRAMMAR.** By Dr. W. KRISCH, Teacher of Latin, Greek, French, German, and Spanish at the Wolverhampton Free Library Science School, Examiner in Modern Languages to the Midland Counties Union of Educational Institutions, 1897-99, &c. Crown 8vo, 2s. 6d.

**COMMERCIAL FRENCH COURSE.** In Two Parts. By W. MANSFIELD POOLE, M.A., Magdalen College, Oxford, Assistant-Master at Merchant Taylors' School; and MICHEL BECKER, Professor at the Ecole Alsacienne, Paris, Author of "L'Allemand Commercial," and "Lectures Pratiques d'Allemand Moderne."

**PART I.**—Consisting of Simple Sentences and Passages in French, with occasional Business Letters, arranged in a manner suited for Practical Teaching, and containing in an Appendix a clear system of French Grammar, with special reference to the Verb, is in course of active preparation. [In preparation.]

**PART II.**—Comprising an Advanced Commercial Reader, will be duly announced.

A COMPLETE ILLUSTRATED CATALOGUE OF STANDARD EDUCATIONAL WORKS PUBLISHED BY MR. MURRAY MAY BE HAD, POST FREE, ON APPLICATION. THIS CATALOGUE INCLUDES SIR WILLIAM SMITH'S FAMOUS SERIES OF STUDENTS' MANUALS, SMALLER MANUALS, DICTIONARIES, PRINCIPIAS, &c.

LONDON: JOHN MURRAY, 50A ALBEMARLE STREET, W.

## EDUCATIONAL WORKS

By A. K. ISBISTER, M.A., LL.B.

(LATE DEAN OF THE COLLEGE OF PRECEPTORS.)

New Edition. 12mo, price 1s. 6d.

**LESSONS IN ELOCUTION AND EXPRESSIVE READING FOR BOYS**, based on Grammatical Analysis; with a choice selection of Extracts for Reading and Repetition, classified, of Goldsmith's "Deserted Village," set out into Principal and Subordinate Sentences, illustrating the theory of Emphasis and Pauses.

New Edition. 12mo, price 1s. 6d.

**LESSONS IN ELOCUTION AND EXPRESSIVE READING FOR GIRLS**, based on Grammatical Analysis; with a choice selection of Extracts for Reading and Repetition, classified, under heads for practice in various styles of Reading, and annotated for Expression, Emphasis, and Pauses, and the Analysis of Sentences, with the figure [of a Girl] showing the proper attitude in Reading.

Ninth Edition. 12mo, price 1s.; or, with Answers, 1s. 6d.

**UNITARY ARITHMETIC**. Embodying the First Book of Arithmetic of the Irish National Board. With numerous additional Examples, and selections from recent Examination Papers; and a full exposition of the "Unitary" System, or Method of Working Arithmetic *without rules*.

\*.\* In this Edition, Questions in Proportion, Practice, Interest, Stocks, Partnership, Profit and Loss, &c., are, by the "Unitary" Method, solved by a single rule.

Sixth Edition. 12mo, price 3s. 6d.

**THE COLLEGE EUCLID**: Comprising the First Six and portions of the Eleventh and Twelfth Books read at the Universities. Chiefly from the Text of Dr. SIMSON. With a new arrangement of the Figures and Demonstrations; the Enunciations of the Propositions separately for Self-Examination, apart from the Text; Notes and Questions on each Book; and a Series of Geometrical Problems for Solution, from the most recent University Examination Papers.

New Edition. 12mo, price 9d.

**THE COLLEGE AND SCHOOL EXAMINER IN EUCLID**, containing the Enunciations of all the Propositions in the College and School Editions, Questions on the Definitions, Arithmetical and Algebraical Demonstrations of the Propositions in Books II. and V., and a large collection of Geometrical Problems for Solution. Designed for Class and Self-Examination, and adapted to all Editions of Euclid.

Fifteenth Edition. 12mo, price 2s. 6d.

**THE SCHOOL EUCLID**: Comprising the First Four Books. With Questions, Geometrical Exercises, &c.

THE SCHOOL EUCLID, Books I. & II. With Questions, Exercises, &c. 12mo, price 1s. 6d.

THE SCHOOL EUCLID, Book I. With Questions, &c. 12mo, price 1s.

Fifth Edition. Two Quarto Copy Books, price 6d. each.

**THE GEOMETRICAL COPY-BOOK**. Arranged for writing out the Propositions of Euclid in the Abbreviated and Symbolical Form adopted in the Universities and Public Schools.

Third Edition. 12mo, price 1s. 6d.

**FIRST STEPS TO EUCLID**: Comprising the Propositions of Book I., prepared for writing out, with a recapitulation of the steps of the Demonstration appended to each. Forming a Text-book for the above.

New Edition. 18mo, price 9d.

**THE ELEMENTS OF BOOK-KEEPING**, by SINGLE and DOUBLE ENTRY; with Practical Explanations and Exercises on the most useful Forms for Business.

Sixteenth Edition, with Map. 12mo.

**CÆSAR'S COMMENTARIES on the GALLIC WAR.**

BOOKS I.-V. With Notes Critical and Explanatory, a Vocabulary of all the Words in the Text, and Easy Reading Lessons for Beginners ..... price 3s. 6d.

BOOKS I.-VII. do. do. 4s. 6d.

Do. (without the Reading Lessons) ..... 4s. 0d.

Twenty-fifth Edition.

**De Fivas, Le Trésor National.** Eighth Edition, 12mo, 1s. 6d. \*• KEY, 2s.

CROSBY LOCKWOOD & SON, 7 STATIONERS' HALL COURT, E.C.

400 pp., crown 8vo, 7s. 6d., cloth.

**A Handbook of English Literature.** Originally compiled by AUSTIN DOBSON. New Edition, Revised, with New Chapters, and Extended to the Present Time. By W. HALL GRIFFIN, B.A., Professor of English Language and Literature at Queen's College, London.

"Of this book we have to speak in terms of unqualified praise. . . . It may be pronounced a most excellent history of our literature."—*Literature*.

"The best compendium for English literary students, and a most reliable handbook for the literary man."—*Academy*.

"For truth of criticism it is about the best book of the kind."—*Westminster Review*.

"An excellent handbook of English literature."—*Athenæum*.

"Professor Hall Griffin and Mr. Dobson are to be thanked for a very acceptable handbook."—*Journal of Education*.

CROSBY LOCKWOOD & SON, 7 STATIONERS' HALL COURT, E.C.

## SHORT FRENCH EXAMINATION PAPERS (110),

Each containing Six Idiomatic Sentences to render into French. Price 2s. 6d., cloth.

Many of the grammatical questions are taken, by permission, from the Oxford and Cambridge Local Examinations, from those of the College of Preceptors, the London Matriculation, the Oxford and Cambridge Joint Board, and from the Cambridge Higher Local Examinations.

"A very useful set of questions."—*Modern Language Quart. Rev.*

"The English idioms for translation into French are well chosen. It is a useful little book."—*University Correspondent*.

"The exercises in the use of idioms are specially good."—*Bookman*.

"Will be found serviceable for rapid drill in the hands of a judicious teacher."—*Educational Times*.

"Would afford useful practice for intending candidates."—*Education*.

"We noticed at the time of its appearance this very useful collection of test papers, and need only here add that the key is full and accurate save for some obvious misprints and one or two slips that we have noticed."—*Journal of Education*.

"We are great advocates of abundant exercises; hence our immediate approval of this book."—*School Guardian*.

"We have much pleasure in recommending this useful collection of papers in grammar and idiomatic sentences. It will save the teacher many an hour of labour, and would be valuable for a class entering for an examination to work through steadily."—*Educational Review*.

A KEY, issued to Teachers and Private Students only, can be obtained from the Publishers. 6s. net. (A list of errata is issued with this.)

By H. R. LADELL, M.A., F.R.G.S.

## THE PUBLIC SCHOOL SPELLING CARD.

Thirtieth Thousand. Price 6d. By the same Author.

Containing nearly 1,000 words (in which actual mistakes have frequently been made, as collected from Dictations, Essays, Examination Papers, &c., during a period of more than fifteen years), with Rules.

Also, in Book Form, "HOW TO SPELL AND SPEAK ENGLISH." Third Edition. Price 1s.

This also embodies most of the errors in the sentences set for correction in the Examination Papers of the London Matriculation, the Oxford and Cambridge Locals, the College of Preceptors, &c.

## French Essentials and French Conversation Sentences.

Second Edition. Price 2s. cloth; 1s. 6d. boards. By the same Author.

"This short grammar is compiled by a master who knows his business. The type is good, the arrangement good, and there is nothing superfluous."—*Journal of Education*.

"Students preparing for examination in French grammar and composition will know the worth of this little book. The colloquial sentences at the end are a useful addition."—*Bookman*.

London: RELFE BROTHERS, Ltd., 6 Charterhouse Buildings, Aldersgate, E.C.

LONDON: EDWARD ARNOLD, 37, BEDFORD STREET, STRAND.

# WILLIAMS & NORGATE'S LIST

## THE FRENCH LANGUAGE.

- DELBOS.—THE STUDENT'S GRADUATED FRENCH READER.** For the Use of Public Schools. I.—First Year: Anecdotes, Tales, Historical Pieces. Edited, with Notes and a complete Vocabulary, by LÉON DELBOS, M.A., of H.M.S. "Britannia." Twelfth Edition. 166 pages. Crown 8vo, cloth, 2s.
- DELBOS.—THE STUDENT'S GRADUATED FRENCH READER.** For the Use of Public Schools. II.—Second Year: Historical Pieces and Tales. Edited, with Notes, by LÉON DELBOS, M.A., of H.M.S. "Britannia," late of King's College, London. Sixth Edition. 180 pages. Crown 8vo, cloth, 2s.
- "It would be no easy matter to find a French reader more completely satisfactory in every respect than that of M. Delbos."—*Athenæum*.
- "This is a very satisfactory collection from the best authors, selected with great care, and supplied with adequate notes. . . . A thoroughly good book of this kind should, in fact, be calculated to inspire a taste for literature in the student's mind. The volumes edited by M. Delbos fairly meet this requirement."—*Journal of Education*.
- "The notes are critical and explanatory. The book is well printed and excellently got up."—*Educational Times*.
- DELBOS.—LITTLE EUGÈNE'S FRENCH READER.** For Beginners. Anecdotes and Tales. Edited, with Notes and a complete Vocabulary. Fourth Edition. Crown 8vo, cloth, 1s. 6d.
- VICTOR HUGO.—LES MISÉRABLES.** Les Principaux Épisodes. Edited, with Life and Notes, by J. BOÏELLE, Senior French Master, Dulwich College. 2 Vols. Crown 8vo, cloth, each 3s. 6d.
- "A worthy addition to our stock of French reading books, which will be welcomed by numberless masters. . . . M. Boielle's notes are full and to the point, his philology is sound, and his translations idiomatic."—*Journal of Education*.
- VICTOR HUGO.—NOTRE-DAME DE PARIS.** Adapted for the use of Schools and Colleges. By J. BOÏELLE, B.A., Senior French Master, Dulwich College. 2 Vols. Crown 8vo, cloth, each 3s.
- "Equipped in the same excellent manner as the same author's 'Misérables.' . . . Makes an admirable school book."—*Scotsman*.
- FOA (Madame EUGEN).—CONTES HISTORIQUES.** (Chagrin de Louis XV.—Bertrand Duguesclin.—Dupuytren.—Grétry.—Greuze.) With Idiomatic Notes by G. A. NEVEU. Third Edition. Cloth, 2s.
- FLEURY'S HISTOIRE DE FRANCE,** racontée à la Jeunesse. Edited for the use of English Pupils, with Grammatical Notes, by AUGUSTE BELJAME. Second Edition. 12mo, cloth, 3s. 6d.

## GRAMMARS AND EXERCISES.

### FOR PUBLIC SCHOOLS WHERE LATIN IS TAUGHT.

- EUGÈNE'S THE STUDENT'S COMPARATIVE GRAMMAR OF THE FRENCH LANGUAGE.** With an Historical Sketch of the Formation of French. For the Use of Public Schools. With Exercises. By G. EUGÈNE FASNACHT, late French Master, Westminster School. Twenty-first Edition, thoroughly Revised. Square crown 8vo, cloth, 5s. Or, separately, Grammar, 3s.; Exercises, 2s. 6d.
- "In itself this is in many ways the most satisfactory grammar for beginners that we have as yet seen."—*Athenæum*.
- EUGÈNE'S FRENCH METHOD.** Elementary French Lessons. Easy Rules and Exercises preparatory to the "Student's Comparative French Grammar." By the same Author. Seventeenth Edition. Crown 8vo, cloth, 1s. 6d.
- "Certainly deserves to rank among the best of our elementary French exercise books."—*Educational Times*.
- EUGÈNE'S COMPARATIVE FRENCH-ENGLISH STUDIES.** Grammatical and Idiomatic. Being an entirely Re-written Edition of the "French Exercises for Middle and Upper Forms." Sixteenth Edition. Cloth, 2s. 6d.
- BOÏELLE (JAMES).—FRENCH COMPOSITION THROUGH LORD MACAULAY'S ENGLISH.** Edited, with Notes, Hints, and Introduction, by JAMES BOÏELLE, B.A. Univ. Gall., Senior French Master, Dulwich College, &c. Crown 8vo, cloth.
- Vol. I. Frederick the Great. 3s.  
Vol. II. Warren Hastings. 3s. 6d.  
Vol. III. Lord Clive. 3s.
- "This, we may say at once, is an exceedingly useful idea, well carried out, and one of the best things of its class that we have seen. . . . We can pronounce the equivalence of the idioms recommended to be quite unusually just."—*Saturday Review*.
- DELBOS (L.).—THE STUDENT'S FRENCH COMPOSITION,** on an entirely New Plan. With Introduction and Notes. (In use at Harrow, Eton, &c.) Crown 8vo, cloth, 3s. 6d.
- DELBOS (L.).—NAUTICAL TERMS IN ENGLISH AND FRENCH.** With Notes and Tables. By LÉON DELBOS, of H.M.S. "Britannia." Dartmouth. Third Improved and Enlarged Edition. Crown 8vo, cloth, 5s. net.
- ROGET (F. F.).—AN INTRODUCTION TO OLD FRENCH.** By F. F. ROGET, of Geneva University, late Tutor for Comparative Philology, Edinburgh. History, Grammar, Chrestomathy, and Glossary. Second Edition, with Map of French Dialects. Crown 8vo, cloth, 6s.
- ROGET (F. F.).—FIRST STEPS IN FRENCH HISTORY, LITERATURE, AND PHILOLOGY.** For Candidates for the Scottish Leaving-Certificate Examinations, the various Universities' Local Examinations, and the Army Examinations. Crown 8vo, cloth, 5s.

## THE GERMAN LANGUAGE.

- WEISSE'S COMPLETE PRACTICAL GRAMMAR OF THE GERMAN LANGUAGE.** With Exercises on Conversation, Letters, Poems, and Treatises, &c. Fourth Edition, almost entirely Re-written. Crown 8vo, cloth, 6s.
- "We have no hesitation in pronouncing this the fullest and most satisfactory German grammar yet published in England."—*Journal of Education*.
- WEISSE'S SHORT GUIDE TO GERMAN IDIOMS.** Being a Collection of the Idioms most in use. With Examination Papers. 8vo, cloth, 2s.
- MÖLLER (A.).—A GERMAN READING BOOK.** A Companion to Schlutter's "German Class Book." New Edition. Corrected to the Official German Spelling. With a complete Vocabulary. 12mo, cloth, 2s.
- HEIN'S GERMAN EXAMINATION PAPERS.** Comprising a complete set of German Papers set at the Local Examinations in the four Universities of Scotland. By G. HEIN, Aberdeen Grammar School. Crown 8vo, cloth, 2s. 6d.
- A SHORT SKETCH OF GERMAN LITERATURE.** Prepared for the Scottish Leaving-Certificate Examinations. By VIVIAN PHILLIPPS, B.A., Fettes College. Thoroughly Revised. Second Edition. Pott 8vo, 1s.
- APEL'S SHORT AND PRACTICAL GERMAN GRAMMAR FOR BEGINNERS,** with copious Examples and Exercises. Third Edition. 12mo, cloth, 2s. 6d.
- APEL (M.).—GERMAN PROSE STORIES FOR BEGINNERS** (including Lessing's Prose Fables), with an Interlinear Translation in the natural order of Construction. Second Edition. 12mo, cloth, 2s. 6d.

## ARMY SERIES.

EDITED BY J. T. W. PEROWNE, M.A.

- LE COUP DE PISTOLET, &c.** By PROSPER MÉRIMÉE. 2s. 6d.
- "The first two volumes are an excellent choice, and we advise any one, whether candidate or lay, to purchase the volume of Mérimée."—*Journal of Education*.
- VAILLANTE.** By JACQUES VINCENT. 2s. 6d.
- "The books are well got up, and in 'Vaillante' an excellent choice has been made."—*Guardian*.
- AUF VERLORNEM POSTEN, AND NAZZARENA DANTI.** By JOHANNES V. DEWALL. 3s.
- "The two stories by J. v. Dewall are well suited for their purpose: the style and diction are not too difficult for those whose acquaintance with German is not extensive, and ample explanatory annotation is provided."—*Saturday Review*.
- CONTES MILITAIRES.** By A. DAUDET. 2s. 6d.
- "Written at fever heat immediately after the great 1870 war, they show Daudet's power in many ways at its highest. . . . We therefore do more than recommend—we urge—all readers of French to get the stories in some form, and the present one is both good and cheap. The paper is excellent, and the type clear and bold. . . . A neat map of Paris will assist the reader in following the movement of the stories."—*Schoolmaster*.
- ERZÄHLUNGEN.** By E. HOEGER. 3s.

## SCHOOL DICTIONARIES.

Uniform in Binding. Price 3s. 6d.

- JAMES (WILLIAM) and O. STOFFEL.—GERMAN-ENGLISH AND ENGLISH-GERMAN DICTIONARY.** Complete Grammatical Dictionary of the German and English Languages. 1009 pages. 8vo. Thirty-fourth Edition. Special cloth binding.
- JAMES (WILLIAM) and A. MOLE.—FRENCH-ENGLISH AND ENGLISH-FRENCH DICTIONARY.** With Tables of Irregular Verbs. 1000 pages. Fifteenth Edition. Crown 8vo, special cloth binding.
- LARSEN (A.).—DANISH, NORWEGIAN, AND ENGLISH DICTIONARY.** Third Revised and Enlarged Edition. 688 pages. Large 8vo, strongly bound, half roan, 12s. 6d.
- BOSING (S.).—ENGLISH AND DANISH DICTIONARY.** Seventh Edition. 540 pages. Large 8vo, strongly bound, half roan, 11s. 6d.

WILLIAMS & NORGATE,

14 Henrietta Street, Covent Garden, London; 20 South Frederick Street, Edinburgh; and  
7 Broad Street, Oxford.

# DENT'S MODERN LANGUAGE SERIES.

Edited by WALTER RIPPMANN, M.A.

*Third Edition, completing 10,000. In fcap. 8vo, cloth, 1s. 6d. net.*  
**\*DENT'S FIRST FRENCH BOOK.** Based on the Hölzel Pictures of the Seasons. By S. ALGE and WALTER RIPPMANN.

*In fcap. 8vo, cloth, 1s. 6d. net.*  
**\*DENT'S SECOND FRENCH BOOK.** By S. ALGE and WALTER RIPPMANN. Consists mainly of a charming story by JEANNE MAIRET, "La Tache du Petit Pierre." Illustrated by C. E. BROCK.

The Second French Book can be taken with a class, even without previously working through the First Book. It will be found an excellent reading book. "We can heartily commend this reader as an exposition of the new method."

—*Journal of Education*, Dec., 1898.

*In fcap. 8vo, cloth, 1s. 6d. net.*  
**HINTS ON TEACHING FRENCH.** With a running Commentary to Dent's First and Second French Books.

Prof. FREDERIC SPENCER writes:—"Dent's First French Book appears most opportunely, supplying as it does, on the lines of the 'reform' method, a course which is both rational and eminently practical. . . . This little book, with Mr. Rippmann's running commentary, deserves the careful attention of every teacher of French."

*In fcap. 8vo, cloth, 2s. 6d. net.*  
**†FRENCH DAILY LIFE.** Common Words and Common Things. Adapted by WALTER RIPPMANN from Dr. KRON'S "Le Petit Parisien."

"For class use it is far better than anything we have previously seen. It is not, of course, intended for beginners. Students who, without much conversational facility, intend to join a French holiday course next midsummer might here find valuable assistance. The Englishman travelling in France will find here all the phrases essential to his comfort—not in formal lists, but strung together in a chatty and interesting narrative, which also contains information as to how and where the phrases are to be used."—*Education*.

*In fcap. 8vo, cloth, 1s. 6d. net.*  
**\*THREE SHORT PLAYS BY SOUVESTRE.** Edited by MARGUERITE NINET.

An easy reading book, suitable for both girls and boys, furnished with explanatory notes (in the French language) of any difficulties which the text may present.

*In fcap. 8vo, cloth, 3s. 6d. net.*  
**†OUTLINES OF FRENCH HISTORICAL GRAMMAR.** By A. T. BAKER, M.A. Ph.D. (Heidelberg).

Suitable for those who are preparing for the Medieval and Modern Language Tripos, the Honours Examinations at London, Victoria, and other Universities, the Examination for the Home and India Civil Services, &c.

*Ready shortly.*  
**\*ASINETTE.** A French Reading Book for Little People. By LILLY FRAZER (Mrs. J. G. FRAZER). With 8 Coloured and 200 smaller Illustrations by H. M. BROCK. Crown 8vo, cloth, 3s. 6d. net.

\* Specimen Copies of these may be had by Teachers on application.

*Just Published. In fcap. 8vo, cloth, 1s. 6d. net.*  
**\*UNE JOYEUSE NICHÉE.** (A Merry Houseful.) By MME. E. de PRESSENSÉ. Edited by S. ALGE. Illustrated by C. E. BROCK.

*Third Edition. In fcap. 8vo, cloth, 2s. net.*  
**\*DENT'S FIRST GERMAN BOOK.** Based on the Hölzel Pictures of the Seasons. By S. ALGE, S. HAMBURGER, and W. RIPPMANN.

M. PAUL PASSY says:—"Le meilleur livre pour l'enseignement de l'Allemand est probablement le Leitfaden" (Dent's First German Book).

"We have no doubt that, in the hands of a good teacher, excellent results would be obtained from the use of this work."—*University Correspondent*, March 25, 1899.

*In fcap. 8vo, cloth, 2s. 6d. net.*  
**\*DENT'S GERMAN READER.** By S. ALGE and WALTER RIPPMANN.

Suitable for pupils in their second or third year of German. With Exercises and a full Glossary.

"Pupils using these two books will receive an inspiring introduction to the German language."—*School World*.

*In fcap. 8vo, cloth, 1s. 6d. net.*  
**HINTS ON TEACHING GERMAN.** With a running Commentary to Dent's First German Book.

"We have no doubt that, in the hands of a good teacher, excellent results would be obtained from the use of this book."—*University Correspondent*.

*In fcap. 8vo, cloth, 2s. 6d. net.*  
**†GERMAN DAILY LIFE.** By Dr. KRON.

The Author of "Le Petit Parisien" has prepared a volume dealing with the daily life of his own countrymen, which he describes in a number of brightly written chapters, the general arrangement being the same as that in "French Daily Life," the lucidity of which has done so much to recommend it.

*In fcap. 8vo, cloth, 2s. 6d. net.*  
**ELEMENTS OF PHONETICS: English, French, and German.** Translated and Adapted by WALTER RIPPMANN from Prof. VIETOR'S "Kleine Phonetik." With numerous Diagrams.

"Mr. Rippmann has done well to add this little volume to his excellent series of modern language text-books. It is a good deal more than a mere translation, for no pains have been spared to bring together the substance of all that has been recently written by scholars on this attractive but difficult subject."—*Educational Times*.

*Just published. The School Edition of*  
**†MOLIÈRE'S LE BOURGEOIS GENTILHOMME.** Edited by Prof. FREDERIC SPENCER. With full Notes and Glossary. Cloth, 1s. 3d. net.

† Specimen Copies of these may be had by Teachers at half price.

J. M. DENT & CO., 29 AND 30 BEDFORD STREET, STRAND, W.C.

### CHAMBERS'S CONTINUOUS READERS.

With Notes and Explanations.

**ON THE SPANISH MAIN.** By G. A. HENTY. 88 pages. Paper cover, 4d.; cloth, 6d.

**A HUMBLE HEROINE.** By L. E. TIDDEMAN. 88 pages. Paper cover, 4d.; cloth, 6d.

**SELECTED STORIES FROM HANS ANDERSEN.** 88 pages. Paper cover, 4d.; cloth, 6d.

**THE STORY OF PAUL DOMBEY.** (From "Dombey and Son," by CHARLES DICKENS). 88 pages. Paper cover, 4d.; cloth, 6d.

**BIOGRAPHICAL STORIES.** By NATHANIEL HAWTHORNE. 64 pages. Paper cover, 3d.; cloth, 5d.

**SELECTIONS FROM TENNYSON.** 80 pages. Paper cover, 4d.; cloth, 6d.

**ARITHMETIC, THEORETICAL AND PRACTICAL.** By J. S. MACKAY, M.A., LL.D., Author of "Mackay's Euclid." Price 4s. 6d.

The *Educational News* says:—"Altogether the work is of outstanding interest, and ought to take its place as a standard text-book on the subject."

Price 3s. 6d., cloth.

**THE ELEMENTS OF EUCLID. Books I. to VI., and parts of Books VII., XII.** By JOHN S. MACKAY, M.A., LL.D., Mathematical Master in the Edinburgh Academy. Separately: Book I., 1s.; II., 6d.; III., 9d.; XI., XII., 6d.

"This is, in many respects, the best school Euclid in existence."—FREDERICK SPENCER, M.A. Cambridge.

**CHAMBERS'S ALGEBRA FOR SCHOOLS.** By WILLIAM THOMSON, M.A., B.Sc. Crown 8vo, 576 pages, cloth, 4s. 6d.

"Among the very best elementary text-books this work will take a prominent place."—*Journal of Education*.

**CHAMBERS'S PRACTICAL MENSURATION. Stage I.** Price 4d. With numerous Exercises and Diagrams.

This little book is especially intended for use in Evening Continuation Schools. It possesses several novel features. The book is essentially *practical*, only such geometrical truths being referred to as are absolutely necessary. Simplicity of language has been constantly kept in view.

### CHAMBERS'S COMMERCIAL HANDBOOKS.

**COMMERCIAL ARITHMETIC.** By W. WOODBURN. 112 pages, 8d. With Answers, 1s.

**COMMERCIAL GEOGRAPHY OF THE BRITISH ISLES.** By Dr. A. J. HERBERTSON. 1s.

**COMMERCIAL CORRESPONDENCE AND OFFICE ROUTINE. First Year's Course.** By G. R. WALKER. 1s.

**COMMERCIAL CORRESPONDENCE AND OFFICE ROUTINE. Second Year's Course.** By G. R. WALKER. 1s. 6d.

**CHAMBERS'S SCHOOL HISTORY OF THE BRITISH COLONIES. Greater Britain: Its Rise and Growth.** 1s. 6d.

A brightly written and attractively illustrated volume, giving a most interesting account of the Acquisition and Growth of the Colonies and Foreign Possessions of Great Britain.

**CHAMBERS'S SCHOOL HISTORY OF THE VICTORIAN ERA. The Reign of Queen Victoria.** 1s. 6d.

The Leading Events in the Reign of Queen Victoria are treated in this volume in a vivid and picturesque manner, and it will be found an excellent little text-book for the lower forms.

**PRINCIPLES OF ENGLISH GRAMMAR.** With Analysis of Sentences, and Numerous Exercises. By W. WALLACE DUNLOP, M.A., Daniel Stewart's College, Edinburgh. Price 1s. 4d.

**THE CITIZEN OF ENGLAND: His Rights and Duties.** By G. ARMITAGE SMITH, M.A. Framed on the lines of the Evening Continuation School Code. Price 1s. 6d.

### CATALOGUES ON APPLICATION.

W. & R. CHAMBERS, Ltd., 47 Paternoster Row, London, E.C.; and Edinburgh by Google

# APPROVED SCHOOL BOOKS BY DR. CORNWELL, F.R.G.S.

"We are qualified by ample trial of the books in our own classes to speak to their great efficiency and value. We have never known so much interest evinced or so much progress made as since we have employed these as our school-books."—EDUCATIONAL TIMES.

**A School Geography.** 88th Edition; 3s. 6d., or, with 30 Maps, 6s. 6d.

"Very superior to the common run of such books. It contains a good deal of useful matter of a more practical kind than usual, which the exercises are likely to impress on the mind more deeply than by the parrot system."—*Athenæum*.

**A School Atlas.** Consisting of Thirty Small Maps. A Companion Atlas to the Author's "School Geography." 2s. 6d., or 4s. coloured.

**Geography for Beginners.** 68th Edition; 1s., or, with 48 pp. of Questions, 1s. 4d. Questions, 6d.

"A very useful series of Educational Works, of which Dr. Cornwell is either author or editor. It ('The Geography for Beginners') is an admirable introduction. There is a vast difficulty in writing a good elementary book, and Dr. Cornwell has shown himself possessed of that rare combination of faculties which is required for the task."—*John Bull*.

**Spelling for Beginners.** A Method of Teaching Reading and Spelling at the same time. 4th Edition, 1s.

**Allen and Cornwell's School Grammar.** 64th Edition; 2s. red leather, or 1s. 9d. cloth.

"The excellence of the Grammar published by the late Dr. Allen and Dr. Cornwell makes us almost despair of witnessing any decided improvement in this department."—*Athenæum*.

**Arithmetic for Beginners.** Combines simplicity and fullness in teaching the First Four Rules and Elementary Fractions. 9th Edition. 1s.

**Grammar for Beginners.** An Introduction to Allen and Cornwell's "School Grammar." 87th Edition; 1s. cloth, 9d. sewed.

"This simple introduction is as good a book as can be used."—*Spectator*.

The Book is enlarged by a Section on Word-Building, with Exercises for Young Children.

**The Young Composer: Progressive Exercises in English Composition.** 48th Edition, 1s. 6d. Key, 3s.

"The plan of the work is very superior. We are persuaded this little book will be found valuable to the intelligent instructor."—*Westminster Review*.

**Poetry for Beginners: A Selection of Short and Easy Poems for Reading and Recitation.** 13th Edition, 1s.

**The Science of Arithmetic.** A Systematic Course of Numerical Reasoning and Computations; with very numerous Exercises. By JAMES CORNWELL, Ph.D., and SIR JOSHUA G. FITCH, LL.D. 26th Edition. 4s. 6d.

"The best work on arithmetic which has yet appeared. It is both scientific and practical in the best and fullest sense."—*London Quarterly*.

**Key to Science of Arithmetic.** With the Method of Solution to every Question. Key, 4s. 6d.

"Eminently practical, well stored with examples of wider range and more varied character than are usually given in such books, and, its method of treatment being thoroughly inductive, it is pre-eminently the book for general use."—*English Journal of Education*.

London: Simpkin, Marshall, Hamilton, Kent, & Co., Limited.—Edinburgh: Oliver & Boyd.

## BOOKS FOR SCIENCE STUDENTS.

**FARM FOODS.** A Text-Book for Agricultural Students. Translated from the German of VON WOLFF by HERBERT H. COUSINS, M.A., Lecturer on Chemistry at the South Eastern Agricultural College, Wye. Post 8vo, 8s. 6d.

**ATTFIELD'S CHEMISTRY: General, Medical, and Pharmaceutical.** Adapted to the 1898 Edition of the British Pharmacopœia. Seventeenth Edition. Illustrated. 15s.

**CHURCH'S LABORATORY GUIDE, especially arranged for Students of Agricultural Chemistry.** Seventh Edition. 6s. 6d.

**HENFREY'S ELEMENTARY COURSE OF BOTANY: Structural, Physiological, and Systematic.** Illustrated by upwards of 600 Woodcuts. Fourth Edition. By MAXWELL T. MASTERS, M.D., F.R.S., &c., and A. W. BENNETT, M.A., B.Sc., &c. 15s.

**WINKLER'S HANDBOOK OF TECHNICAL GAS ANALYSIS.** Translated by Professor LUNGE. Fully Illustrated. 7s.

**GURNEY & JACKSON**

(Successors to Mr. VAN VOORST).

1 PATERNOSTER ROW.

**CAREY'S "GRADUS AD PARNASSUM,"**

WITH THE ENGLISH MEANINGS.

Revised, Corrected, and Augmented by a Member of the University of Cambridge.

Post 8vo, cloth, price 7s.

THE STATIONERS' COMPANY, STATIONERS' HALL, LONDON.

## WORKS BY ALFRED HILEY, M.A.

### 1. MENSURATION AND LAND SURVEYING.

Fourteenth Edition. Pp. 244. Answers at end. Price 2s. 6d.

This work has been placed by the London School Board on their Requisition List for the Use of Pupil Teachers.

"We give it our verdict of unreserved approval."—*The Schoolmaster*.  
 "A well-known standard book on the subject."—*The School Guardian*.  
 "It still deservedly holds a high place amongst text-books on the subject."—*Educational Times*.

### 2. RECAPITULATORY EXAMPLES IN ARITHMETIC.

Sixteenth Edition. Pp. 243. 2s.

This work can now be had either with or without Answers. It contains Test Examples on each rule, and 1,736 Miscellaneous Questions, including 105 full Examination Papers set by University Local Examiners and others.

"Excellent collection of arithmetical examples."—*Schoolmaster*.  
 "Both works are marvels of cheapness and goodness."—*Journal of Education*.

**COLLEGE OF PRECEPTORS.**

**Lectures for Teachers.**

**THE THEORY AND PRACTICE OF EDUCATION.**

To be delivered by H. L. WITHERS, M.A., Professor of Education in the Owens College of the Victoria University.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.  
 \* \* \* The Lectures will be delivered on SATURDAYS, from 5 to 6 o'clock, p.m., beginning on SATURDAY, 6th October, 1900, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

**SYLLABUS.**

**LECTURE I.—The Problems of Education.**

Relation of theory and practice, their combination in an inductive and experimental method; why such a method is requisite in the study of education.—How the problems arise in practice; and how theory (*i.e.*, reflexion and comparison) furnishes provisional hypotheses by help of which we may work intelligently towards their solution.—Some problems in instruction, illustrated from supposed case of a lesson to a fifth form on Milton's "Sonnet to Cromwell."

**LECTURE II.—The Appeal to Experience.**

Problems recapitulated; recourse to the procedure of successful educators.—Limits to the possibility and to the value of this recourse: apprenticeship even under the best conditions needs to be supplemented.—The example of the Great Masters: true meaning and right use of the history of education.—Illustrations from "Stanley's Life of Arnold."—The main purpose of education as Arnold practised it, *viz.*, the preparation of pupils for intelligent and responsible activity in a Christian community.—His adjustment of means to this end, (a) in the general school-life, (b) in his form-teaching.

**LECTURE III.—The Appeal to Science.**

Inadequacy of imitative and traditional methods: because our problems are *new*. Analogous failure of traditional methods in warfare.—New factors in education since Arnold's time, (a) social, industrial, and political changes, (b) new ideas in history and science.—Illustrations from the writings of Edmond Demolins.—Biological conceptions in education.—Perils of premature deduction: confusion of science as a whole with natural science.—The "mental and moral sciences" in their relation to education.

**LECTURE IV.—The Appeal to Literature and Life.**

Unfortunate isolation of ethics, logic, and psychology, as the studies on which a theory of education should be based.—Education deals only with the ascertained results of these studies, not with their speculations; and is influenced far more powerfully by social forces which do not strictly fall within the province of any of them.—Paramount importance to the educator of a knowledge of the world and of human nature, to be gained through intercourse and through literature.—Education arises out of *helplessness*, and is intended to be its cure, but pedantry is only an aggravated form of helplessness.—Sound and efficient mental habits: how the necessarily artificial character of school-training is to be saved from futility.

**LECTURE V.—Relation of Psychology to Education.**

Meaning and scope of psychology: in what sense a science.—Points of extreme value to the educator: (i.) relations of mind and body, and the conditions of healthy mental activity, (ii.) vitality and reproduction of ideas, (iii.) nature of habit in matters of mind and character, (iv.) analysis of voluntary rational action.—"Genetic psychology" and its relations to "child study": how far helpful in the practice of instruction.—Practical corollaries.

**LECTURE VI.—Relation of Ethics to Education.**

Valuelessness of speculative ethics for the educator.—Importance of an understanding of the motives which lead to action.—The problem of discipline, and the power of command.—The "tone" of a school.—Religion and religious teaching.—Physical training: the value and the limitations of games.—Type of character produced by English public schools, its excellences and defects.

**LECTURE VII.—Relation of Logic to Education.**

Logic must be held to include the theory of knowledge and a study of inductive method.—Value to the instructor of (i.) the syllogism, (ii.) the canons of induction.—Practical illustrations.—Relation of the "five formal steps" to logical laws.—Preparation of lesson notes and of schemes of lessons.—A criticism of some forms of "Freudianism," and of "heuristic methods."—What is meant by "sound mental habits"?

**LECTURE VIII.—School Administration and Government.**

A school as a centre of forces: (i.) the governing body, (ii.) the headmaster, (iii.) the staff, (iv.) influence of parents and "society," (v.) national and local authorities, (vi.) examining bodies.—Interaction of these forces; extreme importance of a true understanding of educational politics.—Education as a profession.—Futility of our theories if they do not touch controlling forces.

**LECTURE IX.—The School Curriculum.**

The idea of a liberal education: its history, and the dangers to which it is exposed at present from crude industrialism and from specialization.—Different conceptions of the curriculum for different stages of school-life.—Over-pressure.—The conflict of studies.—Necessity of correlation.—Educational values, and the time-table as a scale of values.

**LECTURE X.—Language-Teaching.**

The teaching of the mother-tongue.—The meaning of words, and the relation of language to life.—Different views expressed in various typical "methods" of language-teaching. The teaching of the classical languages: the "tradition of the scribes," that we should train commentators. Perils threatening the future of the classics as the staple of education in Christendom.—The teaching of modern languages: the "reform" or "direct methods."—Correlation of linguistics with literature and history.

**LECTURE XI.—The Teaching of History and Geography.**

Disrepute of these subjects as "crum-subjects."—The meaning of "crum," and the value of a study of successful "crumming" in contrast with successful educating.—How forms may be got to think and to work in history lessons.—What to teach in history.—Physical and commercial geography in relation to history and political geography.—Criticism of the theory that history should be the "core" of instruction.

**LECTURE XII.—Nature-Study.**

The place of natural science and mathematics in the scheme of a liberal education.—"Concrete methods" in mathematics: their use and abuse.—Importance of natural history and the "life-sciences" especially in the junior school.—How and when the study of abstract science should be begun.

A High School for Girls, Transition Class, and Kindergarten are attached to the College for purposes of Demonstration and Practice.

## CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.

The Council are about to appoint a LECTURER for January next. Stipend from £90 to £120, and residence. Special knowledge of Languages or Science required. Applications, with fifteen copies of testimonials, should be sent by October 15th, to the PRINCIPAL, Cambridge Training College, Wollaston Road, Cambridge, from whom further particulars may be obtained.

## BEDFORD COLLEGE, LONDON (FOR WOMEN).

YORK PLACE, BAKER STREET, W.

Principal—Miss ETHEL HURLBATT.

The Session 1900-1901 will open on Thursday, October 4th. Students are requested to enter their names on Wednesday, October 3rd.

Lectures are given in all branches of General and Higher Education. Taken systematically, they form a connected and progressive course, but a single course of Lectures in any subject may be attended.

Courses are held in preparation for all the Examinations of the University of London in Arts and Science, for the Teachers' Diploma (London), and for the Teachers' Certificate (Cambridge); and also a Special Course of Scientific Instruction in Hygiene. Six Laboratories are open to students for Practical Work. Two Entrance Scholarships awarded yearly. A Gladstone Memorial Prize and the Early English Text Society's Prize are awarded to students each June.

The Art School is open from 10 to 4. Students can reside in the College.

Full particulars on application to the PRINCIPAL.

## BEDFORD COLLEGE, LONDON (FOR WOMEN).

YORK PLACE, BAKER STREET, W.

### DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.

(Recognized by the Cambridge Syndicate.)

Head of the Department—Miss H. ROBERTSON, B.A.

The Third Term of the Session 1900 begins on Thursday, October 4th.

The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge, held annually in December.

The Council will, in December, award a Gilchrist Travelling Studentship, value £70.

Full particulars on application to Miss ROBERTSON.

## THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.

Principal—Miss M. PUNNETT, B.A. (Lond.).

The object of this College is to give a professional training to educated women who intend to teach. In addition to the course of training, it offers the advantages of a College life and one year's residence in Cambridge.

The Students attend the Cambridge University Lectures on Teaching, in addition to those of the Resident and Visiting Lecturers, and are prepared for the Cambridge Teachers' Certificate (Theory and Practice). Ample opportunity is given for practice in teaching science, languages, mathematics, and the other usual school subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Wollaston Road, Cambridge.

THE

## FROEBEL EDUCATIONAL INSTITUTE,

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged. Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

**JOINT AGENCY FOR ASSISTANT-MASTERS.**

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

The Joint Agency for Assistant-Masters and Tutors is under the management of a Joint Committee composed of representatives of the following Bodies:—

- Headmasters' Conference.
- Incorporated Association of Headmasters.
- College of Preceptors.
- Teachers' Guild.
- Welsh County Schools' Association.
- Private Schools' Association.
- Association of Headmasters of Preparatory Schools.
- Association of Headmasters of Roman Catholic Schools.
- Assistant-Masters' Association.
- Association of Technical Institutions.
- &c. &c.

As the Agency is not working with a view to profit, but to benefit Assistant-Masters, the rates of commission are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m., Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

Tenth Edition. 12mo, price 3s. 6d.

COLLEGE OF PRECEPTORS.

Lectures for Teachers.

THE THEORY AND PRACTICE OF EDUCATION.

To be delivered by H. L. WITHERS, M.A., Professor of Education in the Owens College of the Victoria University.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.  
 \* \* \* The Lectures will be delivered on SATURDAYS, from 5 to 6 o'clock, p.m., beginning on SATURDAY, 6th October, 1900, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

SYLLABUS.

LECTURE I.—The Problems of Education.

Relation of theory and practice, their combination in an inductive and experimental method; why such a method is requisite in the study of education.—How the problems arise in practice; and how theory (i.e., reflexion and comparison) furnishes provisional hypotheses by help of which we may work intelligently towards their solution.—Some problems in instruction, illustrated from supposed case of a lesson to a fifth form on Milton's "Sonnet to Cromwell."

LECTURE II.—The Appeal to Experience.

Problems recapitulated: recourse to the procedure of successful educators.—Limits to the possibility and to the value of this recourse: apprenticeship even under the best conditions needs to be supplemented.—The example of the Great Masters: true meaning and right use of the history of education.—Illustrations from "Stanley's Life of Arnold."—The main purpose of education as Arnold practised it, viz., the preparation of pupils for intelligent and responsible activity in a Christian community.—His adjustment of means to this end, (a) in the general school-life, (b) in his form-teaching.

LECTURE III.—The Appeal to Science.

Inadequacy of imitative and traditional methods: because our problems are new. Analogous failure of traditional methods in warfare.—New factors in education since Arnold's time, (a) social, industrial, and political changes, (b) new ideas in history and science.—Illustrations from the writings of Edmond Demolins.—Biological conceptions in education.—Perils of premature deduction: confusion of science as a whole with natural science.—The "mental and moral sciences" in their relation to education.

LECTURE IV.—The Appeal to Literature and Life.

Unfortunate isolation of ethics, logic, and psychology, as the studies on which a theory of education should be based.—Education deals only with the ascertained results of these studies, not with their speculations: and is influenced far more powerfully by social forces which do not strictly fall within the province of any of them.—Paramount importance to the educator of a knowledge of the world and of human nature, to be gained through intercourse and through literature.—Education arises out of helplessness, and is intended to be its cure, but pedantry is only an aggravated form of helplessness.—Sound and efficient mental habits: how the necessarily artificial character of school-training is to be saved from futility.

LECTURE V.—Relation of Psychology to Education.

Meaning and scope of psychology: in what sense a science.—Points of extreme value to the educator: (i.) relations of mind and body, and the conditions of healthy mental activity, (ii.) vitality and reproduction of ideas, (iii.) nature of habit in matters of mind and character, (iv.) analysis of voluntary rational action.—"Genetic psychology" and its relations to "child study": how far helpful in the practice of instruction.—Practical corollaries.

LECTURE VI.—Relation of Ethics to Education.

Valuelessness of speculative ethics for the educator.—Importance of an understanding of the motives which lead to action.—The problem of discipline, and the power of command.—The "tone" of a school.—Religion and religious teaching.—Physical training: the value and the limitations of games.—Type of character produced by English public schools, its excellences and defects.

LECTURE VII.—Relation of Logic to Education.

Logic must be held to include the theory of knowledge and a study of inductive method.—Value to the instructor of (i.) the syllogism, (ii.) the canons of induction.—Practical illustrations.—Relation of the "five formal steps" to logical laws.—Preparation of lesson notes and of schemes of lessons.—A criticism of some forms of "Froebelianism," and of "heuristic methods."—What is meant by "sound mental habits"?

LECTURE VIII.—School Administration and Government.

A school as a centre of forces: (i.) the governing body, (ii.) the headmaster, (iii.) the staff, (iv.) influence of parents and "society," (v.) national and local authorities, (vi.) examining bodies.—Interaction of these forces: extreme importance of a true understanding of educational politics.—Education as a profession.—Futility of our theories if they do not touch controlling forces.

LECTURE IX.—The School Curriculum.

The idea of a liberal education: its history, and the dangers to which it is exposed at present from crude industrialism and from specialization.—Different conceptions of the curriculum for different stages of school-life.—Over-pressure.—The conflict of studies.—Necessity of correlation.—Educational values, and the time-table as a scale of values.

LECTURE X.—Language-Teaching.

The teaching of the mother-tongue.—The meaning of words, and the relation of language to life.—Different views expressed in various typical "methods" of language-teaching. The teaching of the classical languages: the "tradition of the scribes," that we should train commentators. Perils threatening the future of the classics as the staple of education in Christendom.—The teaching of modern languages: the "reform" or "direct methods."—Correlation of linguistics with literature and history.

LECTURE XI.—The Teaching of History and Geography.

Disrepute of these subjects as "cram-subjects."—The meaning of "cram," and the value of a study of successful "cramming," in contrast with successful educating.—How forms may be got to think and to work in history lessons.—What to teach in history.—Physical and commercial geography in relation to history and political geography.—Criticism of the theory that history should be the "core" of instruction.

LECTURE XII.—Nature-Study.

The place of natural science and mathematics in the scheme of a liberal education.—"Concrete methods" in mathematics: their use and abuse.—Importance of natural history and the "life-sciences" especially in the junior school.—How and when the study of abstract science should be begun.

C. R. HODGSON, B.A., Secretary.

FREE GUIDE TO THE CAMBRIDGE HIGHER LOCAL EXAMINATION,

BY THE

TUTORS OF THE UNIVERSITY EXAMINATION POSTAL INSTITUTION.

APRIL EDITION (76 pages), containing advice as to books to read for the 1900 and 1901 Examinations, and the mode of Study, and statistical tables (not obtainable elsewhere). A copy of the Guide will be sent gratis and post free to any candidate on application to the Manager of the Institution, Mr. E. S. Weymouth, M.A., 27 Southampton Street, Strand, London, W.C.

332 U.E.P.I. candidates passed the Cambridge Higher Local from 1895 to 1900, 60 with distinction.

The Institution prepares through the post for various University Examinations and for the A.C.P., L.C.P., and F.C.P.

BY JOHN S. RAWLE, F.S.A.,

Late Examiner to the Department of Science and Art.

HINTS ON FRENCH SYNTAX.

By F. STORR,

Chief Master of Modern Subjects in Merchant Taylors' School.

"The merit of the book is its simplicity and brevity, and we have no hesitation in saying that these *Hints* would prove a valuable supplement to any grammar that might be in use. . . . Neatly printed in clear, bold type, and interleaved throughout, this book is one we can confidently recommend not only to teachers for class use, but as an invaluable aid to students preparing for the Scholarship, Certificate, and London Matriculation Examinations."—*The Practical Teacher*, January, 1900.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

OXFORD LOCAL SHAKESPEARE, 1901.

DINGLEWOOD SHAKESPEARE MANUALS, BY STANLEY WOOD, M.A.

HENRY THE FIFTH, QUESTIONS AND NOTES. 1s.

"A little brochure of some fifty pages, which will suggest some useful thoughts to masters teaching the play."—*Journal of Education*.

MERCHANT OF VENICE, QUESTIONS AND NOTES. 1s.

"Cannot but prove useful to candidates for whom these plays are set."—*Scotsman*.

CAMBRIDGE LOCAL SHAKESPEARE, 1900.

AS YOU LIKE IT, QUESTIONS AND NOTES. 1s.

"They will tend rather to discourage 'cram' than otherwise. . . . We can recommend the book as a distinctly useful 'aid.'"—*Guardian*.

Each of the Manuals contains about 250 Questions, of which all the most difficult (about one-third of the whole number) are fully answered as models.

**A New Spelling Book.** With Side Lights from History. Eighth Edition. Crown 8vo, 152 pp. . . . . 1s.

**The Spelling List.** For Civil Service and other Examinations. With a Key to Correct Spelling. Third Edition. Crown 8vo, 146 pp. . . . . 1s.

**A New Poetry Book for the Use of Schools and Families.** Fourth Edition. 156 pp. . . . . 1s.

**A School Algebra for Junior Forms.** By F. OSCAR LANE, B.Sc. Lond., Assistant-Master, King Edward's School, Birmingham. Crown 8vo, 232 pp. . . . . 1s. 6d.  
With Answers, 2s. 0d.

LONDON: A. M. HOLDEN, 11 PATERNOSTER SQUARE.

## MACMILLAN & CO.'S NEW EDUCATIONAL BOOKS.

### A HISTORY OF GREECE TO THE DEATH OF ALEXANDER THE GREAT.

By J. B. BURY, M.A., Hon. Litt.D. Durham. With Maps and Plans. Crown 8vo, 8s. 6d.

*Saturday Review*.—"Prof. Bury has supplied a real want. At last we have to hand in a single volume a history of Greece which is at once comprehensive, critical, and up to date—a history, moreover, which may be read not only with profit but with pleasure. . . . Will, no doubt, be found useful even by specialists. To schoolmasters and tutors it is a veritable godsend."

#### ENGLISH.

**Tennyson.—The Lotos-Eaters, Ulysses, Ode on the Death of the Duke of Wellington, Maud, The Coming of Arthur, The Passing of Arthur.** With Introduction and Notes by F. J. ROWE, M.A., and W. T. WEBB, M.A. Globe 8vo, 2s. 6d. [*English Classics*].

"No one could desire a better introduction, marked as it is by lucidity of exposition and acuteness of judgment. . . . For scholastic purposes a more judicious selection could not have been made. Each poem is annotated in a clear, adequate, and scholarly manner. The book is moderate in price, and in every way well suited for the junior student."—*Educational News*.

**Charles Lamb.—Essays of Elia.** Second Series. Edited, with Notes, by Prof. N. L. HALLWARD, M.A. With an Introduction by S. C. HILL, B.A., B.Sc. Globe 8vo, 3s [*English Classics*]. Previously Published. FIRST SERIES. Globe 8vo, 3s.; sewed, 2s. 6d.

#### LATIN.

COMPLETION OF MR. PAGE'S EDITION OF  
**Virgil.**

Edited, with Introduction and Notes, by T. E. PAGE, M.A., formerly Fellow of St. John's College, Cambridge. In 3 Vols. Vol. I., **Bucolics and Georgics**. Vol. II., **Æneid**, Books I.-VI. Vol. III., **Æneid**, Books VII.-XII. (Just Published.) Fcap. 8vo, 5s. each. [*Classical Series*].  
*Educational Times*.—"The notes appear admirably sound, lucid, and sufficient; and treated with the same common sense which marks all Mr. Page's work."

**The Catiline of Sallust.** Edited, for the use of Schools, with Introduction, Notes, and Vocabulary, by the Rev. G. H. NALL, M.A. Pott 8vo, 1s. 6d. [*Elementary Classics*].

*Irish Teachers' Journal*.—"The notes are scholarly, and display a full knowledge of the difficulties beginners encounter in reading Sallust. They anticipate every difficulty, and render the path of the student pleasant and enjoyable. We know of no better edition of Sallust to place in the hands of those commencing the study of Sallust."

#### MATHEMATICS AND SCIENCE.

**Workshop Mathematics.** In 2 Parts. By FRANK CASTLE, M.I.M.E. Globe 8vo, 1s. 6d. each.

Book I. now ready.

**The Elements of Euclid.** By I. TODHUNTER, D.Sc., F.R.S. New Edition, Revised and Enlarged by S. L. LONEY, M.A. Globe 8vo. Book I., 1s.; Books I. and II., 1s. 6d.; Books I.-IV., 3s.; complete, 4s. 6d.

*Educational News*.—"We prophesy a new lease of life for 'Todhunter's Euclid' as the result of Mr. Loney's work."

**Elementary Physics and Chemistry.** In 3 Stages. By Prof. R. A. GREGORY, F.R.A.S., and A. T. SIMMONS, B.Sc. (Lond.). Globe 8vo, 1s. 6d. each.

*Guardian*.—"The illustrations are numerous and useful; the experiments are good and require only simple apparatus; and the text is simply, clearly, and carefully written."

**Public School Protractor Scale.** Price 6d.

**Introduction to Zoology.** A Guide to the Study of Animals for the use of Secondary Schools. By Prof. C. B. DAVENPORT, Ph.D. With 311 Illustrations. Crown 8vo, 6s.

PRIZE EDITION NOW READY.

**Curiosities of Natural History.** By FRANCIS TREVELYAN BUCKLAND. Popular Edition, with a few Illustrations. Each Series separately, in small 8vo, 2s. 6d. (extra gilt binding, 3s. 6d.), as follows:—

1ST SERIES.—Rats, Serpents, Fishes, Frogs, Monkeys, &c.

2ND SERIES.—Fossils, Bears, Wolves, Cats, Eagles, Hedgehogs, Eels, Herrings, Whales.

3RD SERIES.—Wild Ducks, Fishing, Lions, Tigers, Foxes, Porpoises.

4TH SERIES.—Giants, Mummies, Mermaids, Wonderful People, Salmon, &c.

OCTOBER NUMBER NOW READY.

## THE SCHOOL WORLD.

A Monthly Magazine of Educational Work and Progress. Price 6d. Annual Subscription, including Postage, 8s. net.

LEADING CONTENTS.

*Special Revision Test Papers for the College of Preceptors Examination in December, 1900, for Second and Third Class Certificates.*

**The Law Relating to the Teacher's Tenure of Office.** By T. A. ORGAN, Barrister-at-Law.—**International Educational Congresses at the Paris Exhibition.** (From our Special Correspondent.)—**A Teacher's Library of Pure Mathematics.** By Prof. G. B. MATHEWS, M.A., F.R.S.—**What is Technical Education?—Observational Astronomy.** A Series of Notes upon the Positions and Apparent Motions of Celestial Bodies. III. (Illustrated.)

By Prof. R. A. GREGORY, F.R.A.S.—**International Correspondence as an Aid to Language Teaching.** By NEVILLE W. ROSS, B.A. (Cantab.), B. & L. (Paris).—**The Teaching of Chemistry and its Development.** Address by Prof. W. H. PERKIN, Jun., F.R.S.

MACMILLAN & CO., LIMITED, St. Martin's Street, London, W.C.

# CAMBRIDGE UNIVERSITY PRESS.

**EDUCATIONAL AIMS AND METHODS:** Lectures and Addresses by Sir JOSHUA FITCH, M.A., LL.D., late Her Majesty's Inspector of Training Colleges, and Author of "Lectures on Teaching," "The Arnolds and their Influence on English Education." Small crown 8vo, 5s.

*Journal of Education.*—"Lectures on Education" has become a standard text-book on pedagogics. The present volume is a kind of supplement or appendix. More miscellaneous and systematic than the former, it deals with some aspects of educational work to which my own attention during a long official life has been specially directed . . . the borderland which separates the corporate life of a school from the larger life of the family and the community."

**FIFTEEN STUDIES IN BOOK-KEEPING.** By WALTER W. SNAILUM, P.A.S.I. Crown 8vo.

This book has been written to combine a thorough explanation of the principles of double-entry book-keeping with a course of work suitable for preparation for the examinations held by the Society of Arts, Civil Service, Lancashire and Cheshire Union of Institutes, and kindred examining bodies.

Part I, comprising the fifteen studies or lessons, examines thoroughly the principles of book-keeping and the form and use of the books and accounts kept by a merchant or trader. A series of exercises are given upon each study. The studies on Bills and Cheques are believed to give all the information thereon that it is necessary for a trader to possess in the ordinary conduct of business.

The book may be used by young students, and an elementary course is marked out for that purpose.

Part II, is devoted to examination work. It contains seven examination papers (including those set by the Society of Arts in the years 1900, 1899, and 1898) fully worked as models. A selection of examination papers is also given for solution by the student.

The work is eminently adapted for use in the winter evening classes that are held to prepare for the spring examinations.

## PITT PRESS MATHEMATICAL SERIES.—NEW VOLUME.

**THE ELEMENTS OF HYDROSTATICS.** By S. L. LONEY, M.A., Professor of Mathematics at the Royal Holloway College, sometime Fellow of Sidney Sussex College, Cambridge. Crown 8vo, 4s. 6d.

*Extract from Preface:*—"The present volume is intended to be for the use of the class of students for whom my 'Elements of Statics and Dynamics' was written, and may be regarded as a continuation of that book."

## CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.—NEW VOLUMES.

General Editor—W. H. WOODWARD, of Christ Church, Oxford; Principal of University (Day) Training College, Liverpool; and Professor of Education in Victoria University.

**A Short History of the Expansion of the British Empire, 1500-1870.** By W. H. WOODWARD. With Maps. Crown 8vo, cloth, 4s.; cloth extra, gilt top, 5s.

*Athenæum.*—"Thoroughly to be recommended."

*Educational Times.*—"Mr. Woodward tells this story 'in usum scholarum' in an altogether admirable manner."

*School World.*—"It is full of wisdom applicable to our own day."

**The Making of Character: some Educational Aspects of Ethics.**

By JOHN MACCUNN, Balliol College, Oxford; Professor of Philosophy in University College, Liverpool. Crown 8vo, cloth, 2s. 6d.; cloth extra, gilt top, 3s. 6d.

*Literature.*—"An acute and thoughtful book."

*Leeds Mercury.*—"A volume which deserves to be not merely read, but studied by all practical educationalists."

**The Education of the Young in the Republic of Plato.**

Translated into English, with Notes and Introduction, by B. BOSANQUET, M.A., LL.D., Author of "A Companion to Plato's Republic." Crown 8vo, 2s. 6d.

*Literature.*—"A scholarly translation, with notes and introductions, sketching well and concisely the history of Greek education."

**Geometry for Young Beginners.** An Introduction to Theoretical and Practical Geometry. By F. W. SANDERSON, Headmaster of Oundle School. 1s. 4d.

*Journal of Education.*—"We have read this little book with interest and pleasure, and feel sure that it will prove a most useful introduction to theoretical and practical geometry."

**Geometrical Drawing.** With Notes and Examples. By W. H. BLYTHE, Jesus College. Part I.—Plane and Elementary Solid. 2s. 6d. Part II.—Solid or Descriptive Geometry. 2s.

*Extract from Preface.*—"Part I. contains Plane Geometrical Drawing and Solid Geometry, so far as it is included in the Syllabus, Geometrical Drawing (Art), Subject 1A, page 231, *Science and Art Directory*, 1899. In Part II. is added a course of instruction in Solid Geometry suited to the Elementary Stage of Science Subjects as given on page 78 of the above *Directory*. This book will also be found of use to all Army Candidates."

*Guardian.*—"The book is very inexpensively got up, and it should be well within the reach of all who want a sound and concise exposition of the important geometrical problems."

*Schoolmaster.*—"The illustrations of this little book are beautifully clear and instructive, the teaching is simple and direct, and the object of the book is fully attained."

## THE PITT PRESS SHAKESPEARE FOR SCHOOLS.

Edited, with Introduction, Notes, Glossary, and Index, by A. W. VERITY, M.A., sometime Scholar of Trinity College.

*Oxford Magazine.*—"Mr. Verity is issuing apace his volumes of the 'Pitt Press Shakespeare for Schools,' and we congratulate the Syndics on having secured so competent an editor. He knows what is wanted by school-children, omits pedantic comments, and provides in lucid and readable paragraphs all the necessary information."

*Practical Teacher.*—"Of the many school editions of Shakespeare's plays this is certainly one of the very best."

*Public School Magazine.*—"Of all editions of Shakespeare I have yet seen it seems to me to be the one most suited for the schoolboy."

**As You Like It.** Second Edition. 1s. 6d.

**King Richard II.** Second Edition. 1s. 6d.

**Merchant of Venice.** Third Edition. 1s. 6d.

**King Lear.** Second Edition. 1s. 6d.

**Julius Cæsar.** Fifth Edition, with Additions and Corrections. 1s. 6d.

**The Tempest.** Fourth Edition, with Additions and Corrections. 1s. 6d.

**Twelfth Night.** Fourth Edition. 1s. 6d.

**A Midsummer Night's Dream.** Fifth Edition, with Additions and Corrections. 1s. 6d.

**King Henry V.**

[Shortly.]

## PITT PRESS SERIES.—NEW VOLUMES.

**Bacon.—The New Atlantis.** Edited, with Introduction and Notes, by G. C. M. SMITH, M.A., St. John's College, Cambridge. [Nearly ready.]

**Scott.—Old Mortality.** Edited, with Introduction, Notes, and Glossary, by J. A. NICKLIN, late Scholar of St. John's College, Cambridge, Members' Prizeman for English Essay. 2s. 6d.

*School World.*—"A very good attempt to edit Scott's celebrated novel as a school-book. The hand of a scholar is traceable everywhere. The Introduction is especially admirable—not too long, yet sufficiently clear. The notes and glossary will be found extremely serviceable. The more of Scott's novels we have in this form the better for literary taste; they supply the right kind of material for a real appreciation of Scott's genius, and ought to assist in clearing the field of numerous inefficient attempts to do this very useful kind of work."

**Hauff.—Der Soheik von Alessandrie und seine Sklaven.** Edited, with Notes and Vocabulary, by W. RIPPANN, M.A., Professor of German at Queen's College, London. 2s. 6d.

*Educational Times.*—" . . . A welcome addition to the elementary reading-books available for schools . . . and Mr. Rippmann's name is sufficient guarantee for good editing."

*Practical Teacher.*—"An admirable edition of one of Hauff's most charming tales. The notes are concise, and are very well adapted for beginners in German. The vocabulary we have found complete so far as we have tested it."

**Cæsar.—De Bello Civili. Book III.** Edited, with Introduction, Notes, and Maps, by A. G. PESKETT, M.A., President and Tutor of Magdalene College, Cambridge. 2s. 6d.

*Educational Times.*—"A careful and thorough piece of work well worthy of its position in the 'Pitt Press Series.'"

*School World.*—"This edition, marked alike by genuine scholarship and simplicity, ought to hold the field for all purposes for which the book may be required. We find here . . . everything which should be found in an edition for the use and stimulus of an intelligent mind."

**Cicero.—Pro Lege Manilia.** Edited, with Introduction and Notes, by J. C. NICOL, M.A., Trinity Hall, Master of Portsmouth Grammar School. 1s. 6d.

*Athenæum.*—"This is a satisfactory addition to the 'Pitt Press Series.' Mr. Nicol shows in his short, but pertinent, preface that he has had teaching experience. . . . More care than usual is paid to matters of text, and the translations given are good."

*Guardian.*—"Mr. J. C. Nicol . . . has produced a pleasant and useful edition of Cicero's 'Pro Lege Manili,' an interesting and readable speech which has been previously edited in English . . . but which is well worth bringing into further notice. . . . The book is good, and should prove useful."

**Horace.—Satires.** Edited, with Introduction and Notes, by J. GOW, Litt.D. [In the press.]

**Sallust.—Catiline.** Edited, with Introduction and Notes, by W. C. SUMMERS, M.A., Fellow of St. John's College. [In the press.]

## The Educational Times.

### A Five Years' Record.

THE Parliament elected in 1895—a year marked for many of us by the Report of the Royal Commission on Secondary Education—is dissolved. We have often appealed to the Government, criticized its action, appreciated its efforts to advance with the times, and welcomed one or two of its cautious and half-hearted reforms. We can appeal to it no more; and, if we criticize, it must be as men who recite a chapter of recorded facts, but no longer hope to influence a Minister or a Board. Of course, there is a theoretical continuity during a General Election, even amongst political heads of Departments, and there is actual continuity on the part of the permanent officials. But we must expect a certain suspense and delay of progress as inevitable. The permanent officials are almost, though not quite, omnipotent. They have had the direction of things pretty much to themselves under the Duke of Devonshire, and they have virtually (we will not say deliberately) tripped up Sir John Gorst whenever his attitude began to indicate energetic motion. Nevertheless the political heads must always count for something, however strong and able the officials may be; and the President and Vice-President have both left their mark on the history of our national education.

What have the outgoing Government done for education, and for secondary education in particular? Their record is sufficiently familiar to our readers, without any repetition of the details. They have, in one word, made a beginning of carrying out the chief recommendations of the Royal Commissioners. Considering how new the whole question of reorganization was to the general public in 1895, and how little inclined the ordinary politician in a Cabinet is to trouble himself over anything that has not a popular or influential cry behind it, the achievement of the past five years is by no means insignificant. The first attempt of the President and Vice-President of the Committee of Council, and of the permanent officials, to make a move in the right direction was not successful. The Bill of 1896 might have been carried if Sir John Gorst had been in the Cabinet. It fell to the ground, not, as is sometimes said, through the reluctance of the County Councils or any mere dispute as to the size of administrative areas, but because the Government had delayed the Bill too long, and Mr. Balfour neither understood it nor cared for it, and Sir John Gorst was not strong enough to push it.

As for the Act of 1899, every one who reads these words is familiar with its virtues and defects. It marks the limit of agreement and conviction which has been attained by a Conservative Government, the political heads and the permanent officials of the Education Department, in working out the principles of the Royal Commission on Secondary Education. A shrewd observer, reviewing recent educational progress in the *Times* of September 6, pointed out that the idea of the Commissioners in regard to a Central Authority had been that it should be a Department of the Executive Government, presided over by a Minister of Cabinet rank responsible to Parliament, and absorbing in itself the educational functions of the Charity Commission and the Science and Art Department. But the Duke of Devonshire, influenced partly by the reluctance of his colleagues in the Ministry, partly by the departmental advisers whom he mainly trusted, was content with something short of this. His Bill created a Board of Education, the organization of which was entrusted to a departmental committee, and which "turns out to be little more than a rearrangement of the Education Department and the Science and Art Department, with no special provision for dealing with secondary education properly so called."

As many persons consider the influence of the Science and Art Department upon secondary education to have been in many respects injurious, it is not reassuring to find secondary education treated as a mere branch of scientific and technical education, and placed under the control of the late chief of that Department. No attempt, again, has been made to absorb the educational functions of the Charity Commission. No attempt has been made to give to the new Central Authority its proper status under a Minister of Education, as in every civilized nation of Europe. As at present constituted it is the mere nucleus and shadow of what it must some day become if the organization of education is ever to be a reality and the Central Authority is to advise, control, and guide the Local Authorities to whose hands must ultimately be entrusted the administration of education. It is, however, a step in the right direction. It provides the raw material out of which some future Ministry more alive to the national importance of the whole question, and less timid and cautious in dealing with it, may frame a really efficient organization.

The Bill of 1900 carries us no further. It was probably not intended to pass; for this autumn dissolution seems to have been in the air of Downing Street since the beginning of the year. We have no doubt that the Duke of Devonshire, whose good will to education is manifest, was perfectly honest in putting forward his cautious measure as a basis of practical discussion, calculated to clear the ground in future, either for his own Government or for their successors. As things have turned out, there is now but little inducement to sort out the details of this Bill or to suggest a modification of one clause or an extension of

another. New men must prepare new measures; the old men have shot their bolt.

With respect to elementary education, and the debatable ground between the elementary and the secondary, there is a great deal in the policy and action of the Conservative Government which might lead us into party controversy. We will not discuss the Voluntary Schools Aid Act of 1897, and the assignment of an annual grant of £800,000 to denominational schools. It was not an economical grant, for it has checked the flow of voluntary subscriptions; and it would certainly be a better policy from the standpoint of education pure and simple if we could all agree on a national system of universal application. But that is just what we cannot do. As for the higher-grade schools, and the Minute of April 6, though we have often protested against the anomaly of School Boards running secondary schools, and have demanded the clearer limitation of elementary and secondary education, it seems to us that the frequenters of these schools and their parents will have a very real grievance if the higher-grade schools are closed before the State has made ample provision for the same boys and girls by way of alternative. After all, it was the Education Department which allowed these schools to grow up and develop, without taking any decided step to prevent discourage them. It will be seen from a couple of paragraphs in our Summary of the Month that the general body of working men are complaining rather bitterly of the threat of the Board of Education to deprive them of what they regard as their own public secondary schools.

To-day, the first of October, the Consultative Committee enters on its recognized operative career. We cannot say whether the Board has any special work prepared for it, but in the meantime it has its defined and statutory work, to devise a plan for the creation of a register of teachers. No task could well be more important, and the Committee is competent under the Act to set about its performance without delay.

*London University.* THE reconstituted University of London will begin its teaching and administrative work this month, and it may not be amiss to recapitulate the general conditions on which it has been modelled by the Statutory Commission. According to its new Statutes, it starts with the lofty triple purpose of holding forth to all classes and denominations in the United Kingdom and elsewhere an encouragement to pursue a regular and liberal course of education, of promoting research and the advancement of science and learning, and of organizing, improving, and extending higher education. The most important of the existing public educational institutions within a radius of thirty miles from the central office of the University have been combined with the old examining University in the following way. A central supreme governing and executive body, called the Senate, is constituted, consisting of fifty-six members, some appointed by the Crown, some by public bodies, some by the Faculties of the University, and sixteen others elected by Convocation. This central authority will, in a great measure, do its work by means of three Standing Advisory Committees. The first will be called the "Academic Council"; the majority of its members will be composed of those members of the Senate who are appointed by the Faculties, and, speaking generally, its function will be to report to the Senate "upon any matter relating to internal

students." The second will be called the "Council for External Students"; the majority of its members will be composed of the members of the Senate elected by Convocation, and its function will be to report "generally upon any matter relating to the external students." Some comfort may be found by members of the University anxious lest the old high standard should be lowered in the fact that, while the first Committee will consist of twenty members, the second will number twenty-eight. The third Advisory Committee will be called the "Board to Promote the Extension of University Teaching."

To assist in the general government of the University, the Senate may appoint a Principal Officer with such title, powers, duties, and salary as it may deem fit, and may assign such powers, duties, and salary to the Vice-Chancellor. Further, the Senate will appoint three paid Registrars, or other officers, to act as clerks of the three Standing Committees. As regards the admission of students, there is to be a Board to advise the Senate upon all questions relating to the admission of students. This Board will consist of the Chancellor, the Vice-Chancellor, and the Chairman of Convocation, and a number of members of the Senate nominated by that body. One third of the members so nominated must be members of the Academic Council, and one third must be members of the Council for External Students. There are to be eight Faculties, and each Faculty is to elect one of its members to be Dean for two years. Two of these Faculties more or less exist at present merely on paper. A Joint Committee of the four Inns of Court having reported adversely to the proposals made by the London University Commissioners, all the Inns declined to take any part in the University, and, although the Incorporated Law Society proved friendly to the scheme, yet the Commissioners say that "to our great regret we have not succeeded in forming at present any effective Faculty of Laws." There has been a similar difficulty with regard to the Faculty of Music.

Three Faculties—viz., Theology, Engineering, and Economics and Political Science—are quite new. Students at King's College and other theological colleges will now be able to obtain, instead of a mere Associateship, the degrees of Bachelor and Doctor of Divinity. In the other two new Faculties students will be able to take degrees in Science. The subjects comprised in these Faculties have yet to be determined by the Senate. In connexion with the eight Faculties, twenty-four schools and institutions have already been made the "first schools of the University." Boards of Studies have been prescribed, and no fewer than thirty-two provisionally appointed, covering an extremely wide and up-to-date range of studies. Among them will be a Board of Marine Engineering and Naval Architecture.

Two classes of "teachers of the University" have been created: viz., the professors, readers, and so on, appointed directly by the Senate, and therefore called "appointed teachers," and the teachers on the staffs of public educational institutions within a radius of thirty miles from the central office, either already recognized by the Regulations (see page 5) or to be recognized by the Senate as "recognized teachers." Appointed teachers will be entitled to retiring pensions, and their lectures will be open, if the Senate thinks fit, to external as well as internal students on payment of the fees, &c. As regards matriculation, the Senate may make provision for holding separate matriculation examinations for different classes of students, having regard to the course of study which the

students propose to follow. Useful as no doubt such a provision will be to enable the various schools of the University to continue their work, it is to be hoped that the Advisory Board will insist, *mutatis mutandis*, on a properly high standard.

In general, examinations for internal and external students will be separately conducted, and certificates and diplomas will state whether the holder passed as an internal or as an external student. Candidates for the Senate have for a long time been busy. We have not seen a complete list of those already in the field and supported respectively by the "Union" and by the "Association." No doubt, every member of Convocation has already received the rival lists. It is to be hoped that the best candidates in both lists will be elected. The following remarks of the Statutory Commissioners need to be kept prominently in evidence for some time to come:—

We cannot but feel that statutes and regulations will not make a living University. Large funds will be required for the remuneration of University professors and lecturers and the provision and maintenance of libraries, museums, laboratories, and workshops.

Let all who realize the importance of the Metropolitan University unite in pressing on Parliament, the City, the London County Council, and other municipal bodies to provide these funds in no niggardly spirit.

### NOTES.

MANY of our readers must have observed how the fever of travelling is spreading among schoolmasters and mistresses. A decade or so ago most were content with a quiet visit to an English or Welsh watering-place, or with a leisurely amble in Scotland. Now, unless they be votaries of golf, teachers take their tickets for a long Continental tour, or a cruise to the North Cape or the Levant, whilst the ink of their mark lists is scarcely dry. Soon we shall find them emulating a University Local examiner we once knew who corrected his papers on a journey from London to Switzerland. Are salaries, at last, increasing, or is the general level of scholastic culture higher, leading to plain living and high thinking during term time and a yearning for the sublimest of Nature and the delights of Continental art galleries when the holidays come? Or is it merely an indication of the general national inability to withstand the blandishments of Messrs. Cook, Lunn, & Co.?

In his opening address before the Mathematics and Physics Section of the British Association at Bradford, Dr. Larmor, of Cambridge, made some remarks on the true function of examinations, which deserve attention from the Universities. In his opinion, except in the particular case of workers in rapidly progressive branches of technical science, a broad education is better adapted to the purposes of life than special training over a narrow range. In England we are apt to mix up the methods, and we find examinations based on the assumption that some amount of original research has been done by undergraduates at periods when they would be far more profitably employed in widening their ideas of learning. Dr. Larmor even advocates the confining of all examinations to general views of literature and science, leaving the stimulus of personal interest to lead students into specialized grooves of research. It seems a hard saying from the mouth of one of the most brilliant Senior Wranglers of this generation, but experience shows it to be sound advice. Examinations may have improved general

learning and culture, but they certainly do not make pioneers of research.

In that effervescent *pot-pourri* of literature, music, art, and craft known as the Welsh National Eisteddfod—this year held at Liverpool—one does not look to find much that is either solid or practical in educational constructive criticism. Its patrons are far too expectant of bardic and musical delights to grapple seriously with the prosaic. Principal Reichel's paper on the defects of technical education read before the Cymmrodorion section would probably have attracted greater attention before a more professional audience. Much remains to be done, as he pointed out, before the University Colleges are equipped to provide the full measure of technical education which the country requires. In its final stage, technical education is really education in a particular business or manufacture, needing all the latest appliances to keep the students in touch with the latest scientific discoveries. Somehow or other the money must in time be provided.

It would be well to use the term "applied technical education" for the special form of scientific instruction just referred to, in order to distinguish it from the more general preparation for a commercial or industrial, as opposed to a professional, career which is usually given in schools. It is for a satisfactory code of technical training in this sense that the secondary schools of the country have looked in vain, but which, we hope, the Board of Education will soon supply. It is, perhaps, not to be wondered at that South Kensington groped for it ineffectually in the past, as the task needs a wide knowledge of our national industries with a philosophical grasp of the principles of science on which their development is based. For this we require a philosopher who is an educationist. Can he be found in a Government administrative Department? If he can, it will be unnecessary to throw Latin to the wolves in the search of a code, as Principal Reichel seems prepared to do.

It is some satisfaction to find that, in spite of the seething turmoil of social and political life in South Africa, the work of the educational institutions seems to suffer no serious disturbance. To judge from a report in the *Cape Times* of the proceedings on degree day at the University at Cape Town, held last month, the "alarms and excursions" of the war were banished from the mind—or, at any rate, from the speech—of Dr. Muir, the Vice-Chancellor, when delivering his address. Even Sir Alfred Milner succeeded in divesting himself of the cares of Government in order to be present. Dr. Muir's speech was of spheres of education, and the true influence of school and University in the formation of character. One is somehow reminded of Izaak Walton writing his "Compleat Angler" during the upheavals of the Cromwellian revolution. The only reference made by the Vice-Chancellor to the temporary check which the University had received was calculated to inspire his audience with buoyant hopes:—"Fortunately the check is less than might have been anticipated, and there is also good ground for hope that it is of the nature of the momentary lull which precedes a forward movement of great magnitude and importance." We sincerely trust he will not be disappointed.

Not only Cambridge, but the friends of education everywhere,

suffer loss by the death of Henry Sidgwick. He had every opportunity of aiding and advancing good causes, for he was as well endowed with this world's goods as with mental and moral acquirements; but the point to his credit is that, having the opportunities, he used them. A genial appreciation in the *Athenæum*, signed by the initial of one of his closest Cambridge friends, reminds us that Sidgwick's pecuniary benefactions to the University were very large.

He not only gave a most generous donation towards the erection of new buildings for Physiology, but on two occasions, on his own proposition, his annual stipend as Professor was largely reduced for a term of years. In the first instance this was done in order to found a Readership in English Law, which enabled the University to secure the services of Dr. Maitland; in the second instance it secured the more speedy foundation of the Professorship of Logic and Mental Philosophy. By Sidgwick's death the University has lost a generous benefactor, a valued adviser, and one of its most learned professors, while many of us here have lost a much-loved personal friend.

As we mention in another column, Henry Sidgwick was largely concerned in the foundation and endowment of Newnham College. It is too early, as pointed out in an obituary notice in the *Guardian*, to estimate the extent of Sidgwick's influence on the mind of this generation or the next. Trained in the school of Bentham and Mill, he was eminently an English philosopher, and was not thought to have much sympathy for German metaphysics and idealism. Indeed, a famous *mot* attributed to him in regard to the papers of some examination candidate, who had been "doing his possible" to expound Hegelianism, makes him say: "I can see this is nonsense, but is it the right kind of nonsense?"

THE many friends of wild birds have started a crusade against the use of stuffed specimens for the purpose of object-lessons in schools. Were teachers content with London sparrows or pigeons, no harm would be done; but when sparrow-hawks and owls are widely sought for we certainly feel inclined to join the crusade. Besides, it is doubtful if stuffed birds are more useful for teaching purposes than good illustrations. The latter show the object's habitat and true pose and movement in a far more satisfactory manner than a stuffed glass-eyed glass-cased bird can be expected to do. It is not so much an accurate and detailed knowledge of a particular species which is necessary in the education of a child, but a love of Nature and country life. An enthusiasm for the joys of the country will be more easily created by good illustrations and descriptions supplied by a teacher than by passing a stiff and staring bird round a class. Were such perfect groups as some of those mounted in South Kensington Museum generally available, the extinction of a species would be far too great a price to pay even for such a boon.

THE Students' Association familiarly known in France as "l'A" was founded in Paris some fifteen years ago, with the object of cultivating friendly relations between students in the capital and students in the provinces, and then between these and students of other nations. Representatives are now to be found in nearly all, if not in actually all, the Universities of Europe. The French and foreign members, with the honorary members—these latter being largely professors—number some thousands. The Association publishes a monthly magazine and an *Annuaire*, international meetings are arranged, and its standing is so far recognized academically that in France announcements as to its proceedings are formally posted on the

notice-boards of the faculties. Some ten years ago the work even then accomplished was *reconnue d'utilité publique* by the Government; indirect pressure has been brought to bear by the Committee on more than one legislative measure, and some of the great Frenchmen of the age—Ernest Renan, Pasteur, Carnot when President, M. Anatole France, M. Sully Prudhomme, and M. Gréard among them—have shown active sympathy with the movement, by attending receptions, presiding at banquets, and delivering addresses. The headquarters have for a long time past been a five-storied house close to the Sorbonne and the Collège de France. The *commission des fêtes* is an important side of the organization—it could hardly be otherwise where French students are concerned—and not a few English visitors had the opportunity of seeing "l'A" very much to the fore on the occasion of the Students' Congress, with its fifty delegations, recently arranged in connexion with the Exhibition.

## SUMMARY.

### THE MONTH.

THE British Association met this year at Bradford, under the presidency of Sir William Turner. A correspondent of the *Liverpool Post* writes that one of the results of this gathering, which is likely to have an important and far-reaching effect, was an informal, but influential, meeting at which it was proposed to found a section for the discussion of educational questions, and to prepare the ground for a wider and more effective system of scientific and technical instruction.

The effect on those best qualified to guide public opinion is nowhere better shown than in the influence it exercised over Dr. Lodge, who, when he entered the room, thought that the topic was one of passing interest, which could be met by an educational conference; but, as speaker after speaker urged the importance of the subject, he became convinced of the necessity of the formation of a permanent section, which would be competent to treat of the subjects brought before it from time to time, and ended by seconding the proposal which Dr. Armstrong moved, recommending that the annual meetings of the Association be utilized for the discussion of questions relating to the scientific methods of education. The final outcome, announced at the general meeting of the Association, was to the effect that the Committee would deliberate during the year, and report on the whole subject at the next meeting, to be held in Glasgow.

ON September 14 Mr. Bryce presided over a meeting of the British-American group of the International Association for the Advancement of Science, Arts, and Education, which was held in the United States pavilion of the Paris Exhibition. Mr. Bryce said:

He hoped all present would endeavour to bring the aims of the organization to the knowledge of those who would be able to give it financial help. Science and learning proverbially went hand and hand with poverty, so that those engaged in the work rarely could give more than their work. But many had never known poverty, and were anxious to give of their wealth to works of public utility. He urged on those the modest claim which this Association put before them. He would not detail the work of the Assembly, but he wished to dwell for a moment on the excellent evidence of international co-operation which was to be seen in this Association. Lately there had been a meeting of their Chambers of Commerce in Paris, and much had been said of the advantages to be gained from peace and harmony among the nations. But commerce, much as they desired it to be a means of peace, sometimes led to strife. He thought there was something which made for peace far more strongly than commerce, and that was the science and learning which did not depend for their growth on competition and rivalry. For this reason he felt that their Association should be a great factor towards international understanding. It was a significant fact that their first meeting should take place in Paris—the home of the great University of the middle ages, the leader and instructor of Europe. In the twelfth century a beacon fire had been lit in Paris which had done more to advance the civilization of Europe than any other. Thither had come the teachers and scholars of all lands to discuss together the deep questions for which solutions were being sought. The Exhibition had made an opportunity for the coming together of the *savants* of the world, and the International Association gave the means to continue the friendly relations there begun.

THE Assistant-Masters' Association met at Manchester on

September 14-15. On the former date the Association dined at the Grand Hotel. Mr. A. R. Gridley, of Emanuel School, London, presided, and amongst those present were Archdeacon Wilson, Prof. A. S. Wilkins, Mr. E. J. Broadfield, Mr. H. D. Rouse (Rugby), Mr. E. Kitchener (Rugby), Mr. S. Winbolt (Christ's Hospital), Mr. A. G. Munro (City of London School) Mr. H. W. Atkinson (Rossall), the Rev. W. C. Massey (Bedford Grammar School), Mr. G. F. Bridge (Ipswich), and Mr. Francis Jones (Manchester Grammar School). Archdeacon Wilson, in proposing the toast of "the Association," mentioned that forty years ago he was a member of a similar society known as the "U.U.'s," or "United Ushers," which Dr. Temple, when on one occasion it met at Rugby, facetiously designated the "Uneasy Underlings." Out of that society, or at any rate out of the need which it indicated, had doubtless sprung the present association. He thought there was need for such an organization, in addition to the National Union of Teachers. The Archdeacon advised the Assistant-Masters' Association to place efficiency before mere pecuniary advantage. They must not degenerate into anything that could be called a trade union. As long as they placed efficiency of education first, and not their own personal interests, they would have the support of everybody interested in education; but they might easily forfeit this if there was a suspicion of trade unionism about their Association.

On the 15th a number of interesting papers were read, and the following resolutions were carried:—

That the meeting, while thanking the Government for the Bill for enabling Local Authorities to aid secondary education, is of opinion that some coercive force will be found necessary to compel the right disbursement of the money, and also that in the constitution of the Committee some member shall be selected as representing institutions for secondary education in the locality.

That the position of assistant-masters in public secondary schools constitutes a serious obstacle to the efficiency and progress of secondary education, and demands the immediate consideration of the Government and of educational authorities, and that this meeting would especially draw attention to the inadequate salaries paid to assistant-masters, the absence of a general pension scheme or of any system of promotion, and the anomalous conditions of service under which assistants hold their posts at the pleasure of headmasters.

DEALING, on September 17, with the subjects raised at the meeting of the Assistant-Masters' Association, the *Manchester Guardian* made some very pertinent comments:—

In no department of public service is a contented mind more essential to the efficient discharge of duty than in the case of the school-master. Yet at a meeting of teachers at Altrincham on Saturday the complaint of general insecurity was repeated, and substantiated by undeniable facts. "Every one deplores," wrote Mr. Howard, one of the inspectors of schools, "the want of some arrangement under which teachers can rest content, feeling that they cannot suffer at the hands of capricious managers of School Boards." When it is not only asserted, but proved, that many teachers, and especially rural teachers, have to guide their practice by the precepts of Macchiavelli rather than by Locke if they would retain their posts the matter assumes public importance. What kind of training can a teacher be expected to give who manifests sturdiness of character or independence in the discharge of his duty at the risk of his livelihood? Time after time the Minister of Education has admitted in the House of Commons the injustice of many of these dismissals. And, if it were not only for the trade unionism of which teachers are advised to beware, matters would be still worse. The demand, peacefully pressed for thirty years, is that efficient elementary teachers of good moral character shall not be dismissed at the caprice of an arrogant manager, or the whim of a small School Board, without appeal. If this is not a reasonable request, what is?

THE Trade Union Congress adopted the following resolutions in regard to secondary—that is, the extension of public elementary—education, which had been prepared by the standing Parliamentary Committee, professedly in consequence of a deputation which had waited on it in July, "on the subject of higher-grade education":—

1. That the scheme of national education foreshadowed by the Act of 1870 shall be completed and made secure by the appointment in every district of Education Authorities elected as freely and democratically as other municipal bodies.

2. That they shall be empowered to provide efficient and suitable education for all who require it.

3. That clerical managers and clerical organizations shall not be allowed to control the education of the people, to serve sectarian purposes.

4. That the elementary and higher education of the people shall be at the public expense—free, unsectarian, and under the management of the elected representatives of the people.

THE circular of the Parliamentary Committee in which these resolutions were put forward was a very outspoken document. It complained that the late Conservative Government, whilst making an annual grant of nearly £800,000 to clerical organizations, had impaired the settlement of 1870 and failed to give "democratic control over education" to the people at large.

But it is in regard to the higher education of children of humble birth that the greatest mischief is being accomplished. Six-sevenths of the nation pass through the elementary schools; does any one suppose that the highest intelligence is confined to the other seventh? Even "hewers of wood and drawers of water" need foremen and managers better equipped than themselves, and all history shows that not only foremen and managers, but some of the greatest masters in trade and manufacture, and even in the professions and in art and science, have struggled painfully upwards from the humblest ranks of society. Who can estimate the value to the nation of those who rose through ignorance and poverty and years of manual toil to their proper work? And, still more, who can estimate the national loss in the crushed intellects of those gifted sons who never surmounted the initial difficulties of life? This is above all others the greatest problem of national education. This is the problem which the democratic School Boards in the great towns have, during the last thirty years, attempted to solve by creating "higher-grade" schools and classes in which those scholars who remained at school could acquire more advanced knowledge.

In brief, the circular complains that the Government dealt a fatal blow at the higher-grade Board schools, without making any adequate provision for the continuance of their work.

THE Scottish Universities Commission, appointed under the Universities (Scotland) Act of 1889, has published a General Report on the expiry of its mandate. The powers of this body were, under the Statute, to remain in force until January 1, 1892, but the term was extended by Order in Council to January 1, 1898. Those powers included the arrangement of the financial affairs of the Universities, including the distribution of the Parliamentary grant of £42,000 a year, and the rules for the granting of pensions to principals and professors, the regulation of the manner and conditions in and under which students should be admitted to the Universities, of the course of study, manner of teaching, and of examinations for degrees, the revision of foundations, the foundation of new professorships and lecture-ships, the regulation of the admission of women to graduation, and of many other matters specified in the Act. The number of ordinances reached 169. The Report gives a full account of the proceedings of the Commissioners, and describes and explains their action regarding many details of University administration and curriculum.

THE Commissioners made various reforms in regard to curriculum, examinations, bursaries, &c. Amongst other changes of curriculum, they allowed students to select among the recognized subjects any number not exceeding five, and to substitute modern languages for either Latin or Greek. The Report points out that the influence of the bursary examinations on the whole educational system is very great. They guide and determine in a remarkable degree the character of the advanced teaching in the secondary schools. Any discouragement which their arrangements may offer to the study of classics will be quickly felt in every school. Without a safeguard such as the clause in question provides, grave and far-reaching mischief is likely to be done to the classical education and, ultimately to the higher learning, of Scotland. The Commissioners explain the reasons which caused them to abolish the old system of the payment of Scottish professors by fees. Now these fees are treated as earned by the University; and the professors receive salaries, which, in some cases, are appreciably lower than the incomes they derived under the old arrangement. The Report concludes with a lengthy explanation and defence of the attitude of the Commissioners in the matter of the affiliation of University College, Dundee, to St. Andrews University, which led to prolonged difficulty and litigation.

THE Board of Education has issued a circular to training colleges calling attention to the fact that after 1900 the grants for science and art will be paid upon the reports of the inspectors, and not, as hitherto, upon examination results. The authorities of the training college will have to send to the Board of Education a statement of the proposed courses of instruction for the ensuing academical year, and, unless the syllabus to be

followed is one of those contained in the "Science and Art Directory," a syllabus of the course is to be forwarded and approved. Each course must consist of at least twenty-eight lessons of not less than an hour each, and must extend over three terms. The rooms in which science instruction is given must be open to inspectors at all times when instruction is proceeding. No student may be registered for more than two courses in the same year. Students must take the examination held by the Board of Education or a University examination, or else an examination held by the college authorities. Grants will be made at the rate of 25s. per student for each approved course in mathematics or theoretical mechanics, and at the rate of 35s. for each approved course in any other subject of science, and 10s. for drawing.

A REPORT by the Scottish Education Department upon the inspection of higher-class schools and the examination for leaving certificates in Scotland for the present year has been published. The high schools inspected numbered eighty-seven, and in no case has an inspector's report been sufficiently unfavourable to call for the withholding of certificates. An appreciative statement of the advantages conferred upon Scottish education by the higher-class schools is followed by an expression of regret that where liberal educational provision has been made the inspectors have so often to lament that the pupils are withdrawn at an age too early to benefit fully by it. This is, indeed, one of the most serious difficulties against which secondary education in Scotland has to contend. Attention is also drawn to the fact that scholars who go to the secondary from the State-aided schools "are not always fitted by previous education to take their places in the same class with those who have had the advantage of being trained with a view to higher education."

THE Joint Agricultural Council in the East and West Ridings of Yorkshire are promoting an extensive scheme for the study of agriculture in the year 1900-1901, for which the Yorkshire College at Leeds is adopted as the centre. At the Manor Farm, Garforth, near Leeds, the practical experiments are carried on, and special exhibitions are offered so as to enable farmers' sons to take the winter course of instruction. The County Major Scholarships are available for agricultural study at the college. Competitive examinations are provided for, and arrangements have been made for the carrying out of experiments at Manor Farm with stock and crops or tests of new implements and varieties of seeds.

PROF. H. SIDGWICK, who recently retired from the Chair of Moral Philosophy at Cambridge, died on August 28. Henry Sidgwick was born at Skipton in 1838, and was educated at Rugby and Trinity College, Cambridge, where he graduated as Senior Classic. He was Fellow of Trinity College from 1859 to 1869, and Lecturer of Trinity College from 1859 to 1875, when he was appointed Prælector of Moral and Political Philosophy. He was appointed Knightbridge Professor of Moral Philosophy in 1883. Prof. Sidgwick was the author of "The Methods of Ethics" (1874), "Outlines of the History of Ethics," "The Principles of Political Economy," "Elements of Politics" (1891), "Practical Ethics" (1898), and of several articles on philosophical and literary subjects. He took a prominent part in the promotion of the higher education of women at Cambridge, especially in the foundation and management of Newnham College. He was Litt.D., LL.D. of Edinburgh, Glasgow, and St. Andrews, and D.C.L. of Oxford. He married in 1876 Eleanor Mildred, daughter of the late James Maitland Balfour, of Whittinghame, and sister of the Right Hon. A. J. Balfour, M.P. Mrs. Sidgwick is Principal of Newnham College. Mr. Arthur Sidgwick, of Oxford, is his brother, and his sister was the wife of the late Archbishop Benson.

THE premises of the Royal College of Art, under the Board of Education, at South Kensington, are being modified to meet the requirements of the reorganization which has been adopted by the Board on the advice of the Council for Art. This Council consists of Sir William Richmond, R.A., Mr. T. G. Jackson, R.A., Mr. E. Onslow Ford, R.A., and Mr. Walter Crane. The Headmaster of the college is Mr. Augustus Spencer. M. Lantéri is the Professor of Sculpture and Modelling, and the appointments to the Professorships of Painting, of Architecture, and of Design are likely to be announced shortly. The total number of students to be admitted to the college is 350, of whom 150 may be fee-paying students. The fee for each fee-paying student will be £12. 10s. per term, and there are two terms in each session of

twelve months. All students admitted (either free or on payment of fees) must have satisfied the Council of their ability to profit by the special courses of instruction, to provide for which the college has been divided into an Upper and a Lower School. Students will be placed in one or other, according to their proficiency, and will be required to pass through the four divisions of each school—namely, those for ornament and design, drawing and painting, modelling, and architecture. As part of the Upper School course, technical instruction will be given at evening classes in a few of the following subjects:—Book illustration, etching and lithography, stained glass, stone and marble carving, wood carving, mosaic, plaster and gesso work, metal work, shuttle-weaving, tapestry-weaving, embroidery, furniture and cabinet work, pottery, &c.

THE Board of Education has prepared a new syllabus of work introductory to the study of hygiene. The introductory section deals with the chemistry of food and other matters relating to domestic science. We understand that the organization of this comprehensive scheme of hygienic work is largely due to Miss Deane. It is intended that the instruction in Section I. should be based on experiments performed, as far as possible, by the students themselves, and should be taken in a spirit of inquiry or research. The suggestions for practical work are intended to indicate the kind of experiments that are desirable, and not in any way to limit or define what these shall be. The object of the course is to inculcate habits of accuracy in reasoning and manipulation, as well as to show on what scientific principles domestic management and hygiene are governed.

HERE is a full list of the *grands prix* awarded at Paris to British educational institutions, &c. The "etcetera" is necessary, seeing that this very comprehensive list includes a Government Department and an individual publisher.

1. *Primary Education*.—Education Committee of the Royal Commission (Organization of English Section), Education Committee of the Royal Commission (Organization of Scottish Section), London School Board, British and Foreign School Society, National Society.

2. *Secondary Education*.—Collective Exhibit of Preparatory and Public Schools, Girls' Public Day School Company, Collective Exhibit of Secondary Schools of Scotland, Collective Exhibit of Intermediate Schools of Wales.

3. *Higher Education*.—University of Oxford, University of Cambridge, Victoria University, Education Committee of the Royal Commission (Organization of English Section), H. Frowde (Oxford University Press).

4. *Special Artistic Education*.—The Board of Education, South Kensington, for Collective Exhibit of Schools of Art of the United Kingdom.

5. *Technical and Commercial Education*.—London County Council (Central School of Arts and Crafts), City and Guilds of London Institute (Examinations Department).

In addition to the *grands prix*, a very large number of medals have found their way to this country.

THE University Court of St. Andrews, in addition to creating a new Chair of Anatomy, endowed by the munificence of Lord Bute, has resolved to continue the present Lectureship in Botany as a permanent lectureship. It will also proceed at once with the creation of a Professorship of Physiology, to come into effect on the death or resignation of the present Chandos Professor of Medicine, and to be then endowed with the revenues payable to that Professor. Until the endowment is available, the present Lectureship in Physiology will be continued.

THE programme of courses of London University Extension Lectures arranged for the Michaelmas Term is very comprehensive. Nearly fifty local centres—two or three as far as twenty miles from Charing Cross—will benefit by the lectures, which include a great variety of subjects, such as "The History of London Local Government," "The Poetry of Tennyson," "English Architecture," "Masters of Modern English Fiction," "Greek Sculptors," and "London Men of Letters."

THE sub-committee of the London School of Economics appointed to consider the candidates for the Research Studentship on Compensation, have elected Mr. C. P. Sanger, M.A., Fellow of Trinity College, Cambridge.

### THE SCANDINAVIAN SCHOOL MEETING AT CHRISTIANIA.

THE four days' school meeting at Christiania, which was attended, from August 7 to August 10, by sixteen hundred teachers from Sweden, two hundred from Finland, thirteen hundred from Denmark, and two

thousand from Norway, is of some importance to us in England; for these countries, we are beginning to learn, can teach us much more than Sloyd. The Danes can show us their people's high schools, the Swedes their proof-year for University men intended for secondary schools, the Finlanders their *Samskoeler*, and the Norsemen a modernizing of the secondary school that takes our breath away. But, for a country like our own, with very many private schools, which the State in its organization of secondary education is puzzled what to do with, the lessons and varied experience to be derived from Northern Europe are simply invaluable.

The State-recognized private school—it sounds like a contradiction in terms to an English ear—plays a great part, often a leading part, in all these four countries. This is especially so in Christiania and Copenhagen. In those two capitals every secondary school, with a single exception in either case, is a private school. The statesmen of the North have learnt how to saddle the willing horse, and then to give him his head; they know how to make education cheap without creating a State monopoly. When the facts come to be known in their fullness, they may give our senators and administrators an altered estimate of the capacities, under fitting conditions, of an instrument which for want of some principle of discrimination has in our country fallen into undue discredit.

This quinquennial school meeting in the North (*Det Ottende Nordiske Skolemøde*) is the eighth of its kind. Like our own Teachers' Guild, it draws its members from every part of the teaching profession, from the highest to the lowest. The Minister for Church and Schools in Norway (Eitarsraad Wexelsen) was present, and preached one of the opening sermons. There were many members of Parliament from the various countries, and some professors from the Universities. Eminent secondary teachers were well to the fore, both as readers of papers and as participators in discussion; but the great majority of the members were not secondary teachers, but teachers from the elementary schools. They found, on their arrival, a series of useful documents prepared for them—*e.g.*, full lists of the members from the different countries, a full programme of the meeting, containing maps, abstracts of the thirty-three papers to be read, and the words of twenty-one songs, mostly of a national character; also a brief historical account, drawn up by a score of experts, of the chief developments in Scandinavian schools since the last meeting ("De Nordiske Landes Undervisningsvæsen, 1895-1900." pp. 136).

Of the thirty-three papers read, twenty-one related to subjects interesting to teachers of all schools; seven were of especial interest to elementary teachers, and five to secondary. Five of the papers were taken at general meetings and twenty-eight at sectional meetings. Of the former, the most interest was shown in a set of three papers on "Co-operation between the Schools of the North"; in Dr. Nørregård's contention that the school-history should not be a history of Norway, or Sweden, or Denmark, but of all three in their relation to one another; and in Rector S. Almquist's paper on "The Period between Youth and Manhood." Of the sectional papers may be mentioned Miss Anna Sandström's, on "The Method of Incorporating the History of Culture with the Ordinary History-Lesson," and a paper asking the question whether the development-hypothesis can usefully be introduced into the religious lesson in school.

In the papers and discussions no Swede tried to speak Norse, nor did any Dane speak Danish in the Norse way. Each spoke as he speaks at home; and it was interesting to see how readily each was understood. There is a greater difference in each country between the King's speech and the more pronounced dialects than between any of the three languages and the other two. There was no sort of indication that the speakers came from three or four different countries of varying political conditions. They met as friends and brothers. In such easy interchange of opinions and plans going on every day in numberless newspapers and periodicals, and brought to a focus at the great meetings, every new departure in the schools of one country immediately becomes the subject of comment or criticism amongst its neighbours. In no country are the educational questions entirely different from those in the other three; in no two countries are they entirely the same.

It is interesting to watch whether a change in one country is adopted or not adopted by its neighbour, to notice how long the adoption may be delayed, whether the adoption be partial or entire, and what new elements may be introduced in the passage from one country to another. It is this that makes the North a quite unique laboratory of educational research. Of such research the Conference just closed constitutes, by its printed documents, by its discussions, and equally, perhaps, by its informal friendly meetings, a valuable five years' record.

It seems incredible that such developments taking place in countries so near akin to us in blood, in religion, and love of freedom should so long have been to England as an unopened book. If the introduction of comparative grammar revolutionized our study of language, so that, as Prof. Skeat once said, we have made more progress in thirty years than in the previous two thousand, the study of comparative education must prove equally fruitful. It is a study that is, of course, always going on among cultivated peoples. But in Scandinavia it is, in the circumstances of the case, closer, more varied, more fully informed than elsewhere.

When the last meeting was held, in Stockholm, five years ago, the relations between Norway and Sweden were much more strained than, happily, they now are; and it was remarked by a competent observer how great the influence of the meeting had been in diminishing differences—how impossible it was for anything like war to break out between people who met one another with such hearty good will. At the meeting just concluded there was one mute reason why Scandinavians should draw more closely together, which in its sad intensity was not present five years ago. The two hundred Finns, though all of course speaking Swedish, took no part in the reading of papers and very little part in the discussions. No wonder, with their case and that of North Sleswick before him, that Dr. Nørregård, of Testrup, in Jutland, and some of his friends have been so active last year and this in promoting meetings for deepening the feeling of Scandinavian unity. In his paper, or rather address, at the school meeting on Wednesday, August 8, he exclaimed: "There is for us but one language, one Fatherland." This may be called the incident of the meeting. The Norwegians have been maintaining, as against the Swedes, that "the kingdom of Norway is a free, independent, indivisible kingdom, not to be bartered away" (so runs the written Constitution of 1814), and that the only union between Norway and Sweden lies in their having one King. They will not acknowledge that Norway and Sweden are parts of one Fatherland. The matter was at once briefly debated, and was discussed at greater length, in the best of tempers, at private meetings afterwards. At the final meeting of the Conference, held in the open air at St. Hanshangen two days later (when the weather fortunately was a little more propitious than on the previous days), the President of the Conference, Mr. Otto Anderssen, an accomplished member of the Norwegian Left, had an opportunity of defining more exactly the Norwegian position. "The thought of a united North," he said, "has, time after time, formed ideals which lie like shattered wrecks on the shore of history. Such an ideal for noble and high-spirited thinkers, as for ambitious statesmen, has been indissolubly connected with that of a political community, wherein the separate peoples were merged as in a higher unity. History shows a different picture—the Northern peoples steadily developing their individuality. And we shall hail this development with gladness; for it denotes for our spiritual life a richer play of colour and new paths wherein to walk. The national idea is right, when it gives the powers free play; wrong, when it dwindles into prejudice and shrinks from the light. And so little does it stand in the way of close, sympathetic relations with other peoples that, on the contrary, it longs for and demands them. Let us not be afraid to acknowledge the truth that, when the Northern peoples work heartily together in all the paths of culture, we have in view a blessed end, a blessed duty. . . . We schoolmen and women will teach our young people to love their own land and their own people; but we will also teach them to honour the other peoples of the North, and give them the next warmest place in their heart."

J. S. THORNTON.

### A LONDON TRUANT SCHOOL.

THE London School Board now spends quite a princely sum every year on the education of half a million children. Despite all efforts, a considerable proportion of London children absent themselves; they refuse to be penned inside the pleasant educational fold. Sometimes their parents aid and abet this refusal by frequent midnight fittings. The inscription of the postman on certain missives might be chalked on their doors: "Gone away; left no address." In some cases the children not only defy the omnipotent Board, but the parents themselves. This is usually the case where the father works all day, betakes himself to the public-house at night, and where the mother is one of those poor simpletons who has no weight at all in the home.

Parents are prosecuted, whether the fault be theirs or not, and the youthful offender usually has a sentence of three months' committal to the truant school passed upon him. At intervals the legal luminary on the Bench, most dignified dispenser of justice, spectacles on nose, will look down benevolently on the small urchin in the dock:—"Why don't you go to school?" Usually there is no answer, as there are moments even in the career of small boys when cheek forsakes them. But, occasionally, the colloquy runs as follows:—"I dunno." "Does the teacher beat you?"—"No, Sir." "Do the other boys tease you?"—"No, Sir." "Then [a trifle more asperity in the voice] why don't you go?"—"Please, Sir, I don't like it." "Three months." This is the sentence for a first offence, four months for a second, six for a third; nine being the maximum. The law always acts as if truancy were a mere temporary aberration, curable by a brief stay at the truant school. It may be so in about 50 per cent. of the cases, but in the remainder officers find that children appear in the school over and over again. Such "repeats" are, so far as present experience goes, incurable; there are boys at Highbury now serving their seventh term, and who have received all their education within the walls of the institution. This school, which I recently visited, was started by the London Board some ten years

ago. It accommodates two hundred boys at once; as the sentences are short, some five hundred pass through every year.

The work is divided into two parts, manual instruction and book learning. Half the boys have a three hours' spell of books in the morning, the remainder in the afternoon. Three schoolmasters deal with this part of the work. All appeared mild and gentle with the boys, and I had not the least difficulty in believing what one of them stated, that they have no trouble whatever with their pupils, who distinctly recognize that all resistance is useless. One of the masters stated that about 7 per cent. of the boys cannot make progress. One of these, a fairly developed boy of eleven, was called out of his place. The master pointed to a large *the*: the boy did not recognize it, knew *h*, called *e*, *b*. It is, of course, evident that such boys should be carefully weeded out and placed in the special schools of the Board for the mentally defective. There, with the kindergarten system, and under women's tuition, which includes a large amount of intuition, some progress would be possible, or, at least, the boy's mental defect would be recognized—always a step in the right direction.

Another big boy, now undergoing his seventh detention, was called out of his place and questioned as to why he did not like school, but no satisfaction was obtained. He is so well behaved that he can be trusted with the oversight of small boys. Intelligence hardly seemed a strong point; the master and I fell on an argument as to whether some hereditary nomadic instinct does not reappear in such cases, making practical objection to the dull uniformity of civilization. Some of the boys read with considerable fluency; and, after all, there is no better test of education than good reading.

In the manual departments about twenty boys are told off to do the housework, and they do it excellently well; everything is spotlessly clean—the distemper on the walls, the well scrubbed boards, the polished windows, the bedding, the slated corridors, all were clean. Other boys enter the laundry, where they wash, mangle, iron. Should fate send them to South, West, or any other point of Africa, such boys may rejoice that they have learned the art of washing their own shirts. Smaller boys were usefully employed in the matron's room, sorting linen, darning socks, and in other light work. In the tailoring department boys were making coats and trousers under a master tailor. All the garments I saw were well made; their particular use is for appearance at church on Sunday. No suits are ever given away. It did not strike me at the moment to ask what was done with the accumulation of coats and trousers as the years roll on. Another department manufactured capital coir mats, large and small. The large mats are used in London Board schools. It seemed a fitting Nemesis that they who hasten to school with glad feet should wipe them on mats manufactured by those who have failed to obey Britannia's mild behests. In imagination I saw her sitting on her wheel, and waving directions with her trident to have those mats made. Rule, Britannia! In the bakery a few boys work under the direction of a master baker.

Another batch of boys were making boots. They are not the kind of boots supplied by wicked, money-grabbing contractors to our unfortunate troops in South Africa, but a most solid and substantial article, a trifle weighty; probably they could be guaranteed to last a year at least. The youthful shoemakers pursued their various tasks in silence; they did not seem at all unhappy. But, for once, the London Board seems determined to exact the pound of flesh; and the various masters of trades see that it is done. The woodwork department is another useful branch. Sixteen boys are taught at once to use their hands. They make picture-frames, soap, salt, and other boxes, card-trays, tables, dovetails, letter-racks, and so forth. There were not many objects to be seen on the occasion of my visit, as a class of boys had just completed their course, and the Governor, Mr. Peall, had wisely permitted them to carry home all the articles they had made.

The dining room is quite a handsome apartment—lofty, well lighted, pleasantly coloured. The tables are of wood, well scoured every day after dinner. Everything was beautifully clean; and, if it be true that cleanliness is next to godliness, the inmates of the truant school are pressing on towards the mark. Each boy has a bed of his own in one of the eight dormitories. An iron bedstead has canvas laced on it, and the bedding is folded up in military fashion during the daytime. The boys looked very clean and healthy. The dietary is laid down by the managers, and approved by H.M. Inspector of Industrial Schools. Breakfast consists of porridge with sugar, and bread; supper of bread, dripping, and cocoa; dinner of meat thrice weekly, once fish, twice soup, once suet pudding. Potatoes, or other vegetables, are added to the dinner.

Highbury certainly needs a larger and loftier schoolroom; a hot summer's day is not the one for the fastidious to test the ventilation. Play is only for thirty or forty minutes daily, and this short space of time is in two instalments. Might not an hour be given, with advantage, and in one period, even without losing sight of the Board's intention, which is to punish rather than cocker those who attempt to evade its mild and gentle sway?

It costs £8,566 per annum to board and lodge truant scholars in Highbury, in Homerton, and a few at Lichfield. The cost of educating a child in a London Board school is £4. 7s.; the average cost per child at Highbury is £21. 10s.; at Homerton £28. 6s. 8d.; a certain proportion of these sums being contributed by the State. C. S. B.

# OXFORD UNIVERSITY PRESS.

THE OXFORD CLASSICAL TEXTS.

SCRIPTURUM CLASSICORUM BIBLIOTHECA OXONIENSIS.

Crown 8vo.

Two new Volumes now ready:—

**Caesaris Commentarii de Bello Gallico.** By R. L. A. DU PONTET  
Paper covers, 2s.; limp cloth, 2s. 6d.

**Vergili Opera.** By F. A. HIRTZEL. Paper covers, 3s.; limp cloth, 3s. 6d.; on Oxford India paper, 4s. 6d.

**A Book for the Beginner in Anglo-Saxon.** By JOHN EARLE.  
2s. 6d.

By HENRY SWEET.

**First Steps in Anglo-Saxon.** 2s. 6d.

**An Anglo-Saxon Primer,** with Grammar, Notes, and Glossary.  
2s. 6d.

**A Primer of Historical English Grammar.** 2s.

**Old English Reading Primers:**

I. Selected Homilies of Ælfric. Second Edition, 2s.

II. Extracts from Alfred's Orosius. Second Edition, 2s.

**First Middle English Primer,** with Grammar and Glossary.  
Second Edition. Extra fcap. 8vo, 2s. 6d.

**Second Middle English Primer.** Extracts from Chaucer, with  
Grammar and Glossary. Second Edition. Extra fcap. 8vo, 2s. 6d.

**Elementarbuch des gesprochenen Englisch.** Grammatik, Texte  
und Glossar. Third Edition. Extra fcap. 8vo, stiff covers, 2s. 6d.

**A Primer of Spoken English.** Second Edition, Revised. Extra  
fcap. 8vo, 3s. 6d.

**An Icelandic Primer,** with Notes, Grammar, and Glossary. Second  
Edition. Extra fcap. 8vo, 3s. 6d.

**A Primer of Phonetics.** Extra fcap. 8vo, 3s. 6d.

## BELL'S SCIENCE SERIES.

New Volumes.  
 Edited by PERCY GROOM, M.A., and Prof. G. M. MINCHIN, M.A., F.R.S.  
**AN INTRODUCTION TO THE STUDY OF THE COMPARATIVE ANATOMY OF ANIMALS.** By GILBERT C. BOURNE, M.A., F.L.S., Fellow and Tutor of New College, Oxford; University Lecturer in Comparative Anatomy.  
 Vol. I.—**Animal Organization. The Protozoa and Coelenterata.** Crown 8vo, illustrated, 288 pages, 4s. 6d.  
 "His book is simply charming, and well worthy his reputation; and, while its literary style should alone ensure for it a wide circulation, it cannot fail to exercise a leavening and humanizing influence on the youthful mind."—*Nature*.

**THE STUDENT'S DYNAMICS.** Comprising Statics and Kinetics. By G. M. MINCHIN, M.A., F.R.S., Professor of Applied Mathematics in the Royal Indian Engineering College, Cooper's Hill. Crown 8vo, 3s. 6d.

## WORKS BY CHARLES PENDELBURY, M.A.,

Chief Mathematical Master at St. Paul's School.

**ARITHMETIC FOR SCHOOLS.** Twelfth Edition. Complete with or without Answers, 4s. 6d.; or in Two Parts, 2s. 6d. each. Key to Part II., 7s. 6d. net.

**EXAMPLES IN ARITHMETIC.** 8,000 Examples extracted from the above Arithmetic. Tenth Edition, with or without Answers, 3s.; or in Two Parts, 1s. 6d. and 2s.

**A SHILLING ARITHMETIC.** Second Edition. Small crown 8vo, 192 pages. Cloth, 1s.; or, with Answers, 1s. 4d. The Answers may be had separately, 4d. net.

**ELEMENTARY ARITHMETIC.** Fifth Edition. Crown 8vo, 1s. 6d., with or without Answers.

**COMMERCIAL ARITHMETIC.** Second Edition. Crown 8vo, 250 pages, 2s. 6d.

**COMMERCIAL ARITHMETIC.** Part I. 152 pages. Crown 8vo, with Answers, 1s.

**GRADUATED ARITHMETIC.** For Private and Junior Schools. In cloth. Parts I., II., and III., 3d. each; IV., V., and VI., 4d. each; VII., 6d. Answers to Parts I. and II., 4d.; III., IV., V., VI., and VII., 4d. each.

**LONG TOTS AND CROSS TOTS (Simple and Compound).** Containing 864 Sums for the use of Pupils in Evening Continuation Schools and Day Schools under the Education Department. Price, 2d.; in cloth, 3d. Answers, cloth, 4d.

**EXAMINATION PAPERS IN ARITHMETIC.** Fourth Edition. Crown 8vo, 2s. 6d. Key, 5s. net.

**ELEMENTARY TRIGONOMETRY.** Second Edition, Revised. Crown 8vo, 4s. 6d.

**A SHORT COURSE OF ELEMENTARY PLANE TRIGONOMETRY.** Crown 8vo, 2s. 6d.

## BELL'S ILLUSTRATED CLASSICS.

Edited by E. C. MARCHANT, M.A., late Classical Master at St. Paul's School.

Full Illustrated Prospectus of this Series post free on application.

THE special object of this Series is to make the editions as interesting and helpful as possible to the intelligent learner; and, with this object, numerous Illustrations have been introduced. Though based on authentic sources, these are not mere copies of antiquities, such as are to be found in every Classical Dictionary, but pictures drawn with a view to bringing the reality of Greek and Roman life before the reader.

Views of places, as well as Maps and Plans, are also freely introduced.

The volumes are equipped with Introductions, Notes, Grammatical Appendices, and, in some of the prose authors, Exercises on the Text. Vocabulary is also given, but the volumes may be had without the Vocabulary if preferred.

The volumes are printed at the Oxford University Press, post 8vo, and are issued in three forms:

1. With Notes and Vocabulary complete, 1s. 6d.
2. Without Vocabulary, 1s. 6d.
3. Text and Vocabulary, without Notes, 1s.

THE FOLLOWING VOLUMES ARE NOW READY UNLESS OTHERWISE STATED:—

**Caesar.—De Bello Gallico. Book I.** Edited by A. C. LIDDELL, M.A. With Exercises.

— **Book II.** Edited by A. C. LIDDELL, M.A. With Exercises.

— **Book III.** Edited by F. H. COLSON, M.A., and G. M. GWYTHYR, M.A.

— **Book IV.** Edited by the Rev. A. W. UPCOTT, M.A.

— **Book V.** Edited by A. REYNOLDS, M.A. With Exercises.

— **Book VI.** Edited by J. T. PHILLIPSON, M.A. With Exercises.

**Cicero.—Speeches against Catiline I. and II.** Edited by F. HERRING, M.A. With Exercises.

**Selections from Cicero.** Edited by J. F. CHARLES, B.A. With Exercises.

**Cornelius Nepos.—Epaminondas, Hannibal, Cato.** Edited by H. L. EARL, M.A.

**Eutropius.—Books I. and II.** Edited by J. G. SPENCER, B.A.

**Horace's Odes.—Book I.** Edited by C. G. BOTTING, B.A.

— **Book II.** Edited by C. G. BOTTING, B.A. [Preparing.]

— **Book III.** Edited by H. LATTEY, M.A.

**Livy.—Book IX., cc. i.-xix.** Edited by W. C. FLAMSTEAD WALTERS, M.A.

**Hannibal's First Campaign in Italy.** Selected from Livy, Book XXI., and edited by F. E. A. TRAYES, M.A.

**Ovid's Metamorphoses.—Book I.** Edited by G. H. WELLS, M.A.

**Selection from Ovid's Metamorphoses.** Edited, with Introduction and Notes, by J. W. E. PEARCE, M.A.

**Ovid's Tristia.—Book III.** Edited by H. R. WOOLRYCH, M.A.

**Phaedrus.—A Selection** Edited by the Rev. E. H. CHAMBERS, M.A.

**Stories of Great Men.** Edited by the Rev. F. CONWAY, M.A.

**Vergil's Aeneid.—Book I.** Edited by the Rev. E. H. ESCOTT, M.A.

— **Book II.** Edited by L. D. WAINWRIGHT, M.A.

— **Book III.** Edited by L. D. WAINWRIGHT, M.A.

— **Book IV.** Edited by A. S. WARMAN, B.A.

— **Book VI.** Edited by J. T. PHILLIPSON, M.A.

**Vergil.—Selection from Aeneid, Books VII.-XII.** Edited by W. G. COAST, B.A.

**Xenophon's Anabasis.—Book I.** Edited by E. C. MARCHANT, M.A.

— **Book II.** Edited by E. C. MARCHANT, M.A.

## BELL'S ILLUSTRATED LATIN READERS.

Uniform with the ILLUSTRATED CLASSICS. Price One Shilling each.

**Scalae Primae.** Simple Stories and Fables for Translation, with Notes and Vocabulary. By J. G. SPENCER, B.A. With 29 Illustrations.

**Scalae Mediae.** Extracts from Eutropius and Caesar. With Notes and Vocabulary. By PERCY A. UNDERHILL, M.A. With 20 Illustrations.

**Scalae Tertiae.** Graduated Extracts in Prose and Verse from Phaedrus, Ovid, Nepos, and Cicero. With Notes and Vocabulary. By PERCY A. UNDERHILL, M.A. [Shortly.]

Specimen Copy sent to Headmasters with a view to Introduction.

# BLACKIE & SON'S NEW BOOKS

## MACAULAY'S ESSAY ON WARREN HASTINGS.

Edited by JOHN DOWNIE, M.A., Lecturer in English at the Free Church Training College, Aberdeen, Editor of Macaulay's "Essay on Milton." 2s. [In October.]

**MACAULAY'S ESSAY ON CLIVE.** Edited by JOHN DOWNIE, M.A. 2s.

**MACAULAY'S ESSAY ON HORACE WALPOLE.** Edited by JOHN DOWNIE, M.A. 2s.

**DRYDEN'S ESSAY OF DRAMATIC POESY.** Edited by D. NICHOL SMITH, M.A., Editor of "Henry VIII." (The Warwick Shakespeare) and Boileau's "Art Poétique." 2s.

This is the most fully equipped edition of Dryden's famous Essay yet published. The Introduction discusses the circumstances which gave rise to the Essay, and ably summarizes it: the Notes are explanatory and critical: and an Appendix gives Sir Robert Howard's criticism of the Essay and Dryden's rejoinder.

**GOLDSMITH'S RETALIATION.** Edited by G. H. BLAKENEY, M.A., Headmaster of Sir Roger Manwood's Grammar School, Sandwich. Paper, 2d.; cloth, 3d.

**COWPER'S EXPOSTULATION.** Edited by A. A. BRAYLEY, B.A., Headmaster of the Pupil Teachers' Centre, Acton and Chiswick School Boards (Blackie's "Junior School English Classics.") Paper, 2d.; cloth, 3d.

**A BRIEF COMMERCIAL GEOGRAPHY OF THE WORLD.** By the Rev. FREDERICK SMITH, formerly Science Master in Dollar Academy. 1s. 9d.

An interesting, vivid sketch of Commercial Geography, not a dry-as-dust manual.

## FRENCH COMMERCIAL CORRESPONDENCE BY EASY STAGES.

By ALFRED STARCK, formerly Assistant-Master in Honiton Grammar School. 1s. 6d.

This book consists of short and simple progressive lessons, introducing gradually a large variety of commercial terms and forms.

**LE COUP DE PISTOLET.** (Prosper Mérimée's well-known popular story.) Edited by J. E. MICHELL, M.A., Ph.D., Assistant-Master in Westminster School. 1s.

**FABLIAUX FRANCAIS.** A Selection of French Fables. Edited by EMILE B. LE FRANÇOIS, French Master in Bristol Higher-Grade School, &c. 1s. [In October.]  
These books are each suited for a single term's work in French.

**A FIRST COURSE OF GERMAN COMMERCIAL CORRESPONDENCE.** By A. OSWALD, Lecturer in the Atheneum Commercial College, Glasgow. 2s.

This will be found a very complete and well arranged introduction to German Commercial Correspondence.

**KEY TO BAUMANN'S FIRST GERMAN COURSE.** 2s. 6d. net.

Mr. Baumann's First German Course, a companion volume to Beuzemaker's First French Course, has been provided with a Key for teachers only.

**GREEK UNSEENS. INTERMEDIATE SECTION.** Paper cover, 4d.

This new book is uniform with Greek Unseens, Junior and Senior Sections, and comes between them in point of difficulty.

**A SHORT HISTORY OF FRENCH LITERATURE.**

By L. E. KASTNER, B.A., and H. G. ATKINS, M.A. Lond. Crown 8vo, cloth, 4s. 6d.

# THE WARWICK SHAKESPEARE

**General Editor — Professor C. M. MERFORD, Litt.D.,**

Trinity College, Cambridge; Professor of English at University College, Aberystwyth.

THE WARWICK SHAKESPEARE is now in use in most of the leading Schools, Colleges, and Universities throughout the British Empire. It is acknowledged to be "*infinitely superior to any other school edition.*" Of the second latest volume ("Henry VIII.") *THE ATHENÆUM* says:—"Compiled with extreme care and pains and with that fulness of annotation and attention to 'æsthetic' comment to which we are accustomed in the 'Warwick Shakespeare.'"

To the whole series may be applied the verdict of *THE ACADEMY* on "A Midsummer Night's Dream": "*In brief, here is an edition to be unreservedly recommended.*"

**The Guardian** says of "Coriolanus":—"The most complete edition of 'Coriolanus' with which we are acquainted."

**The Athenæum** says of "Henry the Fifth":—"Edited with great care. . . . No better edition could be found either for the class teacher or for the solitary student."

**The Journal of Education** says of "The Merchant of Venice":—"One of the best small editions that we have seen. . . . We heartily recommend this edition."

*The Publishers will be pleased to send Specimen Copies with a view to introduction.*

LONDON: BLACKIE & SON, LIMITED, 50 OLD BAILEY.

## FORECASTS AND COMMENTS.

October 1, 1900.

PROF. WITHERS'S Lectures for Teachers at the Fixtures. College of Preceptors on "The Practice of Education" will be delivered on Saturday afternoons at 5 o'clock, beginning on October 6.

\* \*

THE new session of the Birkbeck Institution, for day and evening courses of study, begins on October 1. On the same date the Young Men's Christian Association opens its new Central College of Shorthand and Journalism for students of both sexes.

\* \*

THE evening classes of the Horological Institute, Northampton Square, begin on October 4. The Institute also provides instruction by correspondence.—The same date is fixed for the first meeting of the session of the Civil and Mechanical Engineers' Society.

\* \*

IN connexion with the Oxford School of Geography (which co-operates with the Royal Geographical Society) an examination for one geographical scholarship, of the value of £60, will be held on October 9. Candidates, who must have taken Honours in one of the final schools of the University, should send in their names to Mr. H. J. Mackinder, Christ Church, not later than October 3. The scholar elected will be required to attend the full course of instruction at the School of Geography during the academic year 1900-1901, and to enter for the University Diploma in Geography in June, 1901.

\* \*

THE chief arrangements of the School for the Michaelmas Term are as follows:—The Reader in Geography (Mr. Mackinder) will lecture on "The Historical Geography of the British Islands," on Wednesdays, commencing October 17. The Reader will lecture on "The Development of Geographical Ideas," on Fridays, commencing October 19. The Lecturer on Physical Geography (Mr. Dickson) will lecture on "The Atmospheric Circulation," on Fridays, commencing October 19. The Assistant to the Reader (Mr. Herbertson) will lecture on "The Geographical Cycle," on Wednesdays, commencing October 17. The Lecturer on Ancient Geography (Mr. Grundy) will lecture on "The Geographical Development of the Roman Empire," on Saturdays, commencing October 20. Practical instruction in geography will be given on Mondays, Tuesdays, Thursdays, and Saturdays. The Laboratory will also be open on Tuesdays, Wednesdays, and Fridays.

\* \*

THE Teachers' Guild (Section B) will begin its autumn meetings on October 10, at 8 p.m., with a lecture by Mr. Bernard Shaw on "A Dramatist's Notions on Education." This lecture, which will be held in the Botanical Theatre of University College, Gower Street, will be followed by a discussion, and it is open to all who are interested in education.

\* \*

PROF. HUDSON will give a course of about ten lectures, at King's College, London, on "The Teaching of Mathematics," on alternate Saturdays, at 10 a.m., beginning on October 13. This County Council class is free to bona fide teachers. Application

should be made to Prof. Hudson, 15 Altenburg Gardens, S.W., to whom full information should be given as to the applicant's present position and previous training.

\* \* \*

OWING to structural alterations, the opening of the College of Art at South Kensington has been postponed until October 16. Applications for free and other admissions should be made to the Registrar on October 3.

\* \* \*

ON October 9 Convocation of London University will proceed to elect sixteen members of the Senate. The election of Senators by the various Faculties is fixed for October 12. The first meeting of the Senate, under the new constitution, will take place on October 24. A final meeting of the Senate, as now constituted, is expected to be held on the 8th inst.

\* \* \*

A VARIED and interesting course of lectures, from outside lecturers, has been provided for the students of both divisions of the Datchelor Training College during the current term. Mr. P. A. Barnett, M.A., will lecture on "Formulæ in Education" (October 4), "Method in Teaching Æsthetics," and "Examinations"; Miss Ward will deal with "The Cultivation of Observation in School Work" (November 8), "The Application of Froebelian Principles to School Work," and "Questionings, Illustrations, and Home Work"; Miss Emily Phillips gives three lessons in the teaching of model drawing. The lecturers on literary and historical subjects are Mr. H. E. Malden, M.A., and Miss Elizabeth Lee. The former will deal with "The Commercial Relations of England and Burgundy in the Fifteenth Century" (October 11), More's "Utopia," "The Dramatic and the True Character of Richard III.," "The Prince Hal and Henry V. of Shakespeare compared with the Historical Character," and Spenser's "Foure Hymns"; the latter will lecture on "The Elizabethan Novel" (November 19), and "John Smith, the Founder of Virginia." The Clothworkers' Company have recently made a further grant of books to the college library.

\* \* \*

THE following course of six lectures, entitled "The World we Live on," will be delivered at the Kensington Town Hall, at 4.45 p.m., on Thursdays, October 18, 25, November 1, 8, 15, and 22. "The World when Young," by the Rev. J. O. Bevan, M.A.; "The Chemistry of the Earth's Crust," and "How Rocks are Made," by Cecil Carus-Wilson, F.R.S. Edin.; "The Life of the Past," by F. W. Rudler, F.G.S.; "Land and Scenery," by H. R. Mill, D.Sc., LL.D., Librarian to the Royal Geographical Society; and "Some Electrical Discoveries," by Prof. Ashley Carus-Wilson, M.A. The course will be illustrated by photographic lantern views, chemical and physical experiments, &c.

\* \* \*

THE examination in religious knowledge for candidates wishing to enter Church training colleges will take place on October 27, at some hundred and forty centres in England and Scotland. The Society for Promoting Christian Knowledge offers an exhibition of £2 to every pupil-teacher who obtains a place in the First Class at this examination, provided he or she afterwards enters a training college. The syllabus for 1901 will be as follows:—Old Testament, Genesis; New Testament, to the Transfiguration, exclusive; the Catechism; Prayer Book, Morning and Evening Prayer; Church History, and the Early Persecutions and Martyrs. Church History will not be obligatory, but, if taken as an additional subject, will count towards a First Class.

\* \* \*

THE Council of the Sanitary Institute (Parkes Museum) have arranged for examinations in practical hygiene for school-teachers on February 8 and 9 in London, and June 28 and 29 at Bradford.

Education Gossip.

THERE is an influential movement amongst members of the City Corporation in favour of establishing a new commercial college, for the systematic training of business men. Ideas on this subject have developed in a remarkable measure since the foundation of the Cowper Street Central School for the evolution of a new type of City clerk. The present scheme is far more ambitious. It is proposed to fix a minimum age of fourteen and a minimum course of three years. These limits seem to point to a school rather than a college, and yet it is recommended that specialization should be carried out to its extreme limit. "There will be, according to the embryo scheme, a few general classes, in which tuition will be given in the ruling principles of commerce and in modern languages; but the pupils will be encouraged, and, indeed, expected, to devote their especial attention to one particular branch." On those lines a student will not be ripe for commerce until he is nearly twenty.

\* \* \*

DURING the recess, considerable additions and improvements have been made at the Birkbeck Institution, by the aid of a gift of 2,000 guineas from Mr. F. Ravenscroft, to commemorate his completion of a membership of fifty years. A new reading room, a new magazine room, and a social room have been provided, and a well appointed metallurgical laboratory has been added.

\* \* \*

It will interest some of our readers to take note of the syllabus of the Oxford School of Geography, which is as follows:—

The figure of the Earth and the determination of positions on its surface. The principles of surveying and of mapping. Map projections on the plane, the cylinder, and the cone, and their commoner modifications. The reading, reduction, and generalization of maps, and the representation of climatic and statistical data. The methods of meteorological and hypsometrical observation. The configuration of the continents and of the bed of the ocean. The characteristics, history, and distribution of the chief land forms, of the several types of mountain systems, river courses and river basins, and of the coastal belt. The cartographical analysis of the forms, structures, and activities of the physical regions of the world. The distribution of solar energy on the rotating Earth and the resulting circulations of air and water. The modifying effects of the distribution of land and water. The climatic provinces of the Earth. The physical conditions of the oceanic areas and the methods of observing and representing them. The chief generalizations regarding the distribution of animals and plants. The geographical distribution of men according to number, race, and economic and political condition. The influence of physical features in determining the position of settlements and lines of communication. The outlines of historical geography considered in relation to the influence of physical features. The history of geographical ideas. The outlines of the history of discovery.

\* \* \*

THE Committee of the School is constituted as follows:—The Vice-Chancellor (*ex officio*); Sir Clements R. Markham, K.C.B., F.R.S., President of the Royal Geographical Society; the Hon. George C. Brodrick, D.C.L., Warden of Merton College; Major-General Sir Charles W. Wilson, R.E., K.C.B., F.R.S. (nominated by the Council of the Royal Geographical Society); Henry F. Pelham, M.A., President of Trinity College, Camden Professor of Ancient History; Frederick York Powell, M.A., Fellow of Oriel College, Regius Professor of Modern History; Henry A. Miers, M.A., F.R.S., Fellow of Magdalen College, Waynflete Professor of Mineralogy; John L. Myers, M.A., Student of Christ Church (nominated by the Delegates of the Common University Fund).

\* \* \*

THE increase in the number of evening schools under Government inspection during the past fifteen years is very striking. In 1885 the schools numbered 839, and the registered pupils 40,854; last year the numbers were 5,971 and 474,563 respectively. This increase is doubtless due, in large measure, to the work of the Recreative Evening Schools Association, which was founded in 1885.

\* \* \*

THE first International Congress, held in Paris, on the teaching of drawing, ranks among recent educational events. It

lasted from August 29 to September 1, and the opening meeting was held under the presidency of M. Georges Leygues, Minister of Public Instruction and the Fine Arts.

\* \* \*

THE following persons, well known in English as well as in French educational circles, have been nominated *chevaliers* of the Legion of Honour:—M. Dreyfus-Brissac, former editor of *La Revue Internationale de l'Enseignement*, and a juror at the Exhibition in one of the educational sections; M. Larnaude, Professor in the Faculty of Laws at the University of Paris, and Secretary to the International Congress on Higher Education; M. Henry Bérenger, a writer on pedagogic subjects, and Secretary to the International Congress on Secondary Education; and M. Emile Girard, President of the Association of the Directors of Institutions for Secondary Education, who has "rendered important service to the cause of free education."

\* \* \*

THE Governors of Guy's Hospital have started a fund for the endowment of education and research in their Medical School, which, in two years, has reached £12,000. The treasurer, Mr. Cosmo Bonsor, has lately received from "a friend of the hospital" £5,000, with a request that the interest should be used "to increase and spread the knowledge of the means of preventing and treating disease."

\* \* \*

THERE are ten grammar schools in Queensland—six for boys and four for girls. Separate schools for boys and girls have been established at Brisbane, Ipswich, Maryborough, and Rockhampton; and schools for boys at Toowoomba and Townsville. The school for boys at Ipswich, which was opened in 1863, was the first grammar school established. Endowment at the rate of £1,000 per annum is paid by the State to each grammar school, making a total endowment of £10,000 annually to the grammar schools. On December 31, 1899, the aid granted by the State from the first institution of grammar schools reached a total of £256,535. 9s. 11d.

\* \* \*

AMONGST pious donors for the month may be reckoned Mr. Alfred L. Jones, of Liverpool, who offers £1,000 a year for five years towards a fund for establishing a comprehensive system of technical education in Wales. This is the same gentleman who provides bursaries for Jamaica students at University College, Bristol.

\* \* \*

THERE are eight agricultural colleges in England and Wales. They have all been established during the past ten years to make local provision for the higher forms of agricultural instruction, and they are now working in connexion with thirty-seven separate administrative counties which have associated their educational machinery with the colleges in question. A grant of £7,750 is provided by the Government for the assistance of these institutions, which render valuable assistance to the Board of Agriculture and the farming population generally.

\* \* \*

AT the last examination for admission to the Royal Military College at Sandhurst and the Royal Military Academy at Woolwich no fewer than 1,000 candidates presented themselves for entry to these two establishments.

Appointments and Vacancies. MR. THOMAS RALEIGH, D.C.L., has been nominated Vice-Chancellor of the Calcutta University. Dr. Raleigh has been legal member of the Council of the Viceroy of India since March, 1899, and previously for three years held the post of Registrar of the Privy Council. He was educated at the Universities of Edinburgh and Oxford, and at both had a distinguished career. In 1884 he was appointed University Reader in English Law at Oxford, and was subsequently elected Quain Professor of Historical and Comparative Law in University

College, London. Dr. Raleigh, who is in his fiftieth year, was called to the Bar at Lincoln's Inn in 1877.

\* \* \*

SIR HUBERT PARRY, Sir A. C. Mackenzie, Sir Frederick Bridge, and Sir George Martin, with Dr. Stanford, have been appointed to select three musicians willing to accept the Ormond Professorship of Music at Melbourne, at the stipend of from £800 to £1,000 a year. The income comes from a sum of £27,000, bequeathed by the Hon. Francis Ormond, founder of the Ormond Presbyterian College of Melbourne, and the post has been held for ten years by Mr. Marshall Hall. Candidates are to send in their applications to the Agent-General for Victoria before October 20.

\* \* \*

PROF. ROBERTS LATTI, M.A., D.Phil., Lecturer in Logic and Philosophy in the University of St. Andrews, has been appointed to the Chair of Moral Philosophy in the University of Aberdeen, vacant by the transfer of Prof. Sorley, M.A., LL.D., to the corresponding chair at Cambridge.

\* \* \*

MR. L. R. WILBERFORCE, Demonstrator in Physics at the Cavendish Laboratory, Cambridge, and University Lecturer in Physics, has been appointed to the Lyon Jones Chair of Experimental Physics at University College, Liverpool, vacated by the removal of Dr. Oliver Lodge to the University of Birmingham.

\* \* \*

THE Chair of English Law at Queen's College, Belfast, is vacant by the death of Mr. W. N. Watts, LL.D.

\* \* \*

WE regret to note the death of the Rev. Richmond Frederick Clarke, M.A., Principal of the Roman Catholic Hall, known as "Clarke's Hall," at Oxford. He was a member of Trinity College, and rowed in the University eight in 1859. He was a Fellow and Tutor of St. John's College, Oxford, and an examiner in the University. Mr. Clarke joined the Roman Catholic Church in 1865.

\* \* \*

AT a recent meeting of the Hartley Council on Wednesday, Prof. Spencer W. Richardson, D.Sc. (London), Lecturer on Mathematics and Physics at the University College, Nottingham, was elected Principal of the College and Professor of Physics.

\* \* \*

THE Principalship of the Liverpool University College will be vacated by the Rev. F. Dyson's appointment as Junior Dean of St. John's College, Cambridge.

\* \* \*

MR. A. H. GARDNER, B.A. Oxford, has been appointed Headmaster of Bungay Grammar School, in succession to the Rev. W. Boyce, resigned.

\* \* \*

MR. A. C. K. HATT, assistant-master at St. Olave's Grammar School, has been appointed to the Headmastership of the Grammar School of Howden, in Yorkshire.

\* \* \*

MR. J. REES FOSTER, B.Sc. Wales, has been appointed Headmaster of the new intermediate school at Llanberis. Mr. Foster's appointment was strongly opposed on the ground that he did not speak Welsh, but he received a majority of votes.

\* \* \*

MR. MURRAY'S new *Monthly Review* is a portly literary volume in itself, full of excellent promise. It is almost the equivalent of a quarterly in bulk, but it is much lighter and more varied than the ordinary quarterly review, and it is illustrated. The contents are political, military and naval, scientific and artistic, biographical and critical, with a serial story, a poem, and an essay. It would have been hard to devise a better first number, and we can only hope that the editor, Mr. Henry Newbolt, and the publisher may be able to live (for ever) up to the standard they have raised.

PERHAPS nearest to our special lines of interest in these pages is Mr. Quiller-Couch's sketch of the late T. E. Brown, master of the modern side at Clifton under Dr. Percival. (We are not clear, by the way, as to what the writer of the article means by speaking of a "fellowship" at Christ Church, or of "the night after he won his double first.") "T. E. B." is an interesting personality; but he seems to have lacked the bite of character which might have raised him to higher things:—

Was he happy [Mr. Quiller-Couch asks] in his many years' work at Clifton? On the whole, and with some reservation, we may say "Yes." "Yes," although in the end he escaped from it gladly and enjoyed his escape. One side of him, no doubt, loathed formality and routine. He was, as he often proclaims himself, a Nature-loving, somewhat intractable Celt; and, if one may hint a fault in him, it was that now and then he soon *tired*. A man so spendthrift of emotion is bound at times to knock on the bottom of his emotional coffers; and no doubt he was *true to a mood* when he wrote:

"I'm here at Clifton, grinding at the mill  
My feet for thrice nine barren years have trod,  
But there are rocks and waves at Scarlett still,  
And gorse runs riot in Glen Chase—thank God!"

"Alert I seek exactitude of rule,  
I step and square my shoulders with the squad,  
But there are blackberries on old Barrule,  
And Laugness has its heather still—thank God!"

\* \* \*

M. CAMILLE SÉE, who is intimately associated with girls' secondary education in France, has brought out an enlarged edition of his "*Lycées et Collèges de Jeunes Filles*." All the decrees, Parliamentary discussions, and laws affecting the subject during the last twenty years are recorded by M. Sée, together with facts and figures bearing on examination and other matters of educational interest. The book is valuable for reference.

\* \* \*

IN a recent number the *Noroye Fremya* printed a lively diatribe against the study of Greek and Latin in schools, which is really worth reading:—

The classical schools are isolated hot-houses, monstrosities in our civilization. They are essentially nihilistic with respect to our own culture, being a negation thereof and an expression of disrespect and distrust for it. After Newton, we still dream of Plutarch; after Guizot and Ranke, of Titus Livy; after the orations of Burke, Fox, and the Pitts, of Cicero! The anachronism is incomprehensible. Shakespeare and Molière are unknown to our youth; yet they must know Sophocles and the "*Miles Gloriosus*" of Plautus, and in the severely classical schools the students are made to perform "*Oedipus*" and other Greek tragedies. But do they believe in Fate? No, they believe in Christ? And what are these choruses, moving slowly and ominously, indistinctly prophesying? They represent Nemesis. But we do not know Nemesis; we know the judgment day! And our youths remain strangers to Shakespeare, Goethe, Schiller, and Pushkin, while they are being "educated" by the comical dolls of antiquity!

There is no better argument for a classical education—of course, in the wider sense of the term—than the narrowness with which it is sometimes condemned.

\* \* \*

THE following decree has lately been issued by the French Minister of Public Instruction:—"The second volume ('France and Europe from 1848 to 1899') of contemporary history from 1789 to the present time, by E. Maréchal, continued by Emile Auzou, is forbidden in public schools of all kinds."—The history is, and has long been, very largely used by students and teachers, and apparently the decree is directed against M. Auzou's part in the work. The election of M. Loubet as President, the Auteuil and other incidents are discussed in such a way as to prove that the writer is incapable of treating "the other side" with fairness.

\* \* \*

MR. DAVID SALMON, Principal of Swansea Training College, has reprinted, from the *Educational Record*, his interesting account of "The Welsh Charity Schools." The brochure is published by Messrs. Eyre & Spottiswoode. Speaking of the work of Griffith Jones, of Llanddowror, and Mrs. Bevan, Mr. Salmon patriotically says that, "should the day ever come

when teaching the people of our own land is held as honourable as slaying the people of other lands, Carmarthen will have a public monument to Griffith Jones beside Sir Thomas Picton's, and a statue to Mrs. Bevan beside Gen. Nott's.

\* \* \*

MR. W. CAREW HAZLITT'S "*History of the Venetian Republic*," which was published forty years ago and has long been out of print, is about to be reissued by Messrs. A. & C. Black, not as a new edition, but as an almost entirely new work, having undergone, in the long interval, a thorough process of recension, rearrangement, and augmentation, so as not only to bring down the historical narrative itself, for the first time, to the close of Venetian independence, but to expand the sections relating to social and economical institutions. Advantage has been taken of all the most recent discoveries illustrative of the career of Venice as a State; and a leading result of the new undertaking, as it claims to be, is to show that the Republic was, in fact, the greatest European empire between Rome and Great Britain, and not merely a rich and powerful commercial city.

\* \* \*

AMONGST the announcements of the Cambridge University Press we note "*Bacchylides, the New Poems and Fragments*," a revised text, with introduction, critical notes, and commentary, by Sir R. C. Jebb, Litt.D., Regius Professor of Greek; "*Herondas, the Mimes*," edited, with a commentary, by Walter Headlam, M.A., Fellow of King's College; "*Two Greek Grammars of the Thirteenth Century*," edited, with introduction and notes, by the Rev. Edmond Nolan, Trinity College; "*Sophocles, Translated into English Prose*," by Prof. Jebb; and "*Songs of Modern Greece*," with introductions, translations, and notes, by G. F. Abbott, B.A. Emmanuel College.

\* \* \*

IN mathematics the same Press announces new volumes of "*Scientific Papers*," by Lord Rayleigh, the late Dr. John Hopkinson, Prof. Osborne Reynolds, and Prof. Couch Adams. In history we are promised "*The Teaching of History*," edited by Lord Acton, Regius Professor of Modern History, and W. A. J. Archbold, M.A. Among the contributors, each of whom will deal with a different aspect of history teaching, will be Prof. Gwatkin, Mr. R. L. Poole, Dr. Cunningham, Mr. Tanner, Mr. Woodward, Mr. Marten, and Prof. Ashley. Lord Acton will write an introduction. Very interesting volumes will be "*Political Theories of the Middle Ages*," by Dr. Otto Gierke, translated by F. W. Maitland, Litt.D., Downing Professor of the Laws of England, and a "*Handbook to Politics and General Culture, 1492-1899*," by G. P. Gooch, M.A., with an introductory note by Lord Acton.

\* \* \*

MR. DAVID NUTT will shortly publish Vols. XXVII.-XXXII. of his "*Tudor Translations*," edited by Mr. W. E. Henley—"The *Chronicles of Froissart*," translated by Lord Berners, with an introduction by Mr. W. Paton Ker. This edition is limited to six hundred copies. Mr. Nutt also announces a third volume of "*Arthurian Romances*" unrepresented in Malory—"Guingamor; Lanval; Tyolet; The Were Wolf: Four *Lais* translated from the French of Marie de France and others," by Jessie L. Weston, with designs by Caroline Watts.

\* \* \*

THE essay on "England under Protector Somerset," by Mr. A. W. Pollard, which lately gained the Arnold Prize at Oxford, is to be published by Messrs. Kegan Paul & Co.

\* \* \*

A HISTORY of the Isle of Man, based on a thorough study of the original sources, is to be published by Mr. Fisher Unwin this week in two volumes under the title "A History of the Isle of Man." The author is Mr. A. W. Moore, the Speaker of the House of Keys, who has had unique advantages for obtaining valuable material from old records, &c. Special attention has been given to the social and economic conditions of the

people, and to the growth of the native industries. In the treatment of constitutional questions, help has been received from the Manx Judges and Attorney General; and Sir Spencer Walpole has looked through the chapters on constitutional history (civil), and on the period during which he was Governor of the island.

## THE STATE SIMPLIFICATION OF FRENCH SYNTAX.

### TEXT OF THE MINISTERIAL DECREE.

WE give below a translation of a recent Decree of the French Minister of Public Instruction, intended to regularize sundry anomalies and dubious uses in syntax and spelling, with the long schedule of particular injunctions and regulations. This schedule has been drawn up by the Conseil Supérieur of the Ministry of Public Instruction, on the recommendation of a Commission composed as follows:—MM. Gaston Paris (President), Gréard, Croiset, Paul Meyer, Bernès, Clairin, Devinat, Comte.

#### DECREE.

"1. In all examinations, competitive or otherwise, controlled by the Department of Public Instruction, and involving, or not involving, special orthographical tests, no candidate shall suffer any loss of marks for using the forms contained in the appended list.

"2. No forms or constructions contrary to those contained in the list shall be taught as rules in any State school of any grade."

July 31, 1900.

### LIST OF SIMPLIFICATIONS.

#### THE SUBSTANTIVE.

**NUMBER.**—*Témoin*.—Placed at the beginning of a proposition, this word may be either singular or plural, even though a plural substantive follows: e.g., *témoin*, or *témoins*, *les victoires qu'il a remportées*. This applies equally to the expression *prendre à témoin*: e.g., *Je vous prends tous à témoin* or *à témoins*.

**PLURAL OR SINGULAR.**—In all constructions in which the sense allows the substantive-complement to be understood either in the singular, or plural, both numbers will be allowed: e.g., *des habits de femme* or *de femmes*; *des conitures de groseille* or *de groseilles*; *des prêtres en bonnet carré* or *en bonnets carrés*; *ils ont ôté leur chapeau* or *leurs chapeaux*.

#### SUBSTANTIVES OF TWO GENDERS.

1. *Aigle*.—It is customary to make this word masculine. The best authors have also made it feminine. Both genders will be allowed: e.g., *un aigle* or *une aigle*.

2. *Amour, orgue*.—It is customary to make these words masculine in the singular. In the plural either gender will be allowed: e.g., *les grandes orgues*; *un des plus beaux amours*.

3. *Délice* and *délices* are really two different words. The former is rare and somewhat affected. It should have no place in elementary instruction.

4. *Automne, enfant*.—These two words being of common gender, it is unnecessary to pay special attention to them. The same remark applies to all substantives of common gender.

5. *Gens, orgue*.—Adjectives agreeing with *gens* may in all cases be made feminine: e.g., *instruits*, or *instruites*, *par l'expérience*, *les vieilles gens sont soupçonneux*, or *soupçonneuses*.

*Orgue* may be used in the feminine in all cases: e.g., *orgue carrée*, *orgue mondée*, *orgue perlée*.

6. *Hymne*.—There is no sufficient reason for attaching two different meanings to this word according to its gender. Both national hymns and religious hymns may be of either gender: e.g., *un bel hymne* or *une belle hymne*.

7. *Œuvre*.—The use of this word in the masculine in certain expressions is based upon a very subtle distinction. The feminine will be allowed in all senses: e.g., *une grande œuvre*, *la grande œuvre*.

8. *Pâques*.—This word may be used in the feminine to denote a date as well as the religious festival: e.g., *à Pâques prochain* or *à Pâques prochaines*.

9. *Période*.—Even in the special sense of this word in which it is customary to employ the masculine, the feminine will be allowed: e.g., *arriver à la plus haute période* or *au plus haut période*.

#### PLURAL OF SUBSTANTIVES.

**PLURAL OF PROPER NAMES.**—Inasmuch as the greatest obscurity exists in the rules and exceptions laid down in the grammars, all proper names preceded by the plural article will be allowed to take the plural inflexion: e.g., *les Corneilles* as well as *les Gracques*; *des Virgiles* (types) as well as *des Virgiles* (editions). The same rule will apply to the names of persons used to denote the works of those persons: e.g., *des Meissonniers*.

**PLURAL OF BORROWED NOUNS.**—When borrowed nouns have become

thoroughly French, they may form their plural according to the general rule: e.g., *des exécutés* as well as *des défects*.

#### COMPOUND NOUNS.

The same compound nouns are to be found to-day both with and without the hyphen. It is useless to weary children with contradictions that cannot be justified. The absence of the hyphen in *pomme de terre* does not prevent this expression from forming as true a compound as *chef-d'œuvre* for instance.

Every one will be free to conform to the existing rules for compound nouns, but modifications may be introduced according to the following principles:—

1. Nouns formed of a verb and substantive may be written in one word and form the plural in the ordinary way: e.g., *un essuie-main*, *des essuie-mains*; *un abat-jour*, *des abat-jours*; *un fesse-mathieu*, *des fesse-mathieus*; *un gagnepetit*, *des gagnepetits*; *un garde-côte*, *des garde-côtes*. But in such expressions as *garde forestier*, *garde général*, in which the presence of the adjective clearly indicates that *garde* is a substantive, the words will continue to be written separately.

2. Nouns formed of a substantive and adjective may be joined or separated. In either case the plural will follow the general rule: e.g., *un coffre fort* or *coffrefort*, *des coffres forts* or *coffreforts*.

3. Nouns formed of an adjective and substantive may be treated similarly: e.g., *une basse cour* or *bassecour*, *des basses cours* or *bassecours*; *un blanc seing* or *blancseing*, *des blancs seings* or *blancseings*; *un blanc bec* or *blancbec*, *des blancs becs* or *blancbecs*. An exception will be made in the case of the words *bonhomme* and *gentilhomme*, in which the middle *s* is pronounced: *des bonhommes*, *des gentilhommes*. The following may be written as one word without apostrophe:—*grandmère*, *grandmèsse*, *grandroute*.

4. Nouns formed of an adjective and substantive, denoting a new object named from one of its qualities, may be similarly treated: e.g., *un rouge gorge* or *rougegorge*, *des rouges gorges* or *rougegorges*.

5. Nouns formed of two adjectives denoting a person or thing may be written separately, without hyphen, each retaining its own inflexions: e.g., *un sourd muet*, *une sourde muette*, *des sourds muets*, *des sourdes muettes*;  *douce mère*, &c.

6. Nouns formed of two substantives in apposition may either be written as two words, each taking the sign of the plural, or as one word without hyphen, taking the plural sign at the end only: e.g., *un chou fleur* or *choufleur*, *des choux fleurs* or *choufleurs*; *un chef lieu* or *cheflieu*, *des chefs lieux* or *cheflieux*.

7. Nouns formed of two substantives, or of a substantive and adjective, one being the complement of the other, but with no particle to show the connexion, may be written as one word, the last component only taking the sign of the plural: e.g., *un timbreposte*, *des timbrepostes*; *un terreplein*, *des terrepleins*.

For the words *hôtel Dieu*, *fête Dieu*, it seems preferable to maintain the existing usage and to separate the constituent elements. It will not, however, be counted an error to write them as one word: *hôteldieu*, *fêtedieu*.

No attention need be paid to the plural of the words *hôtel Dieu*, *fête Dieu*, *bain marie*, as they are not used in the plural. No attention need be paid either, in elementary instruction, to the plural of *trou madame*, a word denoting an obsolete game.

8. Nouns formed of a numeral adjective and substantive or adjective may be written, even in the singular, as one word, with the plural inflexion at the end: e.g., *un troisquarts*, *des troisquarts*; *un troisquarts*, *des troisquarts*.

9. Nouns formed of two substantives joined by a preposition are to be written separately, each part obeying the general rules of syntax: e.g., *un chef d'œuvre*, *des chefs d'œuvre*; *un pot au feu*, *des pots au feu*; *un pied d'alouette*, *des pieds d'alouette*; *un tête à tête*, *des tête à tête*.

10. Nouns formed of various elements borrowed from substantives, verbs, adjectives, adverbs, and foreign words may be written separately or in combination. If in combination, they will take the ordinary sign of the plural at the end: e.g., *un chassé croisé* or *un chassécroisé*, *des chassés croisés* or *des chassécroisés*; *un fier à bras* or *un fierabras*, *des fiers à bras* or *des fierabras*; *un pique nique* or *un piquenique*, *des pique niques* or *des piqueniques*; *un soi disant* or *un soisdisant*, *des soi disant* or *des soisdissants*; *un te Deum* or *un tedeum*, *des te Deum* or *des tedeums*; *un er voto* or *un ervoto*, *des er voto* or *des ervotos*; *un vice roi* or *un viceroi*, *des vice rois* or *des vicerois*; *un en tête* or *un entête*, *des en têtes* or *des entêtes*; *une plus (moins) value* or *une plusvalue (moinsvalue)*, *des plus (moins) value* or *des plusvalues (moinsvalues)*; *un gallo romain* or *un galloromain*, *des gallo romains* or *des galloromains*.

The strangely formed word *sot l'y laisse* need not be considered, and, in a general way, it is useless to complicate elementary instruction with the plurals of such compound nouns as *laisser aller*, *ouï dire*, which, on account of their meaning, are not used in the plural.

**HYPHEN.**—Even when the constituent elements of compound nouns are separated, the hyphen may always be omitted.

#### THE ARTICLE.

**THE ARTICLE BEFORE PROPER NAMES OF PERSONS.**—It is customary to employ the article before certain Italian family names: *le Tasse*, *le Corrège*, and sometimes (erroneously) before personal names: *(le)*

*Dante, (le) Guide.* Ignorance of this custom will not be regarded as an error. Great uncertainty also exists as to the proper way of writing the article which is part of certain French proper names: *la Fontaine, la Fayette, or Lafayette.* In dictation the way of writing such names should be pointed out.

**SUPPRESSION OF THE ARTICLE.**—When two adjectives joined by *et* refer to the same substantive so as to denote two different things, the suppression of the article before the second adjective will be allowed: e.g., *L'histoire ancienne et moderne*, as well as *l'histoire ancienne et la moderne.*

**PARTITIVE ARTICLE.**—*Du, de la, des* will be allowed instead of *de* before a substantive preceded by an adjective: e.g., *de or du bon pain, de bonne viande or de la bonne viande, de or des bons fruits.*

**ARTICLE BEFORE *plus, moins, &c.***—The rule as to the use of *le plus, le moins, le mieux* as invariable neuters is very subtle and of little value. It is superfluous to introduce it into elementary instruction. *Le plus, la plus, les plus, les moins, les mieux, &c.*, will be allowed in such constructions as: *On a abattu les arbres le plus or les plus exposés à la tempête.*

#### THE ADJECTIVE.

**AGREEMENT OF ADJECTIVE.**—In the phrase *se faire fort de*, agreement of the adjective will be allowed: e.g., *se faire fort, forte, fortes, fortes de . . .*

**ADJECTIVE CONSTRUCTED WITH SEVERAL SUBSTANTIVES.**—When a qualifying adjective follows several substantives of different genders it may always be put in the masculine plural, whatever the gender of the nearest substantive: e.g., *appartements et chambres meublés.* Agreement with the nearest substantive will also be allowed: e.g., *un courage et une foi nouvelle.*

*Nu, demi, feu.*—These adjectives may agree with the substantive they precede: e.g., *nu, or nus, pieds; une demi, or demie, heure* (without hyphen); *feu, or feue, la reine.*

**COMPOUND ADJECTIVES.**—The constituent words may be combined into a single word forming its feminine and plural according to the general rule: e.g., *nouveauté, nouveauté, nouveautés, nouveautés; courtvêtu, courtvêtue, courtvêtus, courtvêtues, &c.*

But compound adjectives of colour which, in consequence of an ellipse, have become genuine substantives will be treated as invariable: e.g., *des robes bleu clair, vert d'eau, &c.*, as well as *des habits marron.*

**INVARIABLE PAST PARTICIPLES.**—At present the participles *approuvé, attendu, ci-inclus, ci-joint, excepté, non compris, y compris, ôté, passé, supposé, vu*, placed before the substantive to which they are joined are invariable. *Excepté* is already treated as a preposition. The agreement of these participles will be optional, and there will be no insistence on the application of the rules as to their position, and as to the substantive being defined: e.g., *ci joint, or ci jointes, les pièces demandées* (without hyphen between *ci* and the participle); *je vous envoie ci joint, or ci jointe, copie de la pièce.*

The same choice will be allowed for the adjective *franc*: e.g., *envoyer franc de port, or franche de port, une lettre.*

**AVOIR L'AIR.**—It will be permissible to write indifferently *elle a l'air doux or douce, spirituel or spirituelle.* The subtle difference of sense, according as the adjective agrees with the word *air* or with the word denoting the person referred to, will not be taken into consideration.

**NUMERAL ADJECTIVES: *Vingt, cent.***—Euphony justifies in certain cases the existing rule, which requires these words to be in the plural when they are multiplied by another number. The plural form will be allowed when a number follows: e.g., *Quatre vingt dix, or quatre vingts dix, hommes; quatre cent trente, or quatre cents trente, hommes.*

The hyphen will not be insisted on between the word denoting the units and the word denoting the tens: e.g., *dix sept.*

In dates *mille* will be allowed instead of *mil*: e.g., *l'an mil huit cent quatre vingt dix, or l'an mille huit cents quatre vingts dix.*

#### DEMONSTRATIVE ADJECTIVES, INDEFINITES, AND PRONOUNS.

*Ce.*—The particles *ci* and *là* may be joined to the pronouns which precede them, without any distinction being drawn between *qu'est ceci, qu'est cela* and *qu'est ce ci, qu'est ce là.* In the latter constructions the hyphen may be suppressed.

*Même.*—After a plural substantive or pronoun *même* may be put in the plural without hyphen: e.g., *nous mêmes, les dieux mêmes.*

*Tout.*—The agreement of *tout* with a following feminine adjective may take place whether the adjective begins with a consonant or *h* aspirate, or with a vowel or *h* mute: e.g., *des personnes tout heureuses or toutes heureuses; l'assemblée tout entière or toute entière.*

*Tout* before the name of a town may in all cases agree, the somewhat subtle distinction between such constructions as *tout Rome* and *toute Rome* being disregarded. Similarly, when a woman is supposed to be speaking, it will be permissible to write either *je suis tout à vous* or *je suis toute à vous.*

When *tout* is used in the indefinite sense of *chaque*, both *tout* and the following substantive may be used in the singular or plural indifferently: e.g., *des marchandises de toute sorte or de toutes sortes; la sottise est de tout (tous) temps et de tout (tous) pays.*

*Aucun.*—With a negative this word may be used either in the singular or in the plural: e.g., *ne faire aucun projet or aucuns projets.*

*Chacun.*—When this pronoun follows the verb and refers to a plural subject or object, the possessive *son, sa, ses* or the possessive *leur, leurs* may be used indifferently: e.g., *ils sont sortis chacun de son côté or de leur côté; remettre des livres chacun à sa place or à leur place.*

#### THE VERB.

**COMPOUND VERBS.**—The apostrophe and hyphen may be suppressed: e.g., *entrouvrir, entrecroiser.*

**HYPHEN.**—The hyphen may be suppressed when the pronoun-subject follows the verb: e.g., *est il ?*

**APPARENT SUBJECT AND REAL SUBJECT:** e.g., *sa maladie sont des vapeurs.*—Rules need not be laid down for such constructions as these, which cannot be studied profitably apart from the texts in which they occur. It is a question of style rather than of grammar, and has no place either in elementary instruction or in examinations.

**CONCORD OF THE VERB PRECEDED BY SEVERAL SUBJECTS NOT JOINED BY THE CONJUNCTION *et.***—If the subjects are not resumed by an indefinite word like *tout, rien, chacun*, the verb may always be employed in the plural: e.g., *sa bonté, sa douceur le font admirer.*

**CONCORD OF THE VERB PRECEDED BY SEVERAL SINGULAR SUBJECTS JOINED BY *ni, comme, avec, ainsi que* AND OTHER SIMILAR LOCUTIONS.**—The verb may always be in the plural: e.g., *ni la douceur ni la force n'y peuvent rien or n'y peut rien; la santé comme la fortune demandant à être ménagées or demande à être ménagée; le général avec quelques officiers sont sortis, or est sorti, du camp; le chat ainsi que le tigre sont des carnivores or est un carnivore.*

**CONCORD OF THE VERB WHEN THE SUBJECT IS A COLLECTIVE.**—Whenever the collective is followed by a plural complement, the verb may agree with the complement: e.g., *un peu de connaissances suffit or suffisent.*

**CONCORD OF THE VERB WHEN THE SUBJECT IS *plus d'un.***—The present custom being to put the verb in the singular, the singular will be allowed even when *plus d'un* is followed by a plural complement: e.g., *plus d'un de ces hommes était, or étaient, à plaindre.*

**CONCORD OF THE VERB PRECEDED BY *un de ceux (une de celles) qui.***—Should the verb of the relative sentence be singular or plural? This is a delicate point, which has no place either in elementary instruction or in examinations.

***C'EST, CE SONT.***—As the present practice in the use of these forms differs widely, and as the best writers often use *c'est* before a plural substantive or a plural pronoun of the third person, the use of *c'est* instead of *ce sont* will be allowed in all cases: e.g., *c'est, or ce sont, des montagnes et des précipices.*

**SEQUENCE OF TENSES.**—The present subjunctive, instead of the imperfect, will be allowed after a conditional: e.g., *il faudrait qu'il vienne or qu'il vint.*

#### THE PARTICIPLE.

**PRESENT PARTICIPLE AND VERBAL ADJECTIVE.**—Attention should be paid to the general rule, according to which the participle points to the action, the adjective to the state. In doubtful cases it will be sufficient for pupils and candidates to show proof of common sense. In class work all subtleties should be carefully avoided: e.g., *des sauvages vivent errant, or errants, dans les bois.*

**PAST PARTICIPLE.**—The existing rules for the concord of the past participle constructed with *avoir* have always been more or less questioned by writers and grammarians. The rules have gradually become more and more complicated, and the exceptions—according to the form of the object that precedes the participle, the use of the verb in a literal or figurative sense, and the dependence of other verbs upon the participle—more and more numerous. Moreover, the rules are ceasing to be rigidly observed, and it seems useless to persist in galvanizing into life rules which are only a source of perplexity in the class-room, which do not in any way serve to develop the intelligence, and which render the study of French very difficult for foreigners.

There is nothing to change in the rule according to which the past participle, when used as an epithet, agrees with the word it qualifies, or, when used as an attribute with the verb *être* or an intransitive verb, agrees with the subject: e.g., *des fruits gâtés; ils sont tombés; elles sont tombées.*

The past participle constructed with *avoir*, however, will be allowed to remain invariable in all cases in which it has hitherto been expected to agree with the object: e.g., *les livres que j'ai lu or lus; les fleurs qu'elles ont cueilli or cueillies; la peine que j'ai pris or prise.*

Similarly the past participle of reflexive verbs will be allowed to remain invariable in all cases: e.g., *elles se sont tu or tués; les coups que nous nous sommes donné or donnés.*

#### THE ADVERB.

***Ne* IN SUBORDINATE PROPOSITIONS.**—The use of this negative particle gives rise in many cases to complicated and difficult rules which are often contrary to the usage of the best writers. Without regard to the character of the principal sentence—whether affirmative, negative, or interrogative—the suppression of *ne* will be allowed in all subordinate propositions depending on such verbs or phrases as the following:—*empêcher, défendre, éviter que, &c.*: e.g., *défendre qu'on vienne or qu'on ne vienne; craindre, désespérer, avoir peur, de peur que, &c.*: e.g., *de peur qu'il aille or qu'il n'aille; douter, contester, nier que, &c.*

*e.g., je ne doute pas que la chose soit vraie or ne soit vraie; il tient à peu, il ne tient pas à, il s'en faut que, &c. : e.g., il ne tient pas à moi que cela se fasse or ne se fasse.*

Similarly, the suppression of *ne* will be allowed—(1) after comparatives or words expressing a comparison, such as *autre, autrement que, &c.*: *e.g., l'année a été meilleure qu'on l'espérait or qu'on ne l'espérait; les résultats sont autres qu'on le croyait or qu'on ne le croyait*; (2) after the conjunctions *à moins que* and *avant que*: *e.g., à moins qu'on accorde le pardon or qu'on n'accorde le pardon.*

#### NOTE.

In examinations it is desirable that mistakes which prove nothing against the intelligence or the real knowledge of the candidates, but which merely betray ignorance of some shade of meaning or some grammatical subtlety, should not be treated as serious faults. Such mistakes, for instance, as bear on the following points should especially be treated very lightly:—(1) Substantives which change their gender according as they are abstract or concrete, such as *aide, garde, manoeuvre, &c.*, or which have a slight difference of meaning according to their gender, such as *couple, merci, relâche, &c.* (2) Special and technical plurals, such as *aieuls and aieux, ciels and cieux, ails and veur, travaux and travaux, &c.* (3) The use of the article and of different prepositions before masculine names of countries: *e.g., aller en Danemark, en Portugal, but aller au Japon, au Brésil.*

### REGISTRATION OF TEACHERS.

We print below the memorandum recently drawn up by the Training of Teachers' Joint Committee on certain questions which will arise in the framing of regulations for the creation of a Teachers' Register:—

By Section 4 of the Board of Education Act, 1899, "it shall be lawful for Her Majesty, in Council, by Order, to establish a Consultative Committee . . . for the purpose." *inter alia*, "of framing, with the approval of the Board of Education, regulations for a Register of Teachers, which shall be formed and kept in manner to be provided by Order in Council; provided that the Register so formed shall contain the names of the registered teachers, arranged in alphabetical order, with an entry, in respect to each teacher, showing the date of his registration, and giving a brief record of his qualifications and experience."

We are on the eve of the appointment of this Consultative Committee; and, as it is more than probable that professional opinion will shortly be asked with reference to the conditions of registration, it is important that associations and individuals should be considering the points involved.

But, while this general Register must be formed forthwith, its division into sections may be postponed until a Register of Efficient Schools has been formed; and the Board of Education should be urged to deal with this matter without delay.

Such a Register of Schools seems to the Training Committee essential, as affording assurance that any practical experience or systematic course of training that shall be required for admission to the Register of Teachers should have been obtained in connexion with an efficient school.

The report of the Training Committee, issued in December, 1897, following, in most respects, the lines laid down by the Report of the Royal Commission on Secondary Education, may be accepted generally as expressing the voice of the teaching profession as to the principles which should be adopted by the Consultative Committee of the Board of Education, in formulating a standard of training to be required by it, as necessary for the admission of teachers to the Register. In December, 1899, and January, 1900, the Headmasters' Conference and the Headmasters' Association respectively passed the following resolution:—

"That this Conference [Association] is of opinion that, after the expiration of five years from the commencement of the Board of Education Act, no new member of the profession should be qualified for a place on the Register of Secondary Teachers who has not undergone a systematic course of training."

The Committee desires that public opinion be formed on the following questions:—

(a) How shall the conditions of registration be defined for—  
(i.) Teachers who are now in the profession? (ii.) Teachers who shall join the profession within the next five years? (iii.) Teachers who shall apply for registration after the lapse of five years?

(b) Granted that, as in the legal and medical professions, professional training must be a condition of registration, what is the minimum to be required?

1. The Training Committee recommends the following as conditions of admission to the Register of Teachers for those seeking admission on or after April 1, 1905:—

1. That candidates for admission should be graduates of a British University, or should be in possession of a diploma equivalent to a degree.

2. That they should hold a certificate, approved by the Consultative Committee, that they had followed a course of training in the theory and practice of education subsequent to their graduation.

3. That they should give proof of two years' efficient service in a school approved for the purpose.

In reference to condition 2, a considerable minority of the Committee were of opinion that, under exceptional circumstances, this course of professional training might be concurrent with the period of study for the degree.

II. Those who are already teachers must be admitted on easy terms. All headmasters and assistant-masters of, say, five years' standing in any one efficient school would find their place on a Register, as a matter of right. For men of less experience, or for those who have moved about from school to school, it would be necessary that the testimonial of a headmaster in whose school they had been teaching, for not less than twelve months within the three years immediately preceding the formation of a Register, should be presented to the Consultative Committee, countersigned by at least two other schoolmasters, qualified by right, as aforesaid, for registration. Where a teacher has served for two years in a school from the time of admission to a degree in arts and science, by some University in Great Britain or Ireland, to the formation of the Register, it should be sufficient that the application be endorsed by the headmaster of the school alone. It is recommended that the condition of entry on the Register in the case of women teachers should be, in all respects, similar to those for men.

Graduate teachers in elementary schools holding Her Majesty's Certificates shall be eligible for admission to the Register of Teachers, provided that they have taught for three years in one school, and can produce a certificate of efficiency, signed by the Chairman of their School Board, or, in the case of the voluntary schools, by the Chairman of the Body of Managers.

It would follow that against the names of all registered teachers all the schools in which they had gained their experience, with the length of their service in each, should be placed.

III. A similar elasticity must be applied in the case of those who shall become teachers within the next five years. Due notice must be given to boys and girls in our schools, intending to enter the profession, that the conditions of admission will be more stringent than they have been hitherto. Meanwhile, teachers who seek registration shall be required to pass an examination in the theory and practice of education, of which the more important part shall be oral, as well as to satisfy such conditions as to experience in an efficient secondary school as may be approved by the Board of Education. Special facilities for registration should be afforded to those teachers who have, during the interval, availed themselves of the training afforded by colleges and other institutions already in existence.

There must be also for a considerable number of years, under the existing order of things, many secondary teachers, particularly in special subjects—such as music, drawing, &c.—who will be debarred, by circumstances, from graduation, but whose valuable and efficient work ought not to be stigmatized by their exclusion from the Register. Their case would be met by the production of satisfactory proof of a liberal education of a standard not less than that required for matriculation at one of the Universities, together with a prolonged period of service and training, according to the circumstances of the case.

### REVIEWS.

#### SCHOOL BOARD WORK.

*The Work of the London School Board.* By T. A. Spalding, LL.B., assisted by T. S. A. Canney, B.A. (P. S. King & Son.)

This volume was prepared for the Paris Exhibition by direction of the Chairman of the Board, Lord Reay. It sets forth the development of the policy of the Board and the ways in which it sought to solve the very difficult problems that constituted its task. It offers a broad and continuous view of the Board's labours, with very little reference to differences of opinion that have manifested themselves amongst the members. By a mere record of facts arranged in order of occurrence and explained, a very marked tribute or testimonial is given to the common sense and cautious judgment, as well as to the conscientious zeal, of successive Boards. The first part deals with the history of education in England prior to 1870. This is the weakest part, and we find not a little in the twenty-four pages with which we entirely disagree. It opens with a section headed "The Influence of the Reformation," in which it is denied that the Reformation had any influence for good as regards education. The conclusion is stated as follows:—

It has been assumed that national education in England was the offspring of the Reformation, and to the sickly boy who is known to history as Edward VI. has been attributed the glory of having founded the English system of secondary education. The fallaciousness of this doctrine has been sufficiently exposed. . . . The Commissioners of

Edward VI. succeeded in strangling most of the schools of England, and more especially the elementary schools. . . . Their action crippled the progress of elementary education for nearly three centuries.

It is very remarkable that so little credit should here be given to the spirit of the Reformation, to which may be traced the notion of the universal need of education and the right of all to receive the benefit of it. This notion, started by the chief Reformers, was the germ which ultimately led to the establishment of a free and general education. It will be sufficient to call as a witness of this the chief of the Reformers, Archbishop Crammer. It was proposed, three centuries ago, to admit to Canterbury Grammar School none but the sons of gentlemen.

Whereunto [says Strype in his "Memorials"] the Most Reverend Father the Archbishop, being of a contrary mind, said that he thought it not indifferent so to order the matter; "for," said he, "poor men's children are many times endued with more singular gifts of Nature, which are also the gifts of God, as with eloquence, memory, apt pronunciation, sobriety, and such like, and also commonly more apt to apply their study, than is the gentleman's son, delicately educated." Hereunto it was on the other part replied, "that it was meet for the ploughman's son to go to plough, and the artificer's son to apply the trade of his parent's vocation, and the gentleman's children are meet to have the knowledge of government and rule in the commonwealth. For we have," said they, "as much need of ploughmen as any other State; and all sorts of men may not go to school." "I grant," replied the Archbishop, "much of your meaning herein as needful in a commonwealth; but yet utterly to exclude the ploughman's son and the poor man's son from the benefits of learning as though they were unworthy to have the gifts of the Holy Ghost bestowed on them as well as upon others is as much as to say that Almighty God should not be at liberty to bestow His great gifts of grace upon any person, nor no where else but as we and other men shall appoint them to be employed, according to our fancy, and not according to His most Godly will and pleasure, Who giveth His gifts both of learning and other perfections in all sciences unto all kinds and states of people indifferently."

This well expresses the attitude of all the leading Reformers to education, and it might be supplemented by much stronger statements by both bishops and lay politicians.

The succeeding chapters on statistics, school management, and compulsion are interesting reading, and are not open to the charge of looseness and inaccuracy which may be made against the first. The writers evidently deal with matters on which they have a clear knowledge. The statistical chapter describes the efforts of the earlier Boards to estimate the number of children for whom they had to provide. The Registrar-General, when applied to, asked for at least two years for the work. The Education Department had given a sixth of the population as the number of school age, but the Board, by its own methods, arrived at one-seventh as the nearer fraction, and from this made a number of deductions. They certainly did not over-estimate the number of places they had to provide; and, as many schools taken over temporarily by the Board failed to make themselves efficient, the estimate of the number of children for whom places were required rose rapidly. These methods of climbing to the true estimate by experiment are characteristically English. They are exhibited again in regard to the school buildings. The first Board resolved to obtain information of the Prussian system of class divisions before beginning to build. This system they agreed to try, and the Ben Jonson School at Stepney was the result. The Prussian system was soon found to have many defects, and the Board gave up the plan of employing different architects to work out variations of that system, and appointed an architect of its own. Gradually the Board drifted to the conclusion that neither the Prussian system nor the Board's own scheme ought to be rigidly adhered to, but that each school should be planned according to the needs of the neighbourhood in which it is built. When once the Board was emancipated from adherence to a fixed scheme, experience added knowledge, and each school plan was an improvement on its predecessors. So long as this readiness to learn from experience continues, the Board will be healthy: when it ceases, it will soon become corrupt.

The chapter dealing with the vexed question of compulsion presents only the School Board aspect of the question, with too much of an assumption that the majority of parents are perverse and unreasonable and need compulsion. The chapter on educational progress does not notice the effect of the Board's operations in withdrawing children from the secondary schools of the metropolis. The fact that, while, through the building of new endowed schools, the available school places in second-grade schools have increased by more than 50 per cent. in twenty years, the

number of scholars has remained nearly stationary, is altogether ignored. Indirectly, however, there is an acknowledgment of the effect of the Board's policy in providing substitutes for secondary schools.

In tracing the causes of improvements in the quality of the education, the writers say:

The children at present in school are undoubtedly of greater mental receptivity than their forerunners, and are, on that account, capable of a wider range of instruction. If this were not the case, the introduction of a larger number of subjects would tend to diminish the efficiency of the schools; but this has not been the case. They are, to a large extent, the children of parents who have had experience of the advantages of education and are desirous that their offspring should profit more completely in a similar manner.

There can be no doubt that, to a considerable extent, the increased capacity of the pupil which has been observed is due to the attraction of pupils who, but for the operations of the School Board, would have been found in the endowed and other secondary schools of the metropolis. It is a grave question whether it would not be detrimental to education to carry this tendency further than it has gone at present, and herein lies the pressing need of a really strong Minister of Education at the head of the recently enlarged Department.

These criticisms, however, do not diminish our appreciation of the magnitude of the work devolving upon the School Board for London, and the excellence of the methods it has adopted to surmount its great difficulties, as these are clearly and fairly described in the work before us.

#### MODERN LANGUAGES IN SECONDARY EDUCATION.

*Report of the Committee of Twelve of the Modern Language Association of America.* (Boston: Heath.)

IN 1896 a Committee was appointed by the Association, under the presidency of Prof. Calvin Thomas, to consider the position of modern languages in secondary education, and to make recommendations. Their inquiries brought out the greatest variety, both in the modern language teaching of the schools and in the requirements of the colleges at their entrance examinations. Their first year's work resulted in a single resolution to the effect that "secondary instruction in French and German should not be differentiated according as the pupil is, or is not, preparing for college." The result of their subsequent labours is embodied in the book before us. In considering the general purpose of the study of modern languages, the Committee, though by no means taking up an anti-classical attitude, point out that, at any rate, modern languages "give a quicker return on the investment" of time and energy than Latin and Greek. They regard them as valuable instruments of general culture, and urge that conversational facility should be regarded as subordinate to literary linguistic training and to the acquisition of the power of reading French and German books. The conditions in the United States are, they argue, different from those in some European countries, where the speaking of two or three languages is of great practical importance.

Coming to the more technical part of this subject, they pass in review several methods of instruction. The pure "grammar method" they dismiss as uninteresting and as failing to give either insight into foreign life and thought or appreciation of literary masterpieces. To the so-called "natural method," which relies mainly on unsystematic imitation, they raise the obvious objections, and treat it as likely to be eventually regarded rather as a vivifying influence than as an independent method. The "psychological method"—i.e., Gouin's system, introduced into America by Bétis—they consider, while recognizing some of its advantages, especially as a means of fixing the attention, to afford but little opportunity for the exercise of judgment, and to delay too long anything like literary study. In dealing with the "phonetic method"—the method, that is, of the "Reformers," or *neuere Richtung*—they recognize its merits in cultivating the habit of attention and in securing from the first correct pronunciation; but, as in the case of the "psychological method," they are dissatisfied with the postponement of translation and the comparative neglect of the literary side of training. In their opinion its adoption requires considerably more time to be devoted to modern languages than is at present possible in American schools; but they are not indisposed to regard it as a "counsel of perfection." Lastly, they discuss the "reading method," in which translation into English is the main object, and grammar, composition, and pronunciation are kept in the background. To this they raise the objection, among others,

that it often fails to secure attention on the part of the pupils and energy on the part of the teacher.

Their own recommendations are of an eclectic character. They indicate a preference for "oral" methods in the first instruction of those who take up a foreign language at an early age, and of the "reading" method, modified by suggestions taken from other systems, for those who begin later or whose time of study is limited. These general recommendations are worked out in the form of elementary, advanced, and intermediate courses. The courses for German, as probably the language most studied in the United States, are given in greater detail; we in England are still very far from even putting German and French on an equality. In laying out the courses, especially the elementary course, due importance is given to the memorizing of colloquial sentences with a view to the cultivation of *Sprachgefühl* and to pronunciation, notice being taken of the importance of correcting the provincial accent of so many of the German population of the States. Grammar, "with little theory and much practice," and systematic drill in German on the reading-lessons are insisted on, and stress is laid on "free reproduction." Some hints on translation into English are added, and a useful list of reading-books, both in French and in German, is appended. Throughout the report, as we have already pointed out, the necessity of making modern languages an instrument of general education, and, in particular, of systematic training in good English, is fully recognized—a consideration sometimes overlooked by the more zealous partisans of modern methods.

#### PROF. BURY'S "GREECE."

*History of Greece.* By J. B. Bury. (Macmillan.)

This is an admirable book. Prof. Bury has contrived within the limits of a single volume to present the political, social, religious, and literary life of the Greeks; and he has presented them with so much learning and such skill that his history may fairly be expected to satisfy the requirements both of the learner and of the mature reader. The views expressed are studiously moderate. Prof. Bury does not take sides, like Grote and Mitford. He writes without disapproval of the imperial policy of Pericles, and he supports his war policy. He is not enthusiastic over Demosthenes as a politician, but declares that "only his political opponents would deny that he was the most eloquent of orators and the most patriotic of citizens." He holds, as we have long held, that Philip of Macedon has received less than his due from history. A statesman whose patriotism was not, like that of Demosthenes, "purblind"—the word is Prof. Bury's—would surely have come to terms with Philip, who was, if not dazzled, at least attracted, by the glory of Athens, and might have set her once more at the head of the Greek world if she would have let him. But, of course, this opinion is wholly at variance with the views of Niebuhr and Grote.

The references to literature are cunningly interwoven with the general narrative. Scholars will turn with curiosity and respect to the author's literary judgments; and they will find that here, too, Prof. Bury is free from strong prejudices. His opinions are, in some cases, in amusing contrast with those of his distinguished colleague, Prof. Mahaffy. Thus, in a striking passage in which he contrasts Thucydides and Herodotus, the balance is decidedly in favour of the son of Olorus. Not only is his history "still without a rival," but even his theme, so often depreciated by modern writers, is great; "for it is the story of the decline and fall of the Athenian Empire, and, at this period, Athens is the centre of ecumenical history." On the other hand, Prof. Mahaffy has praised Xenophon's narrative of the Retreat of the Ten Thousand as "one of the most delightful chapters of Greek history," and herein Prof. Bury agrees with him. "The charm of the 'Anabasis,'" he says, "depends on the simple directness and fullness with which the story is told. . . . There is a charm of actuality in the early chapters, with their recurring phrases, like brief entries in a diary." This is, surely, a far juster estimate than is Mr. Pretor's depreciatory criticism of these same opening chapters. It is to be regretted that the limitations of space prevent more than a bare reference to many of the greatest authors, for the too brief remarks on literature are all of much worth. Prof. Bury, it is plain, could write an excellent history of Greek literature.

In a very useful collection of notes and references Prof. Bury indicates the sources, both ancient and modern, from which he draws. Men reading for Honour Schools at the Universities will find these lists very convenient. Where there is a conflict of authority, as, for instance, in the account of the overthrow of the

Pisistratids, of the Four Hundred and the Thirty at Athens, it would have been well to indicate clearly which author is followed. In such cases, when ancient authors differ, it will generally be found that Prof. Bury decides in favour of Prof. Wilamowitz-Möllendorff. That mode of untying the knot is a simple and very good working solution of the difficulty; but we should prefer to know when we are following Thucydides, Xenophon, Aristotle, and when we are frankly giving them all up, and surrendering without conditions to the ingenious author of "Aristoteles und Athen." These notes produce a deep impression of the great width of the author's learning, and the extraordinary industry with which he has explored the Great Sahara of foreign periodicals.

Prof. Bury's criticism of the disastrous Athenian expedition to Sicily, and his estimate of that unfortunate devotee of fortune, Nicias, may be quoted as an example of the freshness of manner and the independence of judgment that characterize the whole book:—

Timid as a general, timid as a statesman, hampered by superstition, the decorous Nicias was a brave soldier and an amiable man, whose honourable qualities were the means of leading him into a false position. If he had been less scrupulous and devout, and had been endowed with better brains, he would not have ruined his country.

And, as for the Sicilian expedition:—

It is often said that it was a wild venture, an instance of a whole people going mad, like the English people in the matter of the Crimean War. It is hard to see how this view can be maintained. . . . The failure was due to nothing in the enterprise itself, but entirely to the initial mistake in the appointment of the general. And it was quite in the nature of things that the Athenian sea-power, predominant in the East, should seek further expansion in the West. An energetic establishment of Athenian influence in that region was recommended by the political situation. It must be remembered that the most serious and abiding hostility with which Athens had to reckon was the commercial rivalry of Corinth; and the close alliance of Corinth with her Dorian daughters and friends in the West was a strong and adequate motive for Athenian intervention.

These are not new views; but they are sane views expressed in an attractive form. It is the singular merit of this "History of Greece" that, while it is learned, it is never dull, and, while small details are omitted, a vivid and accurate picture is presented of Hellenic life. Prof. Bury's book forcibly reminds us of the "Short History of the English People." For it is bright and entertaining; it is not a mere record of politics and kings and battles; and it employs all the results of modern investigation and research to illustrate what is old. The life of Athens seems to pass before us as vividly as it passes in the plays of Aristophanes. It is a monument to the skill and industry of its author, and it is wholly worthy of his great reputation.

#### ENGLISH LETTERS.

*Tutorial History of English Literature.* By A. J. Wyatt, M.A. (Clive.)

Mr. Wyatt aims at writing his history of English literature, from Beowulf to Charles Lamb, on scientific principles. He has barely two hundred and twenty pages to work in, and so he practically ignores the smaller writers, linking the more important ones together by sketches rather historical than biographical. He urges that in this task he has "no model to improve upon"—a remark which we fail to understand, since more than one recent writer has done precisely the same thing, though not precisely in Mr. Wyatt's manner. More distinctive in its way is the consistent effort to steer a simple course of narrative between childish phrasing and talking over the reader's head. In order to avoid the last-mentioned danger, Mr. Wyatt boldly adopts and commends a method of study which would be excellent if it could be carried out—which, indeed, can be fully carried out by a student who is prepared to spend several hours daily on the thorough study, not of English literature, but of so much literature as this "tutorial history" sees good to give him. Mr. Wyatt's plan is that the reading of each of his chapters shall be preceded by the reading of "one work by each of the authors dealt with." If that is not possible, then one complete work representative of each period must be read.

To facilitate the plan, Mr. Wyatt gives a list of authors and recommended works, of which we will only say that there are thirty authors and about forty works or selections, and that any one who will study these may boast of a very good acquaintance with a literature which is, as Mr. Wyatt says, "the greatest that the world has ever seen," and written in a language which "bids fair to be some day the universal language." We like the way in

which Mr. Wyatt approaches and performs his task. He has a good perception of the literary qualities, and he deals with literature reverently. His judgments are well balanced and sensible, not off-hand or dogmatic:—

One word summarizes "Augustan" literature—common sense: common sense glorified, deified, beprosed, berimed, and bestanzaed out of all recognition of itself. "Wit and fine writing," says Addison after Boileau, "doth not consist so much in advancing things that are new as in giving things that are known an agreeable turn. It is impossible for us who live in the latter ages of the world to make observations in criticism, morality, or in any art or science, which have not been touched upon by others. We have little else left us but to represent the common sense of mankind in more strong, more beautiful, or more uncommon lights."

"True wit is Nature to advantage dress'd,  
What oft was thought, but ne'er so well express'd"—

the same thought again. The utmost brilliance of form combined with sheer banality of matter—that is Augustan literature.

This comes, perhaps, rather near to dogmatism. It is truer of Pope and Addison and Boileau than of real Augustan literature—of Virgil or Horace, for instance.

We strongly recommend Mr. Wyatt as a guide in the ascent of the easier slopes of Parnassus.

#### A SCHOOL PLATO.

*Proem to the Ideal Commonwealth of Plato.* An Introduction to the Language and Methods of the "Socratic" Dialogues. By T. G. Tucker. (Bell & Sons.)

It is not easy to discover "a long felt want" in school-books, and, when discovered, it requires more than the average learning and ordinary skill to supply that want. But a good school edition of the "Republic" has long been a *desideratum*. The tenth book has been done rather well; and the President of Magdalen has edited in a leisurely fashion the first five books in one volume. But the eighth, so well suited to be read by young historical and classical students, is neglected; and the first, which, though overloaded with fallacious dialectic, is, none the less, an admirable introduction to the sterner stuff of the later Plato, has hitherto received but little attention at the hands of English editors. At length we have an excellent edition of Book I. and Book II., chapters i.-x., by Prof. Tucker. This is altogether the best form of initiation into the Platonic mysteries that we know; and we trust that the sale of the book will be sufficient to encourage the editor to extend his labours, and to edit other parts of Plato's Utopia on the same lines.

Prof. Tucker's work is always fresh and interesting. He can write readable notes, and he presents his subject in an original manner. This book is no exception to the rule. We have read through the commentary, and find that every page contains something to interest the student of Attic Greek. The illustrative quotations are plentiful, and the notes are a storehouse of information on Attic usage. The introduction, which extends to eighty pages, contains an abstract of the "Proem," with which is included some useful comment on the subject-matter, such as we have not hitherto seen in school-editions of Plato. Prof. Tucker holds that the first book was written by Plato as a separate work, and that the remainder of the "Republic" belongs to a much later date in the philosopher's life. In this case, the speeches of Glaucon and Adeimantus in Book II. would be an ingenious device for connecting the latter with the earlier and shorter dialogue. Of course the "Hellenica" of Xenophon exists as a proof that ancient authors did sometimes return to their earlier works and write continuations of them; and, in the case of the "Republic," the linguistic data strongly support the argument from contents.

The text—if we except restorations of Attic forms—is conservative. There are brief, but sufficient, critical footnotes, and considerable prominence is given in the commentary to various readings. The grammatical notes are likely to stimulate interest, and they are replete with scholarship. We wonder that Prof. Tucker lends any countenance to Jowett and Campbell's *οὐ δὲ θαμιζεις ἡμῖν* for the MSS. *οὐδὲ*, &c. at page 328 C. We are decidedly of opinion that *οὐ δὲ* in two words is not Greek, and we do not think that Jowett and Campbell would persuade us that it is. On the interesting phrase *ἐπὶ γήραος οὐδῶς*, which is quoted by Plato a little further on, there is a good comment. Whether we are to understand "on the threshold of old age," or, as Dr. Leaf will have it, "on the road of old age," it is certain that the meaning is "in extreme old age." Nevertheless, we do not agree with the editor that "the threshold (of death) which consists in

old age" can be meant: it is a far-fetched and unnatural explanation. The statement of the ancient grammarians that *πρωγῆρος* denotes *moral*, and *πρόνηρος* *physical*, badness is accepted, and the MSS. are corrected in accordance with it. But this is a point on which the old grammarians are unsafe guides. We formerly believed in the rule, but the evidence of MSS. lends it no support; and we cannot think that there is any sense in it. We should class the statement with the *εἶργω* and *εἶργω* mare's nest; and we do not see how *húman* and *humáne*, cited by Prof. Tucker, is in any sense parallel. But we might go on picking holes *ad infinitum*, and still should not damage materially the substantial fabric that Prof. Tucker has raised, and for which schoolmasters should be grateful to him.

Any student who reads the introduction and notes carefully will know as much about ancient dialectics and Platonic diction as he can possibly need to know before going to the University. The remarks on the shifting, or fluid, character of the terms used and the fallacious arguments that are consequently permitted "to count" are valuable and quite fresh. It remains only to be observed that the printing is, for a school-book, unusually elaborate—spacing, indenting, and heavy type being usefully employed to help towards clearness.

#### ROCK-PICTURES.

(1) *Studies in Fossil Botany.* By Dunkinfield Henry Scott, M.A., Ph.D., F.R.S. (A. & C. Black.) (2) *Outlines of Field Geology.* By Sir Archibald Geikie, F.R.S. Fifth Revised Edition. (Macmillan.)

(1) Dr. Scott, Honorary Keeper of the Jodrell Laboratory at Kew, reprints, in this volume, a special course of lectures given by him four years ago at University College, London. Much of the work has been recast, and about one-fifth of the present text is entirely new matter; but a special feature and attraction of the letters in their permanent form are the hundred and fifty excellent illustrations, many of which quite deserve the title of rock-pictures. Over forty of them are new, and many others are redrawn. They give the volume a particular value as a book of reference for students of botanical palæontology—a progressive and increasingly interesting branch of science, and one in which accurate and elaborate diagrams are of the utmost importance. Dr. Scott does not claim to have written a manual of fossil botany; though that is very much what his book amounts to, seeing that it is a classified description of the principal palæozoic families, and especially of the Permian groups—the lepidodendrons, sigillarias, and calamites—and the rich Carboniferous formation. The introductory remarks on incrustation and petrification as methods of plant preservation will be found practically useful to the student who wishes to turn his attention to the botany of the rocks; and the final chapter of general results will be found to be a clear and comprehensive summary of the conclusions reached by recent studies in fossil botany. As for the influence of these studies of antiquity on our modern plant knowledge, Dr. Scott says:

Only twelve years ago it was said that fossil botany had contributed little to our knowledge of the affinities of plants. Whether true or not at the time it was made, such a statement would certainly not hold good now. Our whole conception of two at least of the great divisions of the vegetable kingdom—the Pteridophyta and the Gymnosperms—and of their mutual relations, is already profoundly influenced by the study of the ancient forms. Far greater results may be confidently expected from further research; but, by the work already accomplished, fossil botany has borne no small part in the advancement of our knowledge respecting the natural affinities of plants.

This may sound rather sanguine as to the future; and, indeed, it may be doubted whether anything more than an inspired generalization can be obtained from a process of ideas which must, of necessity, be diagrammatic and never purely biological. Still, as Dr. Scott remarks in the passage just quoted, there has of late been an undeniable movement in our physical knowledge of plants and plant life, especially in the two sub-kingsdoms which he names, distinctly due to researches in fossil botany. And no small part of the advance may be put down to the credit of Dr. Scott himself.

(2) Sir Archibald Geikie has revised and slightly increased his excellent little introduction to earth study and practical field geology. It is still the simplest and best book, at any rate for its size, for students and amateurs who intend to devote adequate time to open-air study. Its ninety figures admirably illustrate the text.

## GENERAL NOTICES.

## CLASSICS.

*The Odes of Horace, Book III.* Edited by H. Latta. (Bell & Sons.)

This is the second illustrated edition of the Third Book of the "Odes" which has come under our notice in the last few months. Except for the sake of the illustrations, it is difficult to see why either of the editors should have ventured into a field already so well occupied. Mr. Latta's notes are straightforward and unpretending, but they add nothing in the way of felicitous rendering or appreciation of Horace's meaning to what we already find in Page and Wickham, to whose editions he is chiefly indebted; nor do they bring difficult points of scholarship more within the range of schoolboys. It is, in fact, a pity that alternative versions, the discussion of which does so much to stimulate thought, are, for the most part, purposely avoided. Sometimes the less scholarly rendering, or, at any rate, that least approved by modern editors, is adopted. For example, "conjugo barbara turpis maritus vixit" is rendered "disgraced by a barbarous spouse," and "destituit deos mercede pacta" by "cheated the gods of their promised wages," without further comment. On "immunis aram si tetigit manus" there is a thoughtful discussion; but Dr. Gow's pretty suggestion that "immunis" means "unofficial," and points to a private man's offering, without pomp or ceremony, is not noticed; nor are any of Dr. Verrall's suggestive discussions alluded to. The Murena dissertation is, perhaps, beyond the range of schoolboys, and its views are not generally accepted; but surely the ingenious interpretation of "Aeli vetusto," as a playful address to his steward Lamia, deserves a place. The illustrations are good; and there is a useful "classical dictionary" of proper names.

*Vergil, Aeneid VI.* Edited by J. T. Phillipson. (Bell & Sons.)

An editor of the "Aeneid," and especially of the Sixth Book, labours under the same difficulty as the one who attacks the "Odes" of Horace. Conington's famous edition was not, it is true, written for schoolboys, but both Sidgwick's and Page's editions are within their range, and it is not easy for an accomplished scholar to improve upon them. Mr. Phillipson has used their editions very freely, as he tells us in his preface, and has done his work fairly, but it does not seem as if his renderings were happier or his explanations more lucid. In some cases, indeed, he has committed himself to questionable translations, as, for example, *longa dies*, "a far-off day"; *tenent media omnia silvae* "compass all between"; *ardentem et torva tuentem animum*, "her burning and frowning soul." Nor can we approve his note on the historic infinitive, which he says is used "in relating the climax of a series of actions," and "corresponds to our use of the present indicative." Neither of these statements is borne out by the best grammars. Riemann expressly says that it should not be rendered by the present in French, while the other characteristic mentioned, though applicable in some cases, is hardly universal. The illustrations, many of which are taken from the Vatican "Vergil," are interesting.

*Selections from Cicero.* Edited by J. F. Charles. (Bell & Sons.)

The selection is a good one. It falls into two groups. The first, illustrating the chief incidents of Cicero's career, begins with the description of his oratorical studies from the "Brutus," and includes well chosen extracts from the orations, such as the scourging of a Roman citizen by Verres, the murder of Milo, and the offer of a crown to Caesar from the second "Philippic." The other group contains some stories, such as the sale of the gardens of Canius and the passages from the "De Officiis" about Themistocles, Aristides, and Fabricius. The notes are clear and useful, and point to careful comparison of standard editions. One might object to *chiasmus* being described as "a double antithesis in introverted order," which suggests Dr. Johnson's famous definition of network. The appendix contains a very full list of constructions, as well as sentences for retranslation, and, like the other volumes of the series, a catalogue raisonné of proper names.

*Stories of Great Men.* Edited by F. Conway. (Bell & Sons.)

This reading book consists of selections from Livy and other authors, giving an idea of some of the chief heroes of Roman history from Romulus to Scipio Aemilianus. The idea is, of course, not a new one, but the extracts are well chosen, both as illustrations of the qualities the Romans most admired and as materials for an outline of Roman history. The group of extracts on the Second Punic War seem particularly well selected with a view to exhibiting, among other points the characters of Scipio Africanus and of Hannibal. The story is carried on to the death of the Carthaginian hero and the tragic close of his great rival's career. The book is nicely annotated, the introduction is carefully written and to the point, and the illustrations, except that of flogging in a Roman school, are well selected. It is well worth considering whether a set of extracts of this kind is not, in view of the limited time given to Latin reading in many schools, preferable to

a single book of Caesar or Livy, which examinations almost inevitably impose on teachers.

*Fables of Phaedrus: a Selection.* Edited by R. H. Chambers. (Bell & Sons.)

Phaedrus has many advantages as a reading book, and it is convenient to have a selection. The notes are very fair, but not unexceptionable. For example, on *suadebat asino fugere* we find "suadeo with infinitive is to persuade of a fact, not persuade to an action." *Suadeo* never means "to persuade," and occasionally takes an infinitive in its ordinary sense in Vergil and even in Cicero. Again, *defectus animi* should scarcely be described as a "middle," nor need *desertus viribus* be taken as an example of the ablative after a word expressing emptiness. "Well-turned phrases" for *verbosis strophis* misses the force of *verbosis*. But many of the notes are good. The introduction, dealing mainly with the fable, strikes one as a little above the heads of schoolboys. The illustrations seem not to be taken, as in other volumes of the series, from classical sources.

*The Catiline of Sallust.* Edited by G. H. Nall. (Macmillan.)

This is a good school edition of the "Catiline." The notes are sound and to the point, and state with clearness the arguments for and against conflicting interpretations. The edition has a vocabulary like the rest of the series. One is inclined to doubt whether it is desirable to postpone so long the possession of a dictionary and the learning how to use it. There is also a short and well written introduction summarizing the history of the conspiracy. The editor accepts Mommsen's view that Caesar was to some extent accessory to it, though it admits the antecedent improbability of it. This opinion is not universally held; Mr. Long considers there is no good evidence for it, and Prof. Beesly, in an interesting attempt to whitewash Catiline himself, very reasonably urges that Caesar, though rapidly coming to the front, was not yet a leader of the democratic party.

*First Latin Sentences and Prose.* By K. P. Wilson. (Blackwood.)

Mr. Wilson's book is not distinguished by any special features from many other books of the same class; and it, accordingly, calls for no detailed notice. We are not disposed to read through another Latin exercise book that proceeds on the orthodox lines from "of the table" to continuous prose by easy stages. Mr. Wilson has prefixed a few pages of English grammar to the Latin sentences, and these may be of use to those teachers who are forced to teach Latin to young children before they are fit to be taught it. But we really see no reason for the publication of this work.

*Arrian's "Coursing": Arriani "Cynegetica" notulis illustrabat*  
H. H. Johnson, B.A. (Dent.)

From title-page to finish this is an odd little shillingsworth. The imperfect *illustrabat* at once shows that Mr. Johnson has queer notions. Is it the imperfect of *laborious effort*, or does it denote *imperfection*, pure and simple? The civilized world, roughly speaking, has agreed with Cicero and the schoolmen that the so-called "perfect" is the appropriate tense of the Latin verb in this connexion. The title-page is followed by a strange preface, all quotations from books on coursing; but it offers no clue to the *raison d'être* of the edition. Then comes a long list of *errata* and *addenda*, in notes and text; but the list is by no means complete, and itself contains several misprints, though the book has been revised by a "First Class in Classic, [sic] Tripos." Next we have the notes, wherein is contained some curious information, interspersed with commonplace and elementary remarks on Greek. Last of all is placed the text of the treatise in the original. We are inclined to think that this sort of thing is better "in translations, sir." Certainly, the few sportsmen who can stand Arrian in the Greek original will scarcely need to be told that "Artemisium is a promontory of Eubœa," or that  $\mu\eta$  for  $\delta\upsilon$  is late Greek.

*Exercises in the Syntax and Idioms of Attic Greek.* By W. H. D. Rouse and J. M. Sing. (Rivingtons.)

This is a good book, intended, and well planned, for the use of upper forms. The idea of the compilers is that, even when pupils have arrived at "continuous prose," it is advisable to practise them from time to time with short sentences. It is, as we know, frequently the despair of composition masters that the idioms learnt in the earlier stages are afterwards forgotten. Here is the very book for those who experience the difficulty. The exercises are grouped in four series, which deal respectively with rules of syntax, differences between English and Greek idiom, technical phrases, and miscellaneous matters. There are well planned appendices on conditional sentences, the use of certain verbs, the calendar, fractions, proverbs, and interest; and there is a good general vocabulary. The only passage to which we take exception is one in which "general" and "particular" conditions are classified. The editors do not say clearly that the constructions in both kinds of conditions, when *future* time is referred to, are identical. Thus  $\delta\alpha\nu \epsilon\lambda\pi\omega, \delta\acute{\epsilon}\sigma\omega$  is on one page rendered, "If I find, I will give"; on another, "If ever I find, I will give." And, stranger still, the constructions used in "general" conditions referring to *present* time are entirely omitted. The whole of this section is confused, and should be rewritten. We can, however, confidently recommend Messrs. Rouse and Sing's book, as a whole, to the notice of those who have to teach candidates for college scholarships.

## SCIENCE.

"Organized Science Series."—*First Stage Hygiene*. By R. A. Lyster, B.Sc. (Clive.)

The author justly claims for this book the merit of being one connected whole, instead of a series of disjointed subjects. The earlier part follows the lines of an elementary treatise on physiology, with the difference that the pure physiology is kept down, and the practical applications are made most of. By the time the subject of digestion is reached we part company with our original companion and pass on to what is hygiene in its more special sense. The style is simple and clear, and the illustrations are clearly drawn. We again protest against the publisher's custom of placing no date on the title-page.

*Domestic Science*. By Thomas Cartwright, B.A., B.Sc. (Nelson.)

This gives us a course of experimental work in elementary physics and chemistry, in which, as far as possible, the things and processes of common household life are taken as the basis of study. The course is very well arranged and the wording simple. The book should serve a useful purpose.

*An Introduction to the Study of the Comparative Anatomy of Animals*. By G. C. Bourne, M.A. Vol. I. (Bell.)

Addressed "not to children, but to persons whose education is well advanced," this book is notable for its thoroughness of treatment. One half of it consists of a description of the frog, and succeeds in treating that much monographed "type" with some freshness of method. The second half deals with a number of Protozoa and Coelenterata. Accurate and first-hand information characterizes the whole. An intended second volume is delayed by the author's military duties.

"Organized Science Series."—*First Stage Botany*. By A. J. Ewart, D.Sc. (Clive.)

This is a very good introduction to the botany of flowering plants. The author begins with the general structure of the plant-cell, and then goes on to the structure of seeds and the physiology of a growing seedling. This early introduction of elementary notions of physiology, as illustrated by specific cases, and not merely in the abstract, is a very good feature. We should have preferred to find it preceding the section on the cell; and, indeed, the author himself suggests that students may take it in this order. Succeeding chapters deal with the root, shoot, flower, fruit, and natural orders. Instructions for practical work, including physiological experiments, are given in each chapter. Illustrations are abundant and good. It is a pity that Fig. 80 is printed upside down; and we are surprised to find the author falling into the vulgar error of calling the common *solanum* the *deadly* nightshade.

## MISCELLANEOUS.

*English Composition: a Manual of Theory and Practice*. By L. Cope Cornford. (David Nutt.)

It is hardly possible to conceive a more difficult task than that of writing a satisfactory English grammar. A book to teach the art of writing a good English style is incalculably more difficult to produce, if it is not an actual impossibility. Certainly neither of these tasks should be lightly undertaken. We have seen some good books designed to assist a boy or girl in putting together a simple essay, and we noticed one of them a few months ago; but a manual on the theory of English composition is something different from that. It might be a long matter to enumerate the necessary qualifications for setting about the construction of such a manual. One of them, perhaps, would be the gift of writing, and of invariably writing, clear and correct English. In the second sentence of his introduction Mr. Cornford says: "There is no subject in the teaching of which the personal element does not count for a chief factor; and in none, perhaps, more than in the teaching of *Composition*." How would Mr. Cornford justify to his pupils the words which we have italicized? What is their syntax? The best feature of this book is its collection of extracts from good authors, each followed by an analysis of its qualities, and suggestions for a parallel piece of work. That, at any rate, is on right lines, and calculated to be helpful.

*Laudate: a Hymn and Tune Book for use in Secondary Schools*.

Compiled by J. J. Findlay. (A. & C. Black.)

Dr. Findlay has done an excellent thing by putting together this collection of well written hymns set to melodious and generally familiar tunes. He says, what is undoubtedly true, that there is a demand for hymns in schools which are undenominational in character and which cannot use publications especially intended for the use of churches or chapels. The selection is thoroughly liberal and judicious; almost every well known hymn writer has been drawn on, both for words and tunes, and the book is certain to be useful for its intended purpose. It includes psalms as well as hymns, and there is an alternate sol-fa arrangement on every page.

*Lamb's Essays of Elia*. Second Series. Edited, with Notes, by N. L. Hallward, M.A. (Macmillan.)

This is a worthy pendant to Mr. Hallward's former volume, and completes an edition of the "Essays" of Lamb which is specially designed for Indian students of English. The notes are more copious than they need be for an English reader of Lamb, but entirely suited for one who has had to learn the language before he can enjoy its literature.

*The Manipulation of the Brush, as applied to Design*. By Stanley Thorogood. (Philip & Son.)

This large quarto, with many plates of progressive brush work designs in various colours, is intended as a course for higher-grade elementary and secondary schools. Mr. Thorogood says that he has felt the want of some useful handbook on the use of the brush as a means of expressing form and training the hand and the eye. We must say that, if he has really felt such a want, he must have failed to look about him, for there are plenty of books answering to the description. No doubt the present one is more than usually systematic, comprehensive, and suggestive. It is very well suited to its purpose, and provides ample material for the work of a term.

The month brings us a number of new Readers. In Prof. Meiklejohn's series we have Book V. of the "Caxton Historical Readers," *The Tudor Period, with Biographies of Leading Persons* (Holden). This is a good, simple summary, brightly written, in the sense that the brightest things are culled out of contemporary records. There are some appropriate illustrations.—*Great Irishmen: Short Lives written for Young Children* (Bell & Sons) is by the author of "Great Englishmen." The stories are well told, and they will certainly interest young readers.—Messrs. Chambers print a first and second *Infant Reader*, with coloured illustrations.

In the way of Reprints we have from Messrs. Macmillan F. T. Buckland's *Curiosities of Natural History*, which remain in the third generation scarcely less attractive and instructive than they were forty years ago.—Messrs. Cassell & Co. send an annual volume of their boy's magazine, *Chums*, from August to August, with thousands of pictures, tales, anecdotes, and jokes.—From the same publishers we have an anticipation of the special picture-book season, *Peter Piper's Peepshow*, by S. H. Haines, with some very humorous illustrations by Lewis Baumer and H. B. Neilson; and the annual volume of *Work*.

## CORRESPONDENCE.

## NATIONAL HOME-READING UNION.

To the Editor of the Educational Times.

DEAR SIR,—May I be allowed to remind your readers that the syllabus of subjects for the twelfth reading season of the National Home-Reading Union is ready?

For the information of those who are not acquainted with the Union, I should like to state that its aim is, briefly, to render reading attractive and profitable by issuing lists drawn up by authorities of the best books in various subjects, and by publishing magazines which contain introductions to the subjects under study, suggestions as to the best methods of reading the prescribed books, answers to questions, and criticism of essays, as well as news of other readers' doings.

The subjects included in the Young People's Course are:—(1) History and Biography, with special reference to King Alfred and his times; (2) Literature (Shakespeare, Prose, and Poetry); (3) Travel; (4) Romance and Humour; and (5) Nature-Study (for this, special editions of Richard Jefferies' "The Open Air" and "Nature near London" have been obtained).

For the General Course—a section intended for those who have but little leisure—the subjects are:—(1) Social Science; (2) The Reformation and the Revival of Learning (for this group special editions of the following have been obtained: Koestlin's "Luther," Froude's "Erasmus," Hudson Shaw's "Lectures on the Oxford Reformers," and Mrs. Charles' "Chronicles of the Schönberg-Cotta Family"); (3) Geology; (4) Italy in the Revival of Learning; (5) Rome; (6) Travel; (7) Biography; (8) Novels, Essays, and Poetry; and (9) a group of books chosen especially for Sunday school teachers.

The Special Course Section is intended for more advanced students who desire to receive systematic tutorial help, and includes the following subjects:—(1) English History, from 1789; (2) Modern English Literature; (3) The Tragedies of Shakespeare; (4) Browning; (5) Mediæval and Early Renaissance Literature; (6) India; (7) French History; (8) German Lyrical Poetry; (9) Education; (10) Astronomy.

Full information may be obtained from the Secretary, N.H.R.U., Surrey House, Victoria Embankment, London, W.C.—Yours faithfully,  
M. C. MONDY, Secretary.

## UNMANAGEABLE GIRLS.

To the Editor of the Educational Times.

SIR,—Our unmanageable girls are evidently a very real difficulty in the present day. To what a pass have things come when voluntary cases, as they are called, are taken in industrial schools—that is, cases which are voluntarily sent by the parents and paid for by them! There is even one institution in the North of London where such cases are taken from thirteen to nineteen (the more usual age is sixteen). But is there nothing that can be done short of this? Not improbably there are school-mistresses who have made this kind of girl their *spécialité*. If they, or parents who have been successful in treating such specimens, would write and state their experience, some good might be done.

**MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.**

A MEETING of the Council was held on September 15. Present: Dr. Wormell, Vice-President, in the Chair; Mr. Baumann, Rev. J. O. Bevan, Rev. A. W. Boulden, Mr. Brown, Mr. Butler, Mr. Charles, Mr. Eve, Mr. Millar-Inglis, Mr. Milne, Mr. Pinches, Rev. Dr. Scott, Rev. J. Stewart, and Rev. J. E. Symus.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the London School Board had resolved to grant Honour Certificates to pupils in their schools who obtain Certificates of the First Class, or the 1st Division of the Second Class, at the College Examinations.

Diplomas were granted to the following who had completed their subjects at the last Midsummer Examination of Teachers:—*Licentiate-ship*—Mrs. E. M. M. Shipham; *Associateship*—E. R. Booth, W. S. Carrick, T. Pickard, Miss E. S. Scriven, J. P. S. Varcoe.

The Report of the Finance Committee was adopted.

The Report of the Examination Committee was adopted.

The following persons were elected members of the College:—

- Miss M. K. Bell, A.C.P., L.L.A., 61 Grosvenor Place, Margate.
- Mr. W. W. Hayward, Barker Memorial School, Lomas de Zamora, Buenos Aires.
- Mr. N. Venkataswami Iyya, 44 College Street, Calcutta.
- Mr. T. H. Kirkby, 11 Chestnut Avenue, Derby.
- Miss M. P. Lovett Turner, A.C.P., 28 Hampton Road, Redland, Bristol.

The following books had been presented to the Library since the last meeting of the Council:—

- By W. B. CLIVE.—Wyatt's Tutorial History of English Literature.
- By Mr. J. L. LEES.—Lees' Metric Weights and Measures.
- By Mr. J. P. A. MARTIN.—Thierry-Mieg's Examen Critique des Sténographies Françaises et Étrangères.
- By Mr. J. F. MOON.—Aristotle's *Politica* et (*Economica*): Blouet's Class-Book of French Composition; Buckley's Translation of *Æschylus' Tragedies*; Fouquier's *Sintram*; Galpin's British Botany; Hume's History of England (6 vols.); Homer's *Iliad* and *Odyssey*; Kohlrausch's *Deutsche Geschichte*; Rühlé's French Examination Papers; Sargent's Easy Passages for Translation into Latin; Sims's *Mendelssohn's Letters*; Tarver's *Dumas' Monte Christo*; Welb's *Martial for English Readers*; *Weber's Weltgeschichte*.
- By the UNIVERSITY OF THE STATE OF NEW YORK.—Report of the College Department on the Professional Education in the United States.
- By the VOLTA BUREAU, WASHINGTON.—Helen Keller Souvenir, No. 2: Reports relating to the Education of the Deaf.
- By Prof. VICTOR SPIERS.—Spiers' First French Book.
- By A. & C. BLACK.—Hartog's Cours de Grammaire Française Élémentaire; Lyde's School Geography of the World.
- By BLACKIE & SON.—Blackie's Handbooks of English, Nos. I.-IV.; Science Handbook, No. IV.; South Kensington Drawing Sheets, Set IV.; Synopsis of Warner's Brief Survey of British History; Frew's Object Lessons in Geography and Science, Part 2; Kustner and Atkin's Short History of French Literature; Macaulay's Prophecy of Cypus; Sandford's *Virgil's Æneid*, Book III.; Smith's Dryden's Essay of Dramatic Poesy; Weekley's *Le Songe d'Or* and other Stories.
- By G. BELL & SONS.—Conway's Stories of Great Men; Charles' Selections from Cicero; Chambers' Selections from Phædrus; Lutter's *Horace*, Book III.; Bell's Reading Books; Great Irishmen; Phillipson's *Virgil's Æneid*, Book VI.; Marchant's *Xenophon's Anabasis*, Book I.; Minchin's *The Student's Dynamics*; Wells' *Sophocles' Antigone*.
- By T. BURLEIGH.—Popular Handbook of the British Constitution.
- By C. J. CLAY & SONS.—Cambridge Higher Local Examination Papers, June 1900; Blythe's Geometrical Drawing, Part II.; Nicklin's *Scott's Old Mortality*; *Peskett's Caesar*, De Bello Civili, Book III.
- By HACHETTE & Co.—Berthou's *Eckmann-Chatrion's Histoire d'un Conserit de 1813*; Testard's *Graduated French Naval Course*.
- By A. M. HOLDEN.—De Cusance's First French Book; Flux's *Building of the British Empire*.
- By MACMILLAN & Co.—Bury's *History of Greece*; Page's *Æneid of Virgil*, Books VII.-XII.
- By J. MURRAY.—Krisch's Technical School French Grammar.
- By SIR ISAAC PITMAN & SONS.—Vizetelly's *A Child's First Steps in French*.
- By W. RICE.—Anderson and Storr's *French Words and Phrases*.
- By WHITTAKER & Co.—Programme of Technological Examinations of the City and Guilds of London Institute
- Calendars of Edinburgh University, Glasgow University, St. Andrews University, Yorkshire College, Leeds, Queen's College, Cork, University of Birmingham, University College, Bristol.
- N.U.T. Report, 1900.
- List of Members, &c., of the Society of Accountants and Auditors.

**COLLEGE OF PRECEPTORS.**

**PROFESSIONAL PRELIMINARY EXAMINATION—PASS LIST.**

SEPTEMBER, 1900.

THE Supplementary Examination by the College of Preceptors for Certificates recognized by the General Medical Council, the Incorporated Law Society, the Royal College of Veterinary Surgeons, the Pharmaceutical Society of Great Britain, the Education Department, and other bodies, was held on the 4th, 5th, and 6th of September, in London, and at four other local centres, viz., Birmingham, Bristol, Leeds, and Liverpool. The following candidates obtained Certificates:—

<b>FIRST CLASS.</b>		
<i>Pass Division.</i>		
Acland, J. H. D.	Ironside, A. E.	Rossiter, H. T.
Adler, J. E.	Johnson, V. G.	Shaw, E. H.
Austin, G. E.	Macdonald, A. H.	Stevens, R. H. E.
Daw, S. W.	Ockwell, C. M.	Thompson, E. M.
Doo, H.	Page, G. F.	Thompson, G. S.
Eager, G.		
<b>SECOND CLASS.</b>		
<i>First Division.</i>		
Armstrong, A. G.	Boome, E. J.	Taylor, R. T.
Bennett, C. N.	Bracey, H. C. H.	
<b>Second Division.</b>		
Aveston, J. J.	Keates, C. C.	Roberts, W. R. S.
Barker, R. S.	Marshall, C. H.	Sanson, F. A.
Belcher, E.	Matheson, D. C.	Sebastian, G. N. B.
Bevan, L. E. W.	Miller, H. A. W.	Sheppard, C. W.
Binks, H. W.	Morson, A. C.	Taylor, C. H.
Carless, S.	Owen, H. J.	Walker, H. A. H.
Casey, E. R.	Phillips, F. E. L.	Weller, C.
Clough, A. H.	Pickett, A. C.	Wilkinson, W. C.
Gaunt, J. K.		
<b>Third Division.</b>		
Balchin, E. J.	Hagger, W. A.	Kavanagh, L.
Beadnell-Gill, R.	Hindle, J. W.	Sanders, R.
Butcher, W.	Ievers, H. W.	Sewell, E. D.
Cutt, A. H. H.	Jago, W. J.	Wellington, C. P.
Fenn, R. P.	Jarvis, H.	Young, J. S.
Fielder, T. J. G.		

**CERTIFICATE EXAMINATION (MIDSUMMER, 1900).**

The following is the list of the successful candidates at the Colombo-Centre:—

N.B.—The small italic letters denote that the candidate to whose name they are attached was distinguished in the following subjects respectively:—  
*a* = Arithmetic, *e* = Euclid, *eu* = English,  
*al* = Algebra, *g* = Geography.

The small figure 1 prefixed to name in the Second Class List denotes that the candidate was entered for the First Class.

<b>Boys.</b>	
<b>SECOND CLASS.—2ND DIVISION.</b>	
1Sattrukulasinge, A. B.	Private tuition.
<b>SECOND CLASS.—3RD DIVISION.</b>	
Cadiranelu, K. P.	City College, Colombo.
De Silva, A.	" "
<b>THIRD CLASS.—1ST DIVISION.</b>	
D'Zilva, D. O.	<i>e.g.a.al.</i> City College, Colombo.
Thambayah, S.	<i>eu.</i> " "
Wijayaratne, R. J. V. de S.	" "
<b>THIRD CLASS.—2ND DIVISION.</b>	
Hesse, A.	Private tuition.

**JUNIOR FORMS EXAMINATION.**

<b>Boys.</b>	
Blackett, E.	City College, Colombo.
Fernando, M. J.	" "
Gavaramattu, B.	" "
Jacob de Silva, S. M.	" "
Kunagaratnaw, W. R.	" "
Lye, B.	" "
Mutukumaru, T.	" "

**CERTIFICATE EXAMINATION (MIDSUMMER, 1900).**

**ERRATUM IN CLASS LIST.**

SECOND CLASS (GIRLS).

Insert in 2nd Division: Hill, G. B. B., St. Margaret's School, Streatham Common.

**MATHEMATICS.**

**14520** (Professor N. BHATTACHARYYA) and **14670** (E. W. ADAIR).—Required a *direct* proof of the old problem:—If the bisectors of the base angles of a triangle, being terminated at the opposite sides, be equal, show that the triangle is an isosceles one. (See TODDUNTER'S *Euclid*.)

I. Solution by Rev. T. ROACH, M.A.

Let  $A = 2\theta + 2\phi$ ,  $B = 2\theta - 2\phi$ ;

$$\therefore \frac{\sin(2\theta + 2\phi)}{\sin(3\theta + \phi)} = \frac{BE}{BA} = \frac{AD}{AB} = \frac{\sin(2\theta - 2\phi)}{\sin(3\theta - \phi)}$$

$$\therefore \cos 2\theta \sin 2\phi \{ \sin(3\theta - \phi) + \sin(3\theta + \phi) \}$$

$$= \sin 2\theta \cos 2\phi \{ \sin(3\theta + \phi) - \sin(3\theta - \phi) \};$$

$$\therefore \sin \phi = 0 \text{ or}$$

$$\cos 2\theta \sin 3\phi \cdot 2 \cos^2 \phi = \sin 2\theta \cos 3\theta \cos 2\phi;$$

$$\therefore 2 \cos^2 \phi \sin \theta = -2 \sin \theta \cos \theta \cos 3\theta;$$

∴  $\sin \theta = 0$ , which is impossible, or  $\cos 2\phi + 1 = -(\cos 4\theta + \cos 2\theta)$ ;  
 ∴  $\cos 2\phi + \cos 2\theta = -(1 + \cos 4\theta)$ ; ∴  $2 \cos(\theta + \phi) \cos(\theta - \phi) = -2 \cos^2 2\theta$ ,  
 which is impossible, as each factor is positive; therefore  
 $\sin \phi = 0$ , and  $A = B$ .

II. Solution by R. CHARTRES.

(i.) *Indirect*.—By Euc. VI. B,  $ac - ab^2c/(a+c)^2 = ab - abc^2/(a+b)^2$ ,  
 or  $a(c-b) = abc \{b/(a+c)^2 - c/(a+b)^2\}$ ,  
 of which  $c-b$  is a factor; therefore  $b=c$ , or the triangle is isosceles.  
 Indirect proofs are given in TODHUNTER'S *Euclid*, p. 317, and in NIXON'S  
*Euclid Revised*, p. 383.

The following is submitted as a direct proof:

(ii.) *Direct*.—Since  $BD = CE$  and they subtend the same angle  $A$ , therefore the circumcircles of  $ABD$  and  $AEC$  are equal, and therefore the chords  $DG, GC$  are equal and likewise  $GE = GB$ ; therefore the triangles  $EGC, DGB$  are equal in all respects, and therefore the perpendiculars from  $G$  on  $BD, EC$  are equal, or  $GF$  bisects the angle  $BFC$ .  $F$  is clearly the incentre; therefore  $AF$  bisects  $A$ . Consequently  $AF$  passes through both  $P$  and  $Q$ , the middle points of the equal arcs  $DGB, EGC$ , points equally distant from  $BD$  and  $EC$ , and therefore on opposite sides of  $FG$ ; that is, they coincide at  $G$ , and the line  $AFG$  bisects both  $BFC$  and  $A$ ; that is,  $ABC$  is isosceles.

[Dr. J. S. MACKAY observes:—"A direct proof of this Question will be found in the *London, Edinburgh, and Dublin Philosophical Magazine* (Fourth Series), Vol. XLVII., pp. 354-7 (1874)."

Mr. R. TUCKER further observes:—"This Question was proposed as Quest. 1907 in *The Lady's and Gentleman's Diary* for 1856, and is solved on p. 58 (1857) by Messrs. T. T. WILKINSON, J. W. ELLIOTT (the Proposer), and (analytically) by others. Mr. WILKINSON returns to the problem in his 'Notæ Geometricæ' in the *Diary* for 1859 (p. 87). A historical note is added on p. 88 which traces the Question back to the *Nouvelles Annales* for 1842. Professor SYLVESTER drew attention to the subject in the *Philosophical Magazine* for November, 1852. Dr. ADAMSON further discusses the matter in the *Philosophical Magazine* for April, May, and June, 1853. The best article I know on Quest. 1907 (*Diary*) appears in § 11 of WILKINSON'S 'Horæ Geometricæ,' in the *Diary* for 1860, pp. 84-86, with a neat proof by the Rev. W. MARON. I find that the above references are given in Dr. MACKAY'S *Euclid*, p. 108. In the Key to this work Dr. MACKAY prints a proof by M. DESCURS (cf. p. 92)."

And Mr. W. J. GREENSTREET adds the following interesting information:—"For this and the similar theorem for two symmedians, v. *Intermédiaire des Mathématiciens*, Vol. II. (1895), pp. 151, 325. If the external bisectors of  $B$  and  $C$  are equal, it does not always follow that the triangle is isosceles. The data lead to  $4Rr_1 = a^2 + bc$  in the triangle sides  $a, b, c$  (v. *Mathesis*, p. 261, 1895)."

14251. (R. KNOWLES, B.A.)—Prove that the sum of the first  $r$  coefficients in the expansion of  $(1-x)^{-n}$  is  $\{r(r+1) \dots (r+n-1)\}/n!$ .

Solution by Rev. T. MITCHESON, B.A.; and others.

TODHUNTER shows that the sum of the first  $r+1$  coefficients in this expansion is  $(n+1)(n+2) - (n+r)/r!$ . For  $r$  put  $r-1$ ; then we have  $(n+1)(n+2) - (n+r-1)/(r-1)! = (n+r-1)!/n!(r-1)!$   
 $= \{(n+r-1)(n+r-2) \dots r\}/n!$

14250. (ROBERT W. D. CHRISTIE.)—Prove the following very general theorem:—  $x \cdot 10^{pn+k} = \frac{Pm+x}{\{ \frac{1}{10} (XP+1) \}^k \pmod{P}}$  (mod P),

where  $x, n, k$  are any integers,  $P$  any odd prime,  $p$  the period of  $1/P$ ,  $m$  any integer required to make the remainder an integer (always possible).

Ex. gr.—(1)  $x = 3, k = 5, P = 7, X = 1, 3, 7, 9$ , when  $P$  ends in 9, 3, 7, 1, respectively. Therefore

$$3 \cdot 10^{6n+5} = \frac{7m+3}{5^5 \pmod{7}} \pmod{7} = \frac{7m+3}{3} = 1 \pmod{7}.$$

Thus  $3 \cdot 10^{6n-1} = 1 \pmod{7}$ .

(2)  $n = 7, k = 1, P = 19$ .

$$7 \cdot 10^{18n+k} = (19m+7)/2^k = 13 \pmod{19}.$$

Thus  $7 \cdot 10^{18n+1} = 13 \pmod{19}$ .

Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.; and the PROPOSER.

Let  $a$  be any base prime to the prime  $P$ , and let  $p$  be the least exponent giving  $a^p \equiv 1 \pmod{P}$ . Let  $X$  be a number such that  $(XP+1)+a = \text{integer}$ .

Then  $x \cdot a^{np+k} \{ (XP+1)/a \}^k = x \cdot a^{np} \cdot (XP+1)^k \equiv x \pmod{P}$

[because  $a^{np} \equiv 1$ , and  $(XP+1)^k \equiv 1 \pmod{P}$ ]. Now substitute the residue of  $(XP+1)+a$  to mod  $P$  in the sinister, as is clearly admissible; therefore

$$x \cdot a^{np+k} [\text{residue of } \{ (XP+1)/a \}^k \pmod{P}] \equiv x \pmod{P} = (mP+x).$$

Now make  $a = 10$ , and divide by the expression in the brackets [...]; this gives the required result.

14430. (J. A. THIRD, D.Sc.)—A conic, whose centre is  $O$ , touches the sides  $BC, CA, AB$  of a triangle at  $X, Y, Z$ , and  $O'$  is the point of concurrence of  $AX, BY, CZ$ . Show that  $O$  bears to  $ABC$  the same relation that the isotomic conjugate of  $O'$  bears to the anticomplementary triangle of  $ABC$  (the triangle formed by parallels through  $A, B, C$  to the opposite sides).

Solution by Professor A. DROZ-FARNY; and Professor K. J. SANJANA, M.A.

Il suffit de démontrer que  $O$  est le point complémentaire du conjugué isotomique de  $O'$ , point de GERGOINNE de la conique inscrite.

Soit  $P$  un point quelconque du plan du triangle  $ABC$  et  $g$  une transversale quelconque passant par  $P$ . Cette droite coupe les côtés en  $A', B', C'$ . Soit  $A''$  sur  $BC$  l'isotomique de  $A'$ ; les trois points  $A'', B'', C''$  sont sur une ligne droite  $g'$  la transversale réciproque de  $g$  (nomenclature de M. DE LONGCHAMPS). Comme on le démontre aisément, lorsque  $g$  tourne autour de  $P$ ,  $g'$  enveloppe une conique inscrite au triangle et touchant les côtés aux points  $X, Y, Z$  isotomiques des points d'intersection de  $PA, PB, PC$  respectivement avec  $BC, AC, AB$ . Les points  $O'$  et  $P$  sont donc conjugués isotomiques. Soient  $a$  le point milieu de  $BC$  et  $a'$  celui de  $AX$ . D'après une proposition connue, cas particulier du théorème de NEWTON sur le lieu des centres des coniques inscrites dans un quadrilatère,  $O$  est le point de croisement des droites  $aa', bb', cc'$ . Or,  $G$  étant le centre de gravité du triangle, soit  $u$  le point d'intersection de  $PG$  avec  $aa'$ . Les triangles  $AGP$  et  $uaG$  étant semblables,  $Ga : GP = Ga : GA = 1 : 2$ ;  $u$  est donc le complémentaire de  $P$  et par conséquent un point fixe sur  $PG$  par lequel passeront de même  $bb'$  et  $cc'$ ;  $u$  coïncide donc avec  $O$ ; d'où la proposition.

14412. (H. A. WEBB.)—Three equilateral triangles are described outwards on the sides of any triangle as bases. Prove geometrically that the centres of these three equilateral triangles form the vertices of a fourth equilateral triangle.

Solution by J. G. SMITH; W. J. GREENSTREET, M.A.; and many others.

The three circles round the equilateral triangles meet in a point. For let two meet in  $O$ ; then  $\angle BOC = \angle COA = 120^\circ$ . Therefore  $\angle BOA = 120^\circ$ . Therefore  $O$  is on the circle  $ABR$ .

Join  $OA, OB, OC$ , and the centres of the circles  $X, Y, Z$ . Then  $OA$  is common chord of circles  $ARB$  and  $CAQ$ . Therefore  $YZ$  is perpendicular to  $OA$ . Similarly,  $XY$  is perpendicular to  $OC, ZX$  to  $OB$ ; but  $OA, OB, OC$  are equally inclined to one another. Therefore  $YZ, ZX, XY$  are equally inclined. Therefore  $XYZ$  is equilateral.

Extensions.—(1) Same holds if the triangles are inscribed inwards.

(2) This theorem may be extended thus:—If any similar triangles be described inwards or outwards on the sides of any triangle so that each angle may be in turn vertical angle, then the centres of the circles round those triangles form the vertices of a new triangle similar to the described triangles.

The circles will meet in a point, and so on.

14522. (J. H. TAYLOR, M.A.)—If  $A, B, C$  are vertices of equilateral triangles described all externally, or all internally, on the sides of a triangle  $A'B'C'$ , and  $Aa, Bb, Cc$  are diameters of circles circumscribing those equilateral triangles, then  $AA', BB', CC'$  are equal and concurrent, and  $a, b, c$  form an equilateral triangle and are middle points, each of a pair of arcs, on sides of the triangles  $ABC, A'B'C'$ .

*Solution by the PROPOSER and Professor SANJANA.*

AA', BB', CC' are concurrent, since the equilateral triangles are a particular case of similar isosceles triangles. (Quest. 14493.)  
 B'A', A'B = CA', A'C', each to each, and  $\angle B'A'B = CA'C'$ ; therefore  $B'B = CC' = AA'$  in like manner.  
 a, b, c are middle points of arcs containing angles of  $120^\circ$ , and therefore are centres of equilateral triangles described internally on the sides of the triangle B'CA'; therefore abc is an equilateral triangle. (Quest. 14412.)  
 It has been shown (Quest. 14382) that AA', BB', CC' intersect at  $60^\circ$ .

$\angle aOB' = aC'B' = 30^\circ = aOC$ ; therefore a is the mid-point of arc containing angle of  $120^\circ$  on CB, and it is also mid-point of a similar arc on CB.

[Regarding this Question as well as Quest. 14412, Mr. GREENSTREET observes:—For complete discussion of the numerous properties connected with these triangles, with copious bibliographical references, v. *Proc. Ed. Math. Soc.*, Vol. xv., p. 100 (Dr. J. S. MACKAY on "Isogonic Centres").]

**11069.** (J. J. BARNIVILLE.)—Prove that

$$1^5 + (1^5 + 2^5) 2^{-1} + (1^5 + 2^5 + 3^5) 2^{-2} + \dots = 2744,$$

$$1^3 + (1^3 + 3^3) 2^{-1} + (1^3 + 3^3 + 6^3) 2^{-2} + (1^3 + 3^3 + 6^3 + 10^3) 2^{-3} + \dots = 6416,$$

$$1^2 + (1^2 + 4^2) 2^{-1} + (1^2 + 4^2 + 10^2) 2^{-2} + (1^2 + 4^2 + 10^2 + 20^2) 2^{-3} + \dots = 2016;$$

$$n \cdot 1^3 + (n-1) 2^3 + \dots + 2(n-1)^3 + 1 \cdot n^3 = \frac{1}{2} n(n+1)(n+2)(3n^2 + 6n - 1);$$

in the figurate series 1, 7, 28, ...,  $66u_n + 26(u_{n+1} + u_{n-1}) + u_{n+2} + u_{n-2}$   
 = a sum of consecutive fifth powers;  
 the ultimate term of the series 1,  $\frac{1}{2}, \frac{1}{3}, \frac{1}{4}, \frac{1}{5}, \frac{1}{6}, \dots$  is  $2 \sin \frac{1}{10} \pi$ .

*Solution by H. W. CURJEL, M.A.*

Let  $S(x) = 1^5 + (1^5 + 2^5)x + (1^5 + 2^5 + 3^5)x^2 + \dots$   
 and  $S_n = 1^n + 2^n x + 3^n x^2 + \dots$

$$S_0 = \frac{1}{1-x}, \quad S_1 = \frac{1}{(1-x)^2}, \quad S_2 = \frac{1}{1-x} (-S_0 + 2S_1) = \frac{1+x}{(1-x)^3},$$

$$S_3 = \frac{1}{1-x} (3S_2 - 3S_1 + S_0) = \frac{1+4x+x^2}{(1-x)^4},$$

$$S_4 = \frac{1}{1-x} (4S_3 - 6S_2 + 4S_1 - S_0) = \frac{1+11x+11x^2+x^3}{(1-x)^5},$$

$$S_5 = \frac{1}{1-x} (5S_4 - 10S_3 + 10S_2 - 5S_1 + S_0) = \frac{1+26x+66x^2+26x^3+x^4}{(1-x)^6};$$

therefore  $S_x = \frac{1+26x+66x^2+26x^3+x^4}{(1-x)^7} \dots (1);$   
 therefore first series =  $S(\frac{1}{2}) = 4328.$

[The rest in Volume.]

**14463.** (R. C. ARCHIBALD, M.A.)—Express the coordinates of any point on the cardioid as rational functions of a variable parameter, and show that the locus of a point which moves such that the triangle formed by joining the points of contact of the tangents drawn therefrom to the cardioid is of constant area and in general a curve of the eighth degree. [This theorem is due to Professor ZAHRAUDUK.]

**11427.** (R. LACHLAN, M.A.)—If the points of contact of the three tangents which can be drawn from the point P to the cardioid

$r = a(1 + \cos \theta)$  be collinear, prove that (1) the locus of P is a circle  $r + a \cos \theta = 0$ ; and (2), if the feet of the three normals which can be drawn from P be collinear, the locus of P is the circle  $3r = a \cos \theta$ .

*Solution by Professor SANJANA, M.A.*

We have  $x = r \cos \theta = 2a \cos^2 \frac{1}{2} \theta \cos \theta = 2a(1-t^2)/(1+t^2)^2,$   
 and  $y = r \sin \theta = 2a \cos^2 \frac{1}{2} \theta \sin \theta = 4at/(1+t^2)^2,$   
 where  $t = \tan \frac{1}{2} \theta.$

The normal makes with the radius vector the angle  $\frac{1}{2} \theta$ ; hence, its inclination to the axis of x is  $\frac{3}{2} \theta$ , that of the tangent  $\frac{1}{2} \pi + \frac{1}{2} \theta$ . Thus the equation of the normal at t is

$$y - \frac{4at}{(1+t^2)^2} = \frac{3t-t^3}{1-3t^2} \left( x - \frac{2a(1-t^2)}{(1+t^2)^2} \right),$$

or, on reduction,  $y(1-3t^2) - x(3t-t^3) + 2at = 0.$

Similarly, the equation of the tangent is

$$y(3t-t^3) + x(1-3t^2) - 2a = 0.$$

From any point P (hk), let three tangents be drawn to the curve; then the three points of contact are given by the cubic

$$kt^3 + 3ht^2 - 3kt + 2a - h = 0. \quad [\text{The rest in Volume.}]$$

*Alternative Proof of PTOLEMY'S Theorem, by R. F. DAVIS, M.A.*

Let P be a point on the circumcircle of ABC, between A and C (say). Produce PC to Q so that the angle PBQ = ABC. Then, obviously, the triangles PBQ, ABC are similar; and so also the triangles OBQ, ABP.

Thus  $PQ = (b/c) PB;$   
 $QC = (a/c) PA.$   
 Since  $PQ = QC + PC,$   
 $bPB = aPA + cPC.$

**14478.** (Rev. T. MITCHESON, B.A.)—P, Q are the ends of conjugate semi-diameters of an ellipse, and a straight line drawn from the intersection of the normals at P and Q, through the centre C, meets PQ in S, whilst the tangents meet at the point (h, k); show that

$$CS = \frac{a^2 b^2}{(a^2 k^2 + b^2 h^2)^{3/2}}$$

*Solution by R. TUCKER, M.A.; F. H. PRACHELL, B.A.; and others.*

Let the normals meet in O; then the equation to OC is

$$ax/(\cos \phi - \sin \phi) = by/(\cos \phi + \sin \phi) \dots (i.),$$

and to PQ is

$$hx/a^2 + ky/b^2 = 1 \dots (ii.),$$

whence

$$(h/a)(\cos \phi + \sin \phi) = (k/b)(\cos \phi - \sin \phi) \dots (iii.).$$

From (i.) and (iii.)

$$a^2 kx - b^2 hy = 0,$$

but (ii.) gives

$$b^2 hx + a^2 ky = a^2 b^2;$$

hence OC is perpendicular to PQ; whence

$$CS = \sqrt{(x^2 + y^2)} = \&c.$$

**QUESTIONS FOR SOLUTION.**

**14675.** (The late Professor WOLSTENHOLME, M.A., Sc.D.)—In the tetrahedron OABC the sum of the faces ABC, OBC is equal to the sum of the faces OCA, OAB. Prove that

$$(a-x)/\sin \frac{1}{2}(X-A) = (b-y)/\sin \frac{1}{2}(B-Y) = (c-z)/\sin \frac{1}{2}(C-Z)$$

= some positive quantity.

[The lengths OA, OB, OC are denoted by a, b, c; and the lengths BC, CA, AB by x, y, z; and the dihedral angles opposite these edges by A, B, C, X, Y, Z respectively.]

**14676.** (Professor NEUBERG.)—On donne deux points A, A', et deux courbes  $\Delta, \Delta'$ . En un point quelconque M de  $\Delta$  on mène la tangente, qui coupe  $\Delta'$  en un point M'. Les droites AM et BM' se coupent en un point P. Trouver la tangente à la courbe décrite par P lorsque M parcourt  $\Delta$ .

**14677.** (Professor JAN DE VRIES.)—The sides of three complete  $(2n+1)$ -laterals are touched by a conic. Prove that their vertices are joined by a curve of degree  $3n$ .

**14678.** (Professor E. J. NANSON.)—Show that the coordinates of the points of intersection of a conic S with the polar of the point xyz are given by

$$\begin{aligned} &= \Delta x^2 - AS & : & \Delta xy - HS + \Theta u_3 & : & \Delta xz - GS - \Theta u_2 \\ &= \Delta yx - HS - \Theta u_3 & : & \Theta y^2 - BS & : & \Delta yz - FS + \Theta u_1 \\ &= \Delta xz - GS + \Theta u_2 & : & \Delta zy - FS - \Theta u_1 & : & \Delta z^2 - CS, \end{aligned}$$

where  $u_1, u_2, u_3$  are the half-differential coefficients of S;  $\Delta$  is the discriminant of S; A, B, &c., are the co-factors of a, b, &c., in  $\Delta$ ; and  $\Theta^2 = -\Delta S$ .

**14679.** (J. A. THIRD, M.A., D.Sc.)—If P be the centre of a conic circumscribed to a triangle ABC, and Q the point of concurrence of the joins of A, B, C to the opposite vertices of the triangle formed by the

tangents at A, B, C, then P and Q are isotomic conjugates with respect to the complementary triangle of ABC

**14680.** (Professor SANJANA, M.A.)—Prove that the locus of points from which tangents drawn to the ellipse  $x^2/a^2 + y^2/b^2 - 1 \equiv S = 0$  form with their chords of contact triangles whose orthocentres lie on S is the sextic

$$x^4y^2a^2(a^2 - b^2)^2 + x^2y^4b^2(a^2 - b^2)^2 - 2x^2y^2(a^4 - a^4b^4 + b^4) - x^4a^2b^6 - y^4b^2a^6 + x^2b^6(a^2 + b^2)^2 + y^2a^6(a^2 + b^2)^2 = 0.$$

Show that this sextic breaks up into the conic  $a^2x^2 + b^2y^2 = (a^2 + b^2)^2$  and the quartic  $b^6x^2 + a^6y^2 = x^2y^2(a^2 - b^2)^2$ ; and explain the result. In the parabola  $y^2 = 4ax$  the locus is the quartic

$$(x + 2a)(xy^2 + 2ay^2 + 4a^3) = 0.$$

Explain the appearance of the two factors.

**14681.** (Professor U. CHANDRA GHOSH.)—Determine the maximum ellipse having double contact with a given conic, the chord of contact being a given line.

**14682.** (Professor E. N. BAKISIEN.)—Soit ABC un triangle. Calculer le rayon d'un cercle tangent à la fois au cercle inscrit et aux côtés AB, AC.

**14683.** (Professor P. LEVERRIER.) Etant donné un triangle ABC et un cercle O, on demande de couper le triangle par une transversale  $a\beta\gamma$  telle que les cercles  $a\beta C$  et  $a\gamma B$  soient égaux et que leur axe radical soit tangent au cercle O.

**14684.** (D. BRIDDLE.)—If a tetrahedron have its opposite edges equal, the point of contact of the inscribed sphere with any face is at the circumcentre of the face.

**14685.** (R. TUCKER, M.A.)—Find the H.C.F. of

$\cos(C - \omega) \cos(A - \omega)$	$-\cos \omega \cos(A - \omega)$	$\cos^2 \omega$
$\cos^2 \omega$	$\cos(A - \omega) \cos(B - \omega)$	$-\cos \omega \cos(B - \omega)$
$-\cos \omega \cos(C - \omega)$	$\cos^2 \omega$	$\cos(B - \omega) \cos(C - \omega)$
and		
$c \cos(A - \omega)$	$-a \cos \omega \cos(A - \omega)$	$a \cos^2 \omega$
$a$	$b \cos(A - \omega)$	$-b \cos \omega$
$b \cos(C - \omega)$	$c \cos^2 \omega$	$c \cos(B - \omega) \cos(C - \omega)$

**14686.** (R. F. DAVIS, M.A.)—If S be a given point, and KK' a given line, P a variable point moving in such a manner that  $SP \cdot PM = \text{constant}$ , PM being the perpendicular upon KK', prove the following construction for the tangent at P:—Produce SP to Q so that  $PQ = nSP$ ; draw QR perpendicular to SP meeting KK' in R; join QP, which will be the tangent at P.

**14687.** (R. C. ARCHIBALD, M.A.)—If a base angle of an isosceles triangle moves round a given circle with centre O, while the side (whose end traverses the circle) passes through a fixed point S of the circle; if, furthermore, the middle point of the base (which always passes through O) also lies on the circle, show that the vertex of the triangle traces out a cissoid of DIOCLES, while the free side envelops a cardioid.

Choose S as origin. Then any radius vector  $SP'$  of a point  $P'$  of the cissoid cuts the cardioid in a point P. If  $SP_1 = PP'$  be measured off in  $SP'$ , the locus of  $P_1$  is the conchoid of NICOMEDES, which has the same cusp and asymptote as the cissoid of DIOCLES. Its equation is  $r = 2a(1/\cos \theta - 1)$  when  $SO = a$ .

**14688.** (Rev. T. ROACH, M.A.)—TP, TP' are supplemental chords equally inclined to the curve (ellipse). Prove that  $TP : TP' = 2SP : S'P$ .

**14689.** (G. H. HARDY, B.A.)—Prove that

$$\psi(x) = x \log x \dots \log^{(\mu-1)} x \{ (\log x)^\nu \sin^2 \log^{(\mu-1)} x + (\log x)^\mu \cos^2 \log^{(\mu-1)} x \},$$

where  $\mu + 1 > \nu > \mu > 0$ , and  $\log x \equiv \log x$ ,  $\log^2 x = \log \log x$ , ..., tends steadily to  $\infty$  with  $x$ , from a certain value of  $x$ , while its infinity (croissance) is not comparable with that of any function of the logarithmic scale; and, further, that  $\int \frac{dx}{\psi(x)}$  is finite and determinate if

$$\mu + \nu > 2 > \mu + 1 > \nu > 1 > \mu > 0.$$

For example,  $\mu = \frac{3}{2}$ ,  $\nu = \frac{5}{2}$ .

**14690.** (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Solve (in integers), with numerical examples, the equations  $N_1 \cdot \beta_2 = N_2 \cdot \beta_1$ , where  $N_r = x^r + 4y^r$ ,  $\beta_r = (x^r + 3^3 \cdot y^r) + (x^r + 3y^r)$ .

**14691.** (Rev. J. CULLEN.)—A point P is taken in the plane of a given triangle ABC. AP, BP, CP cut the sides in D, E, F. The circle DEF cuts the sides again in D', E', F'; then AD', BE', CF' concur in a point Q. Show that (1), if P lies on the isogonal transformation of the LEMOINE line, then Q lies on the radical axis of DEF and the circumcircle; (2) if P lies on  $f(A, B, C) = 0$ , then Q lies on  $f(A^{-1}, B^{-1}, C^{-1}) = 0$ , where  $A = (b\beta + c\gamma)/\beta\gamma$ , &c.; (3) hence, if P lies on a conic circumscribing the triangle ABC, the isogonal conjugate of Q lies on a conic circumscribing the triangle whose vertices are the associated symmedian points. [If the latter locus be the circumcircle, that of P is  $\Sigma \cos(B - C)/a = 0$ ; and, if the locus of P be KIEPERT'S hyperbola, the other is  $\Sigma (\cos B - \cos C)/a = 0$ , a rectangular hyperbola, with respect to which ABC is self-conjugate.]

**14692.** (ROBERT W. D. CHRISTIE.)—Find perfectly general expressions for the sum of any  $n$  integral squares equal to the sum of  $n$  others when the sums of their roots are equal, also ( $n > 2$ ): e.g.,  $n = 3$ ,  $(a + b + c)^2 + (a + d + c)^2 + (a + c - b - d)^2$

$$= (a + c - b)^2 + (a + c - d)^2 + (a + b + c + d)^2.$$

**14693.** (J. J. BARNVILLE, B.A.)—Having  $u_n = u_{n-2} + u_{n-3}$ , prove that

$$\begin{aligned} \frac{1}{2 \cdot 4 \cdot 5} + \frac{1}{3 \cdot 5 \cdot 7} + \frac{1}{4 \cdot 7 \cdot 9} + \frac{1}{5 \cdot 9 \cdot 12} + \dots &= \frac{1}{24}, \\ \frac{1}{2 \cdot 3 \cdot 4 \cdot 5 \cdot 9} + \frac{1}{3 \cdot 4 \cdot 5 \cdot 7 \cdot 12} + \frac{1}{4 \cdot 5 \cdot 7 \cdot 9 \cdot 16} + \dots &= \frac{1}{840}, \\ \frac{2 \cdot 4 \cdot 12}{3 \cdot 5 \cdot 7 \cdot 9} + \frac{3 \cdot 5 \cdot 16}{4 \cdot 7 \cdot 9 \cdot 12} + \frac{4 \cdot 7 \cdot 21}{5 \cdot 9 \cdot 12 \cdot 16} + \dots &= \frac{1}{4} + \frac{1}{4} - \frac{1}{7}, \\ \frac{2^2}{1 \cdot 3 \cdot 5} + \frac{3^2}{1 \cdot 4 \cdot 7} + \frac{4^2}{1 \cdot 5 \cdot 9} + \frac{5^2}{2 \cdot 7 \cdot 12} + \dots &= \frac{41}{24}, \\ \frac{1}{9^2 - 1^2} + \frac{2}{12^2 - 2^2} + \frac{2}{16^2 - 2^2} + \frac{3}{21^2 - 3^2} + \dots &= \frac{1}{16}. \end{aligned}$$

**14694.** (R. CHARTRES.)—If a line be divided at random into  $n$  parts, and M be the mean value of the product of the parts, and  $m$  the maximum value of the product find the value of  $(m/M)^{1/n}$  when  $n$  is infinite.

**14695.** (R. KNOWLES.)—Prove that the sums to  $r$  terms of the series

- (1)  $1 - (m + 1) + (2m + 1) - (3m + 1) \dots \pm (mr - m + 1)$ ,
- (2)  $1 - (m + 1)^2 + (2m + 1)^2 - (3m + 1)^2 \dots \pm (mr - m + 1)^2$ ,
- (3)  $1 - (m + 1)^3 + (2m + 1)^3 - (3m + 1)^3 \dots \pm (mr - m + 1)^3$

are respectively

$$-\frac{1}{2}rm, \frac{1}{2}rm(m - rm - 2), \text{ and } -\frac{1}{2}rm \{ r(2r - 3)m^2 + 6(r - 1)m + 6 \},$$

when  $r$  is even,

$$\text{and } \frac{1}{2}(mr - m + 2), \frac{1}{2}rm \{ (rm - m + 2) - 2(m - 1) \},$$

$$\text{and } \frac{1}{2} \{ (r - 1)^2 (2r + 1)m^3 + 6r(r - 1)m^2 + 6(r - 1)m + 4 \},$$

when  $r$  is an odd number.

**14696.** (V. DANIEL.)—Show that  $\Sigma \cot A$  is an invariant function of the angles for a system of triangles inscribed to a triangle ABC, so that their vertices divide all three sides in the same ratio. Also, if this ratio is  $k/(1 - k)$  for a particular triangle A'B'C',

$$\Sigma a'^2 = \lambda \Sigma a^2; \quad \Sigma a'^4 = \lambda^2 \Sigma a^4; \quad \text{where } \lambda = 1 - 3k + 3k^2.$$

**14697.** (G. D. WILSON, B.A.)—From the definition "A focus of a conic is a point at which every two conjugate lines are perpendicular" find the ordinary equations for the foci of the general conic (areal coordinates), and thence show that the tangents from the foci to the conic pass through the circular points at infinity.

**14698.** (C. BICKERDIKE.)—

Four maids bright and fair  
As the rose that is rare  
Each one did declare  
She married would be.  
The equations below,  
Their ages will show.  
Will some friend find so  
Their ages for me?

$$(x^2 + u^2 + y^2)x = 26850, \quad (x^2 + u^2 + y^2)z = 23238, \quad (x^2 + z^2 + y^2)u = 24654,$$

$$(x^2 + z^2 + u^2)y = 24750.$$

**14699.** (SALUTATION.)—A circle, of centre O and radius  $r$ , is cut orthogonally by an ellipse, which has its major axis partly coincident with a diameter of the circle. The semi-axes of the ellipse being  $a, b$ , find the positions of its foci.

**14700.** (Professor LANGHOENE ORCHARD, M.A., B.Sc.)—If  $8\alpha = \pi$ ,

$$\text{show that } \sqrt{2} \left\{ 1 + \alpha - \left( \frac{\alpha^2}{2!} + \frac{\alpha^3}{3!} \right) + \left( \frac{\alpha^4}{4!} + \frac{\alpha^5}{5!} \right) - \dots \right\}$$

$$\times \left\{ 1 - \alpha - \left( \frac{\alpha^2}{2!} - \frac{\alpha^3}{3!} \right) + \left( \frac{\alpha^4}{4!} - \frac{\alpha^5}{5!} \right) - \dots \right\} = 1.$$

**14701.** (R. F. MUIRHEAD.)—Find the motion of a particle fixed to a massless elastic stretched cord when made to vibrate by a violin-bow drawn over the particle with uniform pressure and uniform velocity at right angles to the cord. In particular, find how the period of vibration compares with that of the natural period of the particle vibrating freely. Assume that the coefficients of static and kinetic friction are different and constant.

**14702.** (H. A. WEBB.)—A stream of incompressible fluid is projected uniformly vertically upwards, in *vacuo*, from a pipe with a horizontal circular nozzle. Show that the diameter of the fluid at any point varies inversely as the fourth root of the depth below the horizontal plane in which it comes to rest, and that in this plane the fluid is in a state of infinite dispersion. [This seems to be the theoretical explanation of the mushroom-like appearance of the cloud of dust over an active volcano,

and also of the great distance to which the products of an eruption are sometimes carried.]

14703. (Professor COCHEZ.)—N étant un nombre entier, démontrer que le nombre  $n^6 - 5n^3 + 4n$  est divisible par 120.

#### OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

6704. (Professor WOLSTENHOLME, M.A.)—A circle is drawn touching the parabola  $2a = r(1 + \cos \theta)$ , passing through the focus S, and meeting the parabola again in two points: prove that (1) the locus of T, the common point of the two common tangents to the circle and parabola, is  $4r = (\cos \frac{1}{2}\theta)^4$ , the second negative pedal of the parabola  $a = 2r(1 + \cos \theta)$ ; (2) the tangent at T to the locus of T bisects at right angles the radius of the circle drawn from S; and (3) the locus of the centre of the circle is the first negative pedal of the parabola  $a = 2r(1 + \cos \theta)$ .

6705. (Professor KOEHLER.)—Construire les courbes suivantes:—

$$2x^2y^3 + x^4 - y^4 = 2xy, \quad 4x^2y^5 + x^6 - y^6 + 5x^2y^2(x^2 - y^2) = 4xy.$$

6707. (Sir W. THOMSON, F.R.S., now Lord KELVIN.)—On a clear night you are suddenly placed in a boat somewhere hundreds of miles from land in the northern hemisphere, on either the Atlantic or the Pacific, with a *Nautical Almanac* (and a light to read it), knowing the month) but not the day or hour: you see the Moon with a bright star close beside her, as near the meridian as you can judge by reference to the Pole-star. Find the correct date, and tell whether you are in the Atlantic or the Pacific.

6716. (A. MARTIN, M.A.)—Having given the chances  $p, q, (p + q = 1)$  of the happening and failing of an event upon a single trial, find the chances of its happening (1) exactly  $m$  times in succession, and (2) at least  $m$  times in succession out of  $n$  trials.

6717. (Col. CLARKE, C.B., F.R.S.)—P and Q are points on a diameter, and equidistant from the centre of a given circle C; another circle wholly within C encloses one of these points: find the chance that it will enclose both.

6719. (E. W. SYMONS, M.A.)—A variable conic osculates a given rectangular hyperbola, and has one focus fixed at its centre: prove that the common tangents to the curves meet on the lemniscate  $r^2 = a \cos 2\theta$  (the centre of the hyperbola being pole, and its axis the initial line).

#### NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to D. BIDDLE, Esq., Charlton Lodge, Kingston-on-Thames.

NOTICE.—Vol. LXXII. of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price, to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

#### THE LONDON MATHEMATICAL SOCIETY.

The following papers have been received or promised for the Annual Meeting in November:—

"In a Simple Group of an Odd Composite Order every System of Conjugate Operators or Sub-groups includes more than fifty": Dr. G. A. MILLER.

"Prime Functions on a Riemann Surface": Prof. A. C. DIXON.

(i.) "Further Notes on Isoscelians"; (ii.) "On two In-triangles which are similar to the Pedal Triangle": R. TUCKER.

"A general Congruence Theorem relating to the Bernoullian Function": Dr. GLAISHER.

# Blackie's Illustrated Latin Series

General Editor—Professor R. Y. TYRRELL, Litt.D.

Examiner to the Universities of London and Glasgow, &c.

With full-page COLOURED Plates; full-page Photographs of Bas-reliefs, Statues, &c., beautifully printed on superfine art paper; numerous black and white Illustrations specially drawn for this Series.

The Volumes are issued]

NEW VOLUMES.

[with or without Vocabularies.

**CAESAR'S GALLIC WAR, BOOK I.** Edited by JOHN BROWN, M.A., Professor of Latin in the University of New Zealand. 1s. 6d. [Ready October 15.]

A re-issue with slight modifications, and a large number of new illustrations, of Professor Brown's popular edition, the first to make this commonly-read book interesting to school-children. The new edition contains **six** full-page plates, **twenty-four** illustrations in the text, **five** maps and plans, and a **coloured** map of Gaul.

**VIRGIL'S GEORGICS, BOOK I.** Edited by S. E. WINBOLT, M.A., Assistant-Master in Christ's Hospital. 1s. 6d.

The illustrations in this volume are **two** full-page coloured plates, one from a bas-relief specially photographed in Rome, the other from a vase-painting, and **twenty-four** engravings in the text and notes. The introduction is an exceedingly well written and interesting piece of work, and includes a very careful account of Virgil's use of the hexameter.

**LIVY, BOOK VI.** Edited by W. CECIL LAMING, M.A., Classical Master in Edinburgh Academy. 2s. 6d.

This is a companion to Mr. Laming's edition of Book V. already published. The frontispiece is a **coloured** representation of a Roman *patera*, and the other illustrations include **two** full-page plates, with a map of Italy and a **coloured** plan of Rome.

**SALLUST'S CATILINE.** Edited by the Rev. W. A. STONE, M.A., Assistant-Master in Bristol Grammar School. 1s. 6d.

The illustrations include a **coloured** plate representing a chased silver vase, and **two** other full-page plates, as well as a number of illustrations through the text.

**CICERO'S CATILINE ORATIONS.** Edited by C. HAINES KEENE, M.A., Professor of Greek at Queen's College, Cork. **Second edition.** 2s. 6d. This second edition contains **three** full-page plates.

Illustration from]

Romans constructing a New Camp.

[Caesar's Gallic War I.

## VOLUMES ALREADY ISSUED.

**CICERO—THE FIRST CATILINE ORATION.**

Edited by Professor C. H. KEENE, M.A. 1s. 6d.

**EUTROPIUS, BOOKS I. and II.** Edited by W. CECIL LAMING,

M.A., Classical Master in Edinburgh Academy. 1s. 6d.

**LIVY, BOOK V.** Edited by W. CECIL LAMING, M.A. 2s. 6d.

## UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)

Principal—H. R. REICHEL, M.A.

The Session began October 2nd, 1900. The College Courses are arranged with reference to the degrees of the University of Wales and include most of the Subjects for the B.A. and B.Sc. degrees of the London University. Students may pursue their first year of medical study at the College. There are special departments for Agriculture and Electrical Engineering, a Day Training Department for men and women, and a Department for the Training of Teachers in Secondary Schools.

Sessional Fee for ordinary Arts student, £11. 1s.; ditto for Intermediate Science or Medical student, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. The new Hall of Residence for Women Students in Upper Bangor—fee £31. 10s. for the session—is now open.

At the Entrance Scholarship Examination (held in September), more than twenty Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition. One half the total amount offered is reserved for Welsh candidates.

For further information and copies of the Prospectus, apply to

JOHN EDWARD LLOYD, M.A.,

Secretary and Registrar.

## UNIVERSITY COLLEGE OF NORTH WALES.

(A Constituent College of the University of Wales.)

### DEPARTMENT FOR THE TRAINING OF SECONDARY TEACHERS.

(Recognized by the Cambridge Syndicate.)

Professor of Education—J. A. GREEN, B.A. Lond., assisted by Miss C. GRAVESON, B.A. Lond., and an Assistant-Lecturer to be appointed.

Preparation is offered for the Cambridge Diploma (Theoretical and Practical) and for the Teachers' Diploma of the University of London.

Full particulars of the Course (which is open to both men and women students), Fees, Scholarships, &c., may be had on application to the REGISTRAR.

## ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS IN SECONDARY SCHOOLS AND IN FAMILIES.

Principal—Miss M. R. WALKER.

This College provides a complete Course of Professional Training for Women Teachers, in preparation for the Cambridge Teachers' Certificate. The Course includes attendance at the University Lectures on Education, in addition to Lectures delivered by the College Staff, and the Students have ample opportunities of gaining experience in Class-Teaching in Schools. Five Heriot Bursaries of £30 are offered in October. Apply to the PRINCIPAL, 5 Melville Street, Edinburgh.

Reprinted from the *Educational Times*.

Post free, 1½d. each, or 7s. 6d. per 100.

J. RUSSELL, CRIPPLEGATE, WOKING.

A GERMAN LADY (High School Teacher) desires to receive an English Lady as guest in her house, whom she would prepare for Examinations. Terms very moderate. Highest references. Address—Fräulein HERRKLOTSCHE, Magdeburger Strasse, Cothen in Anhalt (near Leipzig), Germany.

## BEDFORD COLLEGE, LONDON (FOR WOMEN),

YORK PLACE, BAKER STREET, W.

Principal—Miss ETHEL HURLBATT.

The Michaelmas Half Term begins on Monday, November 12th.

The College prepares for the University of London Examinations in Arts and Science.

Students can also enter for College Courses, the Training Department, the Hygiene Department, or the Art School. Six Laboratories are open to Students for Practical Work.

Further information on application to the PRINCIPAL.

## BEDFORD COLLEGE, LONDON (FOR WOMEN),

YORK PLACE, BAKER STREET, W.

### DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.

Head of the Department—Miss HANNAH ROBERTSON, B.A.

The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge, held annually in December.

The Session begins on January 17th, 1901.

## THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.

Principal—Miss M. PUNNETT, B.A. (Lond.).

A residential College providing a year's professional training for Teachers.

The course includes preparation for the Cambridge Teachers' Certificate (Theory and Practice), and for the Teachers' Diploma of the London University. The Students attend the Cambridge University Lectures on Teaching, in addition to those of the Resident and Visiting Lecturers. Ample opportunity is given for practice in teaching science, languages, mathematics, and other subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Wollaston Road, Cambridge.

## THE CHELTENHAM LADIES' COLLEGE.

A GILCHRIST TRAVELLING STUDENTSHIP for Women Teachers, of the value of £70, will be awarded by the Council of the Cheltenham Ladies' College. All information can be obtained from the LADY PRINCIPAL, to whom application for the Studentship, accompanied by a statement of the Candidate's qualifications, should be made by December 1st.

## WESTFIELD COLLEGE,

FINCHLEY ROAD, HAMPESTEAD, N.W.—Two ENTRANCE SCHOLARSHIPS, of the value of from £40 to £50 a year for two years, will be offered for competition among women students at an Examination to be held on September 12 and 13. Candidates must have passed the Matriculation Examination of London University, and the successful competitors will be required to enter into residence in October next, and to read for the B.A. or B.Sc. degree of London University. Further particulars and entrance forms may be obtained from the Secretary, Miss S. M. SMEE.

THE

## FROEBEL EDUCATIONAL INSTITUTE,

TALGARTH ROAD, WEST KENSINGTON, LONDON, W.

Chairman of the Committee—Mr. W. MATHER.

Treasurer—Mr. C. G. MONTEFIORE.

Secretary—Mr. ARTHUR G. SYMONDS, M.A.

### TRAINING COLLEGE FOR TEACHERS.

Principal—Madame MICHAELIS.

Mistress of Method—Miss E. E. LAWRENCE.

### KINDERGARTEN AND SCHOOL.

Headmistress—Miss M. BOYS SMITH.

Further particulars may be obtained on application to the PRINCIPAL.

## HOME AND COLONIAL SCHOOL SOCIETY.

(Incorporated for Examination and Certificate purposes with the National Froebel Union.)

### TRAINING COLLEGE FOR SECONDARY TEACHERS.

HIGHBURY HILL HOUSE, LONDON, N.

Principal—The Rev. DAVID J. THOMAS, M.A.

Vice-Principal—Miss PENSTONE.

Students (Resident and Non-resident) trained for the Examinations of the National Froebel Union, and for the Teachers' Diploma of the College of Preceptors.

A High School for Girls, Transition Class, and Kindergarten are attached to the College for purposes of Demonstration and Practice.

## JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

## JOINT AGENCY FOR ASSISTANT-MASTERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

The Joint Agency for Assistant-Masters and Tutors is under the management of a Joint Committee composed of representatives of the following Bodies:—

Headmasters' Conference.  
Incorporated Association of Headmasters.  
College of Preceptors.  
Teachers' Guild.  
Welsh County Schools' Association.  
Private Schools' Association.  
Association of Headmasters of Preparatory Schools.  
Association of Headmasters of Roman Catholic Schools.  
Assistant-Masters' Association.  
Association of Technical Institutions.  
&c. &c.

As the Agency is not working with a view to profit but to benefit Assistant-Masters, the rates of commission are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m., Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

## CARLYON COLLEGE.

55 AND 56 CHANCERY LANE.

# HINTS ON FRENCH SYNTAX.

By F. STORR,

Chief Master of Modern Subjects in Merchant Taylors' School.

"The merit of the book is its simplicity and brevity, and we have no hesitation in saying that these *Hints* would prove a valuable supplement to any grammar that might be in use. . . . Neatly printed in clear, bold type, and interleaved throughout, this book is one we can confidently recommend not only to teachers for class use, but as an invaluable aid to students preparing for the Scholarship, Certificate, and London Matriculation Examinations."—*The Practical Teacher*, January, 1900.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

A REAL EDUCATIONAL ATLAS THAT CONVEYS ITS MAIN PURPOSE ON BROAD LINES INSTANTLY.

# PHILIPS' ELEMENTARY ATLAS OF COMPARATIVE GEOGRAPHY.

LONDON SCHOOL BOARD EDITION.

90 Maps and plans, printed in Colours on 40 plates, with 8 pages of text. Large 4to (11x9 inches), stiff cover, cloth back. Price 1s. net.

NOTE.—This Atlas can also be obtained without the 4 plates specially prepared for the London School Board. Price 1s.

THE GENERAL SCHEME, on the basis of which the ATLAS has been compiled, embodies the recommendations of a SPECIAL ADVISORY COMMITTEE of the LONDON SCHOOL BOARD, and has, besides, received the approval of the GEOGRAPHICAL ASSOCIATION, by one of whose Members the Maps have been revised.

### SPECIAL FEATURES.

1. EACH MAP an ESSENTIAL PART of a GENERAL SCHEME.
2. BRITISH EMPIRE given special prominence.
3. PHYSICAL FEATURES in great detail. Land coloured according to elevation.
4. UNIFORMITY OF SCALE AND COMPARATIVE AREAS. Only 10 scales employed, all bearing a simple and definitely expressed proportion to that of the British Isles, which has been adopted as a unit.

5. SELECTION AND SPELLING OF NAMES. Overcrowding avoided. Towns classified according to population. Spelling according to rules of the Royal Geographical Society.

6. INTRODUCTORY LETTERPRESS, illustrated with numerous Diagrams, dealing with Map Reading, Geographical Terms, Scales of Maps, Projections, &c.

Detailed Prospectus sent gratis on application.

GEORGE PHILIP & SON, 32 Fleet Street, London. Liverpool: PHILIP, SON, & NEPHEW, 45-51 South Castle Street.

Just Published. Demy 4to (11 x 8 in.). In stiff wrapper, 1s. 6d.

## FREEHAND DRAWING OF ORNAMENT.

Consisting of 24 Photographic Reproductions of Examples of Relief Ornament, and 68 Analytical Diagrams of Construction, designed and arranged in graduated order, with directions to the student as to the method of proceeding.

# MACMILLAN & CO.'S NEW AND RECENT EDUCATIONAL BOOKS.

**A History of Greece to the Death of Alexander the Great.** By J. B. BURY, M.A., Hon. Litt.D. Durham. With Illustrations, Maps, and Plans. Crown 8vo, 8s. 6d.

*Spectator*.—"Told with such clearness, fulness, and sense of proportion that the book will stand as a model of one-volume history, rivalled only by J. R. Green's similar work on the English people. . . . Has all the qualities of accuracy, lucidity, and art in arrangement which are the special merits of a short history. The book also contains numerous excellent illustrations."

**A Text-Book of Book-keeping.** By FRANK IRESON, B.A. 8vo, 4s. 6d.

*Commerce*.—"A book we can thoroughly recommend as being up-to-date, and containing every information necessary to the student of this branch of commercial education."

## ENGLISH.

**Tennyson.—The Lotos-Eaters, Ulysses, Ode on the Death of the Duke of Wellington, Maud, The Coming of Arthur, The Passing of Arthur.** With Introduction and Notes by F. J. ROWE, M.A., and W. T. WEBB, M.A. Globe 8vo, 2s. 6d. [*English Classics.*]

*Educational News*.—"No one could desire a better introduction, marked as it is by lucidity of exposition and acuteness of judgment. . . . For scholastic purposes a more judicious selection could not have been made. Each poem is annotated in a clear, adequate, and scholarly manner. The book is moderate in price, and in every way well suited for the junior student."

**Charles Lamb.—Essays of Elia.** Second Series. Edited, with Notes, by Prof. N. L. HALLWARD, M.A. With an Introduction by S. C. HILL, B.A., B.Sc. Globe 8vo, 3s. [*English Classics.*]

Previously Published. FIRST SERIES. Globe 8vo, 3s.; sewed, 2s. 6d.

*Educational News*.—"A scholarly and useful edition."

**Elements of Rhetoric and English Composition.** Globe 8vo, 3s. 6d.

**Elements of Rhetoric and English Composition.** Second High School Course. By Prof. G. R. CARPENTER. Crown 8vo, 3s. 6d.

**Exercises in Rhetoric and English Composition.** (Advanced Course.) Crown 8vo, 4s. 6d.

## FRENCH.

**French Course for Evening Classes. First Year.** By A. C. POIRÉ, Principal of the Northern Institute of Languages, Leeds and Bradford. Globe 8vo, 1s.

**LATEST ADDITIONS TO SIEPMANN'S ELEMENTARY FRENCH SERIES.**

**Cœur.—L'Âme de Beethoven.** PAR PIERRE CŒUR. Adapted and Edited by DE V. PAYEN-PAYNE, Principal of Kensington Coaching College. Globe 8vo, 2s.

WORD AND PHRASE BOOK, sewed, 6d. KEY, 2s. 6d. net.

**Daudet.—La Tour des Maures.** PAR ERNEST DAUDET. Adapted and Edited by A. H. WALL, M.A., Assistant-Master at Marlborough College. Globe 8vo, 2s.

WORD AND PHRASE BOOK, sewed, 6d. KEY, 2s. 6d. net.

*Educational News*.—"Deserves the highest commendation."

**Normand.—L'Émeraude des Incas.** PAR CHARLES NORMAND. Adapted and Edited by the late F. ASTON BINNS, M.A., Balliol College, Oxford. Globe 8vo, 2s.

WORD AND PHRASE BOOK, sewed, 6d. KEY, 2s. 6d. net.

*School World*.—"The story is full of incident, and is suitable for rapid reading. The notes are thoroughly satisfactory, and the vocabulary has been compiled with commendable care."

**Verne.—Le Tour du Monde en Quatre-Vingts Jours.** PAR JULES VERNE. Adapted and Edited by LOUIS A. BURR, B.A., Headmaster of the Modern Language Department in the Glasgow Academy. Globe 8vo, 2s.

WORD AND PHRASE BOOK. Globe 8vo, sewed, 6d. KEY, 2s. 6d. net.

*Academy*.—"An excellent and amusing class-book. . . . The notes are satisfactory and so is the vocabulary."

**LATEST ADDITION TO SIEPMANN'S ADVANCED FRENCH SERIES.**

**Daudet.—Tartarin de Tarascon.** PAR ALPHONSE DAUDET. Adapted and Edited by OTTO SIEPMANN. Globe 8vo, 2s. 6d.

WORD AND PHRASE BOOK, sewed, 6d. KEY, 2s. 6d. net.

**A Historical French Grammar.** By Prof. ARSÈNE DARMESTETER. Edited by Prof. ERNEST MURET and Prof. LÉOPOLD SUDRE. Authorized English Edition by Prof. ALPHONSE HARTOG. Crown 8vo, 12s. 6d.

*Educational Times*.—"MM. Muret and Sudre have done their work very thoroughly. . . . The outcome appears to be very satisfactory."

**An Elementary French Grammar.** By G. EUGÈNE FASNACHT, sometime Assistant-Master in Westminster School, Editor of Macmillan's Series of "Foreign Classics." Globe 8vo, 1s. 6d.

*Journal of Education*.—"Clear, methodical, and scholarly, like all M. Fasnacht's work."

## LATIN.

COMPLETION OF MR. PAGE'S EDITION OF  
**VIRGIL.**

Edited, with Introduction and Notes, by T. E. PAGE, M.A., formerly Fellow of St. John's College, Cambridge. In 3 Vols. Vol. I., **Bucolics and Georgics**. Vol. II., **Æneid**, Books I.-VI. Vol. III., **Æneid**, Books VII.-XII. (Just Published.) Fcap. 8vo, 5s. each. [*Classical Series.*]

*Educational Times*.—"The notes appear admirably sound, lucid, and sufficient; and treated with the same common sense which marks all Mr. Page's work."

**The Catiline of Sallust.** Edited for the use of Schools, with Introduction, Notes, and Vocabulary, by the Rev. G. H. NALL, M.A. Pott 8vo, 1s. 6d. [*Elementary Classics.*]

*Irish Teachers' Journal*.—"The notes are scholarly, and display a full knowledge of the difficulties beginners encounter in reading Sallust. They anticipate every difficulty, and render the path of the student pleasant and enjoyable. We know of no better edition of Sallust to place in the hands of those commencing the study of Sallust."

## MATHEMATICS AND SCIENCE.

**Workshop Mathematics.** In 2 Parts. By FRANK CASTLE, M.I.M.E. Globe 8vo, 1s. 6d. each.

*Board Teacher*.—"Well arranged, and containing numerous practical examples."

**Elementary Mechanics of Solids.** By W. T. EMTAGE, M.A. (Oxon.) Globe 8vo, 2s. 6d.

NEW AND ENLARGED EDITION.

**Elementary Lessons in Electricity and Magnetism.** By Prof. SILVANUS P. THOMPSON, D.Sc., B.A., F.R.S., F.R.A.S. Fcap 8vo, 4s. 6d.

**Elementary Physics and Chemistry.** In 3 Stages. By Prof. R. A. GREGORY, F.R.A.S., and A. T. SIMMONS, B.Sc. (Lond.). Globe 8vo, 1s. 6d. each.

*Guardian*.—"The illustrations are numerous and useful; the experiments are good and require only simple apparatus; and the text is simply, clearly, and carefully written."

**Public School Protractor Scale.** Price 6d.

ENLARGED AND REVISED EDITION.

**Lessons in Elementary Physiology.** By THOMAS H. HUXLEY, LL.D., F.R.S. Fcap 8vo, 4s. 6d.

*Educational News*.—"We unhesitatingly state that this is now, even more than before, the best Elementary Physiology in the market."

PRIZE EDITION NOW READY.

**Curiosities of Natural History.** By FRANCIS TRAVELMAN BY K. LAND. Popular Edition, with a few Illustrations. Each Series separately, in small 8vo, 2s. 6d. (extra gilt binding, 3s. 6d.), as follows:—

1ST SERIES.—Rats, Serpents, Fishes, Frogs, Monkeys, &c.

2ND SERIES.—Fossils, Bears, Wolves, Cats, Eagles, Hedgehogs, Eels, Herrings, Whales.

3RD SERIES.—Wild Ducks, Fishing, Lions, Tigers, Foxes, Porpoises.

4TH SERIES.—Giants, Mummies, Mermaids, Wonderful People, Salmon, &c.

NOVEMBER NUMBER NOW READY.

## THE SCHOOL WORLD.

A Monthly Magazine of Educational Work and Progress. Price 6d. Annual Subscription, including Postage, 8s. net.

LEADING CONTENTS.

**The Training of Probationers in Secondary Schools.** By F. J. R. HENDY, M.A.—**Historical Novels and their Uses in Teaching.** II. By C. S. FEARENSIDE, M.A.—**The Law Relating to the Teacher's Tenure of Office.** By T. A. ORGAN, Barrister-at-Law.—**Observational Astronomy** A Series of Notes upon the Positions and Apparent Motions of Celestial Bodies. IV. (Illustrated.) By Prof. R. A. GREGORY, F.R.A.S.—**Typical School Time-Tables.** I. **Rugby.—Practical Work in Physical Geography.** IV. Observations on the Atmosphere. By Dr. A. J. HERBERTSON, F.R.G.S.—**Notes for Lantern Lectures.** IV. The Continent of Africa. By B. B. DICKINSON, M.A., F.R.G.S.—**Senior, Junior, and Preliminary Cambridge Local Examinations,** December, 1900. Revision Test Papers, No. 2.

# CAMBRIDGE UNIVERSITY PRESS.

## PITT PRESS MATHEMATICAL SERIES.

NEW VOLUME BY PROFESSOR LONEY.

**The Elements of Hydrostatics.** By S. L. LONEY, M.A., Professor of Mathematics at the Royal Holloway College, some time Fellow of Sidney Sussex College, Cambridge. Crown 8vo, 4s. 6d.

*Extract from Preface:*—"The present volume is intended to be for the use of the class of students for whom my 'Elements of Statics and Dynamics' was written, and may be regarded as a continuation of that book."

BY THE SAME AUTHOR.

**Mechanics and Hydrostatics for Beginners.** Fifth Edition. Extra Fcap. 8vo. 4s. 6d.

**Elements of Statics and Dynamics.** Sixth Edition. Extra Fcap. 8vo. 7s. 6d. Or in two parts: ELEMENTS OF STATICS, 4s. 6d.; ELEMENTS OF DYNAMICS, 3s. 6d. SOLUTIONS OF THE EXAMPLES. Second Edition. 7s. 6d.

**A Treatise on Elementary Dynamics.** Crown 8vo. Fifth Edition. 7s. 6d. SOLUTIONS OF THE EXAMPLES. 7s. 6d.

**Plane Trigonometry.** Crown 8vo. Fourth Edition, stereotyped. 7s. 6d. Also in two parts:—PART I. UP TO AND INCLUDING THE SOLUTION AND PROPERTIES OF TRIANGLES. 5s.—PART II. DE MOIVRE'S THEOREM AND THE HIGHER PORTIONS. 3s. 6d. SOLUTIONS OF THE EXAMPLES. 10s. 6d.

## PITT PRESS SERIES.—NEW VOLUMES.

A NEW FRENCH VERSE READER.

**A Primer of French Verse for Upper Forms.** Edited by FREDERIC SPENCER, Professor of the French Language and Literature in the University College of North Wales; formerly Chief Master on the Modern Side in the Leys School, Cambridge. 3s.

*School World.*—"Teachers owe a debt of gratitude to Prof. Spencer for this attractive volume. . . It is a very good book."

*Educational Times.*—"A pupil who has read this book with care will acquire an insight into French prosody such as no other 'Primer' would give him, and will feel that this is a book to which he can always turn again with pleasure."

**Hauff.—Der Scheik von Alessandria und seine Sklaven.** Edited, with Notes and Vocabulary, by W. RIPPMMANN, M.A., Professor of German at Queen's College, London. 2s. 6d.

*Educational Times.*—" . . . A welcome addition to the elementary reading-books available for schools . . . and Mr. Rippmann's name is sufficient guarantee for good editing."

**Scott.—Old Mortality.** Edited, with Introduction, Notes, and Glossary, by J. A. NICKLIN, late Scholar of St. John's College, Cambridge, Members' Prizeman for English Essay. 2s. 6d.

*School World.*—"A very good attempt to edit Scott's celebrated novel as a school-book. The hand of a scholar is traceable everywhere. The Introduction is especially admirable—not too long, yet sufficiently clear. The notes and glossary will be found extremely serviceable. The more of Scott's novels we have in this form the better for literary taste; they supply the right kind of material for a real appreciation of Scott's genius, and ought to assist in clearing the field of numerous inefficient attempts to do this very useful kind of work."

## THE PITT PRESS SHAKESPEARE FOR SCHOOLS.

Edited, with Introduction, Notes, Glossary, and Index, by A. W. VERITY, M.A., sometime Scholar of Trinity College.

*Practical Teacher.*—"Of the many school editions of Shakespeare's plays this is certainly one of the very best."

*Public School Magazine.*—"Of all editions of Shakespeare I have yet seen it seems to me to be the one most suited for the schoolboy."

**King Henry V.** [Shortly.]

**As You Like It.** Second Edition. 1s. 6d.

**King Richard II.** Third Edition. 1s. 6d.

**Merchant of Venice.** Third Edition. 1s. 6d.

**King Lear.** Second Edition. 1s. 6d.

Now Ready. Crown 8vo. 3s. 6d. net.

**Fifteen Studies in Book-keeping.** By WALTER W. SNAILUM, P.A.S.I.

This book has been written to combine a thorough explanation of the principles of double-entry book-keeping with a course of work suitable for preparation for the examinations held by the Society of Arts, Civil Service, Lancashire and Cheshire Union of Institutes, and kindred examining bodies.

Part I., comprising the fifteen studies or lessons, examines thoroughly the principles of book-keeping and the form and use of the books and accounts kept by a merchant or trader. A series of exercises are given upon each study. The studies on Bills and Cheques are believed to give all the information thereon that it is necessary for a trader to possess in the ordinary conduct of business.

The book may be used by young students, and an elementary course is marked out for that purpose.

Part II. is devoted to examination work. It contains *seven examination papers* (including those set by the Society of Arts in the years 1900, 1899, and 1898) *fully worked as models*. A selection of examination papers is also given for solution by the student.

The work is eminently adapted for use in the winter evening classes that are held to prepare for the spring examinations.

**Elementary Commercial Geography.** A Sketch of the Commodities and the Countries of the World. By H. R. MILL, Sc.D., F.R.S.E., F.R.S.G.S., Oxford University Extension Staff Lecturer and Librarian to the Royal Geographical Society. Sixth Edition. 1s. 6d.

**An Atlas of Commercial Geography.** Intended as a Companion to the above. By J. G. BARTHOLOMEW, F.R.G.S. With an Introduction by Dr. H. R. MILL. 4to. 3s.

**Bacon.—The New Atlantis.** Edited, with Introduction and Notes, by G. C. M. SMITH, M.A., St. John's College, Cambridge. [Nearly ready.]

**Sallust.—Catilina.** Edited, with Introduction and Notes, by W. C. SUMMERS, M.A., Fellow of St. John's College. 2s.

**Caesar.—De Bello Civili. Book III.** Edited, with Introduction, Notes, and Maps, by A. G. PESKETT, M.A., President and Tutor of Magdalene College, Cambridge. 2s. 6d.

*School World.*—"This edition, marked alike by genuine scholarship and simplicity, ought to hold the field for all purposes for which the book may be required. We find here . . . everything which should be found in an edition for the use and stimulus of an intelligent mind."

**Cicero.—Pro Lege Manilia.** Edited, with Introduction and Notes, by J. C. NICOL, M.A., Trinity Hall, Master of Portsmouth Grammar School. 1s. 6d.

*Athenæum.*—"This is a satisfactory addition to the 'Pitt Press Series.' Mr. Nico shows in his short, but pertinent, preface that he has had teaching experience. . . . More care than usual is paid to matters of text, and the translations given are good."

**Graduated Passages from Greek and Latin Authors for First-Sight Translation.** Selected and Supplied with short Notes for Beginners by H. BENDALL, M.A., and C. E. LAURENCE, B.A., Assistant-Master of Blackheath Proprietary School. Crown 8vo. PART I. EASY. 1s. 6d. PART II. MODERATELY EASY. 2s. PART III. MODERATELY DIFFICULT. 2s. PART IV. DIFFICULT. 2s.

## THE CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.—NEW VOLUMES.

General Editor—W. H. WOODWARD, of Christ Church, Oxford; Principal of University (Day) Training College, Liverpool; and Professor of Education in Victoria University.

**A Short History of the Expansion of the British Empire, 1500-1870.** By WILLIAM H. WOODWARD. With Maps. Crown 8vo, cloth, 4s.; cloth extra, gilt top, 5s.

*Athenæum.*—"Thoroughly to be recommended."  
*School World.*—"It is full of wisdom applicable to our own day."

**The Making of Character: some Educational Aspects of Ethics.** By JOHN MACCUNN, Balliol College, Oxford; Professor of Philosophy in University College, Liverpool. Crown 8vo, cloth, 2s. 6d.; cloth extra, gilt top, 3s. 6d.  
*Literature.*—"An acute and thoughtful book."

**The Cambridge Bible for Schools and Colleges.—New Volume.** General Editor for the Old Testament and Apocrypha: A. F. KIRKPATRICK, D.D., Regius Professor of Hebrew.

**The Book of Daniel.** Edited by the Rev. S. R. DRIVER, D.D. 2s. 6d. net.

**The Education of the Young in the Republic of Plato.** Translated into English, with Notes and Introduction, by B. BOSANQUET, M.A., LL.D., Author of "A Companion to Plato's Republic." Crown 8vo, 2s. 6d.

*Literature.*—"A scholarly translation, with notes and introductions, sketching well and concisely the history of Greek education."

**Outlines of the History of the English Language.** By T. N. TOLLER, late Fellow of Christ's College, Cambridge, Professor of English in the Owens College, Manchester. [Ready in December.]

## Cambridge Science Primers.

Nearly ready.

**A New Primer of Astronomy.** By Sir ROBERT BALL, F.R.S., Lowndean Professor in the University of Cambridge.

## The Educational Times.

### The New Parliament.

It would be difficult to foretell the kind of treatment which is likely to be meted out to educational subjects in the new Parliament. The *personnel* of the House of Commons is educationally very much as it has been during the past five years. The policy of the Board of Education and the functions of its Consultative Committee are still undefined, but the political constitution of the Department is unaffected by the elections, and the Duke of Devonshire and Sir John Gorst may yet be regarded as oracles in chief. Whether this is or is not a hopeful sign with a view to secondary organization and development, we must leave our readers to judge for themselves. There has been a drag on such development for a good time past, with changes that seem to alter nothing, Bills that are not pushed through, and Acts that are not acted on. Perhaps the pace may now mend a little. The feet of the Government have touched the soil of the constituencies, and, like another Antæus, it may take up the struggle with a new infusion of energy. It will have to be decided—or we presume that it will have to be decided—whether the Secondary Local Authorities are to be set up or not. If they are to be set up, we may further assume that decisions will have to be taken as to their best form and constitution. We sincerely trust that, if another Bill is brought in, it will not be an August-to-February Bill, with no surviving animation in the legislative period. Meanwhile, it will not be forgotten that the Consultative Committee is charged with the formation of a register by the law of the land. This is not a matter of Departmental discretion. Parliament has ordered it; the rest is merely a question of how and when.

The President of the Board of Education, as we mention in our Summary of the Month, opened a new higher-grade Board school at Manchester on October 15. The Duke may be said to have done this without prejudice—and it is to be hoped that nobody and nothing is prejudiced. He may be said to have taken up a detached attitude on the question of School Board limitations, Local Government Board surcharges, and legal decisions. He knew that the Court of Queen's Bench was about to try the legality of spending the ratepayers' money on higher-grade schools; but he said that, if the decision should be unfavourable, it would be a matter for Parliament, not for the Department.

No doubt the President meant that the School Boards which had spent so much money on such schools, for so many years, under continued protest from secondary schoolmasters and continued indifference and washing of hands from the Education Department, would have to be relieved and indemnified by Act of Parliament. We wonder how the secondary schools at Manchester like it. It is true that the Manchester school is started under a scheme of amalgamation which brings together the City Corporation, the Chairman of the Technical Committee, the Principal of Owens College, the High Master of the Grammar School, and Dean Maclure as Chairman of the School Board—but the School Board is the originating and controlling authority. So at Leeds—where, we believe, the higher-grade school is not directly dependent on the rates. It is, nevertheless, a higher-grade Board school, which accommodates some two thousand pupils, and which has damaged the old Grammar School, and ruined several other secondary schools. Not only the question of expenditure, but the more important questions of authority and gradation, are involved in the creation of secondary schools by the elementary Boards. These questions are now on the point of being settled. It would be better in the meantime not to confuse the issue.

### The State and the Public School.

In last month's *Fortnightly Review*, in a paper on "The Public Schools and the Public Services," Mr. J. C. Tarver shows a somewhat too nervous anxiety as to the future relation of the Board of Education towards the public schools. Recognizing the apparent antagonism between the independence and conservatism of the public-school system and a system under departmental control, he foresees nothing but disaster to the public schools if this antagonism becomes active. The power of the purse, wielded by a Government Department, together with the aggressive spirit of Local Authorities, would, he believes, in time, by outside competition and pressure, convert the public schools into mere fashionable lounges for the sons of the rich. To obviate such a calamity, he suggests that the public schools should be formally recognized as training schools for the public services, military and civil, and that a separate Board of Examiners be established to insure the efficiency of all the public schools of the kingdom that desire such recognition. Such a Board could also advise the War Office and other Government Departments on questions relating to examinations and curricula before changes are recommended to the schools.

While there is much that is suggestive in the paper, we cannot agree that the cream of our public schools should be turned into ideal "cramming" establishments, even to save the sons of the rich from *ennui*. Their natural function is that of preparation for the Universities. If the necessary training for the Civil Services is technical in its character, it should be specially provided. There is no need to introduce one more element of confusion into an already sufficiently complicated situation.

### NOTES.

UNDER normal conditions the first election of representatives of Convocation on the Senate of the new University of London would have attracted considerably more attention than it in fact received. It is perhaps well that the overmastering interest of the General Election abated the energy of both the "Union" and "Association" organizations, and allowed the choice of graduates in the several Faculties to be exercised without undue pressure. It would be unfortunate if the University should start on its new career by renewing the controversy as to its policy which it was hoped had been ended by the compromise arrived at during the sitting of the University Commission. Already something has been lost. In the desire to elect representatives of particular views, the claims of languages and *belles lettres* have been overlooked, as well as those of the science of education; unless it is thought that these are safe in the hands of Dr. McClure, of Mill Hill. Rival organizations for influencing the government and policy of a University area novel departure in this country. Moreover, they are not justified by the assumed incompatibility of the "interests of the University" with the "interests of external students." On the other hand, the large measure of power given to the Senate by the Charter of the University to modify its constitution makes it highly undesirable that members of the Senate should be fettered when differences arise which are often best settled by a wise compromise.

THE death of the Marquess of Bute has deprived us of one of the most generous benefactors of the cause of higher education. His want of sympathy, however, with the trend of modern educational policy in its elementary and secondary areas was scarcely disguised; but he seldom turned a deaf ear to an appeal made on behalf of Universities or University Colleges if situated in districts with which he was personally connected. Deeply influenced from his Oxford days by the glamour of mediævalism, his intellectual sympathies chiefly found expression in the study of ecclesiology and archeology, and he contributed many papers on these subjects to Scottish and Welsh societies. Although he recently gave £20,000 towards a Chair of Anatomy at St. Andrews, his interest in the advance of science was not great. Taking into consideration the vast wealth which flowed into his hands as the result of the industrial development of South Wales—some margin of which he would doubtless admit to be an unearned increment—we cannot fail to regret his inability to recognize more fully the need of scientific and technical institutions. Had he done so, his high sense of moral responsibility would surely have led him to do more to satisfy the want.

"EVERY man is a debtor to his profession." This, we think, was a saying of Bacon, and Sir Edward Coke has expressed the

same thought. The degree to which the saying is felt to be true serves the purpose of a test of a man's worth in his own profession; and no profession can be in a healthy state where such a feeling is not general. What the great lawyers of the past felt a great physician of to-day feels likewise. In his recent address to the medical students at Cardiff, Sir John Williams, speaking of his own profession, said: "It will widen your sympathies, whet your wit, increase your resources, and humanize you through and through." Such genuine enthusiasm, we believe, is common in medicine; we wish we could say as much for the profession of teaching. It is not the fault of the teacher. Nature has ordained that physicians should be sought after both by the wise and by fools, while she has no less surely made boys walk very slowly towards their teachers. However, we have ceased to despair, and, before the country has to pass through the ordeal of another General Election, we hope much will be done towards enabling a schoolmaster to say: "Every man is a debtor to his profession."

THE average parent's criticisms in school matters relate, as a rule, to concrete objects, and are for that very reason deserving of attention. In this anything but big gooseberry season a correspondence has been carried on in the *Standard* on the question of school geography books. With the exception of a dignified protest from an Oxonian, all were agreed that the books in general use are disgracefully inaccurate. There is a certain grim humour in the remedies proposed by the lay mind. One, even, went the length of welcoming errors as affording opportunities for stimulating discourse in the class-room. The writer must have been ignorant of the "chapter ahead" condition of most of our teachers of geography. To the professional mind the remedy is clear, if expensive. Competent teachers discover accurate text-books.

THE education of our naval officers is far from satisfactory, if the testimony of naval men is to be relied on. Writers in a recent number of the *United Service Gazette* and in the *Monthly Review* for October are agreed that the training of midshipmen and lieutenants is too specialized and unpractical, and carried on under arrangements which necessitate the far greater part of their time being spent on shore. When we trusted to our wooden walls, broadsides, and boarding parties, the instruction imparted by naval instructors on board no doubt sufficed for the average midshipman. To-day it is strongly urged that the education imparted by naval instructors is a farce, and that the system should be ended. It certainly serves no practical purpose, for under existing regulations a midshipman's technical knowledge is acquired on shore. It is suggested that the general education of midshipmen should be completed before they go to sea, and that much of the present technical work bearing on the construction of ships, guns, and projectiles should be omitted. In fact, naval officers now specialize—some in gunnery, some in torpedoes, and others in navigation—and there is a growing feeling that the "all-round" man is better in war.

WHILE we are on this subject we should like to enter a protest on behalf of the British parent against the exquisite refinements of naval uniform. Indeed, we should counsel a parent who purposes sending his boy into the Navy not to probe

the intricacies of his kit as shown in the twenty-seven closely printed double-columned pages, contained in the current *Navy List*, which deal with uniform. Apparently he must see that his boy is provided with buttons thirteen-twentieths of an inch in diameter for his waistcoat, fifteen-twentieths for his jacket, and eight-tenths for his coat. That way madness lies. It may account for regulation No. 21 affecting Assistant Engineers. To prevent inconvenience and disappointment it is stated that persons suffering from disordered intellect, imbecility, paralysis, or blindness in one or both eyes may be rejected as medically unfit, but that my Lords may modify these regulations "from time to time as may be considered desirable." Have "my Lords" no humour?

THE recent appearance of the Calendar of the Royal Holloway College has caused the *Spectator* to animadvert on the comparative failure of the college to attract students. Our contemporary was indeed very wide of the mark when it asserted that only ten candidates sat last year for ten open scholarships offered; but the college authorities themselves admit that they have some serious difficulties to contend with which hitherto have prevented the college from realizing the founder's anticipations. The fact is that Egham is too remote to attract in large numbers candidates for honours at Oxford and Cambridge; and for those who seek a London degree the necessity of residence of course involves an avoidable expenditure. On the other hand, there is little likelihood at present that parents will give their daughters a University education as a mere luxury. The thing has not become the fashion, and girls themselves do not, as a rule, care to sacrifice the supposed pleasures of society for half the year. But there are now a hundred and thirty students in the college; there is, to be sure, room for plenty more, and the entries this term were upwards of forty. We believe that, when the vastness of the buildings and grounds is taken into account, the endowment, though amounting to some £8,000 a year, is barely sufficient.

IN view of an important correspondence that has lately been carried on in the columns of the *Guardian*, with regard to the decrease in the number and quality of candidates for Holy Orders in the Established Church, it is worthy of notice that the clergy themselves might provide a larger number of recruits to carry on the work of the Church than they do. Thus, for example, St. Edmund's School at Canterbury, the Clergy Orphan Corporation's school, which is doing admirable work, turns out a very small proportion of clergymen. The explanation of this dearth is no doubt in great measure that funds are not forthcoming to continue the education of boys after they leave school. To obtain the necessary qualifications is a luxury which many would-be candidates for Orders cannot afford. What seems to be wanted is a much larger number of scholarships and bursaries for intending candidates.

THE possibilities of museums, from an educational point of view, are practically recognized at the present day, and, from time to time, one hears something of the institutions of this nature in connexion with our public schools. Still, it is not saying too much to state that school museums deserve a great deal more attention, and, it may be added, support, than they

now receive. Much misconception still exists with regard to the amount of time, knowledge, skill, and money which ought to be expended on keeping a museum up to date. As the late Sir William Flower pointed out with regard to local museums, many treasures have been lost to the nation and to science through over-confidence in them on the part of the donors. The ties between an old public-school boy and his school are often stronger than between him and his place of residence, and to the school museum he gives his valuable specimens rather than to the local or a national institution.

ETON COLLEGE has for a long time contained many objects of great interest, but its importance has been increased by the recent acquisition of the collection of Egyptian antiquities got together by the late Major W. J. Myers, who was killed in South Africa last year. Many of the specimens have a world-wide reputation, and the authorities have provided a number of fine cases for their reception. When the scientific arrangement of the objects now proceeding is finished, it is to be hoped that their light will not be hid under a bushel. The important parts of the collection are the series of blue glazed pottery of the New Empire, consisting of beautiful cups, dishes, and vases, as well as of rings, statuettes, and other objects. Then a number of plaster masks from graves belonging to the Roman-Egyptian period call for attention, as well as vases of similar date. Some of the wooden figures are also very remarkable, while one must not forget the prehistoric flint knives, stone jars, and pottery, which Major Myers presented before his death. It was one of this officer's hopes to see in time an anthropological section of the Museum devoted to the works of man in all lands and in all times. In this many other of his gifts would naturally find a place.

HERE is a good instance of a child's anthropomorphism: A little boy's jacket was to be sent to Scotland as a pattern for a new one. He was observed putting into its pockets a pin-cushion, a toy dog, and a penknife. He explained that he had forgotten to take them with him in the summer, and that they had missed their holiday, and he felt sure they were disappointed—the journey to Scotland would make them all right. We fear we cannot cull any scientific lesson from the following, unless it illustrates a deep-seated distinction between the boy and the girl mind:—Overheard on the way home from Sunday school. Boy: "I say, Sis, if you had been Solomon, would you have chosen wisdom?" Girl: "Oh, no; you see I've got wisdom. I should have chosen a doll's perambulator."

## SUMMARY.

### THE MONTH.

THE last meeting of Convocation of the University of London under its old constitution was held at South Kensington on October 9, when the sixteen Convocation members of the new Senate were elected. The graduates in Arts had the right to elect six members, and fourteen were nominated. The chosen six were: Mr. J. Fletcher Moulton, M.A., Q.C., with 1,140 votes; Mr. J. D. McClure, B.A., 1,134; Sir Albert K. Rollit, LL.D., 1,063; Mr. T. D. Napier, LL.D., 910; Mr. J. B. Benson, LL.D., 906; and Mr. T. L. Mears, LL.D., 752. The unsuccessful candidates in the Arts Faculty were Sir Joshua Fitch, Mr. G. Armitage Smith, Mr. T. Ely, Mr. R. W. Hinton, Mr. A. B. Hopkins, Mr. T. S. Osler, Mr. E. J. Routh, and Mr. T. McKinnon Wood. The

graduates in Law had to elect one member, and their choice fell on Mr. Justice Cozens Hardy with 127, his only opponent, Mr. Joseph Walton, Q.C., receiving 106. In Medicine and Surgery two graduates had to be elected, and four were nominated. Mr. Thomas Barlow with 381 votes, and Mr. J. F. Payne with 314, were elected; the unsuccessful candidates being Mr. S. Ringer and Mr. A. R. Silcock. In Science, the six members elected were Sir Philip Magnus, 432 votes; Mrs. S. Bryant, 429; Dr. C. W. Kimmins, 364; Dr. F. Clowes, 333; Dr. Silvanus P. Thompson, 239; Dr. F. S. Macaulay, 226. The unsuccessful candidates were Dr. C. H. Draper, Mr. G. C. Foster, Dr. R. D. Roberts, Dr. S. H. Vines, and Dr. S. R. Wells. The Faculty of Music were entitled to elect one representative, and, as Mr. J. W. Sidebotham, Mus.Bac., was the only nomination, he was declared elected.

THE SENATE has since been completed by the election of the representatives of the Faculties. In Arts, Prof. M. J. M. Hill, Prof. Paton Ker, Prof. Warr, and Miss Emily Penrose have been elected. In Medicine, Dr. Rose Bradford, Physician to University College Hospital and Professor Superintendent of the Brown Institution; Dr. Kingston Fowler, Physician to and Lecturer on Medicine at Middlesex Hospital; and Dr. E. C. Perry, Superintendent of and Physician to Guy's Hospital, have been elected. In the Science Faculty, Sir Michael Foster, K.C.B., F.R.S., the representative of the University in Parliament; Prof. Halliburton, F.R.S., of King's College; Prof. Ramsay, F.R.S., of University College; and Prof. Rücker, who was a member of the late Senate. In the new Faculties of Engineering and Economics, Prof. Unwin, F.R.S., and Prof. Hewins, respectively have been elected; while Sir Hubert Parry returns to the Senate as the representative of the Musical Faculty. As already announced, Lord Davey, Chairman of the late University Commission, has been nominated by the Crown in Law, in default of the constitution of a Law Faculty.

LORD REAY has sent a statement to members of the London School Board in which, amongst other things, he draws attention to the diminished number of children in the metropolitan schools. Three years ago it had risen to 734,777; it is now 724,248. This appears to point to the conclusion that there will not in the future be any serious increase in the number of children between three and thirteen who require school accommodation. As to the cause of the diminution, Lord Reay says:—

The change which has taken place in this respect during the past three years is probably due to the gradual depletion in central London of the population requiring such accommodation. Last year I pointed out how such migrations within our borders affected the question of school provision. But the emigrants are not brought to a standstill by an imaginary boundary-line, and the great increase in artisans' dwellings which has taken place in areas under neighbouring School Boards, such as West Ham, Hornsey, Willeaden, Acton, and Croydon, shows that many of them have swept over the boundary of the metropolitan area. There are still large outlying districts within that area which are not yet covered with buildings. If these districts were occupied by new-comers, and not merely by emigrants, our numbers would again increase. I am inclined to think, however, that the future occupants of these districts will be persons who have been driven out of central London. The Board will be no less bound to provide school places for the children of these persons than if they had been new-comers, and, therefore, we must expect for a time to face the apparent anomaly of an increasing number of schools with a stationary or decreasing number of children to be educated.

ON October 9 the Archbishop of Canterbury opened St. Gabriel's College, Kennington, for the training of schoolmistresses. The building, erected at a cost of £38,000, will accommodate eighty resident and eighty non-resident students. The eighty resident students must be members of the Church of England, but that restriction is not laid upon the non-residents. The Bishop of Rochester, Canon Daniell, Archdeacon Burney, Canon A. Edwards, Canon Brooke, and Mrs. Temple, wife of Archbishop Temple, were among those present. The Archbishop, in the course of a short address, said that the schoolmistress was just as much a minister for Christ as one ordained, and spoke of the necessity of the mistress having a great love for the pupil and a deep interest in the subjects she taught.

THE President of the Board of Education appeared in a somewhat novel character on October 15, when he opened a higher-

grade school for the Manchester School Board. It will be remembered that the legality of expenditure by School Boards on higher-grade schools, in which the maximum age is carried beyond the elementary limit, has been challenged by a public Department, and a case raising the question is now waiting for decision in a court of law. The Duke of Devonshire said on this occasion that

he regarded it as a very great honour to be the guest of the Manchester School Board. On that occasion he felt it especially an honour because he was under the impression that in certain quarters it was thought the present Council on Education was not disposed to be very friendly to the work of School Boards, and not to be altogether in sympathy with them. But he could assure them that, although Sir John Gorst and himself might have thought it necessary on some occasions to check the proceedings of some School Boards whose zeal was tending to outrun their powers, yet they were entirely in sympathy with their object, namely, the organization of a complete system of education in this country.

It may be convenient to quote here one of the surcharges made by the Local Government Board auditor against the London School Board, out of which the case in the Court of Queen's Bench has arisen. The district auditor, in his report dated July 26, 1899, made his first disallowance in the following terms, and for the following reasons:—

In the account for the half-year ended at Michaelmas, 1898, of the School Board for London I disallowed the sum of £5. 10s., entered and charged therein as paid out of the school fund of the said School Board to Mr. C. H. Haslam, a teacher in the employment of the said School Board.

The said payment forms part of an expenditure incurred by the said School Board in the maintenance and instruction in special subjects of an evening science class, registered under the Science and Art Department, South Kensington, as a science class, and held at the Burghley Road Pupil-Teachers' School. The said sum of £5. 10s. was paid to Mr. Haslam, as remuneration for giving eleven lessons at 4s., and eleven lessons at 6s., as special instruction to such class in chemistry. I make such disallowance for the following reasons:—

1. Because the said sum of £5. 10s. was not paid to the said teacher for the performance of duties which the said School Board had power to assign to him within the meaning of Section 35 of the Elementary Education Act, 1870.
2. Because the said sum of £5. 10s. was paid to the said teacher for the instruction of classes registered under the Science and Art Department.
3. Because School Boards have no legal authority to use, expend, or apply any part of the School fund in the instruction of classes registered under the Science and Art Department.
4. Because the said sum of £5. 10s. was paid or expended wholly or partly for services rendered in teaching subjects not allowed, provided for, or recognized by the Education Code.
5. Because the said sum of £5. 10s. was not paid for services rendered as a teacher in an "elementary school" within the meaning of the Education Acts.
6. Because the said teacher, so far as relates to the services in question, was not a "necessary officer" or a teacher required for any school provided by the said School Board within the meaning of Section 35 of the Elementary Education Act, 1870.
7. Because a School Board is not a "Local Authority" within the meaning of the Technical Instruction Acts, 1889 and 1891.
8. Because the said School Board had not any authority in law to pay the said sum of £5. 10s., and to charge the same in their accounts as aforesaid.

And I surcharge the said sum of £5. 10s. upon Thomas Huggett, of 9 Cromwell Crescent, Kensington, and John Archibald Murray Macdonald, of 15 Thurlow Road, Hampstead, Esquires, because they authorized the making of the illegal payment.

THE REV. JAMES PORTER, D.D., Master of Peterhouse, Cambridge, died on October 2. He entered at Peterhouse in 1847, and graduated in 1851 as ninth Wrangler, the Senior Wrangler that year being the present Master of Caius, and others graduating in that Tripos being the Master of Pembroke, the late Bishop Lightfoot, and Sir W. Harcourt. Dr. Porter was absent from the University for a short period, being engaged as a teacher of mathematics at Liverpool College; but, returning to the University, he took private pupils, and became a college lecturer and tutor. In 1876, Dr. Porter was elected Master in succession to Dr. Cookson. Within five years he was elected to the office of Vice-Chancellor. He took a large part in local affairs, and, when the Town Council was reconstructed by the admission of Univer-

sity representatives, he became a member of that body, but declined the office of Mayor. He was an advocate of the admission of women to degrees, and supported the proposal to abolish the order of merit in the Mathematical Tripos.

At University College, London, the following scholarships and exhibitions have been awarded:—Medical entrance scholarships—Bucknill Scholarship, £30 a year for four years, and 55 guineas scholarship (divided, equally), H. T. Mant and W. S. Sweet; 55 guineas scholarship, H. E. Dyson. Medical exhibitions—Each 76 guineas, C. W. Forsyth and A. M. H. Gray; West Scholarship in English, £30, F. H. C. Brock.

At a meeting of the Court of Governors of University College, Liverpool, on October 15, the Earl of Derby presiding, it was announced that Mr. Holbrook Gaskell had given £1,000 towards the building and equipment of a new physics laboratory, and the thanks of the Council, by whom the bestowal of the gift was reported, were tendered to him for this evidence of his continued interest in the welfare of the College. The annual report of the Council was presented and adopted on the motion of Lord Derby, who remarked that the general progress of the college seemed to continue, and, though they might wish that their growth could be even more rapid, they could not complain of the number of benefactions and gifts bestowed on the college during the year. Mr. Robert Gladstone presented the treasurer's statement, which showed an excess of expenditure over income of £1,252, while the total debt under the head of "general fund," now amounted to £11,000. He earnestly appealed for support.

THE following candidates have been successful in the Examinations for the National Diploma in Dairying held recently at Reading and Kilmarnock. At Reading:—Ernest Christopher Brown, Midland Dairy Institute, Kingston Fields, Derby; Ella Evans, Tyn-y-Coed, Sarn, Pwllheli, North Wales; Edith Morton Jackson, Erw Wen, Llangollen, North Wales; Margaret Robertson McDuff, British Dairy Institute, Reading; John Percival, Harper Fold Farm, Radcliffe, near Manchester; Charles Donald Stewart, Yarrow Bridge, Duxbury, Chorley. At Kilmarnock:—Jane Barbour, Redwells, Cardenden, Fifeshire. John Donald, Burrowin, Bogside, Stirling; Agnes Kinross, Wester Balbeggie, Kirkcaldy; Jemima A. Veitch, Backshot, Forth, Lanarkshire; Philippa Wilkinson, Needingworth, St. Ives, Hunts. Each of these competitors will, therefore, receive the National Diploma in the Science and Practice of Dairying. It has been decided by the National Agricultural Examination Board to hold similar examinations in the autumn of next year (1901) under practically the same regulations at the two centres of Reading and Kilmarnock.

## UNIVERSITIES.

(From our Correspondents.)

THE Chichele Professorship has at last been settled Oxford. after nearly half a year's delay; and Mr. C. W. C. Oman, of All Souls, has been elected to it. Mr. Oman has produced original work of value, and no doubt will now produce more; he is, however, perhaps most widely known by his two excellent school books. The election brought out strikingly the strength of the Oxford History School at the moment; for there were at least three other tutors, any one of whom would have held the post worthily.

Mr. Spooner, of New College, has written a valuable article in the *Oxford Magazine* on the subject of "Pass Moderations." The present arrangement is too complex to detail here; and, like everything connected with Passmen, will be hard to change, because energetic people are seldom concerned with Passmen, and the coaches, who are mainly second-rate teachers, depend for their efficiency on their close rule-of-thumb knowledge of the *status quo*. Mr. Spooner brings three main charges against the system: (1) it fails to interest its victims, who are kept for a year stagnating over work done already at school; (2) it is very disconnected, and needlessly isolates its students for purposes of study; (3) it is inconsequent and without any real order. Few people, except Pass coaches, will deny the serious truth of these

charges. The present system is a triple one. After Responsions, an undergraduate who does not take Honours Moderations must take either Pass Moderations, or the Preliminary Examinations in Science, or the Law Preliminary Examination, before he may attempt Honours in a final school. These three examinations are mutually exclusive; each therefore is narrow, while no one of them pretends to be deep. Mr. Spooner's plan proceeds on the lines of amalgamating the three into one systematically tabulated examination, within which a far greater elasticity in the choice and combination of subjects would go hand in hand with a real advance towards any of the final schools. It is a desirable consummation; but I cannot as yet be sure what its chances are.

The death, on October 16, of Sir Henry Acland, sometime Regius Professor of Medicine, removes one of our best known figures; a fellow-undergraduate at Christ Church of Mr. Gladstone, and, later, the most intimate friend of Mr. Ruskin in his Oxford days. His medical work was notable, but his chief achievement was our Museum. He was to be seen in his carriage almost daily till a very short time before his death.

Mr. E. E. Genner, Scholar of Balliol and Fellow of Magdalen, has been elected Derby Scholar. The Rev. E. C. Spicer, New College, has been elected to the Geographical Scholarship for 1900-1901. The Hebrew Scholarships have been awarded: the Junior Kennicott to Mr. A. C. Paterson, Trinity; the Pusey and Ellerton to Messrs. S. L. Brown, Wadham, and R. W. Sutcliffe, St. John's, who were equal.

In the Civil Service Examination this year the proportion of success attained by Oxford men was once more remarkably great.

A slight falling off in the number of freshmen who have come into residence this year, as compared with last, has to be noted. The total is 732, as against 764. New College comes first with 58, or eight more than a year ago, and then, after Christ Church, with 57, the same number as last October, we have the following figures:—Keble, 54; Non-collegiate, 51; Magdalen, 50; Balliol, 50; Exeter, 43; University, 40; Trinity, 39; St. John's, 32; Queen's, 30; Oriel, 27; Brasenose, 26; Merton, 26; Hertford, 26; Wadham, 23; Corpus, 22; Pembroke, 21; Worcester, 16; Lincoln, 15; Jesus, 14; St. Edmund's Hall, 10; Clarke's Hall, 4; All Souls, 1; Marcon's Hall, 1.

THE technical commencement of the University Cambridge. term is October 1; full term is about twelve days later. In years gone by the place was deserted until the actual day for the reassembling of the colleges. Things, however, are rapidly changing here: the October Little-go, beginning as it does on October 1, brings up a large number of junior men, and consequently the college machine has to begin running. So many of our resident teachers are now married men, glad to get back to the comforts of home, that it is safe to say that things are in going order days before the commencement of actual full term. Shortly we may expect to see the new order of things officially recognized, and the first day of full term brought nearer to October 1.

Mr. Chawner, of Emmanuel, the retiring Vice-Chancellor, delivered the usual speech at the end of his year of office. He referred publicly to the fact that all the colleges of Oxford and Cambridge have agreed to hold no examinations for entrance scholarships before December 1 in the years 1900 and 1901. This change will, it is hoped, do away with some of the evils that attend the present system of competition. The Vice-Chancellor also noticed the fact that a movement has recently been growing to promote the study of military science in Cambridge both as regards theory and practice. A large and enthusiastic meeting held in the Lent term authorized a deputation to treat with the War Office on the subject. With regard to the practical side it is fairly certain that the authorities, approving generally of the University as a source for supplying candidates for commissions in both the regular and the auxiliary forces, will encourage the gradual formation at Cambridge of a military school in connexion with the University Volunteers, and will accept the instruction so given as far as it proves to be efficient. Of the total number of commissions offered to the University a fair proportion will be placed at the disposal of the University authorities to be confined to graduates who have been efficient members of the University Volunteer Corps. Cambridge will, in all probability, be made a centre for the military examinations, and the examination in military subjects may be passed previous to graduation. Thus a candidate for a commission (a) might have graduated in Honours; (b) might have passed before

graduation in the military subjects; (c) might have been to a school of instruction; (d) might have obtained the full benefit of a University career, and all this without being many months older, if at all, than the University candidate for the Army of the normal type under the existing regulations.

The new regulations for the Little-go have produced a very considerable change in the nature of the class lists. This October there were only five successful candidates who had commenced residence; so that it is clear the majority of the men now pass either before entering upon their college career, or shortly after doing so. A further step in advance would be taken if the colleges refused to allow any man to reside at all until this examination was successfully negotiated. There is, however, such a greed for numbers in certain quarters that heroic measures of this sort will probably be deferred till the Greek Kalends.

A curious storm in a tea-cup has recently been raging about the form of the class lists in the Historical Tripos. The regulations specify that in each class the names are to be given in one or more divisions. The meaning of such a regulation is fairly obvious; but the examiners, for two years in succession, have chosen to interpret it as giving them a discretion as to whether they shall divide the list into divisions or not. The lists have therefore contained three classes with no attempt at subdivision whatever. The anger of certain persons has been aroused, and fly-sheets have followed. The threatened thunderbolt is in the form of a *non-placet* to the reappointment of any of the present examiners, such a procedure being the only way in which the Senate can show the offenders that when a regulation is passed it has to be observed.

The death of Dr. Porter, Master of Peterhouse, which occurred at the end of the vacation, removes from among us one of the landmarks of the place. He was foremost in the business and social life of the University, and was noted alike for his courtesy and administrative skill. The fact that he was often on the losing side did not detract from the esteem in which he was held by those who had to oppose him. Rumours are rife as to his successor; and those who are acquainted with the electing body imagine that the result of the election will come as a surprise on the University.

The freshmen are not as numerous as usual this year, and the number of residents is also smaller. These facts are undoubtedly due to the war, the number of Cambridge men at the front, in the regular and irregular forces, being very large.

### THE TEACHING OF PATRIOTISM.

ON Wednesday, October 17, at the monthly Evening Meeting of the College of Preceptors, Mr. H. W. EVE in the chair, Mr. J. J. FINDLAY, M.A., read a paper on "The Cultivation of Patriotism in the School."

In introducing his subject, Mr. Findlay observed that the very title of his address was a challenge and denial of certain theories of education. It was often supposed that the school was a place where certain abstract properties were dispensed to all comers—faculties of memory, reason, imagination, quite apart from the political, social, or personal influences of the day. Just as you go to a tailor to purchase your boy's winter outfit, so you go to a school to fit him up with some abstract, marketable commodity called "mental culture."

Now the partial truth underlying this view should not conceal from us its gross error. The school is a product of the time, and it mirrors forth the whole life—political, social, intellectual—of the race and age. We teachers are tools by which modern society works out its ends and seeks to realize its hopes. And, however much the older educational theorists may have ignored this process, it has been for long recognized by statesmen. The churches have understood for many generations what a powerful engine the school may be made; and one of the leading features in the history of education during the nineteenth century will surely be found in the grasp laid on the school by the modern State, sometimes in antipathy to, sometimes in sympathy with, the forces of religion. Now we are not concerned to consider whether this new control is welcome or no. We may lament, if we are inclined, the cloistered seclusion of the academy; but we now live in a world where the social and intellectual environment of school life is seized upon by the ruling forces of the age. We are familiar with the experience of Germany in this matter; we know how, in the last generation, Moltke was willing to allow that the teacher's influence had created a type of soldier who could endure and conquer. "Der Schulmeister" said he once, in the Reichstag, "hat unsere Schlachten gewonnen." And Germany still abides as the chief illustration of the enormous possibilities, for good and evil, in controlling the life of a nation by means of school influence. The German teacher is expressly and definitely employed as a civil servant to safeguard the civil authority of the Government against the attacks of lawless revolutionaries; and he is required, of set purpose, to cultivate in his pupils a sentiment of local provincial patriotism as regards his locality or his State, combined with a still more pronounced sentiment of devotion to the supreme interests of the Empire. The German Empire is an armed camp, standing ready day and night to guard its frontier against its hereditary foes—the Slav on the East, the Celt on the West; and the children of the Empire must be trained to take their share in this perpetual campaign.

The United States exhibits the same influences at work for an opposite cause. There is no fear of an external enemy; but there is an internal disorder—viz., the lack among the people themselves of national consciousness. The common school in the great cities of the States, as well as in many country districts, is attended by children of alien origin, to whom, at first, America means nothing but a workhouse. Hence every public man in America will tell you that the maintenance of the school is the first necessity of the State. "If these immigrant children are not 'Americanized,' they will destroy us."

Now, ten years ago, if we had cited these two nations as examples for Great Britain to imitate, we should certainly have been reminded that the same need does not exist among ourselves. We feel neither the pressure of foreign enemies on our flanks nor the danger of alien elements within our borders: we have, therefore, no need to organize the cultivation of national sentiment among our children, and the problem raised by the title of this address would have been dismissed as an idle waste of time. But to-day no one will consider the discussion as unsuitable; it is being pressed upon our notice by influences which, from many quarters, have combined to make England, and the British Empire, a new world. These influences, for good or evil, are making themselves felt; the school cannot escape them, even if it would, and, if we teachers are to keep our hold upon our schools, we must take our country, our parents, our pupils, our authorities, as we find them, and seek to direct this new spirit of patriotism into channels which will be really helpful to the growth of sane, generous, public spirit in the youth of Great Britain.

"I, for one, do not shrink from this novel task; I rather rejoice to see this day. I believe that our country, in spite of all excesses of Jingoism and militarism, in spite of the degradation of Imperial sentiment to the vulgar ends of wealth and pride—our country is the better for its enlargement of sympathy and of ideal. And, instead of fearing the new burden which a new age lays upon us, I invite you, in the best of spirits, to an analysis of the principles which may help us to a wise fulfilment of our new responsibilities." The efforts which we witness, at home or abroad, for the cultivation of patriotism in the school may be grouped under three heads, corresponding roughly to the three aspects of mental life—intellectual, emotional, volitional.

#### 1. SCHOOL LESSONS.

The school-book literature of the last decade gives sufficient indica-

A MEETING of the Court of Governors of the University College of Wales, Aberystwyth, took place on October 26. In connexion with this meeting, the President of the college (Lord Rendel) held a reception on the evening of October 25, and the Bishop of Hereford delivered an inaugural address on October 26. Similar addresses have been delivered on previous occasions by the late Prof. Henry Sidgwick, the present Master of Balliol, Mr. Leslie Stephen, Sir Michael Foster, M.P., the Master of Trinity, and others.

The next meeting of the Court of the University of Wales will be held at Cardiff on November 23. It will be the Annual Collegiate Meeting for this year; these meetings being held in rotation at Aberystwyth, Bangor, and Cardiff. In connexion with this meeting, the annual degree ceremony will be held. The meeting of the University Court will be held in the newly erected building of the Cardiff Girls' Intermediate School. Among new developments in the Welsh colleges, it is interesting to note the project for forming a school of mines (chiefly for instruction in slate-quarrying) in connexion with the Bangor University College, Cardiff. A school of mining has for some years been one of the departments of the University College, Cardiff. It is gratifying to observe the adaptation of the Welsh University Colleges to meet the needs of the industries of the localities in which they are placed.

In accordance with its policy of encouraging sound education in the county schools of Wales, and of diminishing the feverish anxiety for tangible examination results, the Central Welsh Board has this year issued to each school a list of the certificates gained by its pupils alone, so that the evils of a comparison of the number of certificates gained by different schools will thus be avoided. The next meeting of the Central Board will be held on November 16 at Aberystwyth; and hopes are entertained that much good will result from the deliberations of Welsh educationists at that important centre of Welsh education.

tion of the increasing desire to secure for children a proper equipment of ideas relating to their own country. On the one hand, we have the teaching of civics, studied in a number of books, of which Mr. Arnold-Forster's are the best known. An official recognition of such instruction was first given by Mr. Arthur Acland in his "Code for Evening Continuation Schools," but, since 1894, the advocates of such instruction have carried it much further afield. On the other hand, we have seen our text-books of history and geography infused with a new spirit. Such books as Parkin's "Round the Empire" are spreading in thousands of schools—a conception of Imperial fellowship such as was never contemplated before in books prepared for school use. Perhaps the pioneer in this direction was John Richard Green. His "Short History of the English People" has probably done more to create an intellectual appreciation of England among young Englishmen than all the political agitations and leagues put together.

The teaching of civics has been advocated by great authorities. The advice of James Bryce, Arthur Acland, Arnold-Forster, is not to be lightly set aside, and yet we find the study to be scarcely welcomed in the schools. To a student of education the explanation is simple. All these social sciences, such as politics, economics, civics, and ethics—the crown of them all—are abstract, and, as such, are unsuited to the immature mind, which has no concrete experience on which to build the edifice of systematic thought. Hence, let us confine ourselves during school life to the humanities—history, literature, human geography, which afford the same material in concrete form.

And from what a rich store may we select! The store is far too vast unless we adopt principles of selection which will give us only what is most suitable for each school period. History will tell its own story if we choose such epochs as are adapted to the growth of the pupil's mind, and if we permit sufficient detail to give personal interest to the characters. In this direction the Herbartians seem to have been really successful. They commence at about ten years of age, and introduce the child to the local legends of the neighbourhood, correlating these, on the one hand, with local geography; on the other hand, with local legends and heroic ballads. Then, in succeeding years, they pass through the chief epochs of national history until, about the age of fourteen, the crown of national endeavour is reached in the story of the nineteenth century—from the overthrow of the first Napoleon to the overthrow of the second Napoleon. This course of study can be correlated throughout with the masterpieces of historic literature in poetry and prose. In this last regard we have sumptuous fare provided by modern English writers. "Ivanhoe," "The White Company," "Westward Ho!" and the whole galaxy of Shakespeare's plays cannot be surpassed as material for nourishing the young mind with great thoughts about our country. The supreme value of these books lies in their fidelity to historic realities. They offer the actual words and life of the men and women of the time, and are far removed from the pseudo-historic work of men like Henty and Kingston.

## 2. THE CULTIVATION OF SENTIMENT.

These studies in history, literature, geography mainly serve the purpose of intellectual apprehension. True, they do much at the same time to stir the heart; but young people, after all, are not greatly stirred by the printed word. Something of colour, excitement, movement are necessary to effect broad and deep impressions upon them. Hence the value of what we may call *commemorations*. In America Arbor Day, Independence Day; in Germany the Emperor's birthday, the Duke's birthday (and, unhappily, *Sedan-tag*) provide occasions which, year by year, serve to keep up in the school the memory of great achievements. The members of a school are a society—a fragment of the nation living together day by day, sharing common feelings and common ideals. Should it not, on great and memorable occasions, celebrate and commemorate the days of old? The proceedings may be simple—should be simple—but the effect on young people's imagination extends beyond the influence of many school lessons. The school assembly is, for such an occasion, often joined by friends or parents. One or two songs are sung, a poem recited, an address on some appropriate topic comprises all that is necessary.

An example of what is possible in such a direction in this country may be worth citing. Patriotism is not only an affair of the Empire; it touches still more closely the sphere of local and provincial life. No man is a good patriot if he is a bad citizen. If at this moment we are full of Imperial enthusiasm, we must not forget that this spirit is the sequel to the most remarkable development of county and local interest which has been witnessed since the days of the Norman conquest. That being so, it did not seem inappropriate for a day school situated in the midst of a great town population, full of intense interest in its civic life, to give expression to these feelings by a commemoration. The day chosen was the eve of the new civic year. An honoured citizen was invited to describe the town as it was fifty years before. The description, illustrated by plans and maps, was followed with the keenest attention. The town library and museum provided a number of old maps and charts for exhibition. A speech by the late Earl of Derby on "Local Patriotism" served exactly to remind the audience of the principles underlying civic duty, and it did not come inaptly

from the lips of a schoolboy who would hereafter have to serve his town as a citizen.

Next week comes St. Crispin's Day, when was fought one of the most useless, but most glorious, battles on the roll of British history. If a class of children are studying that story, what can be better than for one of them to tell it before the whole school, with the immortal speech that Shakespeare puts into the mouth of King Henry? Such an exercise, of course, demands that our pupils be trained in recitation, in literary expression and style, which is so much the better, for it is only by such active expression that children can enter into the spirit of heroic literature; they must themselves recite and speak and sing, if they are to feel the glow which inspired the poet and the singer.

## 3. EXERCISE OF CORPORATE ACTIVITIES.

Patriotism consists in deed rather than thought or sentiment; he only is the true patriot who lives the life of a citizen. It, therefore, follows that, since the school pupil is a minor, unfit for the duties of civic life, he must be content while at school with the cultivation of ideas and sentiments which shall bear fruit later. Whatever some parents may do, we teachers are not willing to let young people haunt the polling booths and join in the excitements of a political election. Nevertheless, we are very conscious of the danger of stimulating the mind with impulses for which no outlet is afforded. We know how easy it is for the school to produce a type of man, and of woman, who is content to meditate, to hope, to sigh, but who shrinks from action.

We have, therefore, to ask ourselves whether the school can find any sphere of activity for its pupils analogous to the activities required in later life. Surely this is offered us by the very conditions under which we live as teachers and pupils—members of a common society. The child is a social being, and, as soon as he begins to realize his relations to those about him, he begins to exercise those activities which in later years will make him a useful member of the State. At first he is limited to the home, but when school life begins he finds there a new and wider sphere for the exercise of corporate virtues, for the cultivation of social habits, which will give a decisive direction to his whole career. Nowhere, perhaps, have the evidences for this view been more manifest than in our English public schools, and nowhere is the theory better exhibited than in the teaching of Arnold of Rugby. Indeed, we may fairly say that here is the one lesson which our neighbours across the Channel are accepting from us in England. They see how it becomes possible to direct the corporate life of the school society so as to promote the highest ends of education.

We should not, however, be content merely to copy the Arnold tradition. The broader, wider study of school life, which is characteristic of our time, is leading to many suggestive proposals which go far beyond the special modes in vogue in the great boarding schools. The saving principle throughout is found in cultivating social habits—habits of mutual service, habits of pleasure in the society of one's equals, habits of submission to social laws, and, in due time, habits of authority in the control of inferiors. Not that these habits are to be cultivated, artificially, for the special end of patriotism; they are, rather, the proper modes in which the organized life of school takes shape, if it is to answer adequately the social demands of child-nature; and the further end of creating habits useful hereafter to the patriot and citizen will be achieved at the same time.

This completes an elementary analysis of what can be done, what is being done more or less in many schools, towards the end here proposed. If we are asked whether that end is being achieved, whether we can prove by detailed evidence that cause will produce effect, we may reply with some confidence. It is hard, indeed, to lay one's hand upon individual pupils and say: Here is a specimen, a product, to convince you of the efficacy of the prescription. Results in education are not produced with such rapid effect as we can demand from patent medicines, or from the crammers who put us through examinations. A good patriot is the product of many influences, of which the good school is only one. But when we take a broad survey of what is being done in schools, when we weigh, for example, the influence of the literature to which reference has been made—Green, Seeley, Arnold-Forster, and the like—as a factor in the new Imperial sentiment of our time; when we witness the unquestioned results in Germany, in the United States, in our own large public schools, issuing from organized efforts for the development of patriotic sentiment and corporate activity, we are bound to place some confidence in the theories which underlie these efforts, we have fair ground for supposing that similar principles, if adapted to our time and our need, will lead to similar results. We may believe that it is possible for us, although we stand apart from the open field of political activity, to play our part in the service of our neighbourhood and of our country, by sowing seed which cannot fail of harvest.

The lecture concluded with a discussion of the bilingual problem as it presents itself in various parts of the British Empire—Wales, French Canada, the Transvaal—where a vigorous provincial patriotism claims to be fostered side by side with acceptance of Imperial ideals.

The CHAIRMAN said that the life of the ancient Greeks afforded examples which were worthy of emulation, and, although comparatively few boys studied the Greek language, he agreed with the lecturer that all should have some knowledge of Greek life and patriotism. The idea of commemorations was excellent. It should not be difficult for every school to select for commemoration men whose lives had conferred benefit either on a special locality or on the whole country. Poetry could be made a very effective agent in the cultivation of patriotism, and, perhaps, none more so than certain poems of Tennyson—

"Love thou thy land, with love far brought  
From out the storied Past, and used  
Within the Present, but transfused  
Thro' future time by power of thought."

There were two lines of one of the poems of that group which should never be forgotten—

"The land where, girt with friends or foes,  
A man may speak the thing he will."

Sir JOSHUA FITCH said that all would agree that love of country was one of the first things that should be cherished; and there were legitimate ways of encouraging in school pupils a loyal and affectionate regard for their country. A few special lessons on the privileges we enjoy as citizens, on the sacrifices of our ancestors in securing those privileges for us, conversational lessons in which the elder boys and girls should be encouraged to take a part—*e.g.*, the Courts of Justice, the functions of Parliament, the large number of unpaid services which, in a community like ours, the State expected from its citizens—these would interest boys, increase their love for their country, and arouse a desire to do something which might do credit to it. But he disagreed with the proposition to establish rifle corps in connexion with the great public schools, and to introduce military drill in ordinary schools. That was going beyond the function of the school, which, on the physical side, was to develop the bodily powers in the best possible way; and that way was not necessarily the method of military exercise, for it might easily result in the undue cultivation of the military spirit. It was also undesirable that boys should be led to think that every war in which our country was engaged was necessarily just and patriotic. He thought that the boastful and theatrical patriotism which found its expression in waving the Union Jack about and singing "Rule Britannia" did not deserve encouragement in schools, and he feared that too much of it was in part responsible for the lawlessness and violence which had of late disgraced our streets.

Dr. GLADSTONE was in entire accord with what had been said by the lecturer and by Sir Joshua Fitch. An excellent plan of interesting pupils in social and political life was to start with the history and associations of the immediate locality, and gradually increase the scope of study till they arrived at universal sympathy extending to all mankind. Teachers might do much to promote this sympathy.

Dr. R. P. SCOTT expressed his appreciation of the excellence of the lecture, which was the outcome of Mr. Findlay's personal experience. He felt himself in accord with nearly everything the lecturer had said. It was not always advisable, however, to commemorate the founder of a school, as founders were not in all cases men of worthy lives. He had found it useful to make a commemoration day of All Saints' Day, which formerly had been merely a holiday for the school. The sympathies of the boys were in this way much broadened. He considered the cartoons in *Punch* of real educational value, and he made it a practice to place the current number on the school notice-board. The humour of *Punch* also acted as a corrective of exaggerated sentiment. As examples of literature of value in the school cultivation of patriotism he would like to mention the "Lyra Heroica" and Shakespeare's "Henry V." It was important for teachers to remember that they were training boys who were to become citizens, and they should be careful not to give their pupils a biased notion of patriotism.

Mr. W. C. BROWN thought it was easier to develop local interest in Wales than in London, especially because in suburban districts the population was perpetually shifting. There was, of course, on the other hand, the local interest which was confined to the work of the school, and he had heard of a case in which the boys of a school gave their services for entertainments, and contributed a considerable sum towards the maintenance of a hospital for the use of troops returning from South Africa. If a boy could be got to give his own efforts, to use his own powers, towards the furtherance of public affairs, he was being trained in a form of true patriotism which would never develop into jingoism.

Mr. ORCHARD said that the cultivation of patriotism entered largely into the political, social, and civic life of the country, and should be directed into healthful channels by the teacher. The child was a social being, and there was no reason why *esprit de corps* should not be taught in the school, and after that true patriotism and love of country. The study of the lives of patriots and the teaching of history were of primary importance, and he thought the lecturer's suggestion as to commemoration was very valuable.

Dr. Findlay having replied to the various speakers, a vote of thanks to the lecturer concluded the proceedings.

Part I., Now Ready, Price 6d., of

A NEW, ENLARGED, AND REVISED EDITION OF

SIR ROBERT BALL'S FAMOUS WORK,

# The Story of the Heavens.

The Distinguishing Features of this New Edition are—

1. A Number of New Illustrations.
2. An Entirely New Chapter on the Physical Nature of Stars.

## BELL'S ILLUSTRATED CLASSICS.

Edited by E. C. MARCHANT, M.A., late Classical Master at St. Paul's School.

*Full Illustrated Prospectus of this Series post free on application.*

THE special object of this Series is to make the editions as interesting and helpful as possible to the intelligent learner; and, with this object, numerous Illustrations have been introduced. Though based on authentic sources, these are not mere copies of antiquities, such as are to be found in every Classical Dictionary, but pictures drawn with a view to bringing the reality of Greek and Roman life before the reader.

Views of places, as well as Maps and Plans, are also freely introduced.

The volumes are equipped with Introductions, Notes, Grammatical Appendices, and, in some of the prose authors, Exercises on the Text. Vocabularies are also given, but the volumes may be had without the Vocabularies if preferred.

The volumes are printed at the Oxford University Press, pott 8vo, and are issued in three forms:

1. With Notes and Vocabulary complete, 1s. 6d.
2. Without Vocabulary, 1s. 6d.
3. Text and Vocabulary, without Notes, 1s.

THE FOLLOWING VOLUMES ARE NOW READY UNLESS OTHERWISE STATED:—

**Caesar.**—*De Bello Gallico.* Book I. Edited by A. C. LIDDELL, M.A. With Exercises.

— **Book II.** Edited by A. C. LIDDELL, M.A. With Exercises.

— **Book III.** Edited by F. H. COLSON, M.A., and G. M. GWYTHYR, M.A.

— **Book IV.** Edited by the Rev. A. W. UPCOTT, M.A.

— **Book V.** Edited by A. REYNOLDS, M.A. With Exercises.

— **Book VI.** Edited by J. T. PHILLIPSON, M.A. With Exercises.

**Cicero.**—*Speeches against Catiline I. and II.* Edited by F. HERRING, M.A. With Exercises.

**Selections from Cicero.** Edited by J. F. CHARLES, B.A. With Exercises.

**Cornelius Nepos.**—*Epaminondas, Hannibal, Cato.* Edited by H. L. EARL, M.A.

**Eutropius.**—*Books I. and II.* Edited by J. G. SPENCER, B.A.

**Horace's Odes.**—**Book I.** Edited by C. G. BOTTING, B.A.

— **Book II.** Edited by C. G. BOTTING, B.A. [*Preparing.*]

— **Book III.** Edited by H. LATTER, M.A.

**Livy.**—**Book IX.**, cc. i.-xix. Edited by W. C. FLAMSTEAD WALTERS, M.A.

**Hannibal's First Campaign in Italy.** Selected from Livy, Book XXI., and edited by F. E. A. TRAYES, M.A.

**Ovid's Metamorphoses.**—**Book I.** Edited by G. H. WELLS, M.A.

**Selection from Ovid's Metamorphoses.** Edited, with Introduction and Notes, by J. W. E. PEARCE, M.A.

**Ovid's Tristia.**—**Book III.** Edited by H. R. WOOLRYCH, M.A.

**Phaedrus.**—**A Selection.** Edited by the Rev. R. H. CHAMBERS, M.A.

**Stories of Great Men.** Edited by the Rev. F. CONWAY, M.A.

**Vergil's Aeneid.**—**Book I.** Edited by the Rev. E. H. ESCOTT, M.A.

— **Book II.** Edited by L. D. WAINWRIGHT, M.A.

— **Book III.** Edited by L. D. WAINWRIGHT, M.A.

— **Book IV.** Edited by A. S. WARMAN, B.A.

— **Book VI.** Edited by J. T. PHILLIPSON, M.A.

**Vergil.**—**Selection from Aeneid, Books VII.-XII.** Edited by W. G. COAST, B.A.

**Xenophon's Anabasis.**—**Book I.** Edited by E. C. MARCHANT, M.A.

— **Book II.** Edited by E. C. MARCHANT, M.A.

## Latin and Greek Classics.

- Caesar.—Gallic War, Book II.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Lond. Text and Notes. **1s. 6d.** Vocabulary. **1s.**
- Euripides.—Alcestis.** By J. H. HAYDON, M.A. Lond. and Camb. Text and Notes. **3s. 6d.**
- Horace.—Odes, Book IV.** By A. H. ALLCROFT, M.A. Oxon., and F. G. PLAISTOWE, M.A. Lond. and Camb. Text and Notes. **1s. 6d.** Vocabulary. **1s.**
- Livy.—Book V.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Lond. Text and Notes. **2s. 6d.** Vocabulary. **1s.**
- Vergil.—Aeneid, Book I.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Lond. Text and Notes. **1s. 6d.** Vocabulary. **1s.**

## English.

- ENGLISH GRAMMAR, THE PRECEPTORS'.** By W. H. LOW, M.A. Lond., and ARNOLD WALLI, M.A. Lond. [*In the Press.*]
- The English Language: Its History and Structure.** By W. H. LOW, M.A. Lond. With 320 Test Questions. *Fifth Edition.* **3s. 6d.**
- History of England, The Matriculation. (To 1702.)** With Maps, Battle-Plans, and Numerous Chronological and other Tables. By C. S. FEARENSIDE, M.A. Oxon. **3s. 6d.**
- English History, The Intermediate Text-Book of.** By C. S. FEARENSIDE, M.A. Oxon., and A. JOHNSON EVANS, M.A. Camb., B.A. Lond. Vol. IV., 1714-1837. **4s. 6d.**
- Shakespeare.—Henry V.** Edited by Prof. W. J. ROLFE, D.Litt. **2s.**  
(Other Special Subjects will be announced in January, 1901.)

## French.

- FRENCH COURSE, THE PRECEPTORS'.** By E. WEEKLEY, M.A. Lond. *Second Edition.* **2s. 6d.**
- FRENCH COURSE, BARLET'S PRECEPTORS' JUNIOR.** By STÉPHANE BARLET, B. Sc. Sc., Univ. Gall. **1s. 6d.**
- FRENCH READER, THE PRECEPTORS'.** With Notes and Vocabulary. By ERNEST WEEKLEY, M.A. Lond. *Second Edition.* **1s. 6d.**

## Latin Grammar, &c.

- LATIN COURSE, THE PRECEPTORS'.** By B. J. HAYES, M.A. Lond. and Camb. **2s. 6d.** [*In the Press.*]
- Latin Grammar, The Tutorial.** By B. J. HAYES, M.A., and W. F. MASOM, M.A. *Fourth Edition.* **3s. 6d.**
- Latin Composition.** With Exercises. By A. H. ALLCROFT, M.A., and J. H. HAYDON, M.A. *Fifth Edition.* **2s. 6d.**
- Latin Reader, The Tutorial.** With Complete Vocabulary. **2s. 6d.**
- LATIN READER, THE PRECEPTORS'.** [*In the Press.*]

## Mathematics and Science.

- Algebra, The Tutorial.** By WM. BRIGGS, LL.D., M.A., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. Based on the *Algebra* of RADHAKRISHNAN. Part II.: Advanced Course. **6s. 6d.**
- Algebra, A Middle.** By WM. BRIGGS, LL.D., M.A., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. **3s. 6d.**
- Arithmetic, The Tutorial.** By W. P. WORKMAN, M.A. [*In the Press.*]
- BOOK-KEEPING, THE PRECEPTORS'.** By THOMAS CHALICE JACKSON, B.A., LL.B. Lond. [*In the Press.*]
- Botany, First Stage.** By A. J. EWART, D.Sc. Lond. **2s.**
- Chemistry, The Tutorial.** By G. H. BAILEY, D.Sc. Lond., Ph.D. Edited by WM. BRIGGS, LL.D., M.A., F.C.S. Part I.: Non-Metals. **3s. 6d.** Part II.: Metals. **3s. 6d.**
- Euclid. Books I.-IV.** By RUPERT DEAKIN, M.A. Lond. and Oxon., Headmaster of Stourbridge Grammar School. **2s. 6d.** Books I. and II. **1s.**
- Hydrostatics, An Elementary Text-Book of.** By WM. BRIGGS, LL.D., M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. **2s.**
- MECHANICS, THE PRECEPTORS'.** By F. ROSENBERG, M.A., B.Sc. **2s. 6d.**
- Sound, Light, and Heat, First Stage.** By JOHN DON, M.A., B.Sc. **2s.**
- TRIGONOMETRY, THE PRECEPTORS'.** Edited by WM. BRIGGS, LL.D., M.A., F.C.S., F.R.A.S. **2s. 6d.**

## FORECASTS AND COMMENTS.

November 1, 1900.

At the next Evening Meeting of members of the Fixtures. College of Preceptors, to be held on November 15, the Rev. J. O. Bevan will read a paper on "The Educational Exhibits at the Paris Exposition."

\* \* \*

THE next Certificate Examination of the College of Preceptors will begin on December 4.

\* \* \*

THE remaining Popular Science Lectures for Young People will be given on the undermentioned dates at the Kensington Town Hall:—"How Rocks are Made," by Cecil Carus-Wilson, F.R.S. Edin., November 1; "The Life of the Past," by F. W. Rudler, F.G.S., November 8; "Land and Scenery," by H. R. Mill, D.Sc., LL.D., Librarian to the Royal Geographical Society, November 15; and "Some Electrical Discoveries," by Prof. Ashley Carus-Wilson, M.A., November 22. The course will be illustrated by photographic lantern views, chemical and physical experiments, &c.

\* \* \*

THE first two courses of lectures under the Stopford Brooke Lectureship scheme will be delivered by the Rev. Stopford A. Brooke, M.A., LL.D., in the Botanical Theatre, University College, London. The first course will consist of an inaugural lecture and four lectures on "The Poetry of Robert Browning," on Thursdays, at 8 p.m., beginning on November 1. The second course will take the form of five lectures on poets (other than Browning and Tennyson) between 1840 and 1890 (Clough, Arnold, Rossetti, Morris, &c.), on Thursdays, at 8 p.m., beginning on January 31, 1901. The lectures will be open to the public free by ticket. Applications should be addressed to the Secretary, University College, London, marked on the outside, "Stopford Brooke Lectures," and accompanied by a stamped addressed envelope.

\* \* \*

THE programme of the meetings of the British Child-Study Association, to be held at 8 p.m. in the Ruskin Room of the Sesame Club, is as follows:—On Friday, November 9, Dr. Kimmins will lecture on "The Child as Director of the Parent's Education." Miss Young will treat "The Elementary-School Girl's Notions on Social Economy," and Miss Findlay "The Practical Effect of Recent Child-Study on Education," at the next two meetings, fixed respectively for December 14 and January 11. Education also plays a large part in the lectures and discussions arranged for consecutive Wednesday afternoons. Thus, on the 7th inst., Mrs. Meyerstein discusses the question, "Does the King Alfred School Supply a Want?" The next week Mr. Sonnenschein gives "An Exposition of the only Method of Teaching to Read English," and on December 12 Mrs. Ashton Jonson maintains the proposition "That the Mother is not necessarily the best Trainer of her Children."

\* \* \*

THE combined scholarship examination of seven colleges at Cambridge, as mentioned below, will be held on December 4. Forms should be sent in on or before November 27. Sixty-four scholarships and exhibitions are offered for competition as follows:—Pembroke College, two scholarships of £80, four of £60, and three of £40. Gonville and Caius College, three scholarships of £80, three of £60, and five of £40. King's

College, two open entrance scholarships of £80, three minor scholarships of £60, and three exhibitions of £40 a year, and six Eton entrance scholarships. Jesus College, two scholarships of £80, two of £60, and three of £40. Christ's College, one scholarship of £80, two of £60, and three of £40. St. John's College, three scholarships of £80, five of £60, and three of £40. Emmanuel College, one scholarship of £80, two of £60, and three of £40.

\* \* \*

TO-DAY (November 1) the Rev. T. W. Sharpe, C.B., will give the first lecture of the new session of the Childhood Society, at the Library of the Sanitary Institute, on "The Treatment of Feeble-minded Children in Asylums." Subsequent lectures of the Society will be given on November 15 and 29 and December 13.

\* \* \*

ON November 7 at 8 p.m., Mr. W. J. Addis, M.A., will read a paper on "The Teaching of English Literature," at University College School. This lecture is given under the auspices of the Assistant-Masters' Association, and it is open to all comers.

\* \* \*

MR. CHARLES FRY's costume recital of "As You Like It"—a play selected this year for one or more of the local school examinations—will be given on Saturday, November 17, at 3.30 p.m., at St. George's Hall, Langham Place, W.

\* \* \*

THE London School Board will hold its annual preliminary examination for scholarships on December 4 and 5 next. There will be fifty-eight scholarships and exhibitions—thirty-five for boys and the rest for girls, including six places for boys and three for girls in the Christ's Hospital Schools, and twenty-two places for boys and seventeen for girls whose parents have lived in certain London parishes for at least one year. In addition there is a "Sarah Terry" prize, which will be awarded to a child less as a reward for his school attainments than as a mark of the public appreciation of the merits of poor parents in doing their offspring the justice of prolonging their education in spite of domestic difficulties. Full particulars can be had on application at the School Board Offices, Victoria Embankment, up to November 7.

THE DEAN OF THE COLLEGE OF PRECEPTORS, with the sanction of the Council, will direct the examiners in French at the various examinations of the College to give effect to the decree of the French Minister of Education, of which we printed an English version last month. With regard, however to the rules governing the agreement of the past participles of verbs, the relaxation introduced by the decree will not be allowed until it has been accepted by the Académie Française. The Civil Service Commissioners, the Oxford and Cambridge Local Examinations Syndicates, and the Joint Board Certificate examiners will recognize the concessions specified in the decree.

\* \* \*

THE late Professor Shuttleworth was a man of wide culture and singularly broad views. He was an enthusiastic musician, and his services at St. Nicholas Cole Abbey drew large congregations to that City church. He became chaplain of Christ Church in 1874, and was a minor Canon of St. Paul's from 1876 to 1884, when he was appointed Rector of St. Nicholas. He gained considerable repute as a preacher, whilst essays from his pen appeared in the *Saturday Review* and other journals. He was Lecturer in English Literature in the Ladies' Department, as well as Professor of Pastoral and Liturgical Theology in King's College. He had published various books, notably "The Place of Music in Public Worship."

\* \* \*

THE University College of Bangor is persevering with its plan to establish a department of mining, and the general public in North Wales appears to be ready to back the college. A con-

ference of public bodies, held ten days ago, passed a resolution expressing the opinion that it was desirable in the interest of the miners of North Wales that a school of mines should be established at Bangor University College, and another resolution was also carried pledging the public bodies to help by providing funds, £8,000 capital being required for buildings, &c., and an annual income of £1,100.

\* \* \*

It is, perhaps, worthy of note that, of the sixteen persons elected to represent the Convocation of the University of London on the Senate, seven were supported by the Graduates' Association, four by the Graduates' Union, and five by both bodies. The Association is anxious for the external students, while the Union hopes most from the colleges and other constituent bodies.

\* \* \*

EDUCATION is somewhat more strongly represented in the new Parliament than it was in the old one. All the University members are returned without a contest. Many of the new members have made satisfactory declarations in regard to their interest in secondary and technical schools. Elementary education, in addition to its old spokesmen, Messrs. Gray and Yoxall, will henceforward be able to look to Dr. Macnamara, editor of the *Schoolmaster*, and Mr. Tom O'Donnell, M.P. for West Kerry, who is on the Executive of the Irish Teachers' Association.

\* \* \*

THE Lectures on the Practice of Education, which Prof. Withers is giving at the College of Preceptors on Saturdays, have been attended by a class of between forty and fifty students.

\* \* \*

THE VICE-CHANCELLOR OF CAMBRIDGE, in the usual address delivered at the opening of the new academical year, dwelt on the continued need of the University for better equipment. His appeal was decidedly urgent so far as the teaching staff of the University is concerned:—

Of the teachers whom we have, no Reader receives the full stipend of £400 from the University, and many University Lecturers who hold no fellowship have to be content with the minimum stipend of £50 per annum, which is only a recognition and not in any sense a remuneration of their work. The need of a capital sum for new buildings has been in part met by the subscriptions given by the Chancellor and Lord Rothschild and others to the Benefaction Fund. The total amount paid or promised to this fund (including sums assigned to specific objects) is more than £55,000. Almost the whole of the sum not assigned to such objects has been appropriated for building. Syndicates have been appointed to prepare plans for (1) the Botany School, (2) the Law School and Library, (3) the Medical School, (4) a new Museum of Archaeology and of Ethnology, and (5) buildings for University purposes.

One would have naturally expected the claims of the lecturers to be the first consideration.

\* \* \*

THE treatment of women students in the Austrian capital is worse than that of the English students at Cambridge, when they recently put in their claim for degrees. We are told that when the women students at Vienna made their first appearance in Prof. Bekefy's lecture room the male students, resenting what they regard as an intrusion, bellowed, whistled, stamped their feet, and used opprobrious epithets. Many of the girls burst into tears, and would have left the room if some others, more spirited, had not induced them to stay until the Professor came. When he arrived, and made an appeal on behalf of the ladies, the students became more furious, and the Professor was obliged to abandon all idea of lecturing.

\* \* \*

THE *Manchester Guardian*, commenting on Mrs. Bryant's address at the College of Preceptors on October 3, wrote:—

It is interesting to find, now that the examination of school pupils by the College no longer increases by leaps and bounds, that its real work—the preparation and examination of teachers for professional diplomas—is sensibly advancing. Mrs. Bryant, D.Sc., in distributing diplomas and prizes at the College, drew attention to the exact state of the case. In 1860 there were only 22 men candidates for these

diplomas, and 4 women. In 1870 the figures were 29 and 15. But in 1880 they had risen to 86 and 104 respectively; 1890 exhibited a slight decrease on 1880; but in 1895 the candidates had again risen to 148 and 122, and in 1900 to a total of 494 (347 men and 147 women). The only other body examining teachers for diplomas in numbers at all approaching to these is the University of Cambridge. But that is an examination confined mainly to women, though men teachers so eminent as the late Headmaster of Harrow (Bishop Welldon), the present Headmaster of Haileybury, and Mr. Arthur Berry (Senior Wrangler in 1885) have by their example sought to set another fashion. It is interesting, too, to note that Mrs. Bryant is the first woman that has presided at this half-yearly distribution—just as her predecessor, Miss Buss, was the first woman to serve on the College Council.

**Appointments and Vacancies.** THE WARDEN OF LLANDOVERY COLLEGE, the Rev. Owen Evans, M.A., has announced his intention of resigning his position at the close of the year. Mr. Evans has been Warden for eleven years. During this time Llandoverly boys, in addition to twenty-six minor scholarships and exhibitions, have gained fifty-three scholarships and exhibitions in classics, mathematics, science, and history at various colleges in Oxford and Cambridge, and fourteen First Classes and twenty-five Second Classes in these subjects in the Honours examinations of the two Universities, and the Junior University Mathematical Exhibition and Scholarship at Oxford.

THE VICE-CHANCELLOR OF OXFORD has nominated as temporary Master of Clarke's Hall (the Roman Catholic Hall, of which the Mastership is vacant by the death of the Rev. R. F. Clarke, S.J.) the Rev. John O'Fallow Pope, M.A. of Christ Church.

MR. C. W. C. OMAN has been appointed Chichele Professor of Modern History in the University of Oxford, in succession to Mr. Montagu Burrows.

THE REV. G. WILKINS is the new Professor of Hebrew at Trinity College, Dublin.

THE Chair of Pastoral Theology at King's College, London, is vacant by the death of Mr. Shuttleworth.—At University College there is a vacancy in the Chair of Constitutional Law and History.

DR. SAMSON GEMMELL has been appointed Professor of Clinical Medicine at Glasgow University in succession to Dr. McCall Anderson.

DR. J. B. BAILLIE has been appointed Lecturer in Logic and Moral Philosophy in Aberdeen University.

MR. JOHN ARBUTHNOT NAIRN, Fellow and Tutor of Trinity College, Cambridge, has been elected Headmaster of Merchant Taylors' School. He will enter on his duties in January next. He was educated at Erasmus Smith School, Dublin, and went up to Cambridge in 1893, where he took the Pitt Scholarship in his first year. Mr. Nairn has had no previous experience as a schoolmaster.

THE REV. J. B. LAUNCELOT, headmaster of King's School, Rochester, has been appointed Principal of Liverpool College.

THE Governors of George Heriot's Trust have appointed to the Principalship of the Heriot Watt College, Edinburgh, Mr. A. P. Laurie, M.A., D.Sc. Edinburgh, late Fellow of King's College, Cambridge, Lecturer in Physics and Chemistry at St. Mary's Hospital Medical School, London.

MR. C. R. P. ANDREWS, M.A., late scholar of St. John's College, Oxford, tutor and classical lecturer at St. John's Training College, Battersea, has been appointed first Principal of the new Government Training College, to be opened at Perth, Western Australia.

MR. HERBERT BRACE, B.A. Oxford, has been appointed Assistant-Lecturer in History and in English Language and Literature at Cardiff University College.

AT Reading College the following appointments have been made:—Lecturer in Mathematics, Mr. A. M. Bowley, M.A. Cambridge; Assistant-Lecturer in Chemistry, Dr. J. L. E. Drugman, Ph.D. Bonn; Assistant to the Vice-Principal, Miss M. Bolam, Somerville College, Oxford.

A NEW Headmaster is required for the High School at Newcastle-under-Lyme.

It is no use trying to shirk the question of patriotism and nationalism in education: it is one of the irrepresible elements of the nature that will not be expelled, even with the fork of pure reason. Whilst Dr. Findlay, of Cardiff, was telling us so at the College, the Court of Governors of Cardiff University College were passing a resolution "urgently impressing on the Council the duty of providing adequate and effective instruction in the subject so dear to the heart of the Welsh nation"—to wit, the glorious history of Cambria and the Cymry. We do not quite understand the solicitude of the Welsh. Our English histories always show them up in an excellent light, either thrashing us, or appropriating our infant princes, or providing an ancestor for our most masterful line of monarchs. But nothing will suit them except to write their own history, and get it read in the schools; and we suppose they must have their way.

MR. JOHN RUSSELL, of University College School, who last month translated for us the Decree of the French Minister, has printed his version in a separate form. Every teacher of French ought to make himself familiar with this document, which might be usefully stitched into the grammars now in use by senior students.

A CLEAR and temperate statement of the problem of "Religious Teaching in Secondary Schools" will be found in a little pamphlet published by the Rev. J. O. Bevan. Mr. Bevan writes from the standpoint of those who consider it essential that provision for religious teaching—if possible for Church of England teaching—shall be made in all schemes dealing with secondary schools.

The subject [Mr. Bevan says] is being drawn into the political vortex, so that the question, "Why cannot you leave such a thorny matter alone?" loses its point. Firstly, things of this description are not likely to improve by being let alone; and, secondly, the whole situation is changed by the constitution of a Government Department charged with important administrative duties in relation to the education of the children of the middle and upper classes. This is a revolution bringing in its train results of which we do not dream.

A VALUABLE summary of educational affairs on the other side of the Atlantic is afforded by the series of nineteen monographs, to be had for the asking, in the Education Section of the United States Commission to the Paris Exhibition. The series is produced under the general editorship of Mr. Nicholas Murray Butler, Professor of Education in Columbia University; each monograph is written by a specialist, and no two are from the same pen. Among the most interesting subjects to the English student are "Educational Organization and Administration," "The American College and University," "Summer Schools and University Extension." Two discuss the education of the negro and the Indian. The remaining numbers deal with the more familiar sides of educational interest common to both continents. The series shows careful and appreciative study of English institutions and methods, and, taken as a whole, it forms a noteworthy addition to the pedagogic literature of the day.

des Chartes—the best school of history in the world—includes for the first year palæography, romance, philology, bibliography, and methods of research; for the second, diplomatic, the history of political administration and judicial institutions of France, archives, and the sources of French history. The third year's course covers the history of civil and canon law during the middle ages, the archaeology of the middle ages, and, again, sources of French history. The school, which is situated near the Sorbonne, re-opens on November 3. Foreign students are admitted to the course.

\* \* \*

THE St. Petersburg papers announce that the Minister of Education has "deemed it necessary" to introduce the Russian language in all the Armenian church schools for instruction in all branches of learning except religious teaching. The change is to be made gradually, but is to be completed in two years.

\* \* \*

THE *Oxford Magazine* reminds us that the five leading seats of German learning are combining for the production of the "Thesaurus Linguae Latinae," of which the first part, long promised, is now to appear. The scheme of the new enterprise was sketched as long ago as 1893, and it is guaranteed that the dictionary will be pressed on uninterruptedly to completion—probably in twelve or fifteen years. As there are to be twelve volumes of nearly 2,000 pages each (the price of which is to be £3 to subscribers, and which will be published in parts), it may confidently be pronounced the biggest thing in classical dictionaries which scholarship has yet produced.

\* \* \*

THE Society for the Protection of Birds is offering two prizes, of £10 and £5 respectively, for the best papers on the protection of British birds. The mode of dealing with the subject is left entirely to competitors, but among the points suggested for treatment are the utilization and enforcement of the present Acts and County Council Orders, the modification or improvement of the law, educational methods, and the best means of influencing landowners and gamekeepers, agriculturists and gardeners, collectors, birdcatchers, and birdnesters. Essays are to be sent in by November 30. Particulars may be obtained from the Hon. Secretary, at the Society's offices, 3 Hanover Square, W.

### SOME CRITICISMS.

WELL did Robert Louis Stevenson say that education must always be a work of faith and of charity. He might have added that, unless the teacher be a man with great powers of hope, he had better give up his task altogether. He needs all these three great virtues in a high degree to support him through the trials and perplexities of the work itself, and to keep him in good heart in face of the criticism of the outsider. Of late, wars and rumours of wars, political speeches, and election details have crowded out the peaceful subject of education, but in the lull after the storm we begin to hear once more the whisper of the irrepressible subject. Sir Walter Besant has been protesting against "the teaching of such subjects in Board schools as lead boys and girls to think that the pen of the clerk is a superior implement to the drill and the plane." He specially objects to the teaching of shorthand, modern languages, orchestral music, dramatic literature, and commercial law, but adds, "these are only a few of the subjects which, according to my view, ought not to be taught, while everything that belongs to crafts and handwork ought to be diligently and carefully taught." This is not cheerful reading for those who think that the Board-school boy or girl ought to have, at least, the chance of a liberal education. It sounds like the old call of keeping people in that station to which Providence has called them, which presupposed a surprisingly intimate acquaintance with the purposes and plans of Providence.

The truth seems to be, not that we ought to keep any given class of society to do any special work, but rather that those who are best fitted to do any special kind of work should have the opportunity of proper equipment for it. The way to effect this is not to cripple and discourage good schools, and cut down the curriculum to the needs of an industrial career. It would, surely, be far better if we could have a more careful system of graded

schools such as there are in France, for example, so that a boy might be sent to that particular kind of school for which his abilities fit him. There should be no lack of suitable training for the craftsman; but every boy who can benefit by a literary and classical education ought to be able to get it, no matter what his position in life or the social status and occupation of his parents. At the same time, this may be said: that the ideal education is one which combines the skill of the manual worker with the scholarship of the student; and a better state of society will be reached when the division which now exists between the two has ceased to exist. Why should not the student have the practical training given by some useful craft, and why should the industrial classes be shut out from the uplifting pleasure and intellectual culture to be gained from a knowledge of orchestral music and dramatic literature?

Another criticism of the schools is that they tend to crush out originality and to discourage individual development. Speaking at the annual meeting of the Lancashire and Cheshire Union of Institutes the other day, Mr. George Harwood, M.P., drew a very doleful picture of the present condition of society, its lamentable barrenness and want of originality in every sphere. His topic was "The Play of Individuality in Education," and his address was an indictment of our whole system of education. The epoch through which we are passing, he said, is remarkable for a distinct and marked absence of originality in every walk of life. "There never was such an arid, dark, stupid, and unprolific age as the present. Everybody whose opinion is worth having is agreed upon it. At a time unprecedented for the number of lectures, classes, and aids to literary productiveness, literary excellence has never been at a lower ebb. It is difficult to find a book worth reading, more difficult to find one worth buying and keeping." Art and music are in no better case. "There never were so many students of art as to-day, and yet nobody can paint a picture that anybody cares about. There never was a time when there was less real culture than to-day, and there never was a time when there was less reading done for the pure love of reading." This is but a sorry outlook, every one will admit, if it is true. Our present educational system, Mr. Harwood thinks, is calculated to crush out individuality because it was a system built up, like everything else, on a machine-made plan. Here Mr. Harwood speaks mainly of the elementary schools, but he seems to be no better satisfied with other parts of our educational system. Scholastic attainments alone are insufficient. "A man may go through a University training, and come out a sensible fellow, but the chances are rather against him. There is no more pitiful figure in the world than a University don; for the man who drives a hansom cab has more knowledge of humanity. A free, fresh individuality is more telling than scholastic knowledge."

Mr. Harwood's picture is overdrawn, but there is a good deal to be laid to heart by teachers in his plea for a greater originality and elasticity of teaching methods. Nevertheless, there are hopeful signs, if critics would look for them. The teaching of to-day in all our schools is far less mechanical, and much more scientific, human, and vital, than it was fifty years ago. The fresh and increasing interest in psychology and child-study, and the enthusiasm of those who are responsible for the training of teachers, are evidences of the life which is stirring at the root of the educational tree, and which is surely, if slowly, spreading through the branches.

M. S.

### COLLEGE OF PRECEPTORS.

#### DISTRIBUTION OF DIPLOMAS, PRIZES, AND CERTIFICATES.

THE Public Distribution of Diplomas, Prizes, and Certificates to the successful candidates at the last Midsummer Examinations took place at the College, Bloomsbury Square, on Wednesday, October 3. The Chair was occupied by Mrs. S. BRYANT, D.Sc., F.C.P., who was supported on the platform by Dr. Wormell, Vice-President; Mr. H. W. Eve, Dean; Mr. E. Pinches, Treasurer; Mr. Atkinson, Rev. F. C. Besant, Rev. J. O. Bevan, Mr. Bidlake, Mr. Butler, Mr. Charles, Mr. Dupuis, Mr. Easterbrook, Mr. Hagreen, Mr. Langler, Dr. Lawrence, Mr. Millar-Inglis, Mr. Musson, Mr. Nicholson, Dr. R. P. Scott, Prof. Spiers, Dr. Turpin, Mr. Wilson, and others.

Mrs. BRYANT, in opening the proceedings, said: Ladies and gentlemen,—I have so often spoken at teachers' and business meetings in this room that I feel it a special pleasure to have come here to-day on a more festive occasion—for the very

pleasant purpose of distributing prizes and certificates to those who have gained distinction in the recent examinations. My connexion with the College dates from a very long time ago, and, looking back through the years, I cannot but be specially interested in the very remarkable development that has taken place in the number of candidates presenting themselves for the Diploma Examination. I know that but a small number of those candidates have been able to come up to-day; but I know that many here will be interested in the figures that the Secretary has been kind enough to give me showing what progress has been made, and made largely through the influence and efforts of this College, in bringing home to teachers the importance of having a definite preparation for the work they undertake to do, and of obtaining a certificate or diploma to certify that fact. Now, in the year ending July, 1860, there were only 26 candidates who entered for the Diploma Examination. Of those 22 were men and 4 were women. You will notice that, in the course of the year 1860, women had not begun to go forward at the accelerated rate which has, I think I may say, distinguished them during the last thirty or forty years. In 1870 the number of men had increased slightly, but only slightly, to 29, and that of the women had increased to 15, making a total of 44. In 1880 the women were more numerous—namely, 104, as against 86 men, the total being 190. The figures for 1890 do not show any increase on those of 1880; but in 1895 the number had risen to 270, being 148 men against 122 women. In 1900 the number had risen to 494—namely, 347 men and 147 women. The increase of men over women is undoubtedly a good sign, because it shows that the particular view of the value of professional education which was taken up rather more eagerly by the women is taken up with greater emphasis now by the men than in earlier days. We should, of course, take these numbers in conjunction with the number of those who go up to the Universities of Oxford, Cambridge, and London to obtain certificates of the same kind there, and, if those numbers were added, I have no doubt they would increase very largely the number of the women, as but few men have taken those examinations. The main fact is that in 1860 there were, in relation to secondary education, only 26 persons who thought it worth while to get a certificate of this kind; whereas now there are just upon 500 within the precincts of this College alone, not counting those who obtain certificates from the Universities. That shows great progress; but it is only one sign out of many, and I may congratulate the College that it has helped so much in enabling teachers to realize the value of a professional certificate showing that they have some knowledge of the theory of their profession. I have no doubt whatever that those numbers will largely increase, and I hope we are not very far distant from the time when it will become, not legally obligatory, but practically obligatory, upon every young teacher—not, of course, those who are already established—to give some evidence of having a knowledge of his or her profession.

Now, a large number of those in whom we are interested to-day are not teachers, but learners; and, having said so much as regards the teachers, I should like to say a word to the learners, and, first, to caution them, and the teachers also, against believing too much in teaching, and too little in learning. Colleges, after all, only exist for the sake of the advancement of learning; and, for my part, I am sometimes a little afraid that in the twentieth century—I do not know whether it should be called the twentieth century or not, but I have always called it such since the beginning of the year; though I know that is an unfashionable doctrine—some of us have a little fear that learners will get to depend too much on teaching, and not only too much on examinations, but too much on the efforts made for them by other people. Indeed, one of the advantages of examination is that it goes to the learner himself. I am sure that many successful candidates in these examinations, and in others, must themselves be aware of the fact that the work they do on their own responsibility is infinitely more important than the work which any one does for them. Teachers, after all, are only guides; and, as we used to be taught, many of us, years ago, in the old college building, by Prof. Payne, the Professor of Education, whose lectures I had the privilege of attending, there is no real education which is not self-education. One of the great truths which learners ought to take home to themselves in these days, and in days to come, is that all the scientific laboratories, libraries, lectures, and lessons which are provided for them so amply, and will be provided still more amply in the time to come, are of no importance, compared with the importance of their own interest in learning, their own industry, and their own sense of duty in doing the

work they have to do. Perhaps the relative importance of the work which the learner does for himself is more evident in the case of literature than in any other subject. Of course, no reading can be done unless you do it yourself. In the study of literature, I am very much inclined to think that no one can do very much for you. I am somewhat sceptical as to the value of a course of lectures on literature; although such courses of lectures and lessons are, no doubt, necessary, yet, so far as they are necessary, they probably serve their purpose best when they act as a stimulus to the personal study and reading of the readers themselves. I greatly doubt that there can be much method in the study of literature, and I am quite sure that nothing so important can be done as to cultivate a taste for reading good literature, for the sake of the pleasure and the insight which it brings—an insight into the thoughts of others, contact with the mind of humanity as a whole. That contact we must make for ourselves.

Now let me conclude by giving a little advice to learners. It is not my intention to suggest to you a hundred best books, or the best books for boys and girls to read. The hundred best books must change as time goes on. The best hundred for one is not the best for others; but it is not a bad exercise for each one to make up for himself or herself a list of best books. One way to do it is to think what books you would take with you if you had to go to a desert island, if you could only take, say, twenty books with you to read. There is a more important principle to lay down for ourselves with respect to our reading than may be found in the attempt to construct an actual list of books. In these days of abundant cheap literature, when everybody can hold a pen, and most people use it a little, it is more important to know what not to read than what to read. If we can make up our minds as to the kind of books we will not read, then, having a certain amount of time on our hands, and the best literature being largely available to us, I have no doubt we should spend that available time in a much more profitable way. One simple rule which I would suggest is that one should not read, except with rare exceptions, any book unless it is positively worth reading. You sometimes hear of books that have a bad influence—harmful books, silly books, and so on. It is not necessary that a book should be a silly book or a harmful book in any other way in order to condemn it. To my mind a book is condemned if it is not so well worth reading as other books which you have not read. Do not spend too much time in reading the *Boy's* or *Girl's Own Paper*, the *Strand Magazine*, or any of the other innumerable magazines which have stories in them, when you might spend the same time in reading books which would be an everlasting possession to you. For those who are quite young we cannot over-estimate the enormous importance of being careful what they read, because what is read while we are young we remember during the whole of life. For my own part, I would sooner sacrifice a considerable amount of knowledge of mathematics or philosophy than not have made any acquaintance whatever with Shakespeare, Sir Walter Scott, or "Gulliver's Travels," or a number of other books I could mention, before I was twelve years old. Some books will do more good and be of more value to you—the works of literature that are within your compass—before you are twelve years old than they can be afterwards. You may extend that till you are sixteen or twenty years old; but after twenty your mind is not so plastic. So get much reading in good literature done before you are twenty. It is all very well for your elders to read the *Strand Magazine*, as they forget it almost at once; but you read to remember. There is another thing to be said. In those early years we can take advantage of literature, and we cannot gain quite so much from the study of science. Your science may wait a little; it does not matter if your education be neglected in this respect. I do not know whether this is a great heresy; but I should not mind if we did not learn any science until we were twelve years of age, but I should mind if we had not read Sir Walter Scott's books, and made some acquaintance, through translations or in the originals, with the classical authors. Do not throw away your opportunities. Make for yourselves—not because somebody else suggests it—a course of reading, and see that you do not waste the little time you have for reading in work that is useless to you, and gives no permanent pleasure and leaves no permanent mark upon your minds.

The Diplomas, Prizes, and Certificates were then distributed, after which Mr. H. W. EVE, the Dean of the College, in proposing a vote of thanks to Mrs. Bryant, said he believed that the College of Preceptors was the first educational body to place a lady on its Council, in the person of the late Miss Buss; but this was the

first time that a lady had been kind enough to preside at the distribution of prizes. It had been a great pleasure to listen to one of the most distinguished of the ladies now engaged in education, and to hear the very good and sensible advice that she gave. Before saying anything further, he might be permitted to offer a word of congratulation to A. W. Hurst, and the school from which he came. He noticed that last year Hurst obtained the second prize for general proficiency, and the school had for several years taken a distinguished place in the examinations; but this was the first time on which he could congratulate it on being quite at the top of the tree. It had been his privilege to look through the reports that year after year had been drawn up in reference to Market Bosworth School, and it had been a real pleasure, because there had been throughout such evidence of good work. He did not know whether he should be accused of advertising, but he believed it would be a very good thing if more and more schools followed that example—if they would obtain from the College detailed reports of the performance of the pupils in the different branches in which they were examined. The number of schools that applied for these reports was increasing every year, and he was sure that the hints given by the examiners were such as he should have valued himself when he was engaged in teaching. He would now say a word or two on the subject on which Mrs. Bryant had spoken, perhaps a little from the teacher's point of view, as well as the learner's. He certainly thought they had made very great progress in many ways in education, and in one way in particular. It was now the rule, rather than the exception, that careful attention should be paid to all the boys and girls in a school, and that a real effort should be made to bring them up to a certain level, so that they might pass an examination. But it was not quite so certain that proportional progress had been made in the art of stimulating them to love their work, and to read for themselves. He was afraid that it must be confessed that some of the most distinguished headmasters of fifty or sixty years back used habitually to neglect looking over their pupils' compositions. They did it now and then, and did it with admirable effect; but the duty of the systematic looking over of exercises, which was now looked upon as one of the first things incumbent on a schoolmaster, was not always present to their minds. Yet they were men who did wonders in the way of stimulating intellectual interest in their pupils. One of the great problems in education at the present day was this: How shall a teacher, besides doing his ordinary work conscientiously, manage to exercise that subtle influence which made boys and girls do what Mrs. Bryant had so wisely urged them to do—read good literature for themselves. There were a great many counter attractions for boys; he was afraid that the cricket record often took up a great deal of time. A boy could not, of course, know too much about the performance of his own school eleven, but he wished that some boys knew a little less about the performances of Abel or Grace, and he thought it was part of the duty of teachers to stimulate them to bestow their time better. Men had something to learn from the ladies in that respect. He was not going to say that ladies could teach better than men, though he was sure that some ladies taught a great deal better than some men; but there was more generally spread among ladies a desire to stimulate their pupils intellectually. Their thoughts out of school-hours were more habitually on the subjects they were teaching, and therefore their lessons were often more stimulating. He was sure that those who had been taught by Mrs. Bryant would know how stimulating teaching could be made.

Dr. WORMELL, in seconding the vote of thanks, said he had rarely, if ever, risen with greater pleasure to second the resolution than he did on that occasion. This pleasure was increased by the knowledge that Mrs. Bryant was a member of the College, a member of its Council, and also that she was an acknowledged leader of thought and action in the profession. At the last half-yearly gathering he made some remarks on a similar point to the effect that, when there was a burning question before the public, it might be wise to invite a leading politician who could throw light upon it to distribute the prizes. If the Duke of Devonshire wished to make his views public on, say, the registration of schools or of teachers, he knew of no more appropriate place or more attentive audience than he would find at the College of Preceptors, or a more convenient occasion than the distribution of prizes; but while the Duke of Devonshire remained a sphinx, and while there was no one else who could tell them what was coming, he was quite sure it was better that they should have as President for the time being some one

who had a real sympathy for the higher aims and aspirations of teachers and learners. Nevertheless, he did not find his task so easy as he had found it on some other occasions. When they had a bishop in the chair, he found himself perfectly free to say what he thought of bishops in general and of that particular bishop who had honoured them by his presence; but on the present occasion he was not so free. He could not say what was in his mind and heart with regard to their amiable President; but the Dean had hinted at one association, which would occur to many at the present time. They had been celebrating, in the year 1900, a jubilee and a memory; they had celebrated a cause and its pioneer. It was almost impossible for many to see Mrs. Bryant in the chair without thinking of associations connected with that cause and memory. A Scottish poet had drawn many figures from considering the cottager's garden. He had once before in that room made use of one of those figures, and had thought of certain choice flowers which that institution had known—

There grew a bonny brier-bush,  
In our kailyard;  
And pure were the blossoms on it,  
In our kailyard.

Miss Buss attended the Council meetings very regularly; she always took an enthusiastic interest in everything that concerned the welfare of the College, and when she was with them they never thought of the many works she had in hand, or they would have wondered how she got through so much, because when she was with them she threw herself heart and soul into the things which were nearest. When they lost her they felt that they had suffered an irreparable loss. Once on a time the mantle of Elijah fell on Elisha, and there was still a prophet in Israel. History repeated itself. Many of the works which Miss Buss had initiated or carried on had been taken over by Mrs. Bryant, and no more worthy successor to her could be found. He hoped that she would have many years of health and energy in which to carry on those works. He would not say more upon that subject, but he might be permitted to refer for a moment to some of Mrs. Bryant's suggestions. First, with regard to the books which should be read. If any of the boys or girls happened to be going to a desert island, and wanted to know what to take with them, he would recommend them to take plenty of blank paper, pens, and pencils, to develop and mature their own thoughts, and put them on record, because some day they might come back, and persons would want to know what they had been thinking about. He hoped they would not hasten to the conclusion that they were always to read hard books. The old archers knew that they must not always keep the bow fully bent, but that they must relax it at times, so that, when they wanted full power, they could get it. So it was with the mind. Sometimes it required light reading. They need not be afraid to take up occasionally a book that would make them laugh, as it would enable them to do hard reading afterwards. He once tried to read "Mill on Liberty," but failed for lack of application; more recently he had tried again, and succeeded, by reading portions at a time, and devoting the intervals to "Alice in Wonderland."

The vote of thanks having been carried by acclamation, Mrs. BRYANT, in reply, said she thanked them very much for the vote of thanks which had been so kindly accorded her. It had been a great pleasure to be present that day, and to distribute the prizes.

## REVIEWS.

### A BUDGET OF SUGGESTIONS.

*Problems in Education.* By W. H. Winch. (Sonnenschein.)

As an inspector under the London School Board, and a thoughtful student of psychology and philosophy, Mr. Winch is in an excellent position for the task he has set himself. The heading of his first chapter, "On the Hope of Agreement in Educational Theory," sufficiently indicates its nature. "Educational theory," he says, quoting a happy phrase of Mr. Sadler's, "is a meeting point of the moral sciences," and from this point of view he analyses, in a series of essays, some of the principles, or, one might say, the catch words, that are exercising a considerable influence on modern education, especially on its elementary stages. His essays are hard reading, and somewhat encumbered with technical language and allusions and forms of expression scarcely intelligible to the ordinary reader. Take, for example: "The influence of the static environment theory upon educational theory is obvious. You must expose yourself to the

uninterrupted bombardment of the atoms, and so get the uniformities well worked in." The first sentence is perhaps excusable in a writer who appeals to readers with some philosophical knowledge; but the allusion to the higher physics, and the conversational turn at the end, appropriate enough to a discussion among experts, might easily puzzle the uninitiated. Or again: "Such an attitude I hope the educationist will take up with regard to psychology—even to the most statistical and brass-instrumental variety," contains a phrase which, we must confess, is quite beyond us. Nevertheless, the book is suggestive, and shows good sense and balanced judgment.

The introductory chapters deal mainly with the opposite tendencies, realist and scientific on the one side, idealist and humanist on the other, which influence modern views of education, and connect them with cognate movements in other domains of thought. Though the writer holds the scales tolerably even, it is clear that, in his view, the realists are at present too much in the ascendant, at least in the primary schools, and he practically associates himself with an eloquent plea of Mr. Graham Wallas, quoted in the appendix, for the development of the other side of education in the schools under the Board. In the next essays on "Psychology and Education," on "Observation," and on "Imagery, Thought, and Language" he is mainly occupied in working out, in the interests, first of the teacher, and then of the learner, of a single idea, and that a fruitful one. It is practically impossible, he points out, to observe details without some kind of synthesis, without consciously or unconsciously stringing them together in support or refutation of a theory, or at least associating them with some previously acquired ideas. How, then, are the teacher and learner respectively to be trained to observe properly? Obviously the ordinary teacher cannot know much of psychology: he has not the time, nor, as a general rule, the brains, required for the purpose. He is busy, too, in producing immediate results, and what may be interesting from a psychological point of view is not always conducive to marking.

The blunders in a group of drawings or a set of exercises may illustrate an important type of misconception; but the teacher's first object is to get them correct somehow or other—how can he, at the same time, add to his pedagogic stock-in-trade? By doing so, he will correct them more effectively; but we can hardly expect him to work out the problems himself, on first principles. Mr. Winch's suggestion, and it is an excellent one, is that those who train him should bring psychology down to the marketplace, should lay hold of those pedagogic maxims which he knows, at any rate, implicitly, enable him to increase his stock of such maxims, and to work them into his own experience. It is, in fact, the method of Socrates. Somewhat similar principles apply to the learner. The healthy reaction against simply learning about material objects by means of words may easily be pushed too far. Starting from an analysis of percepts and concepts, he points out that the unconscious association of ideas must not be trusted indiscriminately, but needs a good deal of discretion if it is not to lead to vagueness. Thus the "look and say method" needs to be used with much caution. Nor is argument entirely on the side of teaching spelling without learning the names of the letters. Even to grown-up persons, to know the name of a stranger serves as a centre of reference for whatever they may subsequently notice or hear about him. Words, again, cannot be dispensed with in favour of pictorial representations, however valuable these may be. "Words"—Mr. Winch quotes from Hamilton—"are the fortresses of thought"; and that not only in the sense of securing what is already gained, but as a base for fresh excursions. But we have given sufficient to illustrate Mr. Winch's method. The other essays on "Following Nature" and on "The Method of Studying Nature" will repay perusal. The appendix contains a number of memoranda on practical questions of pedagogy, drawn up for the London School Board, or for discussion at meetings of teachers.

SAMUEL RICHARDSON REVISED.

*Samuel Richardson: a Biographical and Critical Study.* By Clara Linklater Thomson. (Horace Marshall & Son.)

The reputation of Richardson has at least this singularity, that it has been the marvel of two centuries. But in different senses; for while the age of Johnson wondered and adored and hailed the stout printer as a literary Columbus, and bracketed him for the highest honours with Moses and Sophocles, the critic of our own day has wondered certainly, but has been bewildered as to what it all meant, and has searched vainly for some probable

solution of the enigma. For, frankly, Richardson is portentously and unutterably dull, and we read him with pains and pangs of weariness and distaste; and yet his fame was cosmopolitan. It was not England only that applauded, but the whole world of lettered men, so that in a sense Richardson entered, during his lifetime, into honours for which Shakespeare had to wait two centuries, and this great enthusiasm was aroused by "Pamela" and "Clarissa Harlowe" and "Sir Charles Grandison." The problem is difficult, and we advise those whom it interests to turn to this admirable critical study which Miss Thomson has devoted to a dead reputation. For here are the materials; without the long and painful explanation of the faded masterpieces we have the evidence on which to form a judgment, and the most excellent comment to guide us by the way.

Miss Thomson is by no means the blind hero-worshipper who sometimes gains the name of critic. Some years ago a well known playwright gave advice to dramatic critics after dinner, and defined their duty in the words: "Praise, praise, praise." Magnificent (especially from the playwright's point of view), but by no means criticism; as wide, indeed, of the true definition as that hinted by the famous *dumnatur judex* motto of another school. Miss Thomson steers clear of either pitfall; she shows us Richardson with absolute impartiality, neither minimizing his defects nor exaggerating his virtues; and we must very warmly congratulate her on the possession of one of the rarest of faculties. Most of us can be good haters and (not so often) enthusiastic lovers; very few of us are critical in the sense in which Miss Thomson is critical.

And yet one doubts whether she quite understands the reason of Richardson's decline. In a sense, alas! every classic is dead. How many men take down Homer on a rainy afternoon? Students and specialists apart, what following has the "Divine Comedy" among intelligent readers? "Gulliver," certainly, is still given to children at Christmas, and perhaps the Dean, in the Elysian Fields, laughs more heartily than ever he laughed on earth to think that his Greek fire and oil of vitriol have taken their place among the emulsions and soothing syrups of the nursery. But are there many, even amongst the decently well read, to whom the perilous parables of Swift are familiar and customary? Nay. To pass to the classics of our own age, to the constant readers of novels: there is doubtless a copy of "Vanity Fair" on most shelves, but in most cases it would be a dusty book to handle. Yes; the classics are dead, since we must read the "success of the season"; but Richardson is not only dead but buried; and, compared with "Sir Charles Grandison," "Roderick Random" and "Tom Jones" are still gay and lively sparks, and the voyage of "Old Ulysses" is fresh and new beside the moral maunderings of "Pamela." And why? Miss Thomson hardly answers the question. It is not by reason of Richardson's lengthiness, since no one who has read "Don Quixote" could wish it shorter by a page, and the "Morte d'Arthur," rambling and episodic though it be, is too short for its lovers—a good book is never too long.

To us the real answer seems to be simply this: that Richardson never painted human nature at all, and that, in other words, his psychology was purely superficial. He has become obsolete because, instead of relying on the eternal humanity of men and women, on the emotions which are to all intents the same to-day as four thousand years ago, he deliberately painted "society," convention, the temporary disguise under which men and women moved at a particular period. "Pamela" is not a story of love: it is a study of social distinctions; in its very essence it depends on the exalted social position of Mr. B. and the lamentably low social position of his servant-maid. Now a story must have some reference to social grades; we cannot posit our hero and heroine *in vacuo*; but Mr. Hardy has shown in his "Two on a Tower" how the true artist treats all social distinctions as accidents, and searches for the true essence of his book amidst immortal things and unchanging passions. In a word, true art is a thing of mysteries and ecstasies; and mystery and ecstasy were to Richardson utterly unknown. And, again, art deals with universals, with types; it transmutes the particular and unimportant Amlethus into the universal and significant Hamlet—not any individual man, but all men; humanity regarded from a particular standpoint.

Of course, one caveat must be entered. Juvenal, it may be said, Jane Austen, Thackeray dealt with the superficialities of society, with the outward vestments and disguises and conventions. True; but these were satirists. They described "clothes," but their chief business was to rend these clothes in pieces, to tear them away, laying bare the peccant parts of man, or else to laugh

at his folly in assuming such queer disguises. Richardson cannot be ranked in this company; for him there is neither the *sæva indignatio* nor the good-humoured laugh: for him the wicker framework and the dresses are the real and intimate man. The rage of Juvenal, the laughter of the better-tempered—these are in a sense ecstasies. But Sir Charles Grandison? An elegant and affecting figure doubtless, in his red-brick mansion of the eighteenth century, but never destined to the mansions which are abiding. Perhaps he tried to be a man; he has only succeeded in being a baronet.

#### RICHIEU.

*Richelieu and the Growth of French Power.* By James Breck Perkins, LL.D. (Putnam's Sons.)

The French monarch's "L'Etat c'est moi" might with much more truth have been said by Richelieu. When on his death-bed he was asked by his confessor whether he forgave his enemies, his answer was: "I have none but those of the State." This appears to be the key-note of his wonderful career. Apply it to all his actions, and it will give the explanation of seemingly contradictory phases of character and action. Richelieu lived only for the glory and exaltation of France, and he felt that the only way to obtain that end was by the glory and exaltation of Cardinal Richelieu. He, and he only, had the force of will and character to put France in the position which he desired her to take.

It must be remembered that when Richelieu began his work as a Minister of France the French kingdom was distracted within by fatal disunion. The Huguenots were an armed, semi-independent body, and the great nobles were more like independent princes than subjects of the French Crown, while abroad its influence was scarcely felt. It had no army and less navy. It had been ruled, or, rather, misruled, by the Queen-Mother, Mary de Medici, for many years; and now the sceptre was in the hands of Louis XIII., an ill-educated lad, of a jealous, capricious character, with much piety, and a considerable admixture of a curious kind of platonic affection which was apt to be very detrimental to the service of the State. It was from this condition of affairs, and with no better instrument to his hand than the King, that Richelieu determined to extricate his country.

His great strength lay in the fact that he never for a moment doubted himself, and he had no illusions. He believed that he was right and that all who differed from him were wrong. "He accomplished much because he set strict limits to what he undertook. In order to obtain the end of making France great and powerful he saw that the first thing which he must do was to secure internal peace and order; a country distracted within its own border could not hope to be a great, still less the paramount, power abroad; therefore it was that he proceeded to the destruction of the military and political power of the Huguenots and the taking of La Rochelle. This action was no mere religious persecution, as people have been wont to describe it. Richelieu, Catholic Bishop and Cardinal as he was, was no friend of religious persecution. It seemed to him that the Huguenots had to be suppressed, not because they were Protestants, but because their political and separate military organization was a constant peril to France. It is a fact that after the fall of La Rochelle and the other Protestant strongholds the Protestants were in no way interfered with in the exercise of their religion. The revocation of the Edict of Nantes by Louis XIV., some years after the Cardinal's death, is in no way to be traced to his policy. He destroyed the power of the Huguenots as a disturbing force without directly interfering with rights of conscience. In exactly the same way, and for the same purpose, he found it necessary to suppress the power of the nobles. Himself a noble, he nevertheless saw that the King could not be great, nor the kingdom stable, as long as the great nobility kept up an almost royal state, and had what was at that time an impregnable base in their feudal castles. Hence we find him dismantling many a fortress, and when the nobles, relying on the privileges and immunities, attempted to upset the State (*i.e.*, the Cardinal), no rank, no interest which they could bring to bear, could save them. The Duc de Montmorenci stood first and foremost among French nobility—Royalty itself was proud to be allied with the family—but when the Duke took up arms against the King, not all the prayers of princes and nobles, not the crowds who cried in the street for mercy—nay, the services held in the churches could not save him—he was condemned and beheaded the same afternoon. It was (politically) a grim necessity. Had Montmorenci escaped the penalty, there would have been plenty of other conspirators. But in proportion to the Cardinal's severity on the nobles was

his leniency to the commonalty, who might be regarded as having been led away by their natural leaders.

By this means tranquillity in France was restored, and the Minister was at liberty to make her power felt abroad. This he did by supporting Gustavus Adolphus and the Protestant German States against the Emperor, and by foiling the ambitions of Spain. Some have expressed great surprise that the Minister of "the eldest daughter of the Church," a Roman Cardinal, too, should be found in strong opposition to the two great Catholic Powers; but Richelieu saw beyond this. He was the first, perhaps, to realize that great principle of all modern diplomacy, "the necessity of keeping the balance of power," and he held that the strengthening of the hands of "the eldest daughter of the Church" was more important to the Church and to France than the mere suppression of some small German principedoms.

Richelieu did not live to see all his plans carried out, but his work lived after him and was brought to fruition by Mazarin, his own pupil. His enemies have laid every conceivable charge against him. He was called cruel. True, those who were the enemies of the State fell, whether they were Conceni, Montmorenci, or the unfortunate boy-favourite, Cinq-Mars; but in all these cases, no doubt, the execution was entirely political in its motives. "I have been severe to some in order to be good to others, and have loved justice and not vengeance," he says. He was a man of a thousand parts; nothing was too great, nothing too small, for him. In the midst of all the offices of State he had time to settle quarrels between the King and his favourites, to encourage literature and art. He founded the French Academy, which alone of French institutions has lived through all the changes of France. He organized the first post-office; he created a respectable navy and an army of 150,000 men, at that time regarded as a prodigious army. At the Revolution Richelieu's remains were violated. They are said to have been all duly returned; but, as our author says: "It does not matter; wherever his ashes may lie, his fame will endure so long as the history of France is studied by mankind."

The author has written of his hero with judgment and knowledge, and has produced a very attractive book.

#### OLD AGE AND FRIENDSHIP.

"Golden Treasury Series."—*Two Essays on Old Age and Friendship.* Translated from the Latin of Cicero by E. S. Shuckburgh. (Macmillan.)

The two pamphlets that Tully composed in his sixty-third year to be in after ages the special bugbear of Britain's youth are now in this charming volume transformed into a solace for the elderly and aged by a skilful alchemist whom his years, that creep, alas! towards the twelfth lustre, and his reading, that has ranged over broad and pleasant pastures, have brought into complete sympathy with his task. For ourselves we have never met a healthy boy who did not execrate "De Senectute"; out of "De Amicitia" the creature is in the habit of manufacturing a mild "ouss word" by a simple process of *synizesis* which we need not more particularly indicate. It is pleasant to think that, after the lapse of half a century, when, likely enough, he will only be able to read "the classics" as Colonel Newcome used to read them, he will open Mr. Shuckburgh's little book, and find that in the interval the two homely essays have caught the colour of his mind.

Mr. Shuckburgh's introduction, all too short, is an admirable piece of work. He discourses on friendship and age as one who knows; just as Tully did himself. And Mr. Shuckburgh sees that Tully's definition of friendship is quite wrong. What is the use of telling us that friendship "is a complete accord on all subjects human and divine," when those of us who have friends *know* that the warmest friendship can subsist between two persons whose opinions on some of the most important matters are widely sundered? And, as Mr. Shuckburgh rightly points out, it is by no means certain that identity of opinions is provocative of friendship. No; Tully did not know so much about friendship as Montaigne knew; and we refuse to believe that he and Atticus ever got beyond a rather humdrum form of *camaraderie*.

In the essay on "Old Age" there is much that is likely to gratify those who have succeeded as Cato had succeeded. But Tully does not attempt to face the real problem, which is this: What consolation is there for those who have failed? Can friends, gardens, intellectual activity—where there can be any—compensate for the loss of hope and strength? Must not a large part of mankind be thrown back in old age wholly on the support to be derived from the hope of a life to come? Mr. Shuckburgh says

that the inconveniences of old age are often the result of folly. But surely there are plenty of sorely tried old men who have lived all their lives well. The descent from Epsom to the cab-rank has its parallel in the life of man; and many who have lived soberly and toiled honestly come to an old age of rheumatism or other disease that cuts them off from the enjoyments on which Cicero dwells. The fact is that the dark side of the picture is carefully turned to the wall. The instances are all chosen from among successful men, who have passed through a happy life to an honoured and endurable old age. It is of little use to tell the disappointed man at the end of his life what old age might have been, and what it has been to some. It is far more to the purpose to exhort men while there is yet time so to live that they may attain to the joy of a happy old age. But, even so, it is idle to ignore the fact that in this matter too the best-laid schemes may go awry. Yet Tully's old age had been of more service to the world if it had been devoted to the writing of an exhortation to the young.

Of the translation we cannot speak too highly. We append a brief extract as a sample of Mr. Shuckburgh's style. It may fitly close this short notice.

O glorious day, when I shall set out to join that heavenly conclave and company of souls, and depart from the turmoil and impurities of this world! For I shall not go to join only those whom I have before mentioned, but also my son Cato, thou whom no better man was ever born, nor one more conspicuous for piety. His body was burnt by me, though mine ought, on the contrary, to have been burnt by him; but his spirit, not abandoning, but ever looking back upon me, has certainly gone whither he saw that I, too, must come. I was thought to bear that loss heroically, not that I really bore it without distress, but I found my own consolation in the thought that the parting and separation between us was not to be for long.

#### A GOOD HISTORY.

*History of England.* By Prof. F. York Powell, M.A., and Prof. T. F. Tout, M.A. (Longmans.)

This volume collects in the compass of eleven hundred closely printed pages the three separate "parts" of English history which we noticed successively at the time of their appearance. The whole text has been revised throughout for the present edition, which may be regarded as a complete student's history of British origins and the British Empire—for the name of England on the title-page must be understood in its widest sense. Prof. Powell is specially responsible for the first Part, which carries us from the earliest times to the death of Henry VII. The second Part, from the accession of Henry VIII. to the Revolution of 1689, and the third Part, which comes down to 1887, are the work of Prof. Tout. The common plan and design of the authors may be described as a combination of a connected story of the main facts of political and constitutional history, in chronological order, with a sketch of the development of the language, literature, and social life of the people. Wherever it was possible, the Cambridge and Victoria Professors of History have availed themselves of the actual words of contemporary authorities, with a view to preserving dramatic and pathetic incidents in their original colour of time and place. A manifest effort has been made to tell the connected story in simple style, and the usefulness of the volume for young readers is increased by a brief glossary, with good maps, plans, tables, and pedigrees of important persons. For school use the print is rather small, and the paper somewhat too transparent; but the very detailed history could not have been brought into a single and handy volume without having recourse to small type and thin paper.

Prof. Powell has not only a firm grasp of the early institutions and life of the English people, but also a clear idea as to the best way of describing them for young readers. He shows a lucid, if sometimes a rather startling, distinctness in tracing out the main lines of national evolution; but there is, on the whole, little to quarrel with in his method. The brief retrospect with which he concludes his share of the work, though it scarcely exceeds three pages, is a model of comprehension:—

We have now reached [he begins] a line of real division in English history, the line at which the middle ages, with their forms of life and thought, and their systems of Church and State, land and labour, close; and the age of the New Learning and the New Faith, which are known as the Renaissance and the Reformation, is coming in to reshape and recast the life and thoughts of men. So deep is this dividing line that it is certain there was more in common between Alfred and Edward I., or Dunstan and William of Wickham, though severed by centuries, than between Edward IV. and Henry VIII., or Warwick and Wolsey, who are only a generation apart.

On the whole, this is an excellent historical reading-book, though it rather falls between the two stools of a student's manual and a schoolboy's introduction.

#### METHODICAL VOCABULARY.

*The Facts of Life.* Part I. A Text-Book for the Methodical Study of the German Vocabulary. By V. Bétis and H. Swan. (Philip & Son.)

Messrs. Bétis and Swan are well known exponents of the Gouin method, which they have done much to popularize and to improve. Gouin, in common with other reformers of modern language teaching, looked upon the acquisition of vocabulary as the first object, and set to work to facilitate it on the principle of the association of ideas. He differed, however, from other reformers in basing his system rather on the association of ideas with each other in the mind (what he calls "mental visualization") than on the association of words with the objects or pictures of the objects they represent. Hence his "Series," in which his disciples think he went too far in carrying out each train of thought to the bitter end. They are entirely in accord with their master's principle of mental visualization, but prefer to treat his Series rather as the groundwork or setting for groups of words and phrases connected with ordinary life than as an end in themselves. Their book claims to be a "Dictionary of the Facts of Life," arranged under obvious headings, and kept clear of what is not strictly necessary. The volume before us deals with four of the groups to be included in the complete work—viz., Home Life, The School, Travelling, and Plants. Each of these chapters consist of a series of brief narratives of the ordinary incidents of life—getting up, dressing, making the bed, and so on, divided into short sentences. The more important parts are printed in black type, and are ingeniously contrived so as to form a simple continuous narrative in themselves. Thus the description of a school-day occupies about a page and a half, and is split up into twenty-seven sentences; the black type forms about a fourth of the whole, and can be read through without any break in the sense. The narratives are carefully worked out, and seem well adapted to their aim. It is beyond the scope of a brief notice to discuss how far that aim, excluding as it does, or at any rate postponing, grammatical discipline, the cultivation of literary taste, and the concurrent training in the accurate use of the mother-tongue, is altogether a satisfactory one.

## GENERAL NOTICES.

#### CLASSICS.

*A Short History of Ancient Greece*, by Henry Johnstone (Nelson), is, on the whole, a successful attempt to produce a little history of Greece for the young. Mr. Johnstone has contrived to make the imperishable story simple and interesting. The book is copiously illustrated, and the price is very low. We wish to draw the attention of teachers to the volume, believing as we do that they will find in it a more suitable elementary history than has hitherto appeared. Our recommendation must, however, be qualified, for we are decidedly of opinion that Mr. Johnstone has devoted too much space to constitutional matters, and in some other directions has attempted too much. The little ones will find Lycurgus and Cleisthenes dull, and they are likely to get mixed over oligarchy and democracy. Surely the utmost that is to be desired for a child beginning history is that he should learn first about the battles and the great men, good and bad. In the teaching of history to the young the teacher must give absolute precedence to the concrete over the abstract, and to the deeds of men over the movements of thought and political changes. We see no reason why Greek history should not be taught at first as mothers teach the Bible. Bad Cain and good Abel edify when Leviticus and Deuteronomy are as yet without power to help.

*Livy, Book VI.*, edited by W. C. Laming, and *The Georgics of Virgil, Book I.*, by S. E. Winbolt (Blackie), are recent additions to the series of "Illustrated Classics for Middle and Upper Forms." The illustrations in both volumes vary widely in merit—a few are good; some might well have been omitted. Mr. Winbolt's introduction is a good piece of work, though somewhat overloaded. Why does Mr. Winbolt write: "Xenophon's *Oeconomica*"? The notes are commendably brief, and to the point. Mr. Laming's introduction contains sections on the sources from which Livy drew, and on the credibility of early Roman history. There are also appendices containing hints on translating, and exercises for retranslation. The editing is scholarly and careful, and the book will prove of real service to candidates for examinations. The exercises strike us as rather elementary in character as compared with the rest of the book. A student who can profit-

ably read the section on the credibility of Roman history will surely not require such helps as "give-quarter-to (*parcere*)," or "from-the-fact-that (*eo . . . quod*)." The editors of these books—as, indeed, Mr. Winbolt expressly says—write for "fifth, and even sixth, forms"; and, that being so, we are inclined to wonder that the publishers offer an edition with vocabulary. Do "fifth, and even sixth, forms" really use vocabularies?

*The Fourth Form Latin Prose Book*, by E. C. Cumberbatch (Longmans), is a collection of seventy-five miscellaneous exercises. Mr. Cumberbatch makes a thoroughly vicious suggestion when he proposes that pupils should be allowed to write the indicative for a time in relative clauses that occur in *oratio obliqua*. We hoped that the shoddy old method of teaching the wrong thing with a view to correcting it later on had everywhere been discarded before now. This suggestion, contained in the preface, almost prevented us from examining the book further. However, we found better things on the next page. The compiler rightly insists on the value of the "miscellaneous exercise" as a means of teaching boys to think, and he understands his fourth-form boy. The exercises make three terms' work; and, after going through this book, the learner should be ready for continuous prose. The English of the sentences is often faulty. Would any one write: "I warn you the road is not safe," or "He ordered no one to follow," or "The forces were so many that we dare not attack them"?

#### MODERN LANGUAGES.

*Pierre Cœur's L'Âme de Beethoven*. Edited by de V. Payen-Payne. With Key to Appendices. (Macmillan.)

We have here a novelette by Madame des Voisins, a well known journalist and novelist. It tells the sad story of a gifted musician, who eventually fell a victim to a monomania, believing that the soul of Beethoven was incarnated in him. One is disposed to doubt whether the selection is a very good one—the tale fulfils neither the condition of conveying useful information, historical or otherwise, nor that of possessing exceptional literary merit. The notes are carefully done, and suggest the work of a practical teacher; many are put in the form of questions for the pupil to answer. There is a full table of the tenses of irregular verbs occurring in the next, an unnecessary addition, as they can be found in any grammar. The volume has a vocabulary, and the appendices common to all the books of the series edited by Dr. Siepmann, containing phrases and continuous pieces for translation into French, based on the text. The key is in a separate volume.

*C. Nodier, Trésor des Fèves et Fleur des Pois*. Edited by E. B. Le François. (Nelson & Son.)

We hesitate to recommend this fairy tale as a reader for junior classes, mainly on account of the archaic language in which it is written. Just as the fairy tales of Perrault—far superior to this one, owing to their popular character—have to be modernized before they can be read with advantage by children, so this story should have been rewritten in simpler French. No doubt, it would lose much of its charm to the literary student, but the beginner would be grateful. Such words as *meshuy* and *trésir* are surely no gain to his vocabulary; and such touches as "elle le fixait des traits acérés de ses yeux, le liait des petits plis de son sourire," common as they are in French fairy tales, are not the kind of thing we like to translate in class. The notes give a good deal of help, but are not always well expressed: e.g., "the article is generally omitted after the preposition *en*." The vocabulary is not complete.

*Prosper Mérimée, Le Coup de Pistolet*. Edited by J. E. Mitchell. (Blackie.)

This story is well known, and has already appeared in a selection of tales from Mérimée, with brief notes. Mr. Mitchell's notes are very full, and useful on the whole. A little more care should, however, have been given to them; particularly in a book for beginners there should be no slips. In the note to page 10, line 4, it is stated that "*pas* is omitted after *savoir*, when followed by an infinitive." A few lines after this *savoir* again occurs without *pas*, but no infinitive follows. This must confuse a child. To talk about the "ablative absolute" in French is incorrect, and is quite pointless in the case of children who know nothing of Latin. In the note on page 11, line 11, we find *si l'on lui demandait*; in that on page 27, line 5, *nous croyez*; in that on page 28, line 5, *je agis*. There is no German word *manc*; *platt* is an adjective, and should have no capital. The term "to adverbialize" is no gain to our grammatical phraseology. The vocabulary also appears to have been compiled without sufficient care.

*Asinette*. By Mrs. J. G. Frazer. (Dent.)

The author of this children's book is favourably known by her "Scenes of Child Life" and "Scenes of Familiar Life." The scenes contained in this volume centre round a little girl, whom her brother unkindly calls *Asinette*. They are full of life and fun, and written in excellent colloquial French. The book gains immensely by being illustrated by that clever young artist Mr. H. M. Brock, whose eight full-page pictures are capitally reproduced in colour. In addition to these, there are some two hundred pictures in black and white scattered over the margins, and serving to elucidate the text. These will be particularly welcome to teachers on the Reform lines. It is to be hoped

that a cheap school edition will soon appear. We can hardly expect the publisher to issue it in so elegant a binding or with coloured pictures, but we should like to see the vocabulary overhauled, as it is not quite complete; or, better still, there should be a glossary, with explanations of the words in French.

*E. de Pressensé, Une Joyeuse Niché*. Edited by S. Alge. (Dent.)

Mr. Alge is well known as one of the pioneers of the Reform movement in the teaching of modern languages, and, in editing a text, he, of course, follows the principles in which he believes. The story is one likely to interest children; there is nothing mawkish about it, and there is plenty of incident. It is divided into forty sections, and the editor has supplied a set of grammar questions and exercises to each of these, which teachers will find very useful. There is also a *grammaire* to the book, which is not intended to be exhaustive, but to serve purposes of reference on points arising from the text. Finally, there is a carefully compiled glossary, with explanations of the words in French. Teachers who have not yet tried the experiment, and do not realize how much the vocabulary of the beginner is improved by the use of such a glossary in place of a French-English dictionary, may be recommended to read this book with a class of pupils who are in their third year.

*Cours de Grammaire Française Élémentaire*. By W. G. Hartog. (A. & C. Black.)

This little grammar of sixty-four pages is written entirely in French, and is, therefore, intended for use in classes where importance is attached to the almost exclusive use of the foreign tongue. It may be held that it is really best for the pupils to "make their own grammar" by gradual deductions from their reading, and it is hardly advisable to let them have a book giving rules and exceptions, like the one before us, until they have had about a year's teaching. Then it should prove useful mainly for purposes of reference. The rules are well expressed in almost every case. Exception might be taken to the wording of the rule for the use of *mil*. To say "*On ne se sert jamais de de le, à le*" is contrary to the sound principle not to draw the attention of children to possible wrong forms; and, besides, it is not correct (*je viens de le voir*, where *le* is, of course, not the article—but still *de le* is used). There are few slips in the printing; *chaque* occurs on page 27.

*Practical Rules on the Use of the Infinitive in French*. By L. Le Bris. (To be obtained of the Author, 3 Park Row, Greenwich.)

These rules are well expressed, and the table of verbs is full and trustworthy. Most French grammars do not deal adequately with this difficult subject; and M. Le Bris deserves the gratitude of teachers for printing these convenient rules for their use. They are sent, post free, for fivepence.

*Cunuder's Eclectic Oral Method for the Practical Study of the French Language*. (Bristol: Burleigh.)

There is much sound sense in Mr. Cunuder's preface, though it might have been expressed in language a little less high flown. Thus, when he says: "Does Nature induce the mother to repeat to her child disjointed and absurd sentences such as are to be found in the exercises in question, and to crush his bewildered mind under the weight of their trampling legions?" we feel ourselves in full agreement with his protest; but we cannot repress a smile. And we can imagine an earnest teacher being a little impatient when he reads in the "General Hints" a sentence like the following: "If, after the explanation of a lesson, after the hearing or the reading of a passage, its contents do not become the prey of thoughts, its effect will be but transient, only a rippling of the water caused by a cast stone, and as quickly and as irrevocably will it disappear in the stillness of oblivion." It would, however, be a great mistake to allow oneself to be prejudiced by such flowers of speech; for a perusal of Mr. Cunuder's book will bring the conviction that he is a good teacher, who has given serious thought to his subject, and to good purpose. The continuous passages of French have been chosen skilfully, the grammar questions based upon them are well put, and are expressed in French from Lesson 41 onward; indeed, our only regret is that the grammatical part at the end of the book is not in French also. We warmly recommend teachers to read the book; they are sure to learn from it much that they can utilize in their classes, even if they should not see their way to putting it into the hands of their pupils.

*The New Method for the Study of the German Language*. By J. G. Moelwyn-Hughes and F. A. A. Struve. (W. H. Roberts.)

The only novelty claimed by the authors is one of which they certainly have not the monopoly, the study of the verb first and the substantive last. Their preface is an excellent illustration of the well known story of the layman, sent out to discharge judicial functions in the colonies, whose legal friends advised him, by all means, to give his decision, which would probably be right, but to abstain from giving his reasons, which would certainly be wrong. "We deem," they say, "the substantive to be the outward manifestation of the inward I (*ego*), the very self-hidden, but gradually revealed by the various motives working, until it takes an outward form. It is, therefore, necessary to perfect these before they disclose themselves." The practical part of the book consists of a number of exercises, conversations, and extracts, which have probably worked well in the hands of the authors, but which do

not seem very suggestive for other teachers, especially as "the method does not allow any superficial preparation and no deviation from it." The printing is careless: in the first two pages we notice "qualifying" and "thoroughly."

*A German Commercial Reader.* By S. E. Bally. (Methuen.)

The demand for commercial education is likely to produce a considerable crop of special books. The one before us is ingeniously arranged and is likely to be useful. Each lesson contains one extract of about a page and a half, generally, but not always, on some subject connected with trade, manufactures, or means of communication, and a shorter anecdote in newspaper style. To these are added a few idiomatic sentences, groups of business phrases, proverbs, and, in some cases, an arithmetical problem. Specimens of the working out in detail of questions in the first four rules of arithmetic are given. It might have been worth while to include some of the more advanced rules. Perhaps some of the extracts not directly bearing on commercial subjects might with advantage be replaced by extracts bearing on commercial history; by an account, for example, of the South Sea Bubble, of the foundation of the Bank of England, or of some great commercial crisis. The general training of the schoolboy intended for business is, on the whole, more effectively promoted by studying some masterpiece of literature concurrently with his strictly commercial reading than by studying scraps of German "journalisee."

*Exercises in German Composition.* By R. Kaiser. (Arnold.)

This is a useful selection of continuous passages for translation, preceded by a few pages of detached sentences, some of which include commercial expressions, and followed by a vocabulary and a selection of idiomatic phrases, the latter not having much relation to the exercises. What we miss is a set of hints on writing German, such as is prefixed to the best Latin prose books. A good German *Stylistik*, with carefully adapted exercises, like Meissner's excellent "Introduction to French Prose Composition," is much wanted.

*German without Tears. Book II.* By H. H. Hutchinson and S. Bostock (Arnold.)

This is a little reading-book for the nursery, translated from the second volume of Mrs. Hugh Bell's "French without Tears." It has a vocabulary, pictures, and a few notes calling attention to points of grammar. The stories, of course, are excellent; but it is rather difficult to see how the book can be fitted into a systematic course of German. Perhaps it is hardly intended for that.

*Das Wirthshaus zu Cransac.* By H. Zschokke. Edited by E. S. Joynes. (Heath.)

This is a pretty little love story by Zschokke, who, both as politician and as journalist, played so important a part in Switzerland in the first half of the century, and who, in his stories of country life, was one of the first to strike the rich vein of popular fiction worked by Immermann and Auerbach. The notes are careful and adequate, considering the simple style of the story, which does not lend itself to elaborate annotation. The book has a vocabulary and paraphrases for retranslation.

#### MISCELLANEOUS.

*Elements of Rhetoric and English Composition.* By G. R. Carpenter. (Macmillan.)

There is doubtless a great deal of useful matter in this handbook, treating of essay-writing, letters, narration, exposition, persuasion, and composition in verse. But a glance at its contents is sufficient to show that it attempts too much in its 140 pages. Sad to say, no small proportion of this is taken up with examples of what should be avoided, whereby a sound pedagogical law is broken. Again, there seems to be excessive detail of instruction, in some cases amounting to little more than rules of etiquette, or negligible trifles. For instance, the order of pages in a private letter is discussed, and even the size of the paper to be used. The book will strike the English teacher as dealing with matters that boys and girls generally have to pick up for themselves. This is all the more reason why it should be welcome, and with its abundance of exercises it may provide fresh ground in our composition lessons, which often consist entirely of setting and correcting essays.

*Sounding the Ocean of Air.* By A. Lawrence Rotch, S.B., A.M. (S.P.C.K.)

This is a course of lectures delivered in Boston, and it appears to be suited to the average audience of our University Extension type. It deals with the atmosphere generally, and its accidents—clouds and currents—while the author's experience as director of the Blue Hill Meteorological Observatory enables him to speak with detail of the latest balloons and kites for the purpose of scientific research. It is clearly and simply written, without much attempt at originality of treatment. There are several illustrations and diagrams, some of them of a rough blackboard description. The lectures might, perhaps, have been made more interesting, but they contain much up-to-date information which a teacher of physiography will find useful.

*Asia.* By Lionel W. Lyde. (Black.)

M. Lyde's volume on "Asia" is another addition to the author's valuable series of school geographies. There is the same freshness of treatment and continual appeal to the intelligence of the pupil that

marked its predecessors. The term "Asia" is of large significance, and we could wish that the preface had stated the precise aspects to be treated. Apparently it is entirely a "physical" geography, with indications of the main lines of industry and commerce. But here and there we find smatterings of political information, and the chapters are based on the political divisions. It would be more satisfactory if the political aspect were treated more fully, or entirely ignored. There are traces of haste, and consequent lack of clearness in several places, but these are comparatively trifling blemishes on an otherwise excellent text-book.

*Object-Lessons in Botany, from Forest, Field, Wayside, and Garden.*

*Book III.* By E. Snelgrove, B.A. (Jarrold & Sons.)

Boys and girls who have learned to observe plants under Mr. Snelgrove's earlier guidance are now initiated by him into the mysteries of the microscope. We like the method he adopts. He does not present, with cross-sections of plants as a set of curious patterns, to be learned by heart, but, in their proper form, as aids to the understanding of the way the plant is built up, and with the uses of all parts and of their particular arrangement kept in view. Nor are the human uses of plants forgotten. Altogether, a successful work; though the "get-up" is not as good as one could wish.

"The Temple Primers."—*The Human Frame and the Laws of Health.*

By Drs. Rebmann and Seiler. Translated from the German by F. W. Keeble, M.A. (Dent.)

A good general introduction to the principles of hygiene, touching on all the main departments of the subject, as well as the essentials of human physiology. Though the treatment is necessarily brief, any well educated person will find the book readable.

*Technical Instruction Handbook.* Revised to May, 1900.

(Wakefield: Milnes.)

The County Council of the West Riding of Yorkshire publishes a detailed handbook of its schemes, regulations, and syllabuses, showing the general provision made by it for aiding technical and manual instruction in the West Riding, with many suggestions as to the organization and management of technical schools and classes. To this useful information is appended a scheme of work assisted by the Joint Agricultural Council of the East and West Ridings, in conjunction with the Yorkshire College, Leeds.

*A Picture-Map of the World.* By Ada B. Dugan. (Philip & Son.)

This is a novelty in the way of pictorial geography devised by the mistress of an infant model school at Londonderry. It will cover thirty-three square feet of wall, and is well calculated, by its hundreds of coloured pictures, to impress on the mind of a child a great number of useful notions concerning the natural products and industries of the world. It may awaken many intelligences which mere words would not be likely to reach, at any rate, in the same time.

*The Royal Observatory, Greenwich: a Glance at its History and Work.*

By E. Walter Maunder, F.R.A.S. (Religious Tract Society.)

Mr. Maunder, who is one of the Assistants at the Greenwich Observatory, gives us in this volume a full account of the famous meridian Observatory. Its history is recounted in connexion with the lives of the eight Astronomers-Royal—Flamsteed, Halley, Bradley, Bliss, Nevil Maskelyne, Pond, G. B. Airy, and Mr. W. H. M. Christie—of whom we have characteristic portraits. There are also pictures of the chief buildings and astronomical instruments, and photographs of the principal nebulae. The book has a special interest from the fact that few outside people ever see the Royal Observatory. From the nature and importance of the work there carried on day and night, it is possible for visitors to enter it only once in the year, and then under very stringent regulations. Mr. Maunder describes the highly important work done in connexion with navigation, the fixing of time, and the various highly developed scientific departments connected with the constant study of the heavens, which is carried on ceaselessly day and night.

*The Goldsmith Anthology, 1745-1774.* Edited by Prof. Edward Arber. (Frowde.)

With the publication of the Dunbar and Cowper Anthologies—the first and last of the promised ten—Prof. Arber's series of poetical selections, covering the fifth to the eighth centuries, will be complete. Goldsmith is the centre of a numerous group of British and Irish poets, who are represented in these three hundred pages by many delightful pieces. Oliver himself—"magnanimous Goldsmith, a gooseberry fool," according to his own description—occupies thirty pages, and occupies them well, with "The Hermit," the mud dog elegy, "The Deserted Village," and "Retaliation." There are some fine anonymous pieces, and the middle eighteenth century is admirably epitomized.

*The People of China: their Country, History, Life, Ideas, and Relations with the Foreigner.* By J. W. Robertson-Scott. (Methuen.)

This is a book for the hour. It is professedly a made book, compiled from printed sources; but as such it is well put together, and very useful. Indeed, the ordinary English reader could not wish for a better handbook of general information on a country which baffles even those who have known it and lived in it as long as Sir Robert Hart, who recently confessed: "If you asked me to write even three or four

pages about China, I should be puzzled to do so." Mr. Robertson-Scott describes not so much China as the puzzle of China.

*The Junior Temple Reader.* Edited by Clara Linklater Thomson and E. E. Speight, B.A. (Horace Marshall & Son.)

This is an excellent book in every way. It is a collection of folk and fairy tales, children's poetry, play-rhymes, and animal stories, for school and home reading. The choice has been made in a thoroughly literary spirit, and the illustrations, old and new, make the volume as artistic as it is literary. Nothing could be better calculated to nurse children into a love of the best kind of reading, and to cultivate in them the discriminating taste and sense of beauty which are generally to be found in an unspoiled child, but which are often unaroused and often overlaid. This Reader is a great improvement on many of the existing collections of English extracts for schools, and we should say that it is certain to come into high favour.

*Philips' County Readers.*—*Kent Past and Present.* By George F. Bosworth, F.R.G.S. (Philip & Son.)

This handy little book on Kent is a good example of the method of treating geography and history combined in reference to a comparatively small section of the student's native country—the county in which he happens to reside. The Kent Reader is an interesting book, well illustrated, and rendered more useful and attractive by the inclusion of a number of poems germane in subject. Kentish boys and girls certainly ought to use this handbook.

*"The Tweeddale Geographies."*—I. *The British Isles.* II. *Europe and Australasia.* (Oliver & Boyd.)

These are good little introductions in the old style—mainly enumerations, but not overlaid with details. The type and most of the maps are clear.

*A Brief Introduction to Commercial Geography, being a Handbook of the Commercial Relationships of Great Britain, the Colonies, and the United States.* By the Rev. F. Smith. (Blackie.)

Mr. Smith has written a small book for so very comprehensive a title, and our heart misgives us when we find him beginning it with lessons on "a town market," "wind and rain," "ocean currents," and "the seasons." But we are bound to say that this is a very good introduction for boys to a knowledge of British commerce, its subject-matter, methods, extent, and value. It is not a "handbook," but a serviceable reading-book, and as such we can commend it.

*The Preparatory English Grammar.* By W. Benson, B.A. (Bell & Sons.)

A well intentioned restatement of elementary notions of English grammar. Mr. Benson begins: "Grammar is the science of language. English grammar consists mainly of a classification or arrangement of words into groups. . . . Rules are also explained . . ." We cannot honestly say that there is room for this book.

(1) *A Text-Book of Bookkeeping.* By Frank Ireson, B.A. (Macmillan.)

(2) *Fifteen Studies in Bookkeeping.* By Walter W. Snaillum. (Cambridge University Press.)

Mr. Ireson's introduction is very detailed and clear in its explanations, so that it may be used by intelligent beginners at school or at home. There is a large number of exercises and expositions, including many taken from the Society of Arts examination papers. Mr. Snaillum is not so elaborate in his explanations; but he is very clear, and his manner of unfolding his subject is interesting. He provides, in addition to his "studies," seven worked papers and seventeen test exercises.

*Handy-Volume Atlas of the World.* By E. G. Ravenstein, F.R.G.S. (Philip & Son.)

The amount of revision which one is wont to look for, or to find, in a new edition of a book is a very variable quantity, running up from next to nothing in some cases to almost everything in others. No doubt, many of our readers know the "Handy-Volume Atlas" as published by Messrs. Philip some years ago. The book before us has the same title and the same leading features and appearance, but the whole of the seventy-two maps have been redrawn and re-engraved, and the statistical notes and other letterpress have been rewritten. The book thus amounts to a new work, with a close imitation and appropriation of all that was good in the old one. It is an extremely serviceable pocket volume and handy companion.

*Object-Lessons in Elementary Science.* Standards I.-III. By A. H. Garlick and T. F. G. Dexter, B.A., B.Sc. (Longmans.)

This is a new edition of Messrs. Garlick and Dexter's series of object-lessons in Nature-observation. Lists of apparatus, and of objects and localities for outdoor work, have been added; and the value of the lessons for practical purposes has been made more manifest than ever.

*English History Note-Book.* By Margaret Anne Rolleston. With Introduction by the Rev. T. W. Sharpe, C.B. (Birmingham: Davies & Moughton.)

Miss Rolleston has brought together some useful and interesting notes from her careful reading of English history. The book is well arranged, and calculated to be very serviceable to an industrious student.

*"Bell's Handbooks to Continental Churches."*—*The City of Chartres, its Cathedrals and Churches.* By H. J. L. J. Massé, M.A. (Bell & Sons.)

An admirable little handbook to an interesting French city, full of historical relics and ecclesiastical associations. There is some magnificent architecture and sculpture in Chartres Cathedral, and Mr. Massé has done much to enable us to realize it.

*The Gentleman in the Next House* (Dent) is a farcical comedy, in three scenes, adapted from "Nicholas Nickleby" by Isabelle M. Pagan, and dealing with Mrs. Nickleby's elderly suitor.

Of texts with notes, we have, in Messrs. Longmans' "British Classics," Macaulay's *Essay on Clive*, with a general introduction to the study of Macaulay, and an essay on literary characteristics, by A. M. Williams, M.A.; in Messrs. Blackwood's "English Classics," Carlyle's *Essay on Burns*, edited by John Downie, M.A.; in Moffatt's "School Classics," Macaulay's *Essay on Milton* and Gray's *Poems*, Part I, both edited by Thomas Page. Macaulay's *Essay on Milton*, edited by A. P. Walker, M.A., is published by Messrs. Isbister.

From Messrs. Philip & Son we have specimens of their *Semi-Upright Copy Books*—a new systematic course of penmanship well worthy of consideration by teachers who are free agents, and who are on the look-out for a good copy book.

Messrs. Macmillan send us their large *Register of Admission, Progress, and Withdrawal*, and their *Summaries of Attendances for Five Years*, arranged (1) for boys and girls, (2) for infants. They are calculated for the requirements of Elementary Code schools, but might be made more generally available.

Amongst new maps and charts we have two of Messrs. Gill's Cartographic Maps—*Ireland and India*. These excellent wall maps are on a scale of four miles to an inch, and they are so clearly printed and arranged that every detail can be easily made out by children sitting at desks within twelve or fifteen feet of them. The chief towns and other features are named in large type, and the colouring in no way confuses them.—Messrs. W. & A. K. Johnston send us *Pictures for Object Lessons*—rolled sheets on "Ironfoundry," "Mahogany," "Birch," &c. The designs and printing are English in their origin, which is certainly an additional recommendation. From Messrs. Stanford we have a capital new *Orographical Map of Europe*, very carefully and systematically designed and explained. It is compiled under the direction of Mr. Mackinder, M.A., Reader in Geography in the University of Oxford.—Messrs. Blackie & Son publish a set of fourteen *Standard Class Maps of England and Wales*, cycled at the corners, in a strong leather-board box.—"Nelson's Royal Portfolio" (Nelson & Sons) is reinforced by a geographical series of coloured maps, including *Pictures of the Empire*, suitable for the decoration of schools. They are 28 by 21 in. in size, and the sheets can be had variously mounted. The designs and workmanship are very good.—*Blackie's South Kensington Drawing Sheets* are based on Sir E. Poynter's "Drawing Books." The full series, in flat tints on good cartridge paper, 28 by 20 in., includes six sets of twenty sheets each.—*Philips' Typical Object-Lesson Pictures* (Philip & Son), selected by Prof. R. A. Gregory, consist of three series, each of them being a set of six diagrams, 23 by 30 in., printed in colours on stout Manilla paper. They are well drawn and produced, and will make a good basis for object lessons on animal and plant life and on various industries.

WE HAVE ALSO RECEIVED the following publications and new editions:—

*City and Guilds of London Institute: Programme of Technological Examinations, &c., for the Session 1900-1901.* (Whittaker & Co.)

*London University Guide and University Correspondence College Calendar, 1900-1901.* (Clive.)

*The Tutorial French Accidence*, by Ernest Weekley, M.A. Lond. (Clive)—a third edition of this well approved French grammar and exercise book.

*Meldola's Chemistry*, revised to date by J. Castell-Evans (Murby)—a fifth edition.

*Skertchly's Elements of Geology*, revised by James Monekman, D.Sc. (Murby)—a tenth edition.

*The Principles of Chess in Theory and Practice*, by James Mason (Horace Cox)—a second edition, revised and enlarged.

## GIFT-BOOKS AND PRIZES.

### I.

#### HISTORICAL TALES.

THE evergreen Mr. Henty is quite up to date in his story of *With Buller in Natal* (Blackie & Son), which may be classed with the historical tales, though its "history" is very recent. The hero is Chris King, an English lad in Johannesburg, who, on the outbreak of the Transvaal War, collects a little corps of youngsters, makes his

way into Natal, and offers their services as a band of scouts to General Penn Symons. They are attached to a cavalry regiment, and do good work in all the fighting, from Glencoe to the relief of Ladysmith. They go through many perilous and exciting incidents, and are always successful; for, if they had not been, why should Mr. Henty bother to write their story?—*In the Irish Brigade* (same author and publishers) is more strictly historical, being a story of war in Flanders and Spain. The hero is a young officer in the Irish Brigade which entered the service of France after the Battle of Limerick. In those days Irishmen were not able to enlist in the British Army, and, if they came of a fighting stock, as many Irishmen did, their only chance of a military career was to seek it in foreign countries. The heroic deeds of this particular hero included the saving of a large French force at Oudenarde and the kidnapping of an English Premier. This is a very exciting and pleasant story.—*Out with Garibaldi* (same author and publisher) is a tale of the liberation of Italy, and especially of the Sicilian expedition of "The Thousand" against 120,000 disciplined troops. The hero is a young Englishman who takes a large sum of money to the Italian Lion, and is placed on his staff as lieutenant. He also does wonderful deeds, and ends by releasing his relatives from Neapolitan prisons. All these books are fully illustrated.

Mr. Manville Fenn, like Mr. Henty, has drawn on the records of the South African War. *Charge!* (W. & R. Chambers) is a story of Briton and Boer. It opens with a splendid domestic scene under a *kopje* at the Cape, which is in Mr. Fenn's best way, and fixes the interest of the reader from the very beginning. He tells a stirring tale of Val Moray, who was commandeered by an Irish Boer, and has to see a good deal of fighting on the wrong side. There is a freshness and a human feeling about Mr. Fenn's story which will commend it to most young readers.—Yet another tale of the Boer War is Captain Brereton's *With Rifle and Bayonet* (Blackie & Son). Captain Brereton has this advantage over others who have taken the war for their theme—that he has actually served in it, and has produced his romance in the intervals of fighting. His hero is a despatch rider between Kimberley and Mafeking, who is captured and sent to Pretoria. He contrives to escape, and is lucky enough to return to the Transvaal capital under the auspices of Lord Roberts. Oom Paul is one of the characters of this story, and the author puts him in a favourable light.

#### TALES OF ADVENTURE.

Mr. Louis Becke's *Tom Wallis: a Tale of the South Seas* (Religious Tract Society) is an account of the rough and strange adventures of a lad who was smitten with love of the sea, though he made his first voyage under compulsion rather than choice. The incidents follow each other rapidly in this lively story of the Pacific, and, perhaps, they are a little too exciting for some tastes. But there is nothing that a Religious Tract Society need not have published—unless it is the bloodthirsty scene on Bully Hayes's "blackbirding" ship, in which Tom shoots at the blackbirds in a somewhat unnecessary fashion.

*An Ocean Adventurer*. By Walter P. Wright. (Blackie.)—Although a boy's appetite for adventure is generally considered insatiable, we think that this book cannot fail to give him mental indigestion. The rapidity with which thrilling incidents occur to dazzle the reader is almost grotesque. There is no time to realize the sequence of events, even if such sequence existed, and we fear that, owing to its blood-curdling and gruesome details, this is a somewhat unwholesome type of story, unredeemed by grace of style or by immaculate English. The time is to-day—we might almost say to-morrow—so modern are the accessories, a time in which buried treasure and chained skeletons are a little difficult. Mr. Wright has some of the atmosphere of Jules Verne, but lacks that author's consummate power of giving plausibility to the adventures described. As to the illustrations, they contain skeletons enough to satisfy a Traddles.

*Up the Creeks*, by Edward Shirley (Nelson & Sons), is, as its subtitle indicates, a "Tale of Adventure in West Africa," and a very well told, exciting little tale it is. The only thing one finds to grumble at is that there is a slight straining of the probabilities in putting so very young a person as Mr. Richard Trentham—he is only seventeen—in such a very responsible position as the sole Englishman in charge of the company's agency at Bugama.

*The Romance of the South Pole*, by G. Barnett Smith (same publishers), is a substantial volume, and will be found of considerable interest to young readers who prefer fact to fiction.

#### GIRLS' STORIES.

*A Newnham Friendship*, by Alice Stronach (Blackie & Son), will arouse at least the eager interest of would-be girl collegians. In such glowing colours has she painted her picture of Newnham that there will be chafing under the necessary delay before they also may enter this kingdom of delight. We can recommend the book as well written, and of wholesome tone. The social atmosphere of life at a women's college, almost a little world in itself, is excellently realized. The reader is initiated into the mysteries of the famous "cocoas," hockey-matches, debating societies, and lectures. The characters of different students

are cleverly sketched in, noticeably those of Carol Martin, the heroine, and Elspeth Macleod. But both the lights and the shadows are too thickly laid on. There is, indeed, an Adelphi touch about the "villains," male and female. In fact, the plot is the weak point of the story, and the writer would have been better advised to confine herself to her lifelike description of academic acts and scenes. In the closing chapters we are transferred from Cambridge to East London, where some of the girls have started a social settlement, and we have a glimpse of their work in the slums. The book is creditably illustrated.

*Gold in the Furnace* (Religious Tract Society) is a very pathetic story by M. H. Cornwall Legh, author of "An Incurable Girl." The heroine is a servant-maid, and, if that strikes any one as a little unpromising and unromantic, we must hasten to say that the misgiving is quite unnecessary. Mary Copeland is a lovable girl, a good deal better than gold, and she is tried in a very fierce fire. We doubt if a girl of excellent character would be sentenced to three months' hard labour on the sole ground that a missing bracelet was discovered in her box; but that was Mary's "furnace," and she served her term to the bitter end.

*The House that Grew* (Macmillan) is one of Mrs. Molesworth's excellent stories for young girls. The name of Mrs. Molesworth is one to conjure with in nursery and schoolroom, and any work of hers is sure of a warm welcome. There will be no disappointment in this latest of her many charming, fresh, and fanciful tales, for her pen has lost none of its magic. The story, put into the mouth of one of its little heroines, is simply, yet prettily, told. Morals which are indirectly pointed will raise no alarm. What the house was, and how it grew, and the life led by its band of bright inhabitants, we will leave young readers to discover for themselves. The book is daintily got up, with illustrations by Alice Woodward.

*Miss Nonentity*, by L. T. Meade (Chambers), is a capital story for young girls—every chapter full of life and interest. The humour and the pathos are both of a nature that can be easily understood; while the moral tone is wholesome in the main. The tale turns on the eagerness of a high-school girl to save her father's life by getting a specialist to attend him in his illness. For this purpose she hopes to be able to spend her hard-earned scholarship money; but, finding that this is consecrated to strictly educational ends, she is sorely puzzled to find the money to pay the doctor's fee. Fortune favours her at last in a somewhat fantastic way; but the happy style of the story well cloaks its improbabilities. The title rôle belongs to a little sister, who acts as a *deus ex machina* to set matters straight at the end. If the book were not already somewhat lengthy, we could wish to hear more of the subsidiary characters, who are more interesting than the chief ones. The illustrations by W. Rainey deserve special commendation.

*School Days and Holidays*. By Adelaide M. Cameron. (Oliphant, Anderson, & Ferrier.)—All children who like to hear what their grown-up friends did when they were young will enjoy this story of five little girls, who led very ordinary, uneventful lives, but who had the usual feasts in the nursery, dramatic entertainments, struggles with the governors, and moral revivals. The story is not distinguished by anything original or exciting; but there is plenty of pleasant reading of an easy and homely kind suitable to a little girl not yet in her teens. A particularly amusing description of the making of a plum-pudding in the nursery, the boiling of it in a piece of purple cloth for an inadequate length of time, and the eating of it with dire consequences, forms one incident, and is a fair sample of the whole. The book is well got up, but the illustrations are by no means an additional attraction.

*Cynthia's Bonnet-Shop*, by Rosa Mulholland (Lady Gilbert) (Blackie & Son), is a brightly written story for girls, with numerous illustrations. It tells how a beautiful young Irish girl sets up a bonnet-shop in London, on capital advanced by an unknown friend, and is not only successful as a milliner, but so wins the esteem and admiration of one of her customers that she is invited to a ball, where she and her sister create quite a sensation. The sisters married, and were happy ever after, but their pretty heads were not turned, and they remained simple and lovable throughout.

*Jonathan Toms*, by A. V. Dulton (National Society), is an unaffected, well written story. It has just the faintest suggestion of a "Beauty and the Beast" plot, interspersed with graphic descriptions of Continental travel, which will certainly inspire all girl readers with a desire to take a similar tour.

*In Bab's Baby and Other Stories*, by Katherine E. Vernham (same publishers), we have ten short stories of varied interest—some pathetic, others cheerful—dealing largely with humble life, and well suited to be a gift-book for children who are not above taking a moral lesson in the guise of a simple story.

*Rhoda: a Tale for Girls*, by E. L. Haverfield (Nelson & Sons), narrates the experiences of a family of five girls who become orphans, and are cast down from affluence with £8,000 a year to what seems, even to the author, the terrible poverty of £350, in a tiny house in a London suburb. It cannot be said that the Vinning family, with the exception of the unselfish Rhoda, come out well under the ordeal; but the story

is bright and amusing. The author has possibly held up "the faults of others" in order that her readers may "learn to shun" them.

*The Fortunes of Peggy Treherne*, by Annette Lyster (National Society), also deals with a reverse of fortune. But this time we have to do with a child of humble parentage, who spends a couple of years in a workhouse, and becomes a maid-of-all-work in her eleventh year. She is then lifted, by a turn of Fortune's wheel, to comfort and affluence, and is not spoiled by it.

*A Little Ray of Sunshine*. By Jennie Chappell. (Nelson & Sons.)—The child who figures in this little tale is a nice and unselfish one, and her good deeds meet with the reward they merit. The deeds, it is true, are not great, but the motives prompting her actions are excellent. There is a more strongly religious tone about this book than in some others we have mentioned—or, perhaps one should say, religion is a little more in evidence in the conversation of the characters.

#### FOR THE CHILDREN.

A very funny picture-book for the children, on an ample scale, happily designed and cheerfully coloured, is *Drill Doings*, illustrated by Harry B. Neilson, with verses by The Cockiolly Bird (Blackie & Son). It is very humorous in conception and execution, and is sure to please its little patrons.

From Messrs. Nelson & Sons we have a batch of brightly coloured picture-books, at the uniform price of 1s. *The Baby's Picture Book* and *The Baby's Picture Gallery* are both very good for the very little ones. *The Farmer's Friend* and *The Iron Horse* would be more suitable for young boys. They are all "designed and printed in Great Britain," and for those who desire to help home industries this will, no doubt, be greatly in their favour.

*The Tale of the Little Twin Dragons*, by S. Rosamond Praeger (Macmillan), is a picture-book of another kind, and by those who like the grotesque and comic a fund of amusement will be found in these clever and original drawings. The colour-printing is very good.

*Ships and Havens*. By Henry Van Dyke. (Nelson & Sons.)—A little book of quite a different kind from any in our present list. It is rather in the nature of a moral essay or sermon, and is written simply and with good taste. Judging from the evident preference given to American writers in the numerous quotations, Mr. Van Dyke is an American.

*The Three Witches*. By Mrs. Molesworth. (Chambers.)—The capacity children seem to possess for finding out all about their neighbours' business provides the groundwork for this pleasant little tale. The three witches are merely three people in the street about whom a little boy and girl weave their fancies. It is a little thin and spun out, but Mrs. Molesworth is an adept in the art of heaping up mystery for the closing chapters to clear up, and we expect many a young reader will enjoy unravelling the somewhat complicated relation of these "witches." The illustrations by Lewis Baumer are light and pretty, but somewhat lacking in point and variety.

*Brownie*. By Amy le Feuvre. (Hodder & Stoughton.)—A short and simple sketch, full of religious feeling, of two little children living in the country with a widowed mother, who supports them by her pen. There is a beautiful description of the effect of the Gospel story on their neighbour, a little boy who had never heard it before, his acquisition of a Bible forming one of the chief incidents of the book. In spite of a slight tendency to morbidness, we can heartily recommend it for Sunday afternoon reading, and would call special attention to the pretty parable of the "Little Stupid Servant" at the close.

*Our Darling's First Book*. (Blackie.)—In spite of all that can be, and is, said for phonetics and analytical methods of learning to read, it is pleasant to come across a really old-fashioned A B C book, in which A is not ashamed to stand for Archer. This one, founded on Miss Jennett Humphrey's "Laugh and Learn," will prove a fund of joy to little ones struggling with their letters and their first attempts at reading and writing. It is profusely illustrated, with great variety; none of the drawings are poor, and many of them are exceedingly clever, while all appeal to children by being simple and direct; the "Apple-pie A B C" and the illustrations to "The Three Bears" being specially commendable. Several alphabets and spelling exercises are included, as well as some good old nursery rhymes and two tales.

*The Child's Picture Grammar*. By Rosamund Praeger. (George Allen.)—This is one of those delicious bits of nonsense and excellent fooling which appeal so much more to grown-up people than to children. Those of us who have been through the terrors of old-fashioned grammar lessons must bear in mind that our present rising generation will not understand why Bobby stamped upon his grammar-book and wept over it so bitterly. It must be borne in mind, too, that the book is a bit of pure fun, not intended to convey serious instruction, as the title might suggest; for instance, that delightful sheet-anchor of our youth is given: "When a word seems to be no part of speech that you ever heard of, you may safely set it down as an adverb." We can hardly speak too highly of the pictures; somewhat in the style of Caldecott, they have a character of their own, and display unusual

humour of conception and power of line. It is a book that many a parent will buy for his child and keep for himself.

#### FAIRY TALES.

*The Grey Fairy Book*, edited by Andrew Lang (Longmans), is in no way inferior to its predecessors—"The Blue," "The Red," and "The Green Fairy Books"—which have long been deservedly popular with young and old. The illustrations in "The Grey Fairy Book" are delightful; and the stories themselves, translated or adapted by skilled hands, are wonderfully fresh and varied. The writers have put under contribution the fairy stories of many lands, and the result cannot be better described than in the words of the preface: "A certain number of incidents are shaken into many varying combinations, like the fragments of coloured glass in the kaleidoscope." Into this kaleidoscope we can safely predict that a large number of interested eyes will look, and find fascination.

#### ANNUAL VOLUMES.

Probably no gift-book is more welcome to a boy or girl at the end of a year than a handsomely bound volume of a well written and illustrated magazine. Certainly we cannot imagine a more comprehensive, diverting, and richly stored book of this kind than either the *Boy's Own Annual* or the companion *Girl's Own Annual*. The former, which is the twenty-second annual volume of *The Boy's Own Paper*, contains 840 pages of good adventure and other stories, with many illustrated articles on sports and pastimes, and pictures of those who have distinguished themselves in the year's play, fine coloured plates, papers on scientific experiments and natural history, anecdotes, jokes, chess, and the like. The *Girl's Own* is again an excellent volume—just as varied as the other, with girls' stories, pursuits, and interests in place of the masculine counterparts, with puzzles and poetry, and perhaps a trifle more of reserve and refinement in pictures and letterpress. Both volumes are very acceptable.

From the Religious Tract Society we have *Journeys to Jerusalem*: "A Sunday Afternoon Occupation for Young People, with a Key to the Journeys, and Instructions for their Right Performance," by M. and I. Moule.—All who have to do with children on Sunday know the utility of anything which combines amusement with Biblical teaching. These Journeys will be found to combine with sufficient amusement to arouse and keep the children's interest a good deal of useful Biblical knowledge.

### MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held on October 13. Present: Dr. Wormell, Vice-President, in the Chair; Mr. Barlet, Rev. J. O. Bevan, Mr. Butler, Mr. Charles, Mr. Chettle, Miss Crookshank, Miss Dawes, Mr. Eve, Mr. Harris, Miss Jebb, Mr. Ladell, Mr. Millar Inglis, Mr. Pinches, Mr. Sergeant, and Rev. T. W. Sharpe.

The minutes of the last meeting were read and confirmed.

It was resolved that the simplifications in French syntax and spelling scheduled in the recent decree of the French Minister of Public Instruction should be tolerated in the College examinations in that subject, except with regard to the ordinary concords of the past participles of transitive and reflexive verbs, pending the approval or otherwise by the French Academy of the alternatives allowed by the decree.

The Report of the Finance Committee was adopted.

The Report of the Examination Committee was adopted.

Mr. G. Bowker, Waiorāgomai, Featherston, New Zealand, was elected a member of the College.

The following books had been presented to the Library since the last meeting of the Council:—

By the AUTHOR.—Bevan's Religious Teaching in Secondary Schools.

By the AGENT-GENERAL FOR NEW SOUTH WALES.—Coghlan's *Wealth and Progress of New South Wales*, 1898-9.

By E. ARNOLD.—Arnold's King Alfred Readers, Introductory Book; Arnold's Language Lessons, Books I., II., and III.; Bell's German without Tears, Book II.; Kaiser's Exercises in German Composition; Shenstone's Inorganic Chemistry.

By G. BELL & SONS.—Benson's Preparatory English Grammar.

By A. & C. BLACK.—Laudate: a Hymn and Tune-Book for Schools; Lyde's Geography of Asia; Varley's Progressive Chemistry.

By BLACKIE & SON.—Brockhurst's "Key-Word" Tests in Composition and Dictation; Laming's *Livy*, Book VI.; Michell's *Mérimée's Le Coup de Pistolet*; Scott's *Marmion*, Cantos IV. and V.; Smith's Brief Introduction to Commercial Geography; Winbolt's *Virgil's Georgics*, Book I.

By HACHETTE & CO.—Berthon's *Erickmann-Chatrion's Histoire d'un Conserit de 1813*, and Vocabulary to the same; Huguenet's *Decision of the Minister of Public Instruction and Fine Arts, simplifying the Teaching of French Syntax*; Lazare's *Unseen Passages from Modern French Authors*; Lazare and Marshall's *Vade-Mecum of French Composition*; Peschier's *Causeries Parisiennes*; Sundar's *Illustrated German Primer*; Weiss's *Selections in Prose and Verse from German Authors of the Day*, Parts I. and II.

By MACMILLAN & CO.—Emsage's *Elementary Mechanics of Solids*; Hallward and Hill's *Lamb's Essays of Elia* (Second Series); Nall's *Sallust's Catiline*; Rowe and Webb's *Tennyson's Lotus-Eaters*, &c.

Calendars of Royal Holloway College, King's College, London, and Queen's College, Cork.

**MATHEMATICS.**

Further Note on Quests. 14620 and 14670 (triangle isosceles if bisectors of base angles equal).

Dr. J. S. MACKAY observes: "A direct proof of this Question, by F. G. HESSE, will be found in the *London, Edinburgh, and Dublin Philosophical Magazine* (Fourth Series), Vol. XLVII., pp. 354-7 (1874), and another by MOSSBRUGGER in GRUNERT'S *Archiv*, Vol. IV., pp. 330-1, 1844. "The Question seems to have been proposed for the first time by Prof. LEHMUS, of Berlin, to JACOB STEINER in the year 1840. A proof, with extensions of the Question, was given by STEINER in CRELLE'S *Journal*, Vol. XXVIII., p. 375-379, and many other proofs will be found scattered through the volumes of GRUNERT'S *Archiv*. See, for example, Vols. XI., XIII., XV., XVI., XVIII., XX., XXI., XLII., &c. The proof given in TODHUNTER'S *Euclid* is STEINER'S."

Mr. R. CHANTRES sends the following further direct proof, which seems quite satisfactory:—Place the triangle AEC in the position A<sub>1</sub>BD; then a circle will circumscribe BDAA<sub>1</sub>, and the bisectors of BAD, BA<sub>1</sub>D will

meet at G, the middle of the arc BGD, by a well known rider. Since  $x \equiv y = \frac{1}{2}A + \phi$ , and therefore  $\angle GAA_1$ , therefore a circle circumscribes F'FAA<sub>1</sub>; and, since the chords of it FA, F'A<sub>1</sub> are identical, therefore (Eucl. III. 14)  $\angle GA = \angle GA_1$ , or  $\phi + \frac{1}{2}A = \theta + \frac{1}{2}A$ ; therefore  $\theta = \phi$ , or ABC is isosceles.

COR. I.—If the external bisectors be equal, the triangle will be isosceles, *pace* Mr. GREENSTREET (see p. 422 in *Ed. Times*).

COR. II.—If the base angles be divided in a given ratio, then, if the dividing lines terminated by the opposite sides be equal and intersect on the bisector of the vertical angle, the triangle will be isosceles.

Mr. TUCKER sends the following:—The above Question reduces to this: Construct a triangle on a given base, with a given vertical angle and given bisector of that angle. Let BC be the base; on it describe a segment containing the given angle, and let P be the mid-point of the arc remote from A. PKA is drawn so that AK = given bisector of angle. Now, by Euclid III., from P there can be drawn only one other line = PLA' (= PKA); hence there can be only two congruent triangles, fulfilling the data of the problem; hence, &c.

14541. (JOHN C. MALET, F.R.S.)—If the roots  $x_1, x_2, x_3, x_4, x_5, x_6, x_7, x_8$  of the equation  $x^8 - p_1x^7 + p_2x^6 - p_3x^5 + p_4x^4 - p_5x^3 + p_6x^2 - p_7x + p_8 = 0$  are connected by the relations

$x_1 + x_2 + x_3 + x_4 = x_5 + x_6 + x_7 + x_8$  and  $x_1x_2x_3x_4 = x_5x_6x_7x_8$ ,  
 (a) prove  $p_7 = \sqrt{p_8} (p_3 - \frac{1}{2}p_1p_2 + \frac{1}{4}p_1^2)$ ,  
 $(Q_2p_7 - 2p_5\sqrt{p_8} + 2p_1p_8)^2 = (Q_2^2 - 4Q_4)(p_7^2 - 4p_8Q_6)$ ,  
 where  $Q_2 \equiv p_3 - \frac{1}{2}p_1^2$ ,  $Q_4 \equiv p_4 - p_1p_7/(2\sqrt{p_8}) - 2\sqrt{p_8}$ ,  $Q_6 \equiv p_6 - Q_2\sqrt{p_8}$ ;  
 (b) solve the equation.

Solution by the PROPOSER and H. W. CURJEL, M.A.

We have  $\Sigma x_1 = \Sigma x_5 = \frac{1}{2}p_1$ ;  $x_1x_2x_3x_4 = x_5x_6x_7x_8 = \sqrt{p_8}$ .  
 Let now  $\Sigma x_1x_2 = u_1$ ,  $\Sigma x_5x_6 = u_2$ ,  $\Sigma x_1x_2x_3 = v_1$ ,  $\Sigma x_5x_6x_7 = v_2$ ,  
 and we find  $u_1 + u_2 = Q_2$  ..... (1),  
 $\frac{1}{2}p_1(u_1 + u_2) + v_1 + v_2 = p_3$ ;  
 therefore  $v_1 + v_2 = p_3 - \frac{1}{2}p_1p_2 + \frac{1}{4}p_1^2$  ..... (2),  
 $u_1u_2 + \frac{1}{2}p_1(v_1 + v_2) + 2\sqrt{p_8} = p_4$ ,  $u_1v_2 + u_2v_1 = p_5 - p_1\sqrt{p_8}$  ..... (3, 4),  
 $(u_1 + u_2)\sqrt{p_8} + v_1v_2 = p_6$ ; therefore  $v_1v_2 = Q_6$  ..... (5);  
 $(v_1 + v_2)\sqrt{p_8} = p_7$  ..... (6).

From (6) and (2) we find

$p_7 = \sqrt{p_8} \{p_3 - \frac{1}{2}p_1p_2 + \frac{1}{4}p_1^2\}$ ,  
 one of the required conditions. We have from (3) and (6)  
 $u_1u_2 = Q_4$  ..... (7).

Hence, from (1) and (7),  
 $2u_1 = Q_2 + \sqrt{(Q_2^2 - 4Q_4)}$ ,  $2u_2 = Q_2 - \sqrt{(Q_2^2 - 4Q_4)}$ ;  
 and from (5) and (6)

$2v_1 = p_7/\sqrt{p_8} + \sqrt{(p_7^2/p_8 - 4Q_6)}$ ,  $2v_2 = p_7/\sqrt{p_8} - \sqrt{(p_7^2/p_8 - 4Q_6)}$ ,  
 Substituting in (4) for  $u_1, u_2, v_1, v_2$ , and rationalizing, we find the second required condition and the roots of the given equation are the roots of the quartics  
 $2x^4 - p_1x^3 + \{Q_2 \pm \sqrt{(Q_2^2 - 4Q_4)}\}x^2 - \{p_7/\sqrt{p_8} \pm \sqrt{(p_7^2/p_8 - 4Q_6)}\}x + 2\sqrt{p_8} = 0$ .

14538. (SALUTATION.)—Arrange in one plane two triangles of given dimensions in such manner that two specified vertices may coincide, and the other four be concyclic.

Solution by the PROPOSER and H. W. CURJEL, M.A., jointly.

Analysis.—Let ABC, ADE (Fig. 1) be two triangles fulfilling the conditions, A being the common vertex, and B, C, D, E being on the

Fig. 1.

Fig. 2.

circumference of a single circle, of centre O. Let BC = 2a<sub>1</sub>, DE = 2a<sub>2</sub>; FH = h<sub>1</sub>, GI = h<sub>2</sub>; HA = d<sub>1</sub>; IA = d<sub>2</sub>; OF = x<sub>1</sub>, OG = x<sub>2</sub>. Then we clearly have  
 $x_1^2 + a_1^2 = x_2^2 + a_2^2$  ..... (a),  
 and  $(x_1 - h_1)^2 + d_1^2 = (x_2 - h_2)^2 + d_2^2$  ..... (b).

[The rest in Volume.]

14543. (PROFESSOR MORLEY.)—The greatest number of regions into which n spheres can divide space is  $2n + \frac{1}{3}n(n-1)(n-2)$ .

Solution by H. W. CURJEL, M.A.

The corresponding theorem for space of m dimensions is easily proved. If in space of m dimensions we call the hypersphere of highest possible dimensions a sphere, and a space of (m-1) dimensions a plane, the theorem may be stated: The greatest number of regions into which n spheres can divide a space of m dimensions is

$\{2(n-1)(n-2) \dots (n-m)\}/m!$   
 $+ 2 [1 + (n-1) + \{(n-1)(n-2)\}/2! + \dots \text{to } m \text{ terms}] = 2v_{m,n} + u_{m,n}$

(using the notation of Quest. 13395, Vol. LXVIII., p. 39).

The greatest number of regions into which m planes can divide space of m dimensions is shown in Quest. 13395 to be  $v_{m,n} + u_{m,n}$ ; if we invert with respect to a point in none of the planes, we see that the same is true of n spheres passing through a point. But the number of regions that are made to vanish by making the n spheres pass through a point is easily seen to be  $v_{m,n}$ ; therefore the greatest number of regions

$= 2v_{m,n} + u_{m,n}$ .

If we put m = 3, we get the result stated in the Question.

14547. PROFESSOR LANGHORNE ORCHARD, M.A., B.Sc.—Show that, if n be any positive integer greater than unity,

$\frac{1^3 + 2^3 + 3^3 + \dots + n^3 - (1^5 + 2^5 + 3^5 + \dots + n^5)}{(1 + 2 + 3 + \dots + n)^2 - (1^3 + 2^3 + 3^3 + \dots + n^3)} = 4$ .

Solution by H. W. CURJEL, M.A.; Lt.-Col. ALLAN CUNNINGHAM, R.E. and many others.

If  $s_r = \sum_{n=1}^{n-1} n^r$ ,  $s_2 = s_1^2$ , and  $s_3 = \frac{1}{2}(2n^2 + 2n - 1)s_2$ ,  
 therefore  $\frac{s_3 - s_2}{s_3 - s_1^2} = \frac{\frac{1}{2}(2n^2 + 2n - 1)s_2 - s_2}{\frac{1}{2}(2n^2 + 2n - 1)s_2 - \frac{1}{2}n(n+1)s_2} = 4$ .

**14546.** (PROFESSOR NEUBERG.)—Si les angles des triangles ABC, A'B'C' vérifient les égalités  $A + A' = \pi$ ,  $B = B'$ , les côtés sont liés par la relation  $aa' = bb' + cc'$ .

*Solution by R. P. PARANJPEE, B.A.; Professor IGNACIO BRYENS, Lt.-Col. du Génie à Cadix; and many others.*

With centre C describe a circle, radius CA, cutting AB in D.

Then, obviously, DBC is similar to the triangle A'B'C' of the enunciation.

Since the relation to be proved is homogeneous in  $a, b, c$  as well as  $a', b', c'$ , we may prove

$$BC^2 = AC^2 + BA \cdot BD,$$

which is a well-known proposition (see CASEY'S *Sequel*).

Hence the required relation.

**14536.** (I. ARNOLD.)—In any triangle the radius of the circumscribed circle is to the radius of the circle which is the locus of the vertex, when the base and the ratio of the sides are given, as the difference of the squares of those sides is to four times the area.

*Solution by F. H. PEACHELL, B.A.; RAGUNATH RAU, B.A.; and W. J. GREENSTREET, M.A.*

The locus of vertex, when the ratio of the sides is given, is the semicircle on DF, where D, F divide AC internally and externally in ratio of the sides. Therefore

$$CD : DA = a : c,$$

or  $CD : AC = a : c + a$ ;

therefore  $CD = ab/(c + a)$ , and similarly  $CF = ab/(c - a)$ ; therefore radius of locus =  $abc/(c^2 - a^2)$ .

$$\text{Radius of locus : circum-radius} = abc/(c^2 - a^2) : abc/4\Delta = 4\Delta : c^2 - a^2.$$

**14467.** (G. H. HARDY, B.A.)—Prove that

$$\int_{-\infty}^{\infty} \{ \phi(x-a) - \phi(x-b) \} dx = (b-a) \{ \phi(\infty) - \phi(-\infty) \},$$

provided each side of the equation represents a determinate quantity. Deduce the values of

$$\int_{-\infty}^{\infty} \frac{dx}{\cosh(x-a) \cosh(x-b)}, \quad P \int_{-\infty}^{\infty} \frac{dx}{\sinh(x-a) \sinh(x-b)}.$$

*Solution by the PROPOSER.*

$$\begin{aligned} \int_{-\infty}^{\infty} \{ \phi(x-a) - \phi(x-b) \} dx &= \lim_{H \rightarrow \infty} \int_{-H}^H \{ \phi(x-a) - \phi(x-b) \} dx \\ &= \lim_{H \rightarrow \infty} \left[ \int_{-H-a}^{-H-a} \phi(u) du - \int_{-H-b}^{-H-b} \phi(u) du \right] \\ &= \lim_{H \rightarrow \infty} \left[ \int_{H-a}^{H-a} \phi(u) du - \int_{H-b}^{H-b} \phi(u) du \right] \\ &= (b-a) \{ \phi(\infty) - \phi(-\infty) \}, \end{aligned}$$

if both sides of the equation be determinate.

If  $\phi(u) = \tanh u$ ,

$$\phi(x-a) - \phi(x-b) = \frac{\sinh(b-a)}{\cosh(x-a) \cosh(x-b)},$$

and  $\int_{-\infty}^{\infty} \frac{dx}{\cosh(x-a) \cosh(x-b)} = \frac{b-a}{\sinh(b-a)}$ .

If  $\phi(u) = \coth u$ , we find

$$P \int_{-\infty}^{\infty} \frac{dx}{\sinh(x-a) \sinh(x-b)} = -\frac{b-a}{\sinh(b-a)}.$$

It is easy to see that the proof remains valid, although in the latter case only the principal value of the integral is determinate.

*Note on Quest. 6144 (Reprint, Vol. LXXIII., p. 113). By Rev. CHARLES TAYLOR, D.D., Master of St. John's College, Cambridge.*

For "circumscribed" read "circum-inscribed." This term is used in the *Ancient and Modern Geometry of Conics* (pp. 139, 140) in the sense circumscribed to one curve and inscribed to another.

**14312.** (PROFESSOR N. L. BHATTACHARYYA.)—A parabola slides between the two foci of an ellipse, such that the focus of the parabola always lies on the ellipse. Find the envelope of (1) the directrix, (2) the axis, of the parabola.

*Solution by A. F. VAN DER HUYDEN, B.A.; H. W. CURJEL, M.A.; and Rev. J. CULLEN.*

Let SL, S'L', CH' be perpendiculars to the directrix of the parabola, in any position, from the foci and centre of the ellipse. Then  $SL + S'L' = 2CH'$ .

But  $SL + S'L' = SH + S'H$  [if H is the focus of the parabola] =  $2CA$ ; therefore  $CH' = CA$ ;

therefore the envelope of the directrix is the auxiliary circle of the ellipse .....(1).

Let H, H' be corresponding points; HT, H'T tangents. Then  $SH : S'H = ST : S'T = SL : S'L'$ .

[The rest in Vol.]

*Euclidean Proof of PASCAL'S Theorem. By R. F. DAVIS, M.A.*

Let ABCDEF be a cyclic hexagon. Produce AB, DE to meet in G, and AF, CD in K. Let BC and the circumcircle of DFK intersect GK in H, P respectively.

Then (1) P, D, B, G are concyclic, for  
 $180^\circ - DPG$   
 $= DPK = DFK$   
 $= 180^\circ - DFA$   
 $= DBG$ .

Also (2) P, F, B, H are concyclic, for  
 $FPH = 180^\circ - FPK$   
 $= FDK = FBC$   
 $= 180^\circ - FBH$ .

From (2)  
 $BFH = BPH$   
 $= BPG$   
 $= BDE$

from (1) =  $180^\circ - BFE$ ;  
 therefore EF passes through H.

[In most geometrical conics PASCAL'S theorem for the conic is derived from the theorem for the circle by conical projection. The above proof is strictly Euclidean: it neither involves anharmonic ratios (CASEY'S *Sequel*, NIXON'S *Geometry Revised*, &c.) nor MENELAUS' *Transversal Theorem*, which is employed by CATALAN.]

**QUESTIONS FOR SOLUTION.**

**14704.** (PROFESSOR G. B. MATHEWS, F.R.S.)—If  $x, y$  independently assume the values  $0, \pm 1, \pm 2, \pm 3, \dots$ , prove that 
$$x e^{-x(x^2+y^2)} = \frac{\sqrt{4+2\sqrt{2}}}{\pi} \int_0^1 \frac{dx}{\sqrt{1-x^4}}$$

**14705.** (PROFESSOR NEUBERG.)—Etant donné un triangle ABC, appelons  $a', b', c'$  les distances B'C', C'A', A'B' des projections A', B', C' d'un point M sur les côtés BC, CA, AB. Trouver le lieu des points M lorsque  $a', b', c'$  vérifient la relation donnée  $ka'^2 + lb'^2 + nc'^2 = p$ . Trouver également le lieu décrit par le centre de gravité du triangle A'B'C'.

**14706.** (PROFESSOR E. J. NANSON.)—The sides of two triangles touch the parabola  $l/r = 1 + \cos \theta$  at the points whose vectorial angles are  $2\alpha, 2\beta, 2\gamma; 2\alpha', 2\beta', 2\gamma'$ . Show that their vertices lie on the conic 
$$\sin(\alpha' + \beta' + \gamma' - \alpha - \beta - \gamma) \{l/r - \cos \theta\}^2 - \{ \sin(\beta' + \gamma' - \beta - \gamma) \cos(\theta - \alpha - \alpha') + \dots \} \{l/r - \cos \theta\} + \sin(\alpha' - \alpha) \cos(\theta - \beta - \beta') \cos(\theta - \gamma - \gamma') + \dots + \sin(\alpha' - \alpha) \sin(\beta' - \beta) \sin(\gamma' - \gamma) = 0.$$

**14707.** (PROFESSOR JAN DE VRIES.)—Solve the equation 
$$x(\partial^2 z / \partial x^2) - x(\partial^2 z / \partial y^2) = 2(\partial z / \partial x).$$

**14708.** (J. A. THIRD, M.A., D.Sc.)—P is any point on the circum-circle of a triangle ABC, of which H is the orthocentre. Q is the image of P with respect to BC. The perpendicular to QH at Q meets BC in X, and the perpendicular to QH from A meets BC in Y. Show that BX = CY.

**14709.** (Professor COCHEZ.)—Construire un triangle, connaissant l'angle A, le rayon r du cercle inscrit et le produit AB.AC = K<sup>2</sup>.

**14710.** (Professor N. BHATTACHARYA.)—From the centre of curvature at any point on the ellipse (x<sup>2</sup>/a<sup>2</sup>) + (y<sup>2</sup>/b<sup>2</sup>) = 1 two other normals are drawn. Show that the envelope of the line joining their feet is the curve (x/a)<sup>2</sup> + (y/b)<sup>2</sup> = 1.

**14711.** (Professor UMES CHANDRA GHOSH.)—Show that in areal coordinates

$$\alpha \cos A \sin(B-C) + \beta \cos B \sin(C-A) + \gamma \cos C \sin(A-B) = 0$$

is the equation of the line passing through the centres of the polar circle, nine-point circle, and circumcircle of a triangle ABC and its centroid.

**14712.** (Professor K. J. SANJANA, M.A.)—If the centre of a conic circumscribed to the triangle of reference be at the point (fgh), prove that its equation is  $\Sigma f(bg+ch-af) + a = 0$ . Hence or otherwise show that one point of intersection of the conics  $\beta\gamma/a + \gamma\alpha/b + \alpha\beta/c = \Delta^2/abc$  and  $a^2x^2 + b^2y^2 + c^2z^2 = 2\Delta^2$  lies on the line

$$\alpha\{\sin(B-C)\} + \beta\{\sin(C-A)\} + \gamma\{\sin(A-B)\} = 0.$$

**14713.** (Prince C. DE POLIGNAC.)—If t<sub>1</sub>, u<sub>1</sub> are the smallest integer solutions of the PELLIAN equation t<sup>2</sup> - Du<sup>2</sup> = 1 (D a positive integer, not a square), t<sub>n</sub>, u<sub>n</sub> any other two solutions, show that there exists a linear substitution x<sub>1</sub> = (Q<sub>1</sub>x + S<sub>1</sub>)/(P<sub>1</sub>x + R<sub>1</sub>) such that, if we write its nth power as x<sub>n</sub> = (Q<sub>n</sub>x + S<sub>n</sub>)/(P<sub>n</sub>x + R<sub>n</sub>), Q<sub>n</sub> and P<sub>n</sub>/u<sub>1</sub> will give the solutions t<sub>n</sub>, u<sub>n</sub> of the above equation.

**14714.** (D. BIDDLE.)—S is the sum of 2n+1 consecutive integers, the first of which is a. Prove that S-a and 2(S+n)+1 have a factor in common, and give its value.

**14715.** (R. TUCKER, M.A.)—The sides of a triangle are produced to A', B', C' respectively, so that CA' = n.BC, AB' = n.CA, BC' = n.AB. Prove that ABC, A'B'C' have the same BROCARD angle and are concentric.

**14716.** (W. H. BLYTHE, M.A.)—Let a parabola be described with focus S and directrix XX', and let a point Y be taken on the tangent at the vertex A. Take also a fixed point C on the axis of the parabola. Describe a circle with centre Y and distance YC to cut the focal chord YS, produced both ways, in P and P'. Let the second tangent from Y to the parabola meet it in Q.

Considering Y as a variable point, it will be found that P and P' trace out a circular cubic curve. The curve consists of two parts—an oval passing through S, and an infinite branch to which the directrix is an asymptote. The normals at P and P' intersect at Q, and SP.SP' is constant; so that the oval and infinite branch reciprocate one into the other.

Prove, geometrically, (1) that the fourth proportional to SQ, SP, SP' is also the harmonic mean between the subtangents of the cubic at the points P and P'

(2) SN.SN' : SP.SP' = SA : SQ where PN, P'N' are perpendiculars to the axis.

(3) If the normal at P cuts the axis in G, then

$$SG : SA = SP.SP' : SN^2.$$

(4) Can any simple relations be found between SP, SP' and the focal chord of the circle of curvature at P?

(5) Is there any simple method of finding the points of inflexion?

(6) If P, P' be the extremities of the focal chord PSP' and PN, P'N' be perpendicular to the axis, and the normal at P meet the axis in G, then, if PG<sup>2</sup> : PN<sup>2</sup> = 2SG : SN', P is a point of inflexion.

(7) If SN' = SQ, the tangent at P is parallel to the axis.

(8) Let the tangent at P meet the curve again in T and the asymptote in E, and let SD be perpendicular to PT. Let the normal at P meet the axis in G, and let PT meet the parallel to the asymptote through S in Z. Let TQ, perpendicular to the axis, meet the curve again in Q, and let QP meet the curve again in R. Prove that 2DP = TE; that the circle of curvature at P passes through R; and that a parallel to TG through Z meets PG in the centre of the circle of curvature at P.

[NOTE.—The third problem may be stated thus:—SG varies inversely as the square on SN'.]

**14717.** (R. F. DAVIS, M.A.)—If the numbers of the form 7m, 7m+1, ..., 7m+6 denote Sunday, Monday, ..., Saturday respectively, prove that January 1st in the year 1801+x falls upon the {x+4+[x/4]-[x/100]}th day of the week, where [x/4] is the integral part of x/4.

**14718.** (Rev. Prebendary WHITWORTH, M.A.)—A. has £m and B. has £n. They play for pound points until one of them has lost all his money. If a and β be the respective chances that A. and B. win any point, the expectation of the number of points played will be

$$\{na^n(a^m - \beta^m) - m\beta^n(a^n - \beta^n)\} / \{(a - \beta)(a^{m+n} - \beta^{m+n})\}.$$

**14719.** (G. H. HARDY, B.A.)—Prove that

$$\int_0^\infty \frac{x^\mu dx}{1+x^\nu(\sin x)^\nu} \quad (\mu > -1)$$

is convergent if  $\nu > (p+1)(\mu+1)$ ; and obtain precise criteria for convergence or divergence in the cases  $p = 0, 1, 2$ .

**14720.** (R. P. PARANJPE, B.A.)—Without using any properties of projection, anharmonic ratios, poles and polars, &c., prove the fundamental property of the FÉREGUE-point: Chords of a conic subtending a right angle at a fixed point P on it pass through a definite point on the normal at P.

**14721.** (H. MACCOLL, B.A.)—Two equal intersecting circles X and Y touch a given circle A internally so that the area common to X and Y is always equal to the area (in A) excluded from X and Y. Construct the circle which is the locus of the centres of X and Y.

**14722.** (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Solve in integers in a general manner, with numerical examples—

$$\frac{N_1 \cdot N_2 \cdot N_3 \dots N_{2r+1}}{N_1 \cdot N_2 \cdot N_4 \dots N_{2r}} = \frac{N_n}{N_0},$$

where  $N_r = x_r^4 + 4y_r^4$ .

**14723.** (Rev. J. CULLEN.)—If the triangles homothetic with the DEF triangles of a TUCKER-circle T<sub>μ</sub> (Ω and Ω' being the homothetic centres) have a common B.-circle, show that (1) this circle cuts the B.-circle of ABC at an angle θ and passes through Ω and Ω'; (2) points in the homothetic triangles corresponding to a point P on the B.-circle of ABC are the intersections of PΩ and PΩ' with the common B.-circle; (3) if the homothetic triangles of T<sub>μ</sub> have a common T<sub>μ</sub>-circle (μ being the modulus of similarity with reference to DEF), then for the same value of μ the triangles of T<sub>μ</sub> have a common T<sub>μ</sub>-circle.

**14724.** (R. F. MUIRHEAD.)—Through a given point E draw a line QEP meeting AB produced in Q and BC produced in P so that BQ = CP, A, B, C being given points.

**14725.** (ROBERT W. D. CHRISTIE.)—Prove the following theorems on circulators. P = any prime having an even period; H<sub>1</sub> = the number formed by the figures of the first half; H<sub>2</sub> = the number formed by the figures of the second half. Then

$$P-1 = (H_2+1)/(H_1+1), \quad H_2(P-1) = (P-2)10^{1/2}P + H_1 \quad (1, 2)$$

$$(H_2+1)/(H_1+1) = (10^{1/2}P - H_1)/(10^{1/2}P - H_2), \quad 10^{1/2}P - H_1 = 0 \text{ mod } P \quad (3, 4)$$

$$H_1 + H_2 + 2 = 0 \text{ mod } P = 10^{1/2}P + 1, \quad (H_1 + H_2 + 2)/(H_2 - H_1) = p/(p-2) \quad (5, 6)$$

$$P(H_1+1) = 10^{1/2}P + 1 \dots\dots\dots (7)$$

and various others by combination.

Example of (1)— P = 7,  $\frac{1}{2} = 142857$ ;

therefore 7-1 = (857+1)/(142+1) = 6.

**14726.** (R. CHARTRES.)—If the perimeter of a variable triangle ABC be constant, find the mean value of the maximum value of the minimum  $\Sigma(FA)$ , F being FERMAT'S point.

**14727.** (H. A. WEBB.)—If a cubic surface and a quadric surface intersect in three conics, the three straight lines in which the planes of the conics cut the cubic again lie in a plane. In general, if a surface of the nth degree intersect a surface of the pth degree (n > p) in n plane curves of the pth degree, the n plane curves of the (n-p)th degree in which the planes cut the given surface of the nth degree again lie on a surface of the (n-p)th degree.

**14728.** (R. KNOWLES.)—PC is the chord of curvature at the point P of a rectangular hyperbola; O is the mid-point of PC; the diameter of the hyperbola through O meets the circle on PC as diameter in T, T'; tangents to the circle at TT' meet the hyperbola in XX', YY' respectively; M, M' are their mid-points. Prove that (1) TP, T'P and OM, OM' are parallel to the asymptotes; (2) the poles of XX', YY' with respect to the hyperbola are on the diameter of the hyperbola through P.

**14729.** (V. DANIEL.)—If the focus of the parabola y<sup>2</sup> = 4ax is the symmedian point of the triangle formed by a pair of tangents and their chord of contact, show that the locus of the pole of the chord is the parabola y<sup>2</sup> + 2a(x+3a) = 0; the locus of the centre of gravity of the triangle is y<sup>2</sup> - 2a(x-a) = 0; and the envelope of the chord is y<sup>2</sup> + 8a(x-3a) = 0.

**14730.** (Professor FRANZ ROGEL.)—Prove that

$$(a) \binom{6n+3}{6} B_3 - \binom{6n+3}{12} B_6 + \binom{6n+3}{18} B_9 - \dots + (-1)^{n+1} \binom{6n+3}{6n} B_{3n} = 2n;$$

$$(b) \binom{6n+5}{2} B_1 - \binom{6n+5}{8} B_4 + \binom{6n+5}{14} B_7 - \dots + (-1)^n \binom{6n+5}{6n+2} B_{3n+1} = 2n + \frac{1}{2};$$

$$(c) \binom{6n+1}{4} B_2 - \binom{6n+1}{10} B_5 + \binom{6n+1}{16} B_8 - \dots + (-1)^n \binom{6n+1}{6n-2} B_{2n-1} = n + \frac{1}{2};$$

n integer, B<sub>1</sub>, B<sub>2</sub>, B<sub>3</sub>, ... Bernoullian numbers.

**6721.** (J. YOUNG, B.A.)—Through a point in the base of a triangle produced, draw a straight line cutting the sides so that the rectangle contained by the segment of one side towards the base and the segment of the other towards the vertex of the triangle shall be a maximum.

**6723.** (C. LEUDESORF, M.A.)—A pair of tangents to a given conic form an harmonic pencil with two straight lines whose directions are given and which include a right angle. Show that the locus of the point of intersection of the tangents is a rectangular hyperbola, except in the case where the given conic is a parabola, when the locus is a straight line.

**6724.** (E. B. ELLIOTT, M.A.)—If  $a_1, a_2, \dots, a_{2r}$  be the  $2r$  imaginary  $(2r+1)$ th root of unity, and if

$$c_n = \frac{a_1^{n+2r-1}}{(a_1-a_2)(a_1-a_3)\dots(a_1-a_{2r})} + \frac{a_2^{n+2r-1}}{(a_2-a_1)(a_2-a_3)\dots(a_2-a_{2r})} + \dots$$

prove that  $c_n = 2 \{c_0 c_{2n} - c_1 c_{2n-1} + c_2 c_{2n-2} - \dots + (-1)^n c_n^2\}$ ,  $n$  being any positive integer.

**6726.** (J. HAMMOND, M.A.)—If

$$S = \Gamma(r+1) + \frac{\Gamma(r+2)}{2!} + \frac{\Gamma(r+3)}{2!3!} + \frac{\Gamma(r+4)}{3!4!} + \dots \text{ to } \infty,$$

prove that  $S = \frac{\Gamma(r) \sin r\pi}{\pi} \int_0^1 \left(\frac{x}{1-x}\right)^r dx$ .

**6727.** (W. H. BLYTHE, B.A.)—If a conic with centre O be self-conjugate to the triangle ABC, and if OA', OB', OC' be perpendicular to the sides, then, if R = radius of circle circumscribing ABC,  $\Delta$  = area of ABC,  $\Delta'$  of A'B'C', prove that  $4R^2/\Delta = r^2/\Delta'$ .

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to D. BIDDLE, Esq., Charlton Lodge, Kingston-on-Thames.

THE LONDON MATHEMATICAL SOCIETY.

The Annual General Meeting of the Society will be held in its rooms at 22 Albemarle Street, on the evening of Thursday, November 8, at 5.30 o'clock.

The following is the list of members who have been recommended by the present Council for election as the Council and officers for the ensuing session:—*President*, Dr. Hobson, F.R.S.; *Vice-Presidents*, Lord Kelvin, G.C.V.O., Prof. W. Burnside, F.R.S., and Major MacMahon, R.A., F.R.S.; *Treasurer*, Dr. J. Larmor, F.R.S.; *Hon. Secs.*, R. Tucker, M.A., and Prof. A. E. H. Love, F.R.S.; *other members*, J. E. Campbell, M.A., Lieut.-Col. Cunningham, R.E., Prof. Elliott, F.R.S., Dr. Glaisher, F.R.S., Prof. M. J. M. Hill, F.R.S., A. B. Kempe, F.R.S., H. M. Macdonald, M.A., A. E. Western, M.A., and E. T. Whittaker, M.A.

Lord Kelvin will make a short valedictory communication, the title of which is, "On the Transmission of Force through a Solid."

In addition to the papers announced in last month's issue, a further paper by Dr. Glaisher is promised, with the title, "On the Residues of Bernoullian Functions for a Prime Modulus, including as special cases the Residues of the Eulerian Numbers and the I-numbers."

## WINTER MEETING FOR TEACHERS (JANUARY, 1901).

Conducted by the

### COLLEGE OF PRECEPTORS. (Bloomsbury Square, London, W.C.)

The Third Winter Meeting for Teachers will take place at the College of Preceptors in the first fortnight in January, 1901.

The Meeting will extend over two weeks, and the Programme will include Lectures on general principles of education and on methods of teaching various school subjects, with exhibits of apparatus, and visits to educational institutions in London.

The Fee for the whole Meeting is 15s. Tickets may be obtained from the Secretary of the College of Preceptors, and should be applied for on or before December 22.

Tickets (not transferable) will also be issued at HALF FEES (i.e., 7s. 6d. for the whole Meeting) to members of the following Teachers' Societies:—The Teachers' Guild (Central Guild and Branches), The Birmingham Teachers' Association, The Liverpool Teachers' Guild, The Training College Association, The Headmasters' Conference, The Incorporated Association of Headmasters, The Private Schools' Association, The Assistant-Masters' Association, The Association of Assistant-Mistresses, The Froebel Society, The National Union of Teachers.

Tickets at half fees will also be issued to candidates at the Diploma Examination of the College of Preceptors (January 15).

Members of the College of Preceptors will receive a ticket (not transferable) without charge, on applying for it to the Secretary of the College on or before December 20.

Tickets, price 1s., for any single Lecture may also be had at the College on the day of the Lecture, if the available seats are not already occupied.

For detailed information, see Programme enclosed with the December number of the *Educational Times*.

C. R. HODGSON, B.A., Secretary.

## COLLEGE OF PRECEPTORS. (Bloomsbury Square, W.C.)

## UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)  
Principal—H. R. BRICHEL, M.A.

The Session began October 2nd, 1900. The College Courses are arranged with reference to the degrees of the University of Wales and include most of the Subjects for the B.A. and B.Sc. degrees of the London University. Students may pursue their first year of medical study at the College. There are special departments for Agriculture and Electrical Engineering, a Day Training Department for men and women, and a Department for the Training of Teachers in Secondary Schools.

Sessional Fee for ordinary Arts student, £11. 1s.; ditto for Intermediate Science or Medical student, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. The new Hall of Residence for Women Students in Upper Bangor—fee £31. 10s. for the session—is now open.

At the Entrance Scholarship Examination (held in September), more than twenty Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition. One half the total amount offered is reserved for Welsh candidates.

For further information and copies of the Prospectus, apply to  
JOHN EDWARD LLOYD, M.A.,  
Secretary and Registrar.

## UNIVERSITY COLLEGE OF NORTH WALES.

(A Constituent College of the University of Wales.)

## WESTFIELD COLLEGE,

FINCHLEY ROAD, HAMPSTEAD, N.W.—Two

ENTRANCE SCHOLARSHIPS, of the value of from £40 to £50 a year for two years, will be offered for competition among women students at an Examination to be held on July 9 and 10. Candidates must have passed the Matriculation Examination of London University, and the successful competitors will be required to enter into residence in October next, and to read for the B.A. or B.Sc. degree of London University. Further particulars and entrance forms may be obtained from the Secretary, Miss S. M. SMEE.

## ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS IN SECONDARY SCHOOLS AND IN FAMILIES.

Principal—Miss M. R. WALKER.

This College provides a complete Course of Professional Training for Women Teachers, in preparation for the Cambridge Teachers' Certificate. The Course includes attendance at the University Lectures on Education, in addition to Lectures delivered by the College Staff, and the Students have ample opportunities of gaining experience in Class-Teaching in Schools. Five Henriot Bursaries of £30 are offered in October. Apply to the PRINCIPAL, 5 Melville Street, Edinburgh.

## JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergartens and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged. Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

## JOINT AGENCY FOR ASSISTANT-MASTERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

The Joint Agency for Assistant-Masters and Tutors is under the management of a Joint Committee composed of representatives of the following Bodies:—

Headmasters' Conference.

Incorporated Association of Headmasters.

College of Preceptors.

Teachers' Guild.

Welsh County Schools' Association.

Private Schools' Association.

Association of Headmasters of Preparatory Schools.

Association of Headmasters of Roman Catholic Schools.

Assistant-Masters' Association.

Association of Technical Institutions.

&c. &c.

As the Agency is not working with a view to profit, but to benefit Assistant-Masters, the rates of commission are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m., Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

## RELIGIOUS TEACHING IN SECONDARY SCHOOLS.

A Problem of To-day.

BY THE

Rev. J. O. BEVAN, M.A., F.S.A.,

HINTS ON FRENCH SYNTAX.

By F. STORR,

Chief Master of Modern Subjects in Merchant Taylors' School.

"The merit of the book is its simplicity and brevity, and we have no hesitation in saying that these Hints would prove a valuable supplement to any grammar that might be in use. . . Neatly printed in clear, bold type, and interleaved throughout, this book is one we can confidently recommend not only to teachers for class use, but as an invaluable aid to students preparing for the Scholarship, Certificate, and London Matriculation Examinations."—The Practical Teacher, January, 1900.

\*.\* Full Special List of Boys' Books, including Jules Verne's, post free on application.

Now ready, Crown 4to, 3s. 6d. net.

### MODEL AND BLACKBOARD DRAWING.

By F. F. LYDON.

Designed to cover the new requirements of the Board of Education in both the subjects of which it treats.

The book consists of forty-four plates, which divide themselves into three classes, dealing respectively with the geometric models proper, common objects based on them, and blackboard exercises, treated boldly, and reproduced white on black. There are fifty-two pages of descriptive letterpress, in which the usual difficulties of the student are fully dealt with.

Nearly Ready. Crown 4to, 5s.

### AMBIDEXTROUS AND FREE-ARM BLACKBOARD DRAWING AND DESIGN.

By F. F. LYDON.

*Art Master, Parmiter's School, People's Palace School of Art, and Tottenham Training College.*

This work, in addition to a fully illustrated description of the forty-eight graduated plates, which are designed as a progressive course in free-arm drawing and design, gives numerous photographic blocks and diagrams illustrative of the method of work described, and of the best ways to fit up the classroom for the study of this subject. The letterpress shows how the subject may be inexpensively introduced into any school, and made a accessory to the ordinary drawing lesson. The forty-eight exercises, which begin with the simplest curves and work up to examples of floral design, are also issued as four packets of drawing cards suitable for class teaching. All the copies, as belts the subject, are effectively reproduced white on a black background to represent actual blackboard drawing.

Now ready. Second Edition. 8vo, 325 pp. Price 8s. 6d. net.

### SAILING ALONE AROUND THE WORLD.

By CAPTAIN JOSHUA SLOCUM.

With 63 Illustrations by THOMAS FOGARTY and GEORGE VARIAN.

In the *Daily Telegraph*, September 8, Sir Edwin Arnold writes:—"... this wonderful story of resolute adventure. I do not hesitate to call it the most extraordinary book, in its way, ever published."

\*.\* A Sixteen-Page List of Messrs. S. L. M. and Co.'s Announcements can be had post free.

# Blackie & Son's New Books.

**CAESAR'S GALLIC WAR, Book I.** Edited by Prof. JOHN BROWN, B.A. With Maps, Illustrations, and with or without Vocabulary. 1s. 6d.

This is a revised edition, reset in new type, with many new illustrations, of Professor Brown's well-known 'Caesar,' of which many thousands of copies have been sold. The new illustrations include six full-page plates, giving copies of Gérôme's painting of the Assassination of Caesar, Charles Gleyre's painting of Divico's Victory, busts of Caesar and Pompey, and representations of a general triumphing and a consul sacrificing, together with many text illustrations throughout the book.

*Literature says:—*"It is really delightful to see and handle school books so nice as Messrs. Blackie's Latin Series, edited by Prof. Tyrrell. . . Print and general appearance are excellent. In these important respects Blackie's Series holds the first place among school books."

**SALLUST'S CATILINE.** Edited by the Rev. W. A. STONE, M.A. With Map and Illustrations. With or without Vocabulary. 1s. 6d.

**VIRGIL'S GEORGICS—BOOK I.** Edited by S. E. WINBOLT, M.A. With Illustrations. With or without Vocabulary. 1s. 6d.

**VIRGIL'S AENEID—BOOKS II. & III.** Edited by Professor PHILIP SANDFORD, M.A. With Illustrations. With or without Vocabulary. 1s. 6d. each.

By Rosa Mulholland (Lady Gilbert).  
**Cynthia's Bonnet Shop.** With 8 Page Illustrations by G. DEMAIN HAMMOND, R.L. 5s.

By Captain F. S. Brereton.

**With Rifle and Bayonet: A Story of the Boer War.** With 8 Illustrations by WAL PAGE. 5s.

By Captain F. S. Brereton.

**In the King's Service: A Tale of Cromwell's Invasion of Ireland.** With 8 Page Illustrations by STANLEY L. WOOD. 5s.

By Alice Stronach.

**A Newnham Friendship.** With 6 Page Illustrations by HAROLD COPPING. 3s. 6d.

By Gordon Stables.

**In Far Bolivia: A Story of a Strange Wild Land.** With 6 Illustrations by J. FINNEMORE, R.L. 3s. 6d.

By Léon Golschmann.

**Boy Crusoes: A Story of the Siberian Forest.** Adapted from the Russian. With 6 Page Illustrations by J. FINNEMORE, R.L. 3s. 6d.

By Meredith Fletcher.

**Every Inch a Briton: A School Story.** With 6 Illustrations by SYDNEY COWELL. 3s. 6d.

New Book by Judge Parry, Illustrated by Walter Crane.

**THE STORY OF DON QUIXOTE.** Retold by His Honour Judge PARRY. Illustrated by WALTER CRANE. With 11 Coloured Full-Page Plates, 19 Half-Page Plates, a Title-Page, and Cover. Royal 8vo, cloth. 6s.

New Picture Book of Humour by Harry B. Neilson.

**DEOLL DOINGS.** Illustrated by HARRY B. NEILSON, with Verses by THE COCKIOLLY BIRD. 23 Full-Pages and 18 Vignettes in Full Colour. Royal 4to, picture boards, cloth back. 6s.

New Illustrated Catalogue post free on application.

LONDON: BLACKIE & SON, LIMITED, 50 OLD BAILEY.

# CAMBRIDGE UNIVERSITY PRESS.

## THE CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

*General Editor*—W. H. WOODWARD, of Christ Church, Oxford; Principal of University (Day) Training College, Liverpool; and Professor of Education in Victoria University.

### NEW VOLUME.

**Outlines of the History of the English Language.** By T. N. TOLLER, late Fellow of Christ's College, Cambridge, Professor of English in the Owens College, Manchester. Crown 8vo, 4s. [Ready December 5th.]

## THE PITT PRESS SHAKESPEARE FOR SCHOOLS.—NEW VOLUME.

*Oxford Magazine*—"Mr. Verity is issuing apace his volumes of the Pitt Press Shakespeare for Schools, and we congratulate the Syndics on having secured so competent an editor. He knows what is wanted by school-children, omits pedantic comments, and provides in lucid and readable paragraphs all the necessary information."

*Practical Teacher*—"Of the many school editions of Shakespeare's plays this is certainly one of the very best."

**King Henry V.** With Introduction, Notes, Glossary and Index, by A. W. VERITY, M.A., sometime Scholar of Trinity College, Cambridge. [Nearly ready.]

## PITT PRESS SERIES.—NEW VOLUMES.

*Subject for Cambridge Higher Local Examinations, 1901.*

**Bacon.—The New Atlantis.** Edited, with Introduction and Notes, by G. C. M. SMITH, M.A., St. John's College, Cambridge. [Nearly ready.]

*Subject for London Matriculation, June, 1901.*

**Sallust.—Catinus.** Edited, with Introduction and Notes, by W. C. SUMMERS, M.A., Fellow of St. John's College. 2s.

## THE CAMBRIDGE BIBLE FOR SCHOOLS AND COLLEGES.

*General Editor for the Old Testament and Apocrypha*—A. F. KIRKPATRICK, D.D., Regius Professor of Hebrew in the University of Cambridge.

### NEW VOLUME.

**The Book of Daniel.** Edited by the Rev. S. R. DRIVER, D.D., Regius Professor of Hebrew in the University of Oxford. 2s. 6d. net.

## SUBJECTS FOR QUEEN'S SCHOLARSHIP EXAMINATION, 1901.

**Cornelius Nepos.—Miltiades, Epaminondas.** With Notes and Complete Vocabulary for Beginners, by E. S. STUCKBURGH, M.A., late Fellow of Emmanuel College, Cambridge. 1s. 6d.

**Xenophon.—Anabasis, Book II.** With Notes and Complete Vocabulary, by G. M. EDWARDS, M.A., Fellow and Classical Lecturer of Sidney Sussex College, Cambridge. 1s. 6d.

**Shakespeare.—Julius Cæsar.** With Introduction, Notes, and Glossary, by A. W. VERITY, M.A., sometime Scholar of Trinity College, Cambridge. Fifth Edition, with additions and corrections. 1s. 6d.

Now Ready. Third Edition of Jebb's "Antigone."

**Sophocles.—The Plays and Fragments,** with Critical Notes, Commentary, and Translation in English prose, by Sir RICHARD JEBB, Litt.D., M.P., Regius Professor of Greek in the University of Cambridge. Demy 8vo.

*Journal of Education*.—"The greatest English work of this generation in Greek scholarship."

PART III. **Antigone.** Third Edition. 12s. 6d.

## GREEK AND LATIN TRANSLATION.

**Graduated Passages from Greek and Latin Authors for First-Sight Translation.** Selected and Supplied with short Notes for Beginners by H. BENDALL, M.A., and C. E. LAURENCE, B.A., Assistant-Master of Blackheath Proprietary School. Crown 8vo.

PART I. EASY. 1s. 6d.

PART II. MODERATELY EASY. 2s.

PART III. MODERATELY DIFFICULT. 2s. PART IV. DIFFICULT. 2s.

**Demonstrations in Greek Iambic Verse.** By W. H. D. ROUSE, M.A., formerly Fellow of Christ's College, Cambridge, Master at Rugby School. Crown 8vo, 6s.

*Educational Times*.—"It is but a few months since we noticed Mr. Rouse's cleverly devised lessons in Latin Elegiacs. The volume now before us is a companion treatise on Greek verse, and, like its predecessor, is remarkably fresh and stimulating. In an introduction extending over 75 pages, the author has set down a large collection of useful hints on the structure and usage of Greek tragic verse, and has given some valuable tables of classical examples. . . . We can only hope that Mr. Rouse's book will find its way into the hands of many teachers, to the certain benefit both of themselves and of their pupils."

**Cambridge Compositions, Greek and Latin.** Edited, for the Syndics of the Press, by R. D. ARCHER-HIND, M.A., and R. D. HICKS, M.A., Fellows and Classical Lecturers of Trinity College, Cambridge. Crown 8vo, 10s.

*Classical Review*.—"The book before us quite surpasses its predecessors in our judgment. . . . We heartily welcome Cambridge Compositions as being in itself an admirable piece of work, and also as affording a very favourable augury for the future of English scholarship."

Now Ready, crown 8vo, 3s. 6d. net.

## FIFTEEN STUDIES

IN

## BOOK-KEEPING.

With a Selection of Worked and Unworked Examination Papers.

By WALTER W. SNAILUM, Professional Associate of the Surveyors' Institution.

This book has been written to combine a thorough explanation of the principles of double-entry book-keeping with a course of work suitable for preparation for the examinations held by the Society of Arts, Civil Service, Lancashire and Cheshire Union of Institutes, and kindred examining bodies.

*Bookman*.—"A book which seems to supply admirably a long felt want. It teaches its subject from the start, and does not presuppose the possession of knowledge which it professes to impart."

*Commerce*.—"This volume is written so that the veriest tyro may understand."

*Educational Times*.—"Mr. Snailum is very clear, and his manner of unfolding his subject is interesting."

*Schoolmaster*.—"The fifteen studies present in gradation form a very complete account of the principles of book-keeping. We have spent considerable time over this portion of the book, and can testify to the excellence of the style and the skill with which the facts are marshalled."

## PITT PRESS MATHEMATICAL SERIES.—NEW VOLUME.

**The Elements of Hydrostatics.** By S. L. LONEY, M.A., Professor of Mathematics at the Royal Holloway College, sometime Fellow of Sidney Sussex College, Cambridge. Crown 8vo, 4s. 6d.

*Extract from Preface*.—"The present volume is intended to be for the use of the class of students for whom my 'Elements of Statics and Dynamics' was written, and may be regarded as a continuation of that book."

## CAMBRIDGE SCIENCE PRIMERS.

**A New Primer of Astronomy.** By Sir ROBERT BALL, F.R.S., Lowndean Professor in the University of Cambridge. 1s. 6d. net. [Nearly ready.]

## THE CAMBRIDGE HISTORICAL SERIES.

*General Editor*—G. W. PROTHERO, Litt.D., Hon. Fellow of King's College, Cambridge, and formerly Professor of History in the University of Edinburgh.

### NEW VOLUMES.

**An Essay on Western Civilization in its Economic Aspects (Medieval and Modern Times).** By W. CUNNINGHAM, D.D., Fellow of Trinity College, Cambridge. [Nearly ready.]

**The French Monarchy, 1483-1789.** By A. J. GRANT, M.A., Professor of History in the Yorkshire College, Leeds. With 4 Maps. 2 Vols. [Nearly ready.]

**Canada under British Rule, 1760-1900.** By Sir J. G. BOURINOT, LL.D., K.C.M.G. With 8 Maps. [Nearly ready.]

## A NEW FRENCH VERSE READER.

**A Primer of French Verse for Upper Forms.** Edited by FREDERIC SPENCER, Professor of the French Language and Literature in the University College of North Wales; formerly Chief Master on the Modern Side in the Leys School, Cambridge. 3s. [Pitt Press Series.]

*School World*.—"Teachers owe a debt of gratitude to Prof. Spencer for this attractive volume. . . . It is a very good book."

*Educational Times*.—"A pupil who has read this book with care will acquire an insight into French prosody such as no other 'Primer' would give him, and will feel that this is a book to which he can always turn again with pleasure."

*Guardian*.—"Simplicity and freshness characterize the whole of the work, and Mr. Spencer may be congratulated upon having made a really valuable contribution to the list of French school books."

Six or more copies of the two following books for class use can be supplied at half the published prices, and may be ordered through any bookseller.

**Gospel History of our Lord Jesus Christ** in the Language of the Revised Version, arranged in a connected narrative, especially for the use of Teachers and Preachers. By Rev. C. C. JAMES, M.A., Rector of Wortham, Suffolk, and late Fellow of King's College. Crown 8vo, Second Edition, 3s. 6d.

**A Harmony of the Gospels** in the words of the Revised Version, with Copious References, Tables, &c. Arranged by Rev. C. C. JAMES, M.A. Crown 8vo, 5s.

COMPLETE LISTS ON APPLICATION.

## The Educational Times.

### *School Boards and Secondary Education.*

Up to the time of going to press the decision of the judges in the case of *The Queen against Cockerton* has not been pronounced.

The question in dispute affects most seriously the interests of all secondary schools, and until the last moment it was hoped by many that the Board of Education would have found some means of obviating the necessity for a judicial decision on the matter. It is essentially a question of administration and organization, and more fit to be decided on considerations of departmental policy than as a pure question of law. The auditor of the accounts of the London School Board disallowed certain sums in the account charged in respect of the maintenance of classes registered under the Science and Art Department. The position taken up by the auditor, and now supported by the Local Government Board and the Attorney-General, is that the School Board, being a statutory corporation, deriving its powers solely from the Education Acts, cannot legally use the School Board rate or the school fund to support such classes, either in day schools or in evening continuation schools. Owing to the wide range of subjects included in the syllabus of the Science and Art Department of the Board of Education, if the position taken up by the School Board is sound, a most undesirable overlapping of educational work would ensue, to the manifest disadvantage of existing secondary schools.

The difficulty arises from the absence of any definition of the words "elementary education" in the Education Act, 1870. The draftsman—and, after him, "the Legislature"—did not think it necessary to define the term in the definition section, although he defines "elementary school" as "a school or department of a school at which elementary education is the principal part of the education there given." This is a good instance of *lucus a non lucendo*, so frequently met with in statutes, but, as the argument of counsel showed, of little use in determining the meaning of "elementary education"—which, and which only, School Boards are authorized to provide out of the rates. As Mr. Justice Wills pointed out during the hearing, if the ratepayer can be made to pay for teaching the higher branches of mathematics, it is difficult to see where the line can be drawn. Whatever the result of this case, it is highly desirable that Parliament should determine clearly the

limits of the jurisdiction of School Boards. It is undesirable that the ultimate critic of their educational policy and action should be the auditor.

We report in our "Summary of the Month" some of the more noteworthy passages of the three days' argument before Justices Wills and Kennedy. We had certainly expected that more would be made of the spirit, as well as the letter, of the Education Acts—in other words, of the natural and equitable interpretation of the letter. As compared with the strict definition of elementary education, the question of age limit is surely more stringent in its character. Another point on which it seems that scarcely sufficient stress was laid is the essential feature of compulsion, which clearly goes to characterize the rate-aided elementary education of the Board schools. Much of the argument in the Court of Queen's Bench seems to have gone on the assumption that a School Board is a body which may raise a rate for the provision of anything coming under the name of elementary education, and for pupils of any age, and any degree of proficiency. This is not so. The School Board, as set up by Act of Parliament, is a statutory body with a statutory mandate, limited to the work of supplying education according to an imposed code, for children under a statutory age. But we will not multiply comments on a case which we did not hear argued. As the judges reserved judgment, they doubtless desired to go more at leisure into the fair and proper interpretation of the Education Acts. It is probable enough, whatever their decision may be, that the case will be carried to a Court of Appeal.

## NOTES.

THE versatility of Lord Rosebery's mind has never been more pointedly shown than in his recent Rectorial address at Glasgow. That he should have chosen the condition and needs of the Empire as the subject of his discourse is natural; but there are few men who would be able to combine a historical retrospect with an analysis of its essentials and suggestions for its preservation and development in such a well balanced speech. A substantial portion was devoted to a consideration of the true relation of our Universities to the changing requirements of commerce and administration. Without a satisfactory raw material—the product of healthy physical and moral conditions of life—the Universities must fail in supplying even their own natural share in the demands of the Empire. As Lord

Rosebery points out, however, by their neglect of modern languages and subjects useful in commercial life, they are specially unfitted for such a purpose. While the teaching of Latin and Greek is fostered by the expenditure of ample funds, that of science, modern languages, and commercial subjects is starved. There is yet work for a University Commission to do.

FROM the fact that one hundred and eighty-six Unionist members of Parliament have been educated at large public schools, and only twenty-six Liberals, *Truth* has drawn a somewhat far-fetched moral. It advises Liberal parents to shun such educational institutions, on the ground of the baneful political tone which they foster. On similar reasoning, Non-conformist parents should be warned from sending their sons to public schools, because a very large percentage of the occupants of the Episcopal bench are public-school men. It has even been suggested that the lack of discipline in elementary schools is responsible for the existence of the Hooligan tribe. We have, however, only to consult old volumes of *Punch* to satisfy ourselves that street ruffianism of a similar organized type was well known in London before 1870. Unfortunately, the moral influence of education succumbs before the fever of our modern life; but in less exciting times it will again assert itself. It may be, as we heard a shrewd commercial traveller recently maintain, that the English character is becoming more excitable. Being the evidence of a man with exceptional opportunities of observation, this is probably true; but there is certainly no ground for suggesting that the growing excitability of the national character has its origin in our public schools.

THE London School Board election has led to a mild recrudescence of the religious education controversy, which, although not buried, as Mr. Asquith has assumed, fortunately has not been much encouraged by the responsible organs of political opinion. Both sides are apparently agreed that the right of parents to determine the religious views and doctrines which shall be taught their children is to be the first postulate in the discussion. It is also agreed that some religious instruction should be given systematically and as a part of the child's daily work. Here all agreement ceases, and, notwithstanding the wordy warfare of past years, no working scheme has been suggested which can be said to have received substantial support in the country. It would certainly not be an ideal state of things that the bulk of the children in our large towns should depend entirely on the elementary-school masters for their religious education. Teachers are not trained for this work, and the instruction given cannot be supervised so as to satisfy a parent of strong religious feeling. But such a parent can always impart his distinctive views outside of the day school.

THE Government of New Brunswick, Canada, has inaugurated a scheme of agricultural education which ought to satisfy many an English parent troubled by the difficulty of finding a career for his book-tired boys. The training will be carried on at the Government farm some fifty miles from the port of St. John, during a three years' course, the only fee being one of from £30 to £40, payable for the first year only to cover the cost of board. The training farm is intended principally for the class of boy attending our public schools, and has manifest advantages over our home agricultural colleges for boys who

intend to emigrate. The conditions of agricultural life in our Colonies are so diverse, and unlike those which exist here, that for such boys even the best English training is unsatisfactory. It has always been found that a youth who goes out from England, although well trained according to our notions, wastes a considerable part of the capital which he takes with him in merely learning the ordinary farmer's mode of dealing with his farm. Stock and crop raising and the problems of feeding and of transit to market are also essentially different in the Colonies. Mr. Miller, the Agent-General for the province in London, will, doubtless, find many inquirers desiring further particulars about the scheme.

THE accommodating spirit of some theatrical managers leads them occasionally to study the syllabus of the Local Examinations. Indeed, more than one company has been known to tour the provinces for the benefit of the schools. But this was when the set subject was a Shakespearian play. The courageous versatility of the amateur seeks higher planes of difficulty. "Marmion," which is a subject often set for examination, has been dramatized, and the play will be acted on December 1 in the old Lecture Theatre of the University of London, in Burlington Gardens. If masters could be induced to sacrifice their hard-earned holiday, they might seize the opportunity of pointing out, during the shifts, how Scott's narration is changed into the direct form of the dramatic version. Scott's topographical detail is generally so accurate that a copy of the last Ordnance Survey of Scotland would make a most desirable and instructive drop-scene. But surely the boys' Saturday afternoon ought to be held sacred to football, all Local Examinations notwithstanding.

THE endeavour to make girls take an interest in political and social questions at the High School, Tunbridge Wells, has led to some ridiculous results. We can, however, reconcile ourselves to the educational failure when we obtain such gems of information as that Mr. Labouchere is a member of the Conservative Cabinet, and that "Oclaira Hill" was taken from the Boers by the English after a great display of bravery. This reminds us of the pupil-teacher who grew loquacious on the subject of "Kindergarten" as a famous Prussian general in the Franco-German War. With all their brilliancy, girls do not seem able to get at facts with the readiness and grip of boys. This may be due to the process of snubbing which the too-inquiring girl is apt to undergo from the male members of the family; but very little has been or is being done in girls' schools to develop an intelligent interest in political and current events. Does the ordinary woman teacher read her paper?

"LA RÉPUBLIQUE" has been called by a cynical Frenchman "le Papa public." The French Minister of Public Instruction has just addressed to the rectors of all classes of schools throughout the country a circular in which he urges them to renew, with all possible energy, their efforts to spread the anti-alcoholic faith. "I wish," he says, "that it should take an official place on our programmes on the same footing as grammar or arithmetic." Temperance is to become a subject for examination in primary and secondary instruction. "Short lessons and lectures, well supported by facts and figures, should be organized in addition to the regular work in all our public educational

establishments." The official character of the circular—as compared with the earlier and less formal instructions—is intended to serve as a protection to masters and mistresses against the possible resentment which they may incur from mayors and other municipal authorities engaged in the liquor trade. Certainly one would imagine that the protection is necessary.

A VERY thorough system of examination of students seeking to qualify as teachers of commercial subjects has been instituted by the Austrian Department of Worship and Education. The examination is divided into the following stages:—(1) Home-prepared work; (2) examination-room paper work; (3) *viva voce* examination; (4) sample lesson. The candidate must select from the following groups of main subjects:—Group A: (1) book-keeping, correspondence, and counting-house work; (2) commercial and political arithmetic; (3) economics and law. Group B: (1) commercial geography; (2) commodities. Candidates must afford proof of having received higher-school education, and of at least four years' office experience, or of having undergone a curriculum at a polytechnic or University; and this according to the group of main subjects professed. No such minimum of knowledge as in this country is designated "pass work" will suffice. The requirements under the head of economics, in which the candidate must be able to give an independent judgment on important questions, and under geography, in which he must show knowledge of magazine monographs and comparative statistics, are such as would make ordinary English students shudder.

THREE HUNDRED years ago Richard Mulcaster, Master of the Merchant Taylors' School, proposed a teachers' college as a department of a University. The words of wisdom in which he set forth his views may well be recalled at the present moment:—

I conclude [he said] that this trade requireth a particular college for these four causes. First, for the subject, being the mean to make or mar the whole fry of our State. Secondly, for the number, whether of them that are to learn, or of them that are to teach. Thirdly, for the necessity of the profession, which may not be spared. Fourthly, for the matter of their study, which is compatible to the greatest possessions, for language, for judgment, for skill how to train, for variety in all points of learning, wherein the framing of the mind and the exercising of the body craveth exquisite consideration, besides the staidness of the person.

The said Richard Mulcaster, an Old Etonian of brilliant classical attainments, was, it may be noted, the first Headmaster of the Merchant Taylors' School. His great administrative and teaching power, combined with this scholarship, made the school famous. It filled rapidly, and the Company had to reprove him for having considerably exceeded the statutory number of pupils, namely, two hundred and fifty. The Headmaster at that time received £10 per annum for his services; but the sum was regularly doubled by a certain Master of the Company from his own purse.

## SUMMARY.

### THE MONTH.

AFTER many delays, the case of the Queen v. T. B. Cockerton (auditor of the Local Government Board)—a case which raises the question of legality in regard to expenditure by School Boards on their higher-grade schools—has been heard in the Court of Queen's Bench before Justices Wills and Kennedy. A

rule *nisi* had been obtained, calling on the auditor to show cause why a writ should not be issued to quash his disallowances of expenditure by the London School Board for the half-year ending September 29, 1898. The questions for the decision of the Court were:—

(1) Whether it was within the powers of the Board as a statutory corporation to provide science and art schools or classes either in day schools or in evening continuation schools. (2) Whether it was lawful for them to pay the expenses of maintaining these schools or classes out of the School Board rate or School Fund. (3) Whether the said rule *nisi* should be made absolute in regard to any and which of the said disallowances and surcharges.

We printed last month some particulars of Mr. Cockerton's disallowances, which were made, it will be remembered, after complaint had been raised against the School Board by the Camden School of Art and other independent educational bodies.

THE Attorney-General, on behalf of the Local Government Board, showed cause against the rule. He fairly described the origin of the higher-grade schools:—

All scholars in day schools in the seven Code standards were registered at Whitehall, while those in outside standards were registered in South Kensington. In many of the day schools maintained by the Board there were both ex-standard scholars and science and art students. In some cases ex-standard scholars were taught in the same classes with science and art scholars. In other cases scholars in the standards were also taught in the same classes. Grants were obtained by the Board in respect of ex-standard scholars under Article 101 of the Code. In practice the science and art classes were generally carried on in the same buildings as the public elementary school, and the principal teacher had supervision of all the scholars. This practice was alleged to be contrary to the provisions of Article 85 (e) of the Code. The allocation of a teacher to a science and art school or class was also alleged to be illegal. The School Board had charged no fees for instruction in science and art schools and classes provided by them, so far as day schools were concerned, since August, 1891; so far as evening continuation schools were concerned, since September 1, 1898. The expenses incurred by the Board in respect of science and art schools and classes under the Science and Art Department had always considerably exceeded the grants obtained from the Science and Art Department, and the deficiency had always been made good by the Board out of the School Fund and the rates levied under the Public Elementary Education Acts.

MR. ASQUITH, for the School Board, raised the important point of the definition of elementary education. He contended that an elementary school was a school in which the principal part of the education was elementary, but it was nowhere enjoined by law that the whole of it should be elementary. The Attorney-General drew a distinction between education under the Elementary Acts and instruction under the Technical Acts, and urged that the School Board could not use the rates for the latter purpose. On these points the Justices made some noteworthy (if somewhat confused) *obiter dicta*.

MR. Justice Kennedy suggested that the word elementary was loosely applied, and meant all such education as was given in elementary schools. The Attorney-General contended that the science and art instruction complained of went far beyond anything contemplated by the Code. MR. Justice Wills thought the word elementary capable of expansion—in fact, much was included in the Code now which was not admitted years ago. The Attorney-General held that the Code was the outside limit, and that the School Board had gone beyond. MR. Justice Kennedy thought the Attorney-General was trying to put elementary education in a strait-jacket, and was ruling out subjects which had been legally optional for years. The Attorney-General explained that School Boards were not licensed to go to the highest level, and that the Science and Art Department was specially intended to carry education further than the elementary Code contemplated. MR. Justice Wills did not regard much that was in the Code as elementary subjects. He did not see anything in the Code to prevent education such as that given at Eton and Harrow.

MR. ASQUITH's main case was that the powers exercised for so many years by the London School Board had received Parliamentary sanction, and the Board was perfectly within its powers in conducting these science and art classes so long as the principal part of the education given in the schools was elementary education. He ridiculed the contention that School Boards could only conduct schools in which elementary education was taught, either independently of or out of rates.

Parliament created these School Boards, and conferred powers upon them to provide elementary schools, the essence of which was that

they should be schools in which the greater part of the education was elementary. No regulations as to the manner in which a Parliamentary grant was to be obtained could, he submitted, affect their powers, and the questions which had been raised as to the Code had nothing to do with the Act. In addition, the learned counsel argued that these powers had received statutory recognition under the Technical Instruction Act, a great part of which would have no meaning if the Legislature did not look upon the School Boards as capable of receiving, in respect of their schools, grants from the Science and Art Department. The "Directory" itself of the Science and Art Department also received Parliamentary sanction by that Act, as did also the evening continuation schools as carried on now by the London School Board.

THE case extended over three days. On the third day Mr. Justice Wills said that he should give no decision until the questions submitted to the Court were more definitely set out in writing. At present they were asked to assume too much. It was not unusual for Departments to exceed their powers, and he was inclined to think that this was a question for the decision of Parliament rather than the law courts. It was a startling proposition that elementary education could be carried to any length. Mr. Davies, for the School Board, submitted that they were within their rights if the principal part of the education given was elementary, and if the expense was not more than 9d. a head per week. They must take a broad and practical view of this matter. Mr. Justice Wills said the burden of advanced education in all large towns would be enormous if it were paid for out of the rates. Mr. Justice Kennedy did not see why elementary education should be confined to the Code, and not extended to the "Directory," both documents coming from the same Department. The two documents undoubtedly overlapped. Mr. Justice Wills would have no hesitation in judicially deciding that the solution of quadratic equations was not "elementary." He supposed the surcharges would be remitted if the Court upheld the auditor's action? Personal consequences ought not to follow in such a case. Their lordships then went to one of the consulting rooms to see the models prepared by scholars in the advanced classes. Judgment was reserved.

At Glasgow, on November 16, Lord Rosebery gave his address as Lord Rector of the University. He dwelt especially on the need of training men for the responsibilities which must fall on them as members of "a conquering and imperial race." On this subject he had a word of admonition for the schools.

Are we setting ourselves sufficiently to train such men? I doubt it. The most illustrious of our public schools has no modern side. Oxford and Cambridge still exact their dose of Latin and Greek. I cannot believe, from the imperial point of view, having regard to the changed conditions of the world, that this is necessary or adequate or wise. I concede Latin as a training instrument and a universal language. But how about Greek? To learned men it is a necessity. But must it be a part of the necessary equipment of the ordinary youth of the nineteenth century, who has so much to learn in order to be equal to his age? I think that when our national ignorance of foreign languages has become not merely a byword, but almost a commercial disaster, we might reconsider part of our educational apparatus. For the purposes of the present age—especially for the merchant and the politician—there is required a more modern education, more especially as regards languages.

THE Board of Education have published their first Report, together with supplementary volumes on secondary and elementary education. After referring to the organization of the new office, to the transfer of powers, and to the constitution of the Consultative Committee, the report states that up to the present time the Board have received but few applications for the inspection of schools supplying secondary education, which is, no doubt, owing to the fact that the schools have been awaiting the completion of the necessary arrangements by the Board. The draft Orders in Council which will in due course be submitted to Her Majesty will, if approved, the Board say, strengthen their powers in undertaking such inspections; and the advice of the Consultative Committee will be taken as to the employment of any University or other organization for the purpose of inspecting secondary schools. Special reports have been prepared on the educational systems of the self-governing colonies, on various aspects of American, Swiss, German, Hungarian, and Norwegian education, on the work of preparatory schools in England, and on other educational subjects, and these will be published at an early date.

THE Report further states that, during the period under

review, the work of the organizations recognized under Clause VII. of the "Science and Art Directory" has been consolidated. In the case of most of the larger administrative counties and many of the county boroughs in England, the Local Authorities have been recognized as organizations under that clause, the actual figures being 28 out of 49 administrative counties and 21 out of 61 county boroughs. Under the head of the Science Division of Secondary Education a table is given which shows, with regard to elementary scientific instruction, a considerable increase in the number of classes and pupils for the decennial period from 1890 to 1900 in England, Wales, and Ireland. In the Art Division also increases are recorded. The facilities hitherto possessed by the colonies for obtaining specimens of art works have been extended, and cases of works have been despatched to the Cape, Natal, New Zealand, and Malta, the cost of the works and carriage being borne in each case by the colonial Governments. Much information may be found in the Report relating to various other matters connected with instruction in science and art under the secondary education branch of the Board, the expenditure on which during the financial year of 1899-1900 is set down at £590,386.

THE Board hope that the new Code will make it possible to secure a higher level of general education without imposing any additional burden on teachers and children, and it is their desire to allow to managers and teachers the greatest possible freedom in planning and carrying out courses of instruction comprising the subjects specified, and to encourage them to adapt the teaching given in their schools to local requirements. As to higher elementary schools, the Report notes the issue of the minute enabling the Board to establish "a new class of elementary school termed 'higher elementary schools,'" in which will be given "elementary instruction of a more advanced kind than has hitherto been possible under the Code, and their curriculum will be such as to embrace in the higher classes the work of the elementary course prescribed for science schools."

AN explanation of the recent Order in Council, transferring certain powers of the Charity Commission to the Board of Education, has been issued by the Department. The Board contemplate that the powers in question will be exercised by them in connexion with (a) inspections of endowed schools under Section 3 of the Board of Education Act; (b) local inquiries held with a view to prevent undesirable competition between schools in the same locality, or otherwise to promote the better local organization of secondary education. Communications on matters falling under either of these heads should be addressed to the Board of Education, South Kensington. Communications on matters connected with the establishment of new schemes, or the amendment of existing schemes, and on matters relating to the interpretation of schemes and the administration of endowments, should be addressed to the Charity Commissioners, as heretofore. Where any doubt exists as to the office to which application should be made, the Charity Commissioners should be addressed in the first instance, and the question will then be determined by communications between the two Departments. The above explanation refers to England. In Wales and Monmouthshire the Board of Education takes the place of the Charity Commission (with the exceptions mentioned in the Order) for the transaction of all business connected with educational endowments regulated by scheme made under the Endowed Schools Acts. Educational endowments in Wales and Monmouthshire not regulated by scheme under those Acts will be affected by the Order to the same extent as educational endowments in England.

THE Blackburn Chamber of Commerce has addressed a memorial to the President of the Board of Education, in reference to certain remarks which he made at Manchester on October 15, when opening a new higher-grade school. The Duke said that Parliament did not take a very keen interest in education, and that the leaders of industry and commerce should do more to create an opinion that "a thoroughly organized system of national education is indispensable." The memorial says:

We have taken steps to bring these views prominently before the members of the House of Commons who represent the area covered by our Chamber of Commerce. We wish now most respectfully and earnestly to request your Grace to urge upon your colleagues in the Ministry the necessity of treating the present educational deadlock as a matter of first-rate importance. Our attention as a Chamber of Commerce has been specially called to the very great assistance rendered by

the State to education in Germany, Belgium, Denmark, and the United States, as evidenced by the consular reports, and we are deeply conscious of the inadequate mental equipment with which we are furnishing our own people. In particular, we would suggest that those communities that are conscious of their educational disadvantages, and take steps to put themselves in a condition of readiness by forming Local Authorities for Secondary Education, may be allowed to help themselves by devoting a sum not exceeding a penny rate towards the promotion of secondary education, in addition to any rate already available for technical instruction. It would, no doubt, be desirable to have a fully developed scheme for the whole country, but we feel such an advantage would be purchased too dearly at the cost of any further delay. Such concession would be in accordance with the general principles of local autonomy set forth in the Education Bill introduced by the Government in the last Session of Parliament, and would seem peculiarly consistent with the procedure by tentative stages which has marked educational progress in our country.

THE new School Board for London was elected on November 29, too late to enable us to chronicle the result, or to comment on any modification which it may have introduced in the character of the Board.

THE Technical Instruction Committee of the Manchester City Council has secured from the United States Commission, for display in Manchester, the comprehensive exhibit of the educational resources, methods, and aims of the States which has formed so striking a feature of the Department of Education at the French Exhibition. The exhibit includes within its scope every variety of public educational effort throughout the vast area of the Union. The kindergarten, the primary, grammar, and high-school grades of elementary and secondary education, the technical, agricultural, commercial, art, normal, and professional schools and colleges, the Universities, the schools for negroes and Indians, the institutions for defectives of all kinds, the associations for University Extension, and the promotion of summer schools, all find exemplification in this remarkable display, to which photography has lent its effective and invaluable aid. It is hoped that the exhibit may be ready for public inspection by the end of the year, and that it may remain on view for several weeks.

MISS TUCKER, who gained a first class in the History Tripos, Part I., 1899, and a first in Part II., 1900, has been elected to the Kennedy Studentship at Newnham College. Miss Tucker will reside at Newnham, and carry on advanced historical work. Bathurst Studentships have been awarded to Miss S. O. Ford and Miss G. L. Matthæi, of Newnham College, and Miss Clark, a graduate of Glasgow, all of whom are carrying on advanced work in botany and vegetable physiology. Miss Winifred Hudson, who was declared equal to the eighth Wrangler in the Mathematical Tripos, has been elected to the Arthur Hugh Clough Scholarship. On the results of examinations held at the college the classical scholarship has been awarded to Miss A. E. Skelton, Norwich High School; and the Mathilde Blind Scholarship to Miss M. Rowntree, of Scarborough.

IN connexion with the London Branch of the British Child Study Association, Dr. Francis Warner recently gave a demonstration of the methods employed to determine the physical and mental capacity of children, at the Home and Colonial College. Eighty children had been assembled. These were admitted to the room in four parties, each of which was ranged in line along the floor. They were then asked to watch the movements of a bright object. Those who in so doing moved their heads rather than their eyes were put on one side. The remainder were then asked to show their hands, and some were excluded for the manner in which they did so. Dr. Warner then placed his hand on the head of each of the rest, and put aside any showing abnormal development. The children thus selected were individually examined by the lecturer, and their deficiencies noted on cards prepared for the purpose, the results being afterwards compared with the teachers' opinions. At the close Dr. Warner insisted on the importance of training children to move their eyes, and of noting the signs of fatigue and nervous exhaustion in children.

MR. THOMAS ARNOLD, Fellow of the Royal University of Ireland, who recently died in Dublin, was the second son of Dr. Arnold, of Rugby. After leaving Oxford he accepted a clerkship in the Colonial Office; but after a few months emigrated to Tasmania, where he was appointed inspector of schools. He

remained in the colony until 1856, having in the meantime married the grand-daughter of Governor Sorell and become a Roman Catholic. Returning home, he was appointed by Newman a professor in his Roman Catholic college on St. Stephen's Green; and afterwards he followed Newman to Birmingham to the Oratory School. It was in the intervals of his work in these places that he compiled his well known "Manual of English Literature." In 1877 he was appointed one of the first Fellows of the newly established Royal University in Dublin, where he resided during the last ten or twelve years of his life, examining, teaching, and writing. Mrs. Humphry Ward is his eldest daughter.

ON November 13 Lord Avebury delivered, in Jermyn Street, the first Huxley Memorial Lecture, on the foundation of the Anthropological Institute. Lord Avebury said that Huxley's work fell into three principal divisions—natural science, education, and metaphysics. The chief of Huxley's contributions to anthropological science was "Man's Place in Nature," a book which at the time required great courage to publish, but the main conclusions of which might now be said to have been confirmed by subsequent research. The book had stood the test of time, and might still be studied with advantage. Lord Avebury dwelt on Huxley's services to education. As a member of the first London School Board he maintained that "no boy or girl should leave school without possessing a grasp of the general character of science, and without having been disciplined more or less in the methods of all sciences." As regards higher education, Huxley did not undervalue classics, but claimed for science its fair share of time. He advocated the system adopted by the founders of the University of London, and maintained that no one should be given a degree who did not show some acquaintance with science, and with at least one modern language.

## UNIVERSITIES.

(From our Correspondents.)

VERY soon after my last letter was written we lost Oxford. Prof. Max Müller. He had long ceased to lecture, but he and his dachshunds were, till quite lately, a not unfamiliar Oxford sight. Few men, if any, in Oxford were more widely known; though celebrity is rather a poor gauge of merit in a *savant*.

Convocation has been concerned with many trifles; especially in the line of drapery and millinery. The proper garb for a D.Sc. and a D.Litt. has only been settled after long exercising several great minds and exciting several small controversies. Also the preamble to a statute, "De Pileo Rotundo," has been carried. This is to enable Doctors of Law and Medicine to wear round caps instead of square—a precious privilege, which the D.Sc. and the D. Litt. are to be sternly denied.

At the instance of the Hebdomadal Council, a sensible alteration has been made in the statute respecting the Professorship of Poetry. The Professor of Poetry is, in theory, a distinguished *littérateur*, without other official connexion with the University, from whom the University extracts interesting lectures in return for a Professorship. Obviously it is well to vary such a professor fairly often, if we are to sample *littérateurs* in at all adequate number or variety. Hitherto the professor has held office for ten years, which are now reduced to five. Further, a silly restriction has been removed, whereby it was forbidden to elect two successive professors from one college. This prohibition had really no justification in theory, while, in practice, it would almost certainly operate against the election of the best men; through the tendency these men have to come from one or two colleges. Thus, for the next election, the whole "field" come from Balliol.

A matter which has been debated with no little heat is the new regulation as to the University sermons. The afternoon sermons, which no one went to but a handful of officials, have been abolished, and all University preachers are to preach in the morning. The opposition to this, led by Canon Ince and other leading theologians, compared the sermon to a professor's lecture, and urged that the audience do not matter: "a professor must care only for himself and his subject," and does not need to be listened to. The doctrine must be a comforting one for some professors; but Convocation would not subscribe to it.

A new Private Hall is being started in connexion with Manchester College. This is a further example of the method which the late Father Clarke originated. His Jesuit Hall has been a considerable success (though it remains to be seen how

far it will get over his recent death); and there is no reason why a Unitarian Hall should not be equally successful. Only, the tendency to sectarianize the University in this way may go very far if once started, and would become an evil if it did. In the meantime, the relation of these Halls to the University is something of an anomaly. A private Hall is essentially personal, not permanent; whereas these are meant to be permanent, and really depend, not on their Heads, but on outside bodies who nominate these Heads in succession.

The Reports on University Institutions reveal once more the poverty of the central power here. Thus in 1899 the Bodleian spent less than £2,000 on MSS., books, and coins. Everything published in England it, of course, gets gratis; but its supply of American and Continental books is entirely dependent on purchase. How elementarily deficient it is, a very short study of the catalogue will make painfully apparent—e.g., of Paul Bourget's novels it contains, in the original, not one; only the few English translations. And most standard foreign writers are about equally ill-represented.

A CONSIDERABLE change has been proposed in Cambridge. The regulations for the Local Examinations. Hitherto candidates for Honours must be below the age of sixteen. Candidates between sixteen and eighteen years of age may be granted a pass certificate; while in the case of those who desire exemption from the entrance examination for any business or profession the Syndicate are authorized to admit them to the examination, but not to award successful candidates the ordinary certificate. It seems that the Incorporated Law Society, while recognizing the Examination for Junior Students, as affording exemption from the Solicitors' Preliminary Examination, will only accept the ordinary form of certificate. As there is no limit of age at which the Local Preliminary and Senior Examinations can be taken, it is proposed to level up in the case of the Junior Examination, so that persons of any age whatever may go in for any one of the three examinations.

There has been a merry debate in the Senate on the subject of a new regulation for the Historical Tripos. It will be remembered that the present regulations order the arrangement of classes in one or more divisions—an ordinance which the examiners have construed as giving them an option whether they make subdivisions or not, invariably publishing a list with undivided classes. This evoked the anger of Dr. Cunningham and others, who maintain that the orders of the Senate have been violated. The Council came to the rescue of the examiners, by proposing a grace to the effect that there shall be no subdivision, while giving alternative graces to allow the opponents to have a chance of once more emphasizing their views. The Senate finally decided that there should be no subdivisions in any of the classes. The views of the examiners and of the Historical Board have therefore obtained the sanction of the University.

The visit of the Colonial Volunteers to Cambridge was a great success: hospitality was not overdone, and the arrangements were admirable. Each college took charge of a certain number of guests, and it is hoped that the men took away pleasant recollections of their brief stay here. It is quite certain that our guests by their manly bearing and utter absence of any trace of swagger created a very marked impression on the undergraduate mind. The number of Cambridge men at the front was very large, and, as they are returning gradually to revisit their old haunts, they do much to keep alive the zest for soldiering which has taken so strong a hold on University men during the past three years.

In accordance with the intimation given in last month's notes, a Syndicate has been appointed to consider in what way the University can profitably assist in the cause of military education, and in the meanwhile private enterprise has led to courses of lectures in military subjects being given. There is every chance of some definite scheme being promulgated for the systematic instruction of all the Volunteers, and it is hoped that some prominence will be given to military history in the schedules of various examinations in cognate subjects.

The University Benefaction Fund has now reached the respectable amount of £66,000—a result which has been accelerated by the generous gift of £10,000 by Mr. W. W. Astor. The Financial Board are, however, quite alive to the consideration that only a limited proportion of the available funds can be disbursed on bricks and mortar, as maintenance both of buildings and staff are items which do not show signs of diminution in any annual accounts.

The Library Syndicate have been busying themselves with a

plan for roofing in the eastern quadrangle, to give increased book room: at present the whole arrangement of the Library is unnecessarily complex, but there can be no remedy while the present state of congestion exists; though the withdrawal of the Woodwardian Collection to its new home will give temporary relief. It should be noticed, however, that the Syndicate have taken no steps to provide efficient fire alarms in the building; though it is a matter of common knowledge that a comparatively small expenditure would very considerably reduce the chance of a fire remaining undetected if it broke out during the hours the building is shut up.

The annual election of members of the Council passed off very quietly, as there was no burning question before the University. The Conservative and Moderate candidates were successful with one exception—Dr. Taylor and Dr. Ryle as heads of houses; Prof. Sir R. Jebb as professor; Dr. Keynes, Secretary of the Local Examinations, Mr. Scott, Bursar of St. John's, Mr. Mollison, Tutor of Clare, and Mr. Shipley, Tutor of Christ's, as ordinary members of the Senate, were elected by substantial majorities in each case.

The recent outbreak of diphtheria in Cambridge has afforded a useful object-lesson in the modern methods of stamping out disease. The Corporation for once acted with common sense and vigour; no attempt was made to conceal the true facts, but every step was taken to minimize the danger. Dr. Cobbett, of King's, was at once placed in charge of the pathological department in connexion with the Town Council, and every doubtful case was the subject of careful investigation, followed by proper measures for isolation when the disease was diagnosed. There has been no fuss and no fright, with the result that everything has gone on as if the town could present a clean bill of health—a result which is now within measurable distance of attainment.

The triennial production of a Greek play is a recognized fact in Cambridge. This year the "Agamemnon" was selected, and, in spite of the difficulties inherent in such an undertaking, a very great success was achieved. Special credit is due to the impersonators of the female parts, upon whom the burden of the play falls—Mr. F. H. Lucas as Clytemnestra and Mr. F. C. Crace as Cassandra were really excellent. It should not be forgotten that the Cambridge Greek Play Committee has the assistance of Mr. J. W. Clark, whose knowledge both of archaeology and stagecraft is unrivalled; while a host of specialists were ever ready with advice and assistance in regard to the smallest detail. Crowded houses and an overflowing treasury were the natural outcome of so excellent a performance.

### THE RECENT MINUTE ON THE SIMPLIFICATION OF FRENCH SYNTAX.

THE Minute of the French Education Department on the Simplification of French Syntax has excited nearly as much attention in England as in France. Apparently it has been, on the whole, welcomed. Several examining bodies of high repute have accepted it without reserve. One headmaster, at least, lost no time in directing his colleagues to put it in force immediately. Perhaps second thoughts may suggest a less favourable verdict. From the schoolboy's point of view one cannot help thinking:

Alas! regardless of their doom,  
The little victims play.

To take a simple example, there are eighteen possible ways in which, following the light of nature alone, it is possible to write the plural of *chou-fleur*, nearly as many, in fact, as the ways of turning *the* in German according to Mark Twain. Of these the Academy recognizes one as correct; the new Minute recognizes three. For the schoolboy, who mentally puts all possible plurals in a hat and draws out one at haphazard, this is an obvious gain; the odds against his being right are reduced from 17 to 1 to 5 to 1. But even the idlest candidate for a bare pass has got a step further, and, when he comes to think out the question, he will not unreasonably resent having to learn three right plurals instead of one. It is essential to bear in mind that the difficulties of an English schoolboy are quite different from those of his French cousin. Even when French is taught according to the principles of the most advanced reformers, the eye plays a more important part in the process of learning in the case of a foreigner than it can in the case of a native.

But, while deprecating hasty action in England, especially so long as the final court of appeal, the French Academy, reserves its judgment, a thoughtful critic is bound to look carefully into the reasons that have guided a distinguished body of French

scholars to conclusions at first sight so startling. If we read between the lines of the Minute, we recognize that they have been influenced, first, by the real difficulties presented by French spelling to children in the early stages of education, and, next, by the pedantic tendency of examiners to lay undue stress on exceptional forms—a tendency not confined to France. The general direction to examiners to avoid penalizing severely such mistakes as do not betray lack of thought or general intelligence seems to be the keynote. Hence, for example, the licence allowed as to the gender of words like *manœuvre*, *amour*, *Pâques*, &c., in different senses. Such distinctions are not necessary for a native till he meets the word in his general reading, which he may never do. If he belongs to the educated classes, he will pick them up unconsciously. The case of a foreigner is somewhat different. No educated Frenchman would confuse *un manœuvre* and *une manœuvre*. An Englishman, to whom French genders are a standing difficulty, needs to have the difference pointed out, though not at an early stage. His probable source of error is ignorance of the gender of the abstract noun *une manœuvre*.

Another principle running through the Minute is the elimination of certain differences of spelling not corresponding to differences of pronunciation. Carried to an extreme, this would land us in phonetic spelling; as M. Brunetière points out in the *Revue des deux Mondes* of September 1, *sin* would represent *sain*, *sein*, *saint*, *seing*, &c.—an inconceivably horrible conclusion. At present only a very thin edge of the wedge is inserted. The licence allowed as to the addition or omission of *s* in *cent* and *vingt* (not, of course, in *quatre-vingts hommes*, where *liaison* takes place) is, to a certain extent, justified, because, except in examinations, large numbers are almost always represented by figures. Another illustration is afforded by the variations allowed in forming the plural of borrowed and compound nouns. In these we recognize also the influence of a third principle, the desire to accelerate a natural process already at work in the language. It is well known that there are three stages in the treatment of foreign words that have found their way into French. Some, like *redingote*, *bifteck*, have put on a French dress; others, like *ticket* (familiar to visitors to the Exhibition), *wagon*, *tramway*, have retained the English spelling, but are completely naturalized, and, of course, take the plural ending. There is a third class, containing many Latin words, like *exéat*, and it is to this class that the new rules apply. It is not unreasonable to suppose that the hospitality extended to foreign residents will be more and more freely granted to foreign words, and that usage will consecrate the addition of *s* permitted by the Commission. The case of compound nouns is somewhat similar, but the rules are necessarily still somewhat complicated; and, as is pointed out above, it is doubtful how far an Englishman will gain by availing himself of the alternatives allowed. Already several words like *portemanteau*, *garderobe*, have lost their hyphens, and form their plural as if they were simple nouns. It is, then, not inconsistent with the spirit of the modern language to extend the same treatment to *abat-jour*, *timbre-poste*, *coffre-fort*, &c.; but at present the process of transformation has gone on but slowly, and we may well have to wait a considerable time before the innovations have secured *droit de cité*. The indiscriminate addition of *s* to proper names is a reversion to an earlier usage, surviving in certain cases, and may possibly find favour.

When we come to syntax proper, we are on more delicate ground. Naturally space permits, as in the case of the accidence, the selection of only a few typical examples. The licences allowed in the application of the first concord do not seem always to tend to precision of thought, and might not commend themselves to scholarly teachers. For example, the sentence *Le chat ainsi que le tigre est un carnivore* suggests a particular order of thought. We have mentally classified the tiger as a carnivorous animal; we now put the cat in the same class. The alternative allowed by the Minute, *Le chat ainsi que le tigre sont des carnivores*, is a different proposition, implying a different mental standpoint. It would be a serious loss if the distinction were ignored in the higher classes of a school. Again, the delicate distinction between *sirop de groseille* (currant syrup) and *sirop de groseilles de Bar* (syrup made from Bar currants), to which M. Brunetière calls attention, may not in itself be of grave importance, but the principle could hardly be extended to *une forêt de chênes* and *une table de chêne*. Nor, as the same writer points out, is the difference between *avoir l'air doux* and *avoir l'air douce* an idle one—to ignore it entails some loss of precision.

The most important concession made in syntax, the permission to neglect the concord of the past participle of transitive

and pronominal verbs—a concession which formed the subject of long debates in the Commission—seems, if it is not presumptuous for a foreigner to say so, as unnecessary as it is revolutionary. No doubt some of the more delicate applications of the rule, such as those affecting the inflexion of *valu*, are “caviare to the general”; but the main principle is simple in the extreme, and—as for example, in phrases like *La lettre que j'ai écrite*—affects the spoken as well as the written language. Even more startling is one of the reasons given for this licence. It will facilitate, it is said, the learning of French by foreigners. Surely a very poor compliment to the intelligence of the rest of Europe! One wonders whether, considering that the first principle of international reciprocity is *do ut des*, it is a delicate hint to Englishmen to make some concession in return. Shall we, for example, sacrifice the initial *h* in accordance with the usages of one section of society or the final *g* in deference to the affectations of another?

It is devoutly to be wished that the recommendations of the Commission may be somewhat restricted in their influence, that the Academy may put down its foot on any attempt to trifle with a great work of art like the French language, and that the effect of the Minute may be confined to the praiseworthy object of checking pedantry on the part of the examiners of elementary schools and the lower classes of secondary schools. H. W. EVE.

## CORRESPONDENCE.

### PUBLIC-SCHOOL TRAINING.

To the Editor of the Educational Times.

SIR,—With the advance of the times, and the altered conditions existing in connexion with the struggle prevailing amongst the sons of the upper-middle class to provide themselves with employment, it is perhaps as well that our public schools should amend and alter their curriculum; for, as it now stands, and has stood for years past, the training vouchsafed unto the sons of “gentlefolk” does not eminently fit them to make their way in the world successfully. And it is not only the scholastic side of the question which counts, but also the social side.

At Marlborough, Fettes, and other public schools it has been for some years past recognized in a practical manner that, however great may be the veneration of the headmaster and classical masters for the dead languages, their acquirement is not a matter of necessity—unless, indeed, a boy intends to compete for a scholarship, or to take orders or his degree.

But to those who propose entering the Army, or the more lucrative paths of commerce, the classics are—especially in the latter case—unnecessary, as I can say from personal experience. Encouragement of the study of modern languages is readily given in the Army. Young officers of linguistic promise are afforded every facility for perfecting their knowledge of French, German, Italian, Persian, and Russian; for, on passing a preliminary examination, leave of absence (technically known in the Service as “language leave”) is allowed to officers who may wish to proceed to any country to make themselves perfect in the language selected. In India, the study of the frontier dialects, such as Pushtu and other hill languages, is taken up by many Staff Corps officers. And, as a handsome reward is given by the authorities, the successful student, after paying his professor's fees, has a substantial balance left to his credit.

It will, doubtless, be urged by the scholar who follows somewhat obsolete methods that a study of the dead languages is necessary as a groundwork. There can be no difficulty in upsetting this theory. In fact, the shortest answer is that the time spent in acquiring this groundwork would be better employed by the pupil in tackling the languages which he desires eventually to acquire. It is satisfactory to find the modern side, or modern school, so greatly in evidence at the majority of our public schools. But why should not the modern-side system be more general throughout the curriculum of our schools? Why not, at the outset of a boy's school career, let him eschew such subjects as Latin, Greek, and Divinity, until it is settled that he is to embrace one of the callings to which those subjects apply? To a boy who is destined to become an officer in the Army, or to a youth who has it in his mind to be “something in the City,” of what use is a knowledge of Homer and Virgil? And, again, to those who propose making the intricate and varied paths of commerce their future aim, of what avail is the study of Divinity or Xenophon?

There is also a word to be said about the way in which languages are taught. The method employed is not precisely practical. Would it not be possible for the French and German forms at our schools to have intercourse with German and French boys? Though national proclivities might lead to boyish disputes and bickerings, the acquirement of a foreign tongue need not be interrupted even by disputes. As regards mathematics, they, fortunately, have always received due consideration.

Again, the general tone and morale of a boy, his reliance and sense

of adaptability, should be serious items in the curriculum. A lad takes his tone as much from the masters as from the elder boys. I would advocate more social mixing, of a discreet nature, between the boys and their masters. Judiciously carried out, and provided the masters themselves are of the requisite stamp, such a course would, I imagine, prove distinctly beneficial. Many boys, on joining their militia battalion, or on going to the University, are most unpleasant young cubs. They are a source of discomfort to themselves and to their friends and mentors. But, if, whilst at school, they have had the awkwardness, uppishness, and rough angles of extreme youth rubbed off, they would start the world free from the drawbacks of hobbled-hoyhood.

GEORGE CECIL.

#### EXAMINATION DATES.

To the Editor of the Educational Times.

SIR.—I have often thought, and so have other teachers whom I have consulted, that the College of Preceptors would be studying the interests of many schools, without detriment to its own interests, if it held a Certificate Examination at the end of the Lent Term, either instead of or in addition to the present summer examination. With an examination at the end of each term, the requirements of all schools would be adequately met, and the Easter examination would, I believe, prove a special boon to many schools. The two winter terms could be devoted to regular work for the examination, and the summer term could be utilized for various special purposes. The Lent term, when football has become "stale," would be admirably adapted to preparing for examination. Easter is a far better time for examination than the short days of Christmas or the hot days of midsummer, and the results would be ready for the midsummer Prize Day. At Christmas the examination is so arranged as not to clash with the Cambridge Locals, and hence there is a comparatively short time for work after the long midsummer vacation, and an awkward interval between the examination and the Christmas vacation. The examination might either commence on the Tuesday nearest to March 11, so as to precede the earliest possible date of Holy Week, or—better still—be varied so as always to precede Holy Week, and yet never be later than the twelfth week of the Lent term. Such an arrangement would suit us here "down to the ground," and from the unanimous opinion of the many teachers whom I have consulted I am led to believe that it would be equally acceptable to many other schools. At least, the question is well worth ventilating, and I shall be greatly obliged if you will kindly insert this letter.—Yours faithfully,

WM. IRELAND.

Lucton School, April 13, 1900.

#### MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held on November 14. Present: Dr. Wormell, Vice-President, in the Chair; Mr. Barlet, Miss Crookshank, Mr. Bidlake, Mr. Charles, Miss Day, Mr. Eve, Rev. Dr. Hiron, Miss Jebb, Mr. Ladell, Rev. R. Lee, Mr. Montgomery, Mr. Pinches, Rev. Dr. Robson, Dr. R. P. Scott, Rev. J. Stewart, Rev. J. E. Symns, and Rev. J. Twentyman.

The minutes of the last meeting were read and confirmed.

The Secretary reported the state of the preparations for the forthcoming Winter Meeting for Teachers to be held at the College in the first fortnight in January.

The Report of the Examination Committee was adopted, and the following were appointed Examiners in Physiology:—Dr. A. News-holme, M.A., and Professor R. H. Ainsworth Davis, M.A.

The following persons were elected members of the College:—

- Mr. R. Cooke, A.C.P., Archbishop Abbot's School, Guildford.
- Mr. F. T. Leighton, A.C.P., 4 Cambridge Crescent, Edgbaston, Birmingham.
- Mr. A. Snape, A.C.P., Collegiate School, Lapford, N. Devon.
- Miss K. Stevens, Carlisle House, Dartmouth Park Hill, N.W.
- Mr. M. F. Walker, A.C.P., 20 Pemberton Road, Harringay, N.

The following books had been presented to the Library since the last meeting of the Council:—

- By Mr. E. E. SPEIGHT.—Thomson and Speight's Junior Temple Reader.
- By E. ARNOLD.—Arnold's Continuous Story Readers, Grades I., II., III., and IV.
- By G. BELL & SONS.—Pendlebury and Beard's Commercial Arithmetic, Part I.
- By A. & C. BLACK.—Woodstock ("Sir Walter Scott" Continuous Readers).

## FORECASTS AND COMMENTS.

December 1, 1900.

THE Certificate Examination of the College of Fixtures. Preceptors, and the Junior Forms Examination, will begin on Tuesday next, December 4.

\* \* \*

THE Third of the Winter Meetings for Teachers, conducted by the College of Preceptors, will take place at the College, Bloomsbury Square, from the 1st to the 9th of January. The programme will include short series of Lectures on "Principles and Practice of Education," by Mr. P. A. Barnett; on "The Teaching of Mathematics," by Prof. Hudson, with supplementary lectures by Mr. A. Sonnenschein and Miss Findlay; and on "The Teaching of Modern Foreign Languages," by Mr. H. W. Eve, Prof. Strong, Mr. S. Barlet, and Mr. W. C. Brown. There will also be single lectures on "Discipline and Form Management," by Professor Withers; on "The Development of the Moral Nature of Children," by Professor Earl Barnes; on "The Choice of Studies," by Dr. J. J. Findlay; on "Observation of Children," by Dr. Francis Warner; on "The Teaching of Reading," by Principal Burrell; on "The Teaching of History," by Mr. W. M. Childs; on "The Teaching of Geography," by Mr. E. Barkby; on "Ruskin and Education," by Mr. E. L. Paton; on "A Recent Educational Reformer," by Mr. J. Russell; and on Tennyson's "In Memoriam," by Mr. H. W. Eve.

\* \* \*

THERE will be in all twenty-two lectures, which will occupy the mornings and the early evening hours of each day; the afternoons being taken up with visits to important educational institutions in easily accessible parts of the metropolis.

\* \* \*

THE plan of the programme, following that adopted at the previous Winter Meetings, is to deal in a general way with the principles underlying the practice of education; and, while covering a considerable range of school subjects, to concentrate attention on two main departments of study. The treatment of physical science is provided for in a two days' Conference at the South-West London Polytechnic (in connexion with the Technical Education Board of the London County Council) to which the teachers attending the Meeting are admitted.

\* \* \*

ON December 4 and 5 the London School Board will hold its annual preliminary examination for scholarships. Fifty-eight scholarships and exhibitions, as well as a Sarah Terry Prize, will be awarded as a result of this examination.

\* \* \*

AN examination will take place at Marlborough on December 5 and 6 for fifteen foundation scholarships of the annual value of £30, confined to the sons of clergymen. Applications for particulars should be made to the Bursar.

\* \* \*

AN "Occasional Lecture" will be given at Bedford College, London, on December 6, by the Dean of Ely, at 5 p.m. The subject will be "Alan de Walsingham, Prior and Master of Ely Minster." The lecture will be illustrated by lantern views.

\* \* \*

ON Friday, December 7, the Hon. E. Lyulph Stanley, Vice-Chairman of the late London School Board, will give an address to the metropolitan Section B of the Teachers' Guild on "The

Government Secondary Education Act." The lecture will take place at the North London Collegiate School for Girls, and will be open to all.

\* \* \*

A GENERAL CONFERENCE of the Teachers' Guild will be held at Brighton on January 9 to 12.

\* \* \*

THE next meeting of the British Child-Study Association will be held on December 14, when Miss Young will read a paper (followed by discussion) on "The Elementary-School Girls' Notions on Social Economy."

\* \* \*

ARRANGEMENTS have been made for a Holiday Course for English Teachers to be held at Marburg, beginning on January 3, 1901. Prof. Kühnemann, of Marburg University, will lecture three times a week on "Die Blütezeit der deutschen Litteratur"; and Herr A. Cocker will hold classes in German conversation (based on phonetics) four times a week for beginners, and four times a week for more advanced students.

\* \* \*

LECTURES will also be given at the Marburg meeting for English students from half-past four to half-past seven on every Wednesday from January 9 to March 27. The lecturers will be Profs. Dr. Below, Dr. Schröder, and Dr. Natorp. These lectures are so arranged that those delivered on the first three Wednesdays, *i.e.*, in the month of January, will form a complete course in themselves. Applications for these courses can only be received up to December 14. All communications should be addressed to Herr A. Cocker, Villa Cranston, Marburg a.d. Lahn.

\* \* \*

THERE is talk of memorials to Sir Thomas Dyke Education Acland and Max Müller, of Oxford, and to Henry Gossip. Sidgwick, of Cambridge; whilst the lists are still open for Sir Archibald Geikie and one or two more. The honourable dead, like the living poor, are always with us: it is a saving clause in the contract of life.

\* \* \*

THERE is talk of yet another English University. On November 6 Lord Barnard formally opened the new science buildings, costing over £4,000, attached to the North Eastern County School, Barnard Castle. The Bishop of Durham and others were present. Lord Barnard, in the course of his speech, advocated the endowment of a University for the North of England similar to the Birmingham scheme.

\* \* \*

IN memory of the late Prof. Thomas Jones, of Manchester, who died at Springfontein while acting as chief surgeon to the Welsh Hospital in South Africa, Mrs. Jones has founded a scholarship at the Owens College, Manchester, of the value of £100. Candidates must be graduates in medicine and surgery of the Victoria University, or have passed the Final Conjoint Examination of the Royal Colleges of Physicians and Surgeons, and must have spent at least three years of their course of medical and surgical study at the Owens College. The scholarship will be awarded triennially.

\* \* \*

ONE of our daily contemporaries has been nursing a correspondence on the question as to which is the oldest of our public schools. If it were asked where were schools first established in England—the Druids being barred—one might answer at once: Canterbury and York. As a matter of documentary evidence in regard to our existing schools, the order of precedence is, perhaps, as follows:—Warwick School, 1066; St. Peter's School, York, 1090; St. Albans Grammar School, 1117; Wells Grammar School, 1236; Winchester, 1387; Wantage, King Alfred's School, reign of Henry V.; Eton, 1441; City of London, 1442; Magdalen College School, Brackley, 1447; Reading School, 1485; St. Paul's, 1509; Nottingham High School, 1513; Manchester Grammar School, 1515; King's School, Canterbury, 1542; Bedford Grammar School, 1552; Christ's Hospital, 1552; Tonbridge, 1553; Tideswell, 1560; Merchant Taylors', 1561; Bedford Modern School, 1566.

£7,000 has been subscribed in augmentation of the £5,000 presented to Aberdeen University by Mrs. Fletcher, of Hampstead, for the purpose of founding a Chair of History in the University. A further sum of £4,000 is needed in order to make up the total which a Scottish University regards as necessary for the endowment of a professorship.

\* \* \*

NEXT year, the year of Glasgow's International Exhibition, Glasgow University will celebrate the ninth jubilee of its existence. After St. Andrews, Glasgow is the oldest University in the North. The proceedings, which begin on July 24, will last three days, and a feature will be the delivery of speeches on three famous sons of the University—William Hunter, M.D., the great anatomist, Adam Smith, and James Watt; Dr. Hunter being dealt with by Prof. Young, Adam Smith by Mr. A. J. Balfour, and Watt by Lord Kelvin. In all £3,000 will be spent on the celebrations.

\* \* \*

A NEW County School has been opened at Pontywan, near Risca, Monmouthshire. This is the last of the schools to be founded in Wales and Monmouthshire under the Intermediate Education Act. The Welsh revolution in higher and secondary education is now practically accomplished.

\* \* \*

VICTORIA UNIVERSITY has now decided to examine students presenting themselves from recognized theological colleges, with a view to graduation. This is practically the same policy which has already been adopted by the University of Wales. During the discussion on this subject by the University Court, Dr. Hopkinson, the Vice-Chancellor, ridiculed the notion that the proposed course would necessitate the application of religious tests.

\* \* \*

THE women students of Paris who registered themselves at the various faculties last month are thus distributed:—in the Faculty of Medicine 104, of whom 21 are French and 83 foreigners; in the Faculty of Letters, 86 Frenchwomen and 70 foreigners, chiefly Russians and Americans; in the Faculty of Sciences 12, of whom 6 are French, 4 Russians, 1 German, and 1 Norwegian; in the Faculty of Law 2 only, both Russian. At the School of Physical Sciences (where a year's preliminary work is done before the students pass on to the Faculty of Medicine) there were 8 entries, 6 Frenchwomen and 2 foreigners. The total number is 282.

\* \* \*

LORD ROSEBERY will doubtless be glad to hear that a company of one hundred cadets, selected from some hundred and fifty candidates, has just been formed at the Merchant Taylors' School and attached to the London Rifle Brigade. The playground is used for special military drill on Wednesday afternoons, and an armoury has been fitted up in the basement. Besides making a grant for preliminary expenses, the Merchant Taylors' Company have given the uniforms, and the boys are called on for small subscriptions—an entrance fee of ten shillings and a terminal subscription of five shillings. The rejected candidates have, for the most part, been placed in a "reserve."

\* \* \*

UNDER the will of the late Dr. D. J. Leech, of Manchester, £10,000 is to be given to the authorities of the Owens College for the endowment of a Chair of Materia Medica and Therapeutics.

\* \* \*

At the end of October the Fellows of Peterhouse, Cambridge, elected as their Master, in place of the late Dr. Porter, Dr. Adolphus William Ward, Litt.D., formerly Fellow of the College. In 1866 Dr. Ward became Professor of History and English Literature at Owens College, Manchester, and in 1870 was elected Principal of the College, which appointment he held until 1897. On his resignation he received the freedom of the City of Manchester. He was Vice-Chancellor of Victoria University from 1886 to 1890, and again from 1894 to 1896.

Appointments  
and  
Vacancies.

Dr. Ward translated Curtius's "History of Greece," which was published in five volumes, and edited the "Globe Edition" of Pope's poetical works. He is the author of a history of English dramatic literature to the death of Queen Anne, published in 1875, and he wrote for the "English Men of Letters Series" lives of Chaucer and of Dickens. He also was a contributor to the "Dictionary of National Biography" and the "Encyclopædia Britannica."

\* \* \*  
THE RIGHT HON. F. MAX MÜLLER, Corpus Professor of Comparative Philology at Oxford, died on October 28. The Chair was virtually created for him, and his name appeared in the deed of foundation. After he had lectured for a quarter of a century at Oxford, Max Müller resigned his Professorship, with the intention of returning to Germany and devoting his remaining years to literary work. Invitations reached him from several German Universities, and even from Florence; but he returned to Oxford after less than two years' absence, the authorities offering to appoint a deputy and charging him at the same time with the editorship of a large literary undertaking, a translation of the "Sacred Books of the East." Of this work fifty volumes have been issued.

\* \* \*  
THE Principalship of Liverpool College has been vacated by the Rev. F. Dyson (formerly Headmaster of the Godolphin School, Hammersmith), who has been appointed Junior Dean and Fellow of St. John's College, Cambridge.

\* \* \*  
MR. OLIVER ELTON, Lecturer in English Literature at Owens College, has been selected for the Professorship of Modern Literature at University College, Liverpool, in succession to Mr. Walter Raleigh, who was recently appointed Regius Professor of English Language and Literature at Glasgow.

\* \* \*  
MR. A. W. HUGHES, F.R.C.S., Professor of Anatomy at King's College, London, who directed the Welsh Hospital at Springfontein and Pretoria, must be added to the long list of victims of the South African War. He went out last June, having volunteered at a moment's notice to supply the place of Prof. T. Jones, the previous director of the hospital, who also died at the post of duty. For a time he was Professor of Anatomy at Cardiff, and on leaving for London he collected for University College Hospital there a sum of £300 towards the provision of a collection of anatomical specimens to take the place of his private collection, now at King's College Hospital.

\* \* \*  
MR. R. C. GILSON, M.A., late Fellow of Trinity College, Cambridge, assistant-master at Harrow, has been appointed Headmaster of King Edward's School, Birmingham, in succession to the late Rev. A. R. Vardy.

\* \* \*  
MR. C. E. BROWNRIGG, M.A., has been appointed Headmaster of Magdalen College School, Oxford. Like Mr. Gilson, he was educated at Haileybury, under Dr. Bradby. He held for a short time a temporary post as assistant-master at Eton, and was then appointed second master or usher at Magdalen College School, which post he has retained till the present time. Mr. Brownrigg is the author of a book of selections entitled "Latin Prose of the Silver Age," and of other educational works. He edited for some time the *Oxford Magazine*, and he has been a not infrequent contributor to our own columns.

\* \* \*  
MR. B. D. TURNER, M.A., Rector of Kelvinside Academy, formerly assistant-master at Marlborough, has been appointed Headmaster of Loughborough Endowed Schools, in the place of Mr. C. W. Kaye, now Headmaster of Bedford Grammar School.

Two valuable contributions to English history in the current number of the *English Historical Review*—with parallels for the present time, as all true history has—are "Colchester and the Commonwealth," by Mr. J. H. Round, and "The Foreign Policy of

England under Cromwell," by Mr. Basil Williams. Mr. Round distinguishes very clearly amongst the "royalists" who fought for Charles in 1642 the "loyalists" who crossed over to them in 1647, in the interests of public liberty, and the "moderate Parliamentarians" who fell away from Cromwell later on.

\* \* \*  
WE note once more with pleasure the contributions of trained historical women students in the "Notes and Documents" section of the same *Review*. Miss Bateson gives us the third part of her "Laws of Breteuil," and Miss Eva Scott makes an interesting contribution on "The Marriage of Prince Rupert."

\* \* \*  
A NOTEWORTHY new publication is the "Histoire de France" (Hachette), by Ernest Lavisse, assisted by thirteen competent authors. We have the first of sixty-four *fascicules*, containing ninety-six pages, from which it is possible to infer the contemplated scale of the entire work.

\* \* \*  
MESSRS. LONGMANS are publishing a new edition of Max Müller's "Ramakrishna: His Life and Sayings," the first edition of which appeared in the beginning of last year. It is a book of material for the study of the evolution of religion.

\* \* \*  
ON New Year's Day the Cambridge University Press will publish the first number of a new quarterly to be called the *Journal of Hygiene*. It will be edited by Dr. Nuttall, Lecturer on Bacteriology and Preventive Medicine in the Cambridge University; Dr. Haldane, Lecturer in Physiology at Oxford, and Dr. Newsholme, Examiner in State Medicine in the Universities of London and Oxford, will give their assistance.

\* \* \*  
MESSRS. A. J. EVANS and D. G. Hogarth, Directors of the British School of Archæology at Athens, report the discovery of extraordinary prehistoric treasures in Crete in connexion with the work of the Cretan Exploration Fund. Their discoveries at Knossos throw into the shade all the other explorations of last season in the Eastern Mediterranean. A magnificent palace has been unearthed which is claimed to be the dwelling-place of Homeric kings and the sanctuary of the Cretan god of the Double Axe. There is ground for the belief that this building was, in fact, the Labyrinth of the Minotaur. All the palace archives have come to light, which, when deciphered, should contain a mine of wealth for archæologists. Various frescoes, vases, and statuettes have been found.

\* \* \*  
THE British School at Rome is to begin work this month. The Director, Mr. G. M. Rushforth, is already in Rome, and may be addressed at the British Embassy. Intending students are requested to apply to Prof. Pelham, Trinity College, Oxford, from whom all particulars as to admission, &c. can be obtained. The school is intended to promote the study, not only of classical history and archæology, but of mediæval history, art, and literature. The Director will be happy to explain the principal recent discoveries relating to ancient and mediæval Rome to any University graduates and members of the teaching staff of public schools who may be visiting Rome during the Christmas or Easter vacation. Those who wish to avail themselves of this offer are requested to communicate with the Director as soon as possible.

\* \* \*  
THE Oxford University Press announce the following amongst their forthcoming publications:—"Homer, *Odyssey*, Vol. II., Books XIII.-XXIV.," edited, with English notes, by D. B. Monro, M.A.; "Demosthenes, the Speech against Meidias," with introduction and notes by J. R. King, M.A.; "Thucydides, Book III.," edited by H. F. Fox, M.A.; "Euripides, *Hecuba*," by C. B. Heberden, M.A.; "A French Grammar," by A. H. Wall, M.A.; "A Historical Primer of French Phonetics," by Margaret C. Brittain; "The Oxford School History of England"; and "The Junior Euclid, Books III. and IV.," by S. W. Finn, M.A. Mr. Frowde will also publish a cheap edition of "The Treasury of American Sacred Song," selected and edited by W. Garrett Foster.

SIR ISAAC PITMAN & SONS will in future publish the well known "Attractive" Primers, Readers, &c., and other educational books, maps, charts, &c., hitherto issued by Messrs. C. A. Pearson, Limited.

\* \* \*

PROF. WEEKLEY, of University College, Nottingham, has in preparation a work to be entitled "The Revised French Grammar," incorporating the simplifications authorized by the recent decree of the French Minister of Public Instruction. The date of publication may be given approximately as January 15, in time for school use during the coming term.

\* \* \*

For the London University Examinations of 1902 several additions are being made to the "University Tutorial Series": Mr. W. J. Woodhouse, Lecturer in Ancient History and Political Philosophy in the University of St. Andrews, is editing the portion of Herodotus (Book IV., Ch. 1-145) prescribed for the Intermediate Arts Examination (this is the first time that this Book has been edited with English notes of an elementary character); Mr. A. H. Allcroft is engaged on Cicero's "Second Philippic," and Mr. T. R. Mills on Æschylus' "Eumenides," both prescribed for Intermediate Arts. The publication of these three books may be expected next February.

\* \* \*

MR. FISHER UNWIN is publishing "A Literary History of America," by Barrett Wendall, Professor of English at Harvard College. The history endeavours to define the ways in which the nation, character, and thought of America have diverged from those of England. Touching briefly on the seventeenth century, with a special chapter on Cotten Mather, it discusses the eighteenth century at greater length, with special chapters on Jonathan Edwards, Benjamin Franklin, and the American Revolution. The nineteenth century is treated in more detail, with special chapters on Brockden Brown, Irving, Cooper, Bryant, Poe, Emerson, Whittier, Longfellow, Lowell, Holmes, and Walt Whitman. The chief emphasis is laid on the literature of New England and its differences from that of the mother country.

### EDUCATION AT THE PARIS EXHIBITION.

At the monthly Evening Meeting of Members, held at the College of Preceptors on November 14, M. E. Sadler, Esq., in the Chair, the Rev. J. O. BEVAN read the following paper on the "Educational Exhibits at the Paris Exhibition":—

Education and Instruction and the kindred Third Group occupied the same building of the Champ de Mars on the west side—the Palace of Education and Instruction. A special exhibition of the Trade Schools of Paris was placed in the Pavillon de la Ville de Paris—Cours la Reine—at the right side of the Pont des Invalides.

The following were the classes:—French Sections, chiefly on the first floor, both official and private—important and complete: I. Education of the Child, Primary and Adult Schools. II. Secondary Education (of both sexes—for boys, classical and modern training; for girls, retrospective section of Schools of the Legion of Honour). III. Higher Education and Scientific Institutions. IV. Special Art Schools (design and music—French Section, ground floor, centennial collection of Prix de Rome). V. Special Agricultural Instruction (scientific and practical, including forestry and technical schools, and training in normal, technical, secondary, primary, and farm schools). VI. Special Industrial and Commercial Schools (retrospective section and annexe, Avenue de Suffren—samples from technical schools).

#### FRANCE AND HER COLONIES.

This exhibit was highly important. It was historical, comprehensive, well set out, beautifully shown forth in detail. The impression was left upon the mind that the organization of school work, whether by the State or private bodies or individuals, was complete, entering into various ramifications, the whole being reduced to a system, and the utmost skill and care exhibited in every part. Uniformity was the badge and sign everywhere displayed—precision, clearness, and finish met one at every turn. The exercise books were wrought out with the characteristic delicate spindle-shanked writing; neatness, almost painful in its regularity and monotony, succeeded unto neatness.

Recommendations were drawn up by the Commissioners at the beginning of last year, and were issued to school authorities in France. These dealt with questions of size, form, and shape, &c., best calculated to set forth to the best advantage the various objects exhibited. The

size of copy and exercise books was practically prescribed, so that uniformity should prevail. The result was most satisfactory, for it enabled the parts to be blended and arranged so as to constitute each separate exhibit a work of art. From a survey of the United States show one would presume that similar recommendations were put forth by the Commissioners for that country. As regards Old England, the usual happy-go-lucky conditions prevailed. The average Briton is so proud of his independence that he even glories in variety and want of harmony. It provides opportunities for the chanting his national carol, "Britons never shall be slaves."

In reference to the French show, the qualities were exhibited which have made France great in this particular kind of greatness; that have manifested themselves in her love of art, in the tasteful arrangement of her museums, in her elaboration of dress and ornament, in her love of organization, arrangement, painful detail—qualities that have manifested themselves politically in her power of recuperation after great losses and catastrophes, and in the strength and weakness of her colonial expansion, policy, and government.

[After speaking of the *écoles maternelles*, the agricultural schools, the associations for developing love of country, co-operation, social organization, helpfulness, and civics generally, the geographical, geodetical, and hydrographic surveys, and the centennial exhibit attached thereto, the Lecturer gave a more detailed account of the British exhibits.]

#### GREAT BRITAIN.

Great Britain occupied a somewhat humble position compared with her hostess, and, what is surprising, did not, at first sight, appear to advantage even by the side of our cousins from across the Atlantic—a fact partly explained by the circumstance that the material resources of the latter for the preparation and staging their exhibit exceeded by many times the amount set apart by our Government Commissioners. Herein it may be that an undue parsimony was shown by our keepers of the Exchequer. In connexion with this exhibit, as in the pavilion in the Rue des Nations, and in other ways, one felt that the greatest Empire on earth was not worthily represented. A specimen of our exclusiveness was manifested in the fact that our Royal Pavilion was opened only on certain days and at certain hours, so that intending visitors were often met with the shut door and a blank welcome.

It is undoubtedly the case that foreign visitors, from the Shah of Persia downwards, would be disposed to take us not at our own price as expressed in public and private demonstrations at home, but at such a valuation as would be suggested by the relative size and importance of the tangible objects set out before them in any world-show like unto this Exposition. But exhibitors need the support, countenance, and guidance of their Government. Not only so, but large contributions of money are necessary to enable the administrators to do justice to our importance as expressed in our productive and manufacturing skill, or in the educational side of our life. Looking unto the end, one may well entertain the opinion that a wise profusion—or, shall we say, a wise economy?—would have been exercised by Her Majesty's Government if the grant actually contributed had been multiplied manifold. We have reached such a stage in our national life, and are being pressed so hard by other nations, that it is of the utmost importance to settle within ourselves what we really can do well, and to manifest our full strength in the face of an ever increasing foreign competition.

Other circumstances which militated against our complete success in relation to the educational exhibit were:—(1) The conflict of administration in some departments; (2) the absence of organization in others. Thus, in this section, we had at work the Education Department, the Science and Art Department, and the Scotch and Irish Education Departments. Beyond these lay the spheres of action covered by the Universities, University Colleges, public and grammar schools, private schools, technical schools, and schools and departments controlled by voluntary and School Board agencies. It required great skill and knowledge to gather together a homogeneous and representative exhibit from such a motley group of bodies impressed by such various, and in some cases competing, energies. The way was partly cleared by the efforts which culminated, in the early part of this year, in the formation of an Educational Exhibition at the Imperial Institute. It is, perhaps, a fortunate circumstance that these exhibits, as a whole, were not forwarded to Paris, as certain specimens might have made the opposers scoff and the judicious grieve. Even so, it was difficult to make a selection that would truly represent what was best in each section. It must be allowed that, ultimately, this choice was made with discretion; furthermore, that the exhibit was set out with considerable skill and care. The representative of the Commissioners was always ready to be of service to those who solicited his aid. Moreover, hand-books were furnished affording valuable information about the history and development of the various forms of education existing in the British Isles. Probably from lack of funds, Ireland was represented in no other way than in the hand-book; but the work of England, Scotland, and Wales was writ large upon the walls.

The work done in Scotland seems solid and satisfactory; but an element of surprise was found in the omission of the Universities—which bulk so largely in the national life and supply to the schools so many of the teaching staff—to furnish any more public exhibitions of their existence and their work than that contributed by a few pictures.

Indeed, the exhibit on its literary side generally did not do justice to what we know to be the state of things in the Northern kingdom.

Wales showed a great advance (since the passing of the Act of 1889) in number of scholars, organization of work, and extension of University agencies; but the exhibit displayed traces of weakness in classification and detail. An important feature was the work projected by the University Colleges in reference to agricultural schools.

Certain considerations which a general survey forces upon us may here be set forth:—

I. In England the extension of primary education presents marked features. Within certain limits of literary excellence this form of education would seem to come up to the level of France, Germany, and the United States. It may be questioned, however, whether the variety of work and occupation and the early preparation of the pupils for the various manual industries are sufficiently provided for. The instruction imparted appears too restricted and booky; it seems to have a tendency to repress originality—to restrain observation and the use of the senses generally. Doubtless this is owing to the townified life led by many of the scholars, and to the prevailing idea that all knowledge worth the knowing must of necessity be derived from a book or from the teacher. In some sections it is also due to the inadequate, and even farcical, preparation of teachers called upon to instruct their scholars in other than literary subjects. Can it be supposed that any man can qualify himself to teach agriculture, let us say, by attending a short course of lectures on the subject, being instructed only by the deliverances of the lecturer or by the words of the text-book? Yet this is what is attempted in some quarters. "Getting up" a subject is substituted for its experimental study.

II. On the whole, the growing advance in the scheme and organization and results of our system of technical instruction is a subject for congratulation. Herein we really seem to be making progress—slowly it may be, but surely. Not, indeed, before the time; for it is beyond dispute that other nations—France, Germany, the United States, and, in some respects, smaller States, like unto Switzerland and Denmark—have seized the opportunity presented by our slowness and unwillingness to learn, and, by virtue of sheer pluck and perseverance, combined with sound methods of technical instruction, are outstripping us in the race (in many a product) on many a field of commerce. There is no doubt that, in the immediate future, our educational system must be shaped and conditioned so as to bring about something even over and above sound learning—viz., a change in certain of our national characteristics, such as our pride, our insular prejudice, our trade conservatism, our unwillingness to adapt ourselves to a wider outlook, to a deference to the wants, wishes, and even the prejudices, of our customers; to learn the lessons taught by our trade disputes, our fatuous strikes; by our tolerance of tyranny in the labour market, and of restrictions, whether on the part of masters or men, in respect of trade.

III. The third consideration worthy of mention is the one leading us to infer that our higher technical education is not based on a sound system of secondary instruction—in other words, that it has no bottom. This has been evident to thoughtful and far-seeing persons for some time. It is due to the fact that we somewhat suddenly woke up to the reflection that we were relatively losing ground in the race of giants, that other countries were far ahead of us in the attention they gave to the establishment of trade schools, technical colleges, and the like. It was also based upon the feeling that school work should be immediately profitable, and that the A B C of education—as soon as learned—ought to be readily convertible into bread and butter. It is, however, tolerably clear that the one thing needful, in this particular, is the training and discipline afforded to the mind, will, whole constitution of the student, by a broad and liberal secondary education, wherein the wisdom of the ancients, the lore of the middle ages, the keen and nimble wit of the scientist of to-day, shall alike combine to furnish a foundation, solid and four-square, to settle the principles that underlie not only all knowing, but all action, and to make the *man* before one attempts to make the chemist or the mechanic.

IV. The fourth consideration deals with the unique character of the public-school system. I do not use the word *excellence*, although in many ways it is excellent, because one cannot but be sensible of its limitations and drawbacks. The statistics and exhibits referring to public schools presented their claims and their doings in a satisfactory manner, and obtained suitable recognition at the hands of the jury. Of late the attention of French educationists has been closely directed to this system. Many have investigated matters on the spot, several have committed their impressions to print. Perhaps these gentlemen have been somewhat partial in their appraisal of certain schools as compared with others, but they unanimously testify to their appreciation of the fact that our system tends to make for independence, courage, and self-reliance far more than that followed in France. Englishmen (comparing French boys with their own sons and scholars) have long entertained that opinion, and we may perhaps be pardoned (in the midst of much international depreciation) if we can be permitted to taste what is a very substantial crumb of comfort. Naturally, to one intimately acquainted with the schools represented, it would appear that their doings and aspirations were better set out on paper than in

the actual history and condition of the school. Practice frequently lags far behind theory, and an enthusiastic headmaster can do much, in the way of description, to idealize his work and cast a glamour over every prospect. It is to be noted that certain schools under the control and management of an individual were represented as run on public-school lines.

V. The fifth consideration deals with the increasing ratio of female teachers in the schools of England and the States.

From the nature of the case, private schools, whether for boys or girls, were not largely represented; yet the attention of the jury was directed to their work, which, in certain cases, was honourably distinguished. It is to be hoped that the requirements of the new Education Acts will bring it about that a more formal organization shall be developed in this class of school, so that every institution may be brought under evaluation, and the bad weeded out from the good in respect both of the teacher and of all that essentially goes to make the school. Private schools, some time ago, were but a fortuitous concourse of atoms. Their promoters gloried in their isolation. Ordinary means having failed to bring them together, it remains to be seen what the iron hand of the State will find it possible to accomplish.

The Universities and University Colleges made a satisfactory show. Views of the colleges and statistics of their work were displayed in a very presentable form. One fact that strikes our Gallic neighbours is the requirement for residence on the part of our older Universities, which differentiates them very largely from most of their own institutions. Another feature that wins unbounded praise is the work connected with University Extension movements, which is happily, increasing in a satisfactory ratio, tending, as it does, to instruct and cheer that particular class of students who otherwise, perhaps, would have gone empty or silent on their way.

The Local Examination system, and that of University Settlements in the slums, also present to our friends marked features for congratulation. The display and working of the Clarendon Press must not be overlooked in this connexion.

#### UNITED STATES.

This exhibit was splendidly staged and set up. No expense had been spared to provide illustrations of the work accomplished; to display them in handsome hinged cases, where they were readily accessible; to translate the descriptions into French (a matter conspicuously neglected in our own section, a very noticeable and lamentable omission, due to paucity of funds); to furnish statistics of schools and colleges, specimens of work in all departments, selections of copy and exercise books. Altogether this exhibit was one of which the country might well be proud. Both Russia and the States—partly from their traditional friendship with France, partly (in respect of the latter country) from its natural go-ahead character—have put their best foot foremost, and made an admirable representation. The States also furnished gratuitously monographs on different subjects. Indeed, the number of official publications put forth from time to time, and the generosity their Government and the different States exercise in respect of them, are alike noticeable.

We are bound to congratulate our cousins on their show in this section, and, indeed, it all sections to which they contributed. They will carry many honours across the water. You will be prepared to hear of the progressive advance of education in that country, of its complete and formal organization, owing to each State making it a first charge on the national resources. This organization renders its work easy to do, easy to investigate. In this section we were likewise reminded of the munificent gifts to educational institutions bestowed by many of its leading citizens; of the enthusiasm displayed by its professors and teachers; of the freshness and originality of their work; of their striving—not always wisely, perhaps—after new methods, and the clothing of old ideas in new forms; of the manner in which they carry the University even into the woods, where, under the summer sun, they learn lessons from the trees and running brooks, as well as from the living voice declaiming the lessons of the modern laboratory, or the aphorisms of those who taught in the old time in the Porch or the Academy, or under the colonnade of some solemn temple.

The course of study prescribed for some of the series of public schools was well thought out, ultimately dividing into three lines—humanistic, scientific, economic—according to the bent of the scholar or his intended work in life. In some schools the practice of marking, place taking, has been entirely abolished. It is noticeable here, as in other countries, that the exhibit is mainly concerned with schools controlled by public authorities. There are private schools in the States, in Germany, in France; but they did not furnish many tokens of their existence. In France many of the girls are educated in convents, and, owing to the dislike of a section of the population to the State schools, where religion is not formally taught, certain religious communities have opened schools by way of competition; but, on the other hand, certain municipal authorities are arranging to open boarding schools for girls—a noticeable innovation. The feeling on the part of Frenchmen respecting the education of their boys is in favour of sending them to the municipal or State school. At least, so one gathered from educationists represented at the Exhibition.

Here are a few figures relating to higher education in the United States that are deeply significant. They testify to the number of Universities and colleges open in the years severally named:—1790, 17; 1850, 138; 1880, 394; 1895, 547. Thus in the far-away West does the tide of educational progress rise to a full flood.

When one comes to think of the educational aspect in general one naturally inquires: What new things has it shown to us? What new methods has it exhibited? And it furnishes the *raison d'être* of an address like the present to enlarge on any novelties that may have been presented either in matter or in form, rather than to give a mere catalogue of objects or a general characterization of the whole. Perhaps in this connexion the most noticeable feature alike in the United States, France, and Russia, is the development of Nature-study. This is a revulsion against bookish methods of education, and is thus readily understood and justified. We have all inveighed in our time against the separation of our pupils from the great world, their confinement within four walls, their forced dependence for all they learn upon the teacher's voice or the silent tongue of the book, for all they apprehend upon the judgment of the living man or even of the sage who died centuries ago. It is unnatural—almost cruel. It is hard for the teacher—harder still for the scholar. It has a tendency to lead the pupil to believe that all knowledge is contained within the narrow limits of a schoolroom or is confined to what others tell us in books. It tends to the disuse of observation, investigation, experiment, comparison, interchange of thought and action. It compels the student to learn what he does not like at times when he is disinclined to exertion; it represses effort at times when the senses are on the alert and the brain fully awake. It swamps originality; it makes us an inferior copy of those gone before; it converts the mind into a mere lumber-room, into which may be thrust, darkly and confusedly, the thoughts of others; turns our voices into a mere echo of the truisms and common-places of the dead past.

This may be a serious indictment; but it would be absolutely true if human nature did not contrive occasionally—by hook or by crook—to kick over the traces, and to find out new roads alone. One may try to expel this natural impulse by the ferule, but one will not wholly succeed. It is, then, only fitting that our relatives across the Atlantic, whose peculiar history and daily needs have thrust them back upon themselves, and stimulated to a high degree invention and resource, should have thrown themselves with zest into this study, and should be developing it into significant proportions. A class would be taken into the country or into the farm-yard. The children would be called upon to observe some natural object, such as a flower or an animal. This would then be made the starting-point for the educative process. On their return, by question and answer, the various facts concerning the object would be educed; writing would be begun by setting out its name in full on the board and calling upon the children to copy it, and so on with other processes.

Again, the children would be called upon to observe a tree and to continue the observation for days and seasons; to regard the clouds, the weather, the succession of day and night, the procession of the seasons. They would be invited to press the leaf, to gather the seed, to catalogue the natural products—by-and-by to plant the seed, to watch the processes of growth, to describe them in words, to delineate them alike with brush and pencil. In time they would be expected to discriminate the sequence of events, leading up to the formulation of the law or principle governing the growth of the object or the succession of phenomena under consideration. In some cases text-books would be entirely dispensed with—at all events, in early stages. The child would form his own text-book out of the notes set out every day recording his observations and impressions, these being ultimately bound together, so that he should become not only his own author, but even his own printer and binder. Original sketches in brush work would be occasionally called for by way of illustrating a story related to the child or an event brought under his notice. This course is supposed to stimulate originality and resource, and, indeed, it is surprising to see the effects produced, comprising much, of course, that is ludicrous, and, at first sight, worthless. It is, however, claimed that nothing in this connexion can be absolutely worthless, and with that dictum many of us will be found to agree. This may be styled the true heuristic method—a method certainly at least as old as Socrates. Such a system—any system, indeed—must be judged by its results. Many teachers in Paris were entirely sceptical as to the merits and satisfactory results of such a *régime*. The truth appears to be that it would be the best if certain requisites were furnished—viz., an infinity of time and opportunity, a teacher thoroughly instructed in his work and gifted with an endless store of enthusiasm and patient endeavour.

One can hardly conceive, in relation to this method, how any large number of pupils could be taught together or systematically, or that what we understand by discipline could be effectively maintained. It every child, e.g., was employed in dissecting a bird's nest and were permitted to exchange verbal notes with his neighbours; if, perchance, the spirit of mischief and fun should overpower the thirst for knowledge, patient investigation, and careful notation, what a Babel would arise, what a rag-and-bone shop would take the place of the orderly schoolroom! Every child would require from two to three

teachers, and life would be too short to enable a single lesson to be finished. Again, if one banished text-books altogether, where could the time be found, in our practical and surging life, to enable us, after burning our libraries, to gather together, in a short school course, all those accumulations of fact and principle which it has taken men centuries to discover and arrange? But that is stating the case in its worst and most exaggerated aspect. What is projected must of necessity fall far short of this end; and, although the scheme seems at first sight visionary and impracticable, we cannot fail to sympathize with its protest, with its inner principle—viz., that it is not the fact itself which alone is worth knowing, but the search after the fact and after the significance underlying the fact. These strengthen the powers of observation, and lead, by well marked and progressive stages, to the perfect development and education of the ideal man, with his observing and reflective faculties fully engaged and developed.

There does, then, appear to be a well authenticated indication—from what we see around us to-day—that all the great nations, in their educational systems, are not only desirous of enlarging their curriculum, of engaging a larger proportion of the population in the scheme of education, but of adopting more rational methods, and of suffering the teacher to enjoy greater liberty. In a word, there is an attempt made to humanize the instruction imparted, and to realize that it is not alone necessary to teach, but to make to learn. The lantern is used, not only to illustrate lessons in natural history, but in geography and history as well. Diagrams, pictures, coins, photographs are also employed. Excursions to historic sites, visits to museums and galleries, country walks are so treated as to have a scholastic value. More care is taken in the preparation of class-books and their illustrations. This is a fruitful subject. Of many text-books—having, too, a wide acceptance—it may be said that they bristle with errors. Take a combined geography and atlas, for example. You find the spelling of names of places different in the atlas and text; the length of rivers, the height of mountains set down as different in different pages; the results of recent discoveries not utilized. When complaint is made to the publishers you elicit the reply that alterations cannot be made until the existing edition has been worked off!

In relation to such institutions as the London School Board, and to such countries as France and the States or Canada, where a control is exercised over a large number of schools, the question of the choice and retention of class-books becomes of deep importance. Large numbers of a particular book may be in circulation; a better book might be produced; but questions of expense may arise leading to the retaining of the unsuitable book for some time.

Questions affecting the training of teachers arise from a survey of the normal schools of the States and the University system of Switzerland, but time does not admit of their description. The same lack forbids any reference to school books, furniture, developments of the lantern, and suchlike educational subjects.

The CHAIRMAN said that only those who had spent time in working at the Exhibition would be able fully to appreciate the width of view and sympathy of Mr. Bevan's paper. A visit to the Exhibition had been to many one of the great experiences of the end of the century. He was glad that the lecturer had taken as his title, "Education at the Paris Exhibition," and not "The Educational Section in the Paris Exhibition." There was all the difference in the world between the two ideas. Was there not sometimes a danger of our specializing our ideas and studies in education too much, and of our thinking of education as if it were confined to that important work which was done in the school or college, and which could be brought under the supervision or even control of the State? Education was a far wider, deeper, and more subtle thing than that; it was a complex of influences, an aspect of life. Anything which tended to professionalize education, or to induce people to think of it as a series of contrivances of teaching, or to dwell on the pecuniary rewards, in the form of "grants," which could be earned by excellence in this or that subject, seemed to him perilous, and apt to sterilize our ideas of what really was a great spiritual movement. The lecturer had avoided that, and had taken the Exhibition as a whole. It was the aspect of the whole Exhibition which threw light on the culture of the peoples who had contributed to it. The organization of the Exhibition seemed to him to reflect immense honour on the French nation. As he walked hour after hour through its immense area, nothing had impressed him so much as the fact that there were great intellectual ideas embodied in the organization of it. It would be impossible to exaggerate the impression (far from reassuring in many respects) made on the student's mind by this display of the world's activities and moral restlessness. It was like being taken up on to a great mountain and being suddenly shown the working of the world. One of the two or three finest things in the whole Exhibition was the British Pavilion, which contained a very fine collection of British masterpieces; and its arrangement was typical of national reserve and artistic refinement. But, as the lecturer had suggested, the really best things in education could not be exhibited. Things that mattered most in national life could not be nailed to a counter or put under a glass case. The British educational exhibit, which was marked by characteristic variety, was

remarkably successful, considering the difficulties the Committee had had to contend with; and great credit was due to our representative, Mr. Fabian Ware, who was ideally qualified to act as the expounder of the exhibit. In the Educational Section Germany did not exhibit at all, one reason being that the space assigned was considered by her Government insufficient to do justice to the greatness of the subject. The absence of Germany was a great blot on the completeness of the Educational Section of the Exhibition. The educational contribution of the United States was admirable, and the kindness of the Director, Mr. Rogers, added largely to the enjoyment of English visitors. It was intended to show the American exhibit in Manchester, and he would strongly urge English teachers to go and see it. The brushwork and illustrative drawings of the American children in the primary grades were particularly noteworthy as showing recent developments in this direction. Mr. Wilson's portfolios, illustrating Nature-study at the Philadelphia Normal School, would well repay study. The American exhibit, like the British, suggested the existence of that care for the liberty of the individual which is common to the two nations. The Exhibition had left some deep impressions on his mind:—(1) The immense importance, not simply in the material world, but in its effect on the imagination of our generation, of the victories of applied science. (2) All through the Exhibition organized knowledge showed itself as being more and more master of the situation, and he sometimes feared that there was a danger of those subtler and larger ideals which cannot be formulated in clear-cut logical expressions being crushed out from their right place by the pressure of more materialistic aims and by the prestige of useful achievements. (3) He could not help feeling that the effect of education over a large part of Europe had been to stimulate unduly the imitative faculty, to develop impressionableness to current ideas, and to lessen the power of resistance to what was temporarily in vogue. But in the intellectual standard of many parts of our education we were seriously behind. It behoved us, as a nation, to raise the intellectual standard of our education, and to bring more organized knowledge into the conduct of public affairs. Yet it would be disastrous if we failed to retain something at least of our traditional tenacity of principle, that adherence to old ways which we knew were good, but which we could not intellectually justify; and we must never forget that, though intellectual efficiency was becoming more and more necessary in human life, it was a perilous possession, unless it was founded on faith and moral discipline.

Mr. MILLAR INGLIS said that, when visiting an exhibition, one was apt to stray about examining curiosities, and it was difficult to devote the attention necessary to a thorough study of the various exhibits. Character was the chief thing in educational life, and he hoped that nothing in our educational system would be changed that would make it less the fact that the true Englishman was a man of sterling qualities—straightforward, of good character, grit, and capability.

Miss STEVENS thought that the first thing that struck a visitor to the Paris Exhibition was an overwhelming sense of the immensity of the work and the skill displayed in gathering it together. Her visit had had a profound influence on her life and teaching, and she had derived from it some valuable lessons, which she was now able to put into practice in her own school.

Miss CROMBIE had had a glimpse of the Paris Exhibition on her return from Switzerland, and had intended to limit the range of her visit to the Education Section and the National Pavilions. But the Exhibition was so overwhelming that she had found it impossible, in the space of a couple of days, to study anything thoroughly. One thing that specially delighted her was the way in which the people themselves enjoyed and appreciated their Exhibition.

A vote of thanks to the lecturer concluded the proceedings.

## REVIEWS.

### SOMERSET AND THE CHANTRY SCHOOLS.

*England under Protector Somerset: an Essay.* By A. F. Pollard. (Kegan Paul & Co.)

Mr. Pollard has amplified and developed the article which he wrote for the "Dictionary of National Biography" on Edward Seymour, first Duke of Somerset, Protector of England during part of the minority of Edward the Sixth. Edward was a child of nine at the time of his father's death. Dynastic precedent and the will of the King decreed that the minority should endure another nine years, and Seymour, as Lord Great Chamberlain, was named fifth in order of precedence amongst the executors of the royal will. Mr. Pollard reasonably urges that this fact is a strong argument against the charge which was subsequently made by Somerset's enemies that he had forged the document in question. He was the young King's uncle: it would have been no more than natural if he had been nominated to a position at least equal to that enjoyed by the Duke of Bedford, uncle of Henry VI., or the Duke of Gloucester, uncle of Edward V. At the same time he was not, like these two, personally of the royal

blood, so that the limitations of his authority as Protector are easily understood. Mr. Pollard gives us a clear and consistent account of the steps by which these limitations were rapidly removed. Somerset was unquestionably a very able man, with most of the essential qualities of statesmanship, but he was not sufficiently powerful, either by birth or by sternness of character, to establish his personal authority on a durable basis. His ambition marked out a course too high and difficult for his powers. No doubt the Council of Executors was from the beginning an unstable body, which must have led to administrative confusion, and even threatened a civil war. But the disturbance of Henry's settlements in Church and State, and the power reserved to the young King by statute to repeal all Acts which might be passed during his minority, undermined the authority of the Government which they were intended to confirm. The Protector aimed from the first at a religious revolution such as Henry himself had never contemplated. The opposition of Bonner and Gardiner was thus explained, if not justified.

Somerset found Parliament quite willing to pass Acts affecting the discipline of the Church in the sense of Protestant reform, on which his proclamations were based—as in the enjoining of communion in both kinds. He had the Privy Council at his back; the Star Chamber was equitable and even popular; the Protector was moderate, and scorned to resort to positive religious persecution, and the changes actually introduced were temperate and gradual. Still they did in some measure force the Church into Erastian and almost Calvinistic tendencies before the nation was prepared for the new models; and Somerset, with the best intentions, and with a real love of personal liberty, was not strong enough, or patient enough, to secure and maintain the general acquiescence of Englishmen in his administration. He stands out in history as an amiable failure. During his brief period of power

There was not a single execution for any kind of religious opinion, there was no torture, and the severest penalties which Somerset tolerated were the bearing of faggots by Anabaptists and the temporary imprisonment of two bishops for refusing to acknowledge the authority of his Government. It is only necessary to look before and after—to remember Fisher and More, Barnes and Lambert, Fetherstone, Abel and Powell, under Henry VIII.; Joan Bocher and George van Paris, under Northumberland; Cranmer, Latimer, Ridley, and a noble army of martyrs, under Mary; Campion, Robert Southwell, and the two hundred victims of Elizabeth's reign—to realize that the rule of Catholic sovereigns is not an unmixt blessing, and that the sway of a "rank Calvinist" may not be without its compensations.

That is Mr. Pollard's way of putting it. Perhaps the philosopher will remember Servetus, and the early records of the New Englanders, and smile.

Mr. Pollard does not endorse Mr. Leach's description of Edward VI. and his counsellors as "spoilers of schools." The question of the abolition of chantries is discussed in this volume with greater breadth of view than has been exhibited by some previous writers. He quotes from Foxe a very significant admission of Gardiner's:—"I that allow Mass so well, and I that allow praying for the dead (as indeed the Dead are of Christian charity to be prayed for) yet can agree with the realm in the matter of putting down chantries." It is useless in the face of such evidence to contend that these foundations for the repetition of masses for the souls of the departed were free from great abuses, or that they ought to have been preserved in the teeth of public opinion because they had some collateral uses. Gardiner had acquiesced in the abolition of chantries by Henry—who practically put the spoils in his pocket, though he professed to devote them to the purposes of war with France and the preservation and defence of the kingdom. Somerset, or rather the Act of 1 Ed. VI., c. 14, assigned the value of the abolished offices "to good and godly uses, as in erecting of Grammar Schools, to the Education of Youth in Vertue and Godliness, the further Augmenting of the Universities, and better Provision for the Poor and Needy." No doubt the contention of some has been that this excellent purpose was not carried out, and that the courtiers profited by the confiscations of religious endowments. Canon Dixon gives a list of chantries, colleges, &c., which were granted to private persons. Mr. Pollard points out that he does not draw the important distinction between free grants and sales, and does not show what proportion the number of grants which are mentioned bears to the total number of chantries abolished. The whole matter seems to be fairly considered in this volume. So far as Somerset's personal attitude is concerned, it must be remembered that his fall from power came too soon to allow him to carry out his declared intention—and the express provision of

the Act above mentioned—by refounding the schools which had been maintained out of the chantry funds.

#### HOMER AND HUMOUR.

*The Odyssey rendered into English Prose, for the use of those who cannot read the original.* By Samuel Butler. (Longmans.)

We welcome the appearance of this volume, which completes Mr. Butler's translation of the Homeric poems. Whatever may be thought of Mr. Butler's theories about the authorship of the "Odyssey" and the locality of the places therein described, we have no hesitation in declaring that he has rendered a real service to all who cannot read Greek and are likely to find the fashionable Wardour Street style of translation a bore. A little girl of ten peeped over the reviewer's shoulder as he was smiling at Mr. Butler's amusing version of *Circe and the pigs*. "How jolly it looks!" she exclaimed; "I should like to read that book." It is easy to cavil at the author's mannerisms; in a reader familiar with the Greek, his strange modernity arouses always a sense of incongruity, and not seldom "unquenchable laughter." But, even so, it may be that he is bewitched by some Minerva, and that, after all, Mr. Butler has as much right to be taken seriously as Mr. Butler has.

We often disagree with the rendering in details. Already in the first few lines of the poem we doubt his interpretation of ἀμόθεν (which, however, is not new); and we think that the young lady who, according to Mr. Butler, wrote the "Odyssey" should not be made to say "Bless my soul!" But it all makes delightful reading. Right or wrong, Mr. Butler is an admirable writer of common English idiom; and, as we have on occasions insisted, he is a humourist of no mean order. You can never say that he is consciously perpetrating a joke; but there is a perpetual naïveté about his English which is extremely amusing. "When I heard him I was in two minds whether or no to draw the keen blade that hung by my sturdy thigh and cut his head off, in spite of his being a near relation of my own." "The people here are very ill-natured, and some low fellow, if he met us, might say, 'Who is this fine-looking stranger that is going about with Nausicaa? Where did she find him? I suppose she is going to marry him.'" It is very curious to note what a weird effect the colloquial manner gives. The result is as though men in trousers and jackets and women in skirts and bodices were acting through the story of the "Odyssey." The more barbarous the actions described, the greater the shock produced by this quaint combination of primitive deed and latter-day language. The story of the shambles in Book XXII. is far more horrible here than we have ever found it before.

Has any one every found the death of Elpenor humorous? Yet who can restrain a smile when he reads Mr. Butler's version?

Even so, however, I did not get them away [from Circe's island] without misadventure. We had with us a certain youth named Elpenor, not very remarkable for sense or courage, who had got drunk, and was lying on the housetop away from the rest of the men to sleep off his liquor in the cool. When he heard the noise of the men busting about, he jumped up on a sudden, and forgot all about coming down by the main staircase; so he tumbled right off the roof and broke his neck, and his soul went down to Hades.

But, when the narrative takes a serious turn, the mannerisms cause all the pathos to disappear, and the translation is apt to become a burlesque; as may be judged from the meeting of the phantom Heracles and Odysseus in Hades:—

Hercules knew me at once when he saw me, and spoke piteously, saying: "My poor Ulysses, noble son of Laertes, are you leading the same sorry kind of life that I did when I was above ground? I was son of Jove, but I went through an infinity of suffering, for I became bondsman to one who was far beneath me—a low fellow, who set me all manner of labours."

The words we have placed in italics illustrate a kind of bathos to which Mr. Butler is very partial. It is effective enough in the lighter passages, perhaps, but it sometimes raises a laugh where it is no laughing matter. It occurs again in the address of Laertes to his son (Book XXIV.), whom he takes for a stranger:

His father shed tears, and said: "Alas! He has perished, far from his own country; the fishes of the sea have eaten him, or he has fallen a prey to the birds and wild beasts of some continent! Neither his mother nor I his father, who were his parents, could throw our arms about him and wrap him in his shroud, nor could his excellent and richly dowered wife Penelope bewail her husband."

But perhaps these things are an outcome of Mr. Butler's conviction that the "Odyssey" is not to be taken too seriously. His title-page contains a rather enigmatic quotation from a private

letter: "From some points of view," it runs, "it is impossible to take the 'Odyssey' seriously enough; from others it is impossible to take it seriously at all." Mr. Butler's point of view falls, would seem, under the "others."

Included in the volume are maps and pictures that support the author's ingenious theory of the Trapanese origin of the "Odyssey." It is pretty generally known by now that Mr. Butler maintains that the Thracian Island is Sicily, and that the "Odyssey" was written at Drepanum or thereabouts. It is one of his amusing paradoxes that the silence of critics means consent. But, until some theory can be constructed that will account satisfactorily for the language of the poem, and for the civilization therein described, it is impossible to consider the topographical proofs that he brings forward. We notice that Mr. Butler is unable to assign any locality to the Land of Endless Night, and dismisses the point by saying that it has no topographical significance. But, if so, why is it certain that the Lotophagi and Polyphemus have an ascertainable home? For the present we rest content in the belief that the local traditions sprang up at a time subsequent to the fictitious identification of the Thracian Island with Trinacria. We are certain that Mr. Butler will never win support for his views until he has himself written a book to prove that the Greek of the "Odyssey" could have been written at Drepanum, or has persuaded somebody to do it for him. The presumption against it is overwhelming, and cannot surely be brushed aside by the reference to the "Phocians" of Thucydides. As to the feminine authorship, we think it is unfortunate that Mr. Butler combines this theory with the other: it is so difficult to take it seriously, though we have a great respect for Mr. Butler in many ways.

#### EDUCATIONAL IDEALS.

*Education and the Philosophical Ideal.* By H. W. Dresser. (Putnam's Sons.)

The author tells us that his own education was unconventional. He was four years at school, but never attended any high or preparatory school; he was five years in business, travelled at twenty-two, and entered Harvard at twenty-four, where, no doubt, he followed Emerson's advice: "Room alone and keep a journal." He has evidently read widely in philosophy, and he is familiar with psychical research. Among his personal experiences are a realized presentiment of a railway accident, from which he was to escape uninjured, and the cure of an injured limb by the *vis medicatrix nature*. Both the merits and the defects of the book associate themselves with this account of his early life.

One cannot fail to be struck, among other things, by the importance he attaches to the "subconscious life," by which he means a great deal more than less metaphysical writers would include under the name.

Under this head [he says], as evidence of the soul's existence as an immortal spirit, functioning independently of matter, I class the higher impressions, guidances, spiritual insights, intuitions, and the power to communicate with other souls at a distance. I do not now refer to messages from incarnate souls, though guidance may sometimes come in this way; but rather to the soul's native ability to obtain knowledge by a quicker process than through the physical senses, or by the function of reason. Take, for example, the ability which many possess to describe the state of mind and body of people at a distance, to find their way by spiritual impression in a strange town or country, and the power to heal others at a distance through a purely spiritual process.

The reconciliation of science and religion presents no difficulty to him. "It is safe to say," he tells us, after putting aside orthodox religion, "that never in the history of thought has any revelation equalled in depth this discovery of the immanent God, whose presence modern science has declared. Few people in our day will realize the stupendous importance of this great revelation." Not many, probably, will accept the author's philosophical position, in which evolution, spiritualism, and intuitional philosophy are strangely combined.

Within one cup pour vinegar and oil,

And, look! unblent, unreconciled, they war.

But the hopefulness and earnestness of the book, and the practical wisdom of many of its suggestions, will appeal to those who demur to its reasoning. It is clearly pointed out that education is for the whole of life, and not for the intellect alone. "It means not merely self-expression, but self-knowledge, and the progressive application of this knowledge in conduct." The author is by no means in favour of universal secondary education, especially if conducted with German thoroughness. His preference, at any rate in many cases, is for "the elective plan, by self-

development and experiment"—a preference easily explained by the very different conditions of life in America and in Germany. There are some sensible remarks on the advantage of practical life over the school in cultivating concentration. We are all familiar with examples of boys whose school life has been a comparative failure, and whose real education has begun in the dissecting-room, the engineering workshop, or the counting-house, and of others whose first awakening to anything like thought has come from some course of reading begun almost at haphazard. There is wisdom, too, in his application of his views of the subconscious mind. Like all the best writers on education, he lays great stress on the atmosphere with which a child is surrounded in his earliest years, and on the need of keeping a happy mean between over-training and leaving a child too much to its own resources. "A boy," he says, "is not an animal, nor is he a picture to be painted." It is hardly necessary to say that Mr. Dresser is an enemy to anything like hurry or pressure. A very interesting chapter is that on Equanimity, the principles of which are subsequently applied to education. The book is, altogether, a suggestive one, both in itself and for the light it throws on the working of the *Zeitgeist*, in dealing boldly and earnestly, if not always on sound principles, with the great problems of existence.

#### PROF. RALEIGH AS A LITERARY CRITIC.

*Milton.* By Walter Raleigh. (Edward Arnold.)

Almost every generation of Englishmen since the death of our greatest classical poet has seen him discussed anew as a theme and text of literary criticism; but never has he been handled more frequently or more acutely than at the critical close of the nineteenth century. Prof. Raleigh follows suit after a score of recent students of "Paradise Lost," yet he is in many respects the freshest and most penetrating of a long line of commentators, indebted to his predecessors for very little that is valuable in his estimate, and drawing many striking ideas and illustrations from the undying epic of the Puritan Commonwealth as though it were a new masterpiece of the later Victorian epoch. It is because he has devoted a trained academic spirit of criticism to the study of a poet who is, as he sees, as alien and aloof from the mere catenary of English poets of the last three centuries as he was from his contemporaries. The Puritans themselves, who sometimes claim him, "not without many searchings of heart and sharp misgivings," as one of the fathers of their creed, have no title in his poetical genius or his intellect.

His influence on the destinies and history of our literature might be compared to the achievement of Napoleon while he was winning the victories that changed the map of Europe. He could not change the character of a people, nor perpetuate his dynasty; but nothing is as it would have been without him. Our literature is as hospitable as the Hindoo pantheon; the great revolutionary has won a place even in our creed. And the writer has this advantage, at least, over the conqueror and legislator—that he has bequeathed to us, not maps nor laws, but poems whose beauty, like the world's unwithered countenance, is bright as at the day of their creation.

That is vivid as well as acute; it attests the true greatness of Milton as a poet who stands by himself, without models amongst his forerunners and without a school amongst his coevals or successors, although in the mere ledger of our chronological annals of literature we may treat him as the centre of an "age" and the leader of a "group."

Prof. Raleigh vindicates by this small volume his claim to be reckoned as one of our closest, shrewdest, and most delicate literary critics. We are thinking not so much of his comparative textual criticism, of his search for origins and parallels, of his exegesis or his philological scholarship, but rather of the intuition and insight with which he discusses the style and diction of the poet, his dissection of Milton's blank verse, his recognition of its "elements of musical delight," his exhibition of its "close-wrought mosaic," his fine perception, in short, of the qualities of a thoroughly original master of the art of word-painting. The fifth and sixth chapters of this volume would suffice by themselves to establish Prof. Raleigh's position as a literary critic. If we make a second quotation, it is not to show the Professor at his best, but to illustrate a certain freedom in his manner which often helps him to put his point more attractively, though it sometimes detracts a little from the worthiness of his discussion.

It remains a paradox that Milton's, of all styles in the world—unapproachable in its loftiness, invented by a temper of the most burning zeal and the profoundest gravity for the treatment of a subject wildly intractable by ordinary methods—should have been chosen by a generation of philosophical organ-grinders as the fittest pattern for their

professional melodies, and that a system of diction employed by a blind man for the description of an imaginary world should have been borrowed by landscape-gardeners and travelling pedlars for the setting forth of their works and their wares.

"Organ-grinders" and "pedlars" are rough terms to apply to the makers of eighteenth-century verse, especially when the borrowing which is justly condemned has been illustrated solely by passages from Pope, Gray, and Thomson.

#### THE ELEMENTS OF PSYCHOLOGY.

"Stonyhurst Philosophical Series."—*Psychology, Empirical and Rational.* By Michael Maher, S.J. (Longmans.)

After a test of ten years' use, there is good reason for saying that Father Maher's introduction to the science of psychology—which he quite frankly treats as inseparable from mental philosophy and metaphysics—is still one of the clearest and most helpful text-books on the subject from the dualistic point of view, and at the same time one of the most scholarly and comprehensive. The first edition was published in 1890, and the book was specially intended as an aid to its author as Professor of Mental Philosophy at Stonyhurst College. Its qualities of lucidity and simplicity soon brought it into general use, and three editions were printed with little variation in the text. The new edition is the fourth, and Father Maher has taken the opportunity of revising it in the light of ten years' discussion of psychological science, in England, on the Continent, and in America. He has revised so thoroughly, and added so much to his original text, that the book assumes a much more important character as a student's manual, and may almost be considered in the light of a new work.

Father Maher's "Psychology" is a rationalistic and ratiocinative treatise on an empirical basis, the outcome of a deductive process applied to the introspective observation of the mental activities. The analysis of these mental activities results, for him, in the conception of the human mind as an immaterial being endowed with free will and rational activity "of a spiritual order." His theory of the connexion of mind and body is, therefore, entirely opposed to the monistic theory, which regards mind and body not as two distinct realities, but rather as two aspects or phases of one being. With this "new Spinozism," as it is sometimes called, from its affinity to the metaphysical teaching of the father of modern Pantheism, our present author will have no truck. He is a dualist of the school of Aristotle, whose Christian interpreters have been St. Thomas Aquinas and the mediæval schoolmen. He is content with Aristotle's definition of the soul as the primary determining or actualizing principle (*entelechia*) of a physical body which has the potentiality of life. Soul and body thus denote form and matter—the informing principle and the organic germ which is capable of being informed with life and energized. Father Maher's fundamental definitions come last in his book: he leads up to them very skillfully by the discussion of the phenomena of psychology, of the laws of sensuous and rational life. The student who has followed him in his discussion, and has failed to find a flaw in it, will have to accept his conclusion that "the human soul cannot be the result of the gradual evolution of a non-spiritual principle."

Self-consciousness, free-will, conscience, are all facts *sui generis* which could never have been produced by the gradual transmutation of irrational states. In a word, all the proofs by which we established the spirituality of the higher faculties, and of the soul itself, demonstrate the existence of an impassable chasm between it and all non-spiritual principles, whether of the amoeba or the monkey. The special intervention of God must, therefore, have been necessary to introduce into the world this new superior order of agent, even if He had previously directed the gradual development of all non-spiritual creatures by physical laws.

The reader will understand the basis on which Father Maher has built. We need not say that there is no theology in his book, beyond the simple denomination of the creative Agent who has added the informing principle to the organic matter.

#### ETON.

*Eton.* By A. Clutton-Brock, B.A. (Bell & Sons.)

This history of Eton, while it tells quite agreeably and sufficiently the tale of the most renowned of the English public schools, suggests the larger and more important question as to the value of the whole English public-school system. For Eton may fairly stand as the representative of all, and, if it has not been the model of the others, it may certainly claim to represent the sum of the virtues and vices which are native to this very

distinctive system of education. In Eton tradition, prestige, devotion have achieved their highest results, and in Eton education, in its technical sense, has been, perhaps, most scandalously neglected. On the one hand, its merits are summed up in the often-quoted phrase of the Duke of Wellington as to the Battle of Waterloo; and, on the other hand, Mr. Clutton-Brock informs us of the miserable scheme of studies, in which not only was mathematics an extra, a sort of ornamental accomplishment, like guitar playing in a ladies' school, but even in the classics the list of authors was so arranged that the *Edinburgh Reviewer* of 1830 was able to conclude his indictment of Etonian instruction with these words:—"The Etonian who goes to either Cambridge or Oxford has not read a single book of Herodotus, Thucydides, Xenophon, Livy, Polybius, or Tacitus. He has not read a single Greek tragedy or comedy." It is clear then that, so far as the learning goes, the Etonian system was not merely bad—it might fairly be termed infamous; and in 1830 it would not have been difficult to represent the Royal College as an institution which vacillated between a farce and a scandal. And yet with the average Englishman Eton is a subject of pride, and English history shows that the Etonians have borne no small share in the great work of the Empire at home and abroad.

The solution of the puzzle is plainly to be sought in the distinction between "instruction" and "education." Of the former Eton gave very little, and that little was indifferent enough; but in the worst days it never failed to impart to young Englishmen the tradition of the English race. The Etonian left the College (and the University, very likely) lamentably deficient in information of any kind and every kind; but, unless he happened to be born hopeless, Eton had stamped upon him an unmistakable character. He was fitted by a peculiar training both to obey and to rule, and these lessons outbalanced all defects. He was ignorant of the height of mountains, but he dared to ascend the most perilous heights; he understood no French, but he understood how to conquer the French—in theory he was an imbecile; in practice a philosopher, an omniscient ignoramus. Now, the experiment is being made of reconciling education with serious and competent instruction, and there is every reason to hope that two things, in no way opposed to one another, may be combined. The Etonian of to-day has to acquire the abstruse art of the quadratic equation, the despised dialect of Paris; but so far there are no signs that these perilous accomplishments have impoverished his soul. And, after all, brave and good men have been able to spell.

## GENERAL NOTICES.

### CLASSICS.

"Latin Classics." Edited by the Rev. F. Marshall, M.A.—*Cæsar de Bello Gallico VI.* By the Rev. A. E. Humphreys, M.A. (Gill & Sons.)

Here is another illustrated *Cæsar*, provided with a "*Cæsar's grammar*," including "*Cæsar's pronouns and prepositions*," "*Cæsar's phrases and constructions*," and, in brief, a *Cæsar's apparatus* and *vade mecum*. Everything is thoroughly prepared, explained, annotated, vocabularized; hardly anything is left for the teacher or the pupil to do. On these lines the book has been very efficiently edited; Mr. Humphreys makes *Cæsar* as plain as a pikestaff.

In the "*Scriptorum Classicorum Bibliotheca Oxoniensis*" (Clarendon Press) we have Mr. F. A. Hirtzel's *Vergil* and Mr. E. Du Pontet's *Cæsar* ("*De Bello Gallico*").

### SCIENCE.

*Progressive Course of Chemistry for Junior Classes.* By Telford Varley, M.A., B.Sc. (Black.)

Like most modern introductions to chemistry, this starts off with what is really physics, which is quite as it should be. Afterwards chemical changes are studied, and before the end of the book (310 pages) is reached we have studied the properties of the most important metals and non-metals. The method is thoroughly scientific and practical, and well adapted for the use of schools of science.

*Elementary Physics and Chemistry.* Second and Third Stages. In two volumes. By R. A. Gregory, F.R.A.S., and A. T. Simmons, B.Sc. (Macmillan.)

These books carry on the useful methods of the First Stage. The extreme patience of the authors, and their care in not hastening too much, is well shown in the section on heat, where, in experiment after experiment on temperature and heat-capacity, an equivalent experiment on water-level and water-capacity is given. The second book is chiefly concerned with heat, but also takes up the subject of burning; while the third deals with chemistry only. Altogether, an excellent introduction to practical science.

*Preliminary Practical Magnetism and Electricity.* By John Henderson, D.Sc. (Longmans.)

Strictly a laboratory manual, containing instructions for elementary practical work, chiefly on magnets and electro-magnetics, with a few on electrostatics. The instructions are clear and precise.

*Agricultural Zoology.* By Dr. J. Ritzema Bos. Translated by J. R. Ainsworth Davis, M.A. With an Introduction by Eleanor A. Ormerod, F.E.S., &c. Second Edition. (Methuen.)

It is a pleasing thing that such a book as this should have reached its second edition. The book is not a school-book, but should be useful as a work of reference to rural teachers. After a brief introduction on the broad facts of anatomy and physiology, it gives a systematic account of all animals that are of interest to the farmer. These are practically restricted to four classes—mammalia, birds, insects, and worms—though a few other classes come in for brief treatment. Not the least interesting part is the appendix, on the subject of "plagues," in which Prof. Bos very lucidly points out that, so far from their being in any way supernatural in origin, they simply indicate the enormous fertility of animals in general, normally balanced by a host of inimical agencies of many kinds, but occasionally allowed by a combination of fortunate accidents to show itself plainly. The index is another important addition to this useful work.

*Exercises in Natural Philosophy, with Indications how to Answer them.* By Magnus Maclean, D.Sc. (Longmans.)

The Natural Philosophy classes in the University of Glasgow, under Prof. Lord Kelvin, had a unique reputation for the form and method of the courses of study pursued, and for the training afforded by the exercises systematically placed in the hands of the students. These examples are collected chiefly from the papers set to the students by an assistant to the professor. They cover the courses for ordinary degree students in colleges and Universities, and the added solutions make them a useful supplement to ordinary text-books. Very complete tables of physical constants are added, for the use chiefly of laboratory students. The course comprises questions in dynamics of solids, liquids, and gases, heat, sound, light, and electricity.

*Elementary Questions in Electricity and Magnetism.* Compiled by Magnus Maclean, D.Sc., and E. W. Marchant, D.Sc. (Longmans.)

This is a book of questions only intended to be used as exercises in an ordinary course of lectures or lessons for a first year's course of electricity and magnetism. The questions are carefully graduated, and are arranged under headings to cover the whole ground. The answers are given when the questions are arithmetical. Some rules are given with regard to the mode of answering, which might well be adopted generally:—(1) Leave a margin on the left-hand side of the page, in which the number of the question is to be placed. (2) Leave a space between your answers. (3) Do not give long answers; be clear and exact in your statements. (4) Give an illustrative sketch whenever practicable, and give a concise written description of it.

### MATHEMATICS.

*A Brief History of Mathematics.* An authorized translation of Dr. Karl Fink's "*Geschichte der Elementar-Mathematik*." By Wooster Woodruff Beman and David Eugene Smith. (Kegan Paul.)

There has been of late years a wholesome revival of interest in the history of mathematics, bred, no doubt, from increased attention to the art of teaching. For the teacher's purpose, however, the history should serve the purpose of arousing interest, stimulating attention, or establishing an association which will fix a fact, or series of facts, in the memory. This work is hardly interesting enough in style, and it does not bring out with sufficient prominence the points which would afford assistance to the memory. It is a work rather more useful to the young mathematician who hopes to labour for the further development of the principles than to the teacher. Yet it will not be without use in the class-room. The translators have done their best with a work written in the original in scientific form and a dry style, and have in parts revealed the system underlying the treatment in clearer fashion than the author.

*The Elements of the Differential and Integral Calculus.* By J. W. A. Young and C. E. Linebarger. (Hirschfeld Bros.)

This is based on the German text-book of Prof. Nernst, of Göttingen, and is a clear book for beginners. The first 76 pages deal with analytical geometry, and the next 25, "Concerning Limits," are equally introductory. This chapter, and those devoted to "Fundamental Conceptions," clear the way of all the usual difficulties. The integral calculus is taken up at length immediately after the derivations of the simpler functions have been established, and the easier applications of both parts are then treated together.

*First Stage Mechanics of Solids.* By F. Rosenberg, M.A., B.Sc. (Clive.)

As becomes a volume published by the University Correspondence College Press, this little text-book abounds in explanations tending to smooth the path of a student working without a tutor. These explanations sometimes strike the reader as trivial—e.g.: "In a roundabout, each rider experiences a tendency to continue to move along the line in which he was moving at the instant considered. He would do so did he not hold fast to some portion of the roundabout."

It is stated that "the distance passed over" has a different meaning from what it has in ordinary language. "If a man walks from Birmingham through Wolverhampton to Stafford, thirty miles, and then back to Wolverhampton, eighteen miles, we should ordinarily say the distance he has traversed was forty-eight miles, but, in mechanics, the distance traversed would be twelve miles." This is a confusion between "the distance from the starting-point" and the distance traversed—the first twelve miles, the second forty-eight. The exercises are well graduated and the answers trustworthy.

*Elementary Mechanics of Solids.* By W. T. A. Emtage, M.A. (Macmillan.)

This text-book really bases its theory on experiment, the theoretical proofs of proportions being occasionally added with the view of increasing the number of examinations for which the book is a reliable guide. The work is carefully prepared and printed, and the exercises are well graduated.

*The Elements of Plane Trigonometry.* By William P. Durfee. (Edward Arnold.)

There is often an advantage to the student of a mathematical subject in looking into a text-book which is prepared for students not connected with English colleges—hints and suggestions are always to be gathered from the greater liberty of treatment. This is true of the very elementary text-book before us. Its proofs often differ from those in common use in English examinations, and always gain in simplicity by the change. One illustration will suffice. The proof of the formula for  $\sin$  and  $\cos(\phi + \theta)$  draws a perpendicular to the middle line belonging to both angles, and uses the fact that the projections of two sides of a triangle on any given line are together equal to the projection of the third side on this given line. The formulae follow at once. The exercises are easy and useful.

*A Treatise on Geometrical Optics.* By R. A. Herman, M.A. (Cambridge University Press.)

There was room for a new work dealing with the higher mathematical treatment of optics, for a number of important researches, such as those of Clerk Maxwell and Cayley, communicated to the various scientific societies, had not found their way into the ordinary student's path. Mr. Herman's work supplies the want.

*The Elements of Hydrostatics.* By S. L. Loney, M.A. (Cambridge University Press.)

It was to be expected that Prof. Loney would supplement his "Elements of Statics and Dynamics" by a similar text-book on hydrostatics. This work equals its predecessors in clearness and simplicity.

*Workshop Mathematics.* Part II. By Frank Castle, M.I.M.E. (Macmillan.)

To provide the artisan who wishes to continue his education while learning his trade with sufficient mathematics for his purpose has become a problem of some interest. Classes in "workshop calculation and practical mathematics" have been started in many provincial towns for the purpose, and now the necessary text-book appears. The practical character of this book promises it success.

*The Higher School Arithmetic: Junior Course.* (Educational Supply Association.)

This is a book of examples almost exclusively. The rules and worked examples are reduced to a minimum. The exercises are very numerous and well arranged.

#### MODERN LANGUAGES.

*Krieg und Frieden.* Edited by W. Bernhardt. (Boston: Ginn; London: Arnold.)

This volume contains three well selected stories, of about thirty pages each, by Emil Frommel, "Villa Maria," and Hans Hoffmann, all writers of the second half of the present century. All three have an interest beyond the mere story—a most important point in the choice of books for school reading. The first, "Mutterliebe," by Frommel, is concerned with the history of a German lad, who ran away from home and took service, first with the French and afterwards with the English, in the Peninsular War; then became a French spy; then entered the Swiss Guard of the King of Naples; and eventually became a rich tradesman in Rome. Incidentally we get glimpses of the Peninsular War, and of Italian life and scenery. The next, "A Son of the Steppes," tells the sad tale of a Hungarian lad, whose brother and only protector meets his fate in the Hungarian Rising of '48, after almost effecting his escape from captivity by his marvellous skill in horsemanship and the use of the lasso. The horse, which plays a conspicuous part in the story, brings home the news of his master's death, like the dark grey charger of Mamilius in "Lake Regillus." The last, and perhaps the most touching of all, entitled "Publius," takes us to the war of 1870, and relates how the son of an old-fashioned German schoolmaster, to whom the Peloponnesian War was far more real than the conflicts of the nineteenth century, proved quite incapable of mastering Greek accident, but became a brilliant scholar of the *Realschule*, gained a commission in the artillery, and shared, before Paris, the fate of those whom the gods love. The notes are serviceable and adequate, though, perhaps, a little more attention might have been given to the grammatical side.

*Specimens of German Handwriting.* By H. Oskar Sommer. (Hachette.)

In examinations where a practical knowledge of German is required,

importance is very properly attached to the ability to decipher German handwriting. The book before us is the first published in England to meet this want; though several of the kind are to be found in Germany. It will prove very useful, not only for its immediate purpose, but as a help to the acquisition of epistolary style—always one of the hardest tasks for a student of a foreign language. There is a complete key, which is by no means unnecessary, considering the hieroglyphic appearance many of these specimens present to an Englishman.

*German Exercises, Part II.* By J. F. Stein. (Boston: Ginn; London: Arnold.)

The earlier exercises of this book are arranged on an excellent plan. A German anecdote is given, and corresponding to it is an English version, in somewhat different language, of the same anecdote. A great deal of help—one is inclined to think too much—is given at the bottom of the page; and the book is, therefore, suitable for rapid *viva voce* work. But it would be better if it were so arranged that each exercise impressed on the pupil some definite grammatical rule or some connected group of words. It should, at least, be used only to supplement more methodically drawn-up exercises.

*German Idioms.* Prepared and translated by Myra Taker, under the direction of F. F. Roget. (Macmillan.)

This may be regarded as a companion book to Mr. Roget's selection of French idioms. The main distinction in method is that in the present volume the German phrases are Englished in parallel columns—not quite literally, nor yet by the mere substitution of one idiom for another; though, of course, as a rule, idiom must be rendered by idiom. It is a careful and serviceable piece of work.

*Schiller's Maria Stuart.* Edited by Margarethe Müller and Carla Wenkebach. (Boston: Ginn; London: Edward Arnold.)

The editors are professors in Wellesley College in the United States, and their edition is prepared in accordance with the principles of the advanced reformers. The annotation is entirely in German. Their view is that translation into English should be used as a handmaid only, not as an end in itself, and that the use of English notes spoils the atmosphere, so to speak, with which a German lesson should be surrounded, and involves a loss of time in acquiring the foreign idiom. The notes, which are careful and correct, are strictly limited to what is necessary for interpretation, and for the brief explanation of historical allusions. A fair idea of them may be gained by taking the commentary of a good English edition, such as Dr. Breul's, and cutting out all the notes where the editor "lets himself go" a little, often the most suggestive of all. There is much to be said for the method of treatment, especially in the hands of a teacher who will add something, and who is thoroughly alive to the importance of scholarly treatment. Perhaps the most valuable part of the book is the appendix, consisting of a series of questions on each scene, some dealing directly with the details of the subject-matter, and others taking a wider range. Such questions are a great help to the intelligent study of the play, and, to take a lower point of view, they form an excellent preparation for the best form of oral examination—such, for example, as that prescribed for the Cambridge Higher Local Examinations.

*Selections from A. Daudet's Tartarin de Tarascon.* Edited by O. Siepman. With Key to the Appendices. (Macmillan.)

Tartarin is almost as great a favourite in England as in France, and for that reason, and also because of the many allusions to persons, places, &c., it is well worth while to publish for English schoolboys a selection from his adventures. The notes are less full than those to "L'Amé de Beethoven," being intended for more advanced classes. They are adequate and sensible. The volume has the usual appendices and a key.

*E. Laboulaye, Contes Bleus.* Edited by C. Fontaine. (Isbister.)

The longest of these little tales, "Pif Paf," has already been edited for English schools; the others, we believe, are new. Laboulaye's style is charming, and his mode of narration is sufficient to show that he was a lover of children. The editor has supplied a few pages of helpful notes and a thoroughly good vocabulary. The printing is clear and careful.

We have received from Mr. David Nutt a *Supplement to the Wellington College French Grammar*, by H. W. Eve and F. de Baudiss, embodying the licences tolerated by the "Arrêté du 31 Juillet, 1900." This is the first emendation of existing school grammars in England rendered necessary by the "Simplification de l'Enseignement de la Syntaxe Française." The editors preface their *résumé* by saying:—"As in duty bound, we lay before our readers a *résumé* of the variations of spelling and grammar tolerated by the French Education Department. It is only fair to warn them that the study of these variations may in many cases lead to confusion of thought. The difficulties which a fairly educated English boy or girl encounters in French spelling are by no means the same as those which beset natives, especially those aiming at only a low standard of culture. Nor have the innovations allowed as yet obtained the highest sanction, that of the Academy and of the literary world. M. Brunetière sums them up in the line

"Sunt mala, sunt quædam bona, sunt mediocria plura."

a slight variation on Martial."

## MISCELLANEOUS.

*Comenius and the Beginnings of Educational Reform.* By W. S. Monroe. (Heinemann.)

The series of books on "Great Educators" would be incomplete without a volume on the Moravian pastor who anticipated so many of the ideas which even now have not thoroughly permeated the educational world. In Comenius we find recognized, to mention only a few points, the application of philosophical principles to education, the importance of method from the very earliest stages, the necessity of a wide curriculum dealing with things and not with words alone, the need of a carefully graduated system of classes, and, above all, the desirability of making learning a pleasant and, as far as may be, a natural process. Considering the great mass of Comenius literature in German, and since the publication of Mr. Quick's essay in English also, the task of writing a fresh book on the subject is no easy one. It seems to us that Prof. Monroe has hardly risen to the occasion. Of his ten chapters, two are devoted to the condition of education in the sixteenth century and to the immediate predecessors of the great reformer, and two, which seem the most valuable portion of the book, to his influence on subsequent writers and teachers. The chapters on Comenius himself are hardly full enough, and do not show exceptional insight into his methods. Prof. Laurie had already given us a methodical analysis of his chief works, with an interesting biographical sketch; and Mr. Keatinge's introduction to his translation of the "Great Didactic" contains an excellent account, implying much original research, both of his life and of his educational views. Neither is likely to be superseded by Prof. Monroe's work. It is surely an error of judgment to quote a long extract about Hartlib, the English friend of Comenius, from Masson's "Life of Milton," and Raumer's eloquent summary of the life-struggle of Comenius, when both appear in Prof. Laurie's book.

"The Works of Shakespeare." Edited by Edward Dowden.—*The Tragedy of Romeo and Juliet.* (Methuen & Co.)

This new volume of Prof. Dowden's excellent edition of Shakespeare fully bears out the promise with which he began his arduous, but doubtless grateful, labour. Apart from the scholarly introduction and the critical apparatus and appendices, the notes alone form a most helpful and interesting commentary on the text. The edition is so well conceived, and the volume is so admirably printed, that students and readers of Shakespeare could not ask for better means of satisfying their needs. The editor, we are glad to see, has not yielded to any idle craving to suggest new readings. He has supplied a comma in one place, and a couple of hyphens in another—and that is all the liberty which he has allowed himself to take with the text as he accepted it from the Globe edition. No higher praise could be given to this volume than to say that it is on a level in every respect with Prof. Dowden's edition of "Hamlet."

"Old and Middle English Texts." Edited by L. Morbach, Professor at Göttingen University, and F. Holthausen, Professor at Kiel University.—*Havelok.* Edited by F. Holthausen. (Sampson Low & Co.)

These editions of Old and Middle English texts are intended for use at the Universities, and for private study. The apparatus is not elaborate, but it includes an introduction on the manuscript and previous editions of the text, on the date, author, and dialect, notes on variants, a serviceable glossary, lists of proper and geographical names, and of emendations and corrections. The poem of "Havelok"—which Prof. Holthausen, usually very careful, spells with a *c* as well as with a *k*—was probably written, by an unknown minstrel, at the beginning of the fourteenth century. Its story is laid in Lincolnshire, and it is in the Lincoln dialect; and, as it mentions the Parliament of Lincoln, which was held in 1301, and is quoted by Mannyng in his "Handling Sinne," it may be safely assigned to one of the first three years of the century. The text is clearly printed, and the edition is worthy of commendation.

*The First Epistle of S. Peter (Greek Text).* With Introduction and Notes. By the Rev. J. Howard B. Masterman, M.A. (Macmillan.)

A very serviceable volume for candidates for deacon's orders, and for general students. The text is not given consecutively, but phrase by phrase, with abundant explanations. The work is admirably done, for Mr. Masterman gives to the Epistle of Peter all the erudition and scrupulous care which he would have been expected to bestow on a dialogue of Plato.

*Cyclopædia of Mechanics.* First Series. Edited by Paul N. Hasluck. (Cassell & Co.)

The editor of *Work* and the *Building World* gives us, in this fully illustrated technical volume, a collection of very miscellaneous receipts, processes, and memoranda, suitable for experimental or practical mechanics. The eight or nine thousand paragraphs are thrown together without classification, but they are elaborately indexed, and there are as many as twelve hundred diagrams.

*Life of General Charles Gordon.* By M. B. Synge. (Nelson & Son.) There is nothing to show whether this appreciative little biography of Gordon is a reprint or not. At any rate, it will be welcome to hero-worshipping boys and girls.

*Model and Blackboard Drawing.* By F. F. Lydon. (Sampson Low & Co.)

This is a very good and well printed handbook for the assistance of teachers of model-drawing. It contains forty-four plates and a considerable number of explanatory diagrams, both on a white and on a black ground. The drawings are all clearly produced.

*Brushwork Copy Books.* Designed and arranged by A. R. Cartwright and F. C. Proctor. (Macmillan.)

This is a graduated scheme of lessons in simple brush forms, with the straight line and curve, in a series of six progressive books. It is a serviceable introduction.

*Queen Victoria: a Personal Sketch* (Cassell & Co.) is the last of Mrs. Oliphant's literary works, which will doubtless be reproduced many times before it has outlived its welcome. It is a graceful and sympathetic sketch of the life of the Queen, and is illustrated by many contemporary prints, as well as by three fine "Rembrandt" toned plates. It is a very acceptable book.

*Educational Drawing Copies of Ornament, Common Objects, &c.* (Educational Supply Association.)

These are loose copy cards specially intended for blackboard drawing for "the D Certificate" of the Code. The grey outlines are clearly drawn, and the designs are good, so that the set of thirty cards may be regarded as decidedly good.

*Philips' London School Board Atlas*, edited by George Philip, junior, has ninety maps in forty coloured plates, and eight pages of introductory letterpress. It is a good and serviceable publication, with special plans of London.

We have several new Readers in evidence this month. One of the most elaborate is the *Educational Reader* ("Holborn Series"—Educational Supply Association), in six progressive parts. All Readers are supposed to be educational; but in this instance particular care has been taken to bring together and graduate a good selection of pieces.—We have four parts of the *Continuous Story Reader* (Edward Arnold), simple stories without notes or spelling-words.—The *Conversational Readers* (Blackie & Son) include two Readers and two Primers for infants.—*Woodstock* is the latest volume of the "Sir Walter Scott Continuous Readers" (A. & C. Black). It is edited by H. Corstorphine.

WE HAVE ALSO RECEIVED the following publications and new editions:—

*Report of the Board of Education, 1899-1900: The Report; Appendix on Secondary Education; Appendix on Elementary Education* (Her Majesty's Stationery Office).

*Helps to the Study of "Lyra Heroica,"* by Ernest Ruse (Macmillan.)  
*Notes and Elucidations to Henley's "Lyra Heroica,"* by W. W. Greg and L. Cope Cornford (David Nutt).

*Foreign Correspondence*, by John Warren (Heywood)—English forms for various commercial purposes.

*French Grammar Reforms*, authorized by the French Minister of Education (Pitman & Sons).

*Laudate: a Hymn-Book for Secondary Day Schools*, by J. J. Findlay (A. & C. Black)—words only.

*Lessons on Israel in Egypt and the Wilderness*, by S. G. Stock (Sunday School Institute).

*The Story of the Heavens*, by Sir R. S. Ball (Cassell)—Part I. of a reissue.

## GIFT-BOOKS AND PRIZES.

## II.

## HISTORICAL TALES.

*Red, White, and Green*, by Herbert Hayens (Nelson & Sons), is a well told story of the Hungarian revolution of 1848. Its narrator is a Magyar faithful to the Emperor of Austria, but still a Liberal, from the Magyar point of view. The story is full of incident and excitement, with plenty of well marked characters, including a few ladies; and the reader is treated to a good deal of fighting and vicissitude.

*Ye Mariners of England* (same author and publishers) may be classed amongst the historical tales, though its stories are of ships, and its records are those of the British Navy. For a boy specially interested in these things, the volume is all that could be desired. It is well illustrated; and there are many narratives of historical sea-fights, with an account of the naval review of 1897, to wind up.

*One of Buller's Horse* (same publishers) is a tale of the Zulu campaign, by William Johnston. It begins with a lion-hunt in England, the hero being a young schoolmaster, who shoots his big game in the Pennine country, and subsequently develops (with his favourite pupil) into a soldier of the Queen. They have hard times with the Zulus, and fight at Isandwana and Ulundi. We can recommend this as a good and stirring tale.

*My Lady Marcia*, a story of the French Revolution, by Eliza F. Pollard (Nelson & Sons), is a pleasing and carefully written tale, in which historical facts are blended with imaginary scenes and characters, with considerable success. "My Lady Marcia" is a young English

heir, who is left in charge of her aunt, married to a French nobleman, while her father goes to fight with Lafayette in America. Her sympathies are all with the French; and she goes through many perilous adventures in consequence of her attachment to the unfortunate Royal Family.

The central idea of *Life's Anchor*, by Harriet E. Colville (Religious Tract Society), is the hope of immortality that Dr. Johnson only found in his last days; though he sought it diligently, with tears. The pathetic figure of the Doctor, with his morbid self-communings and his trenchant remarks, pervades the whole of this book. Much ingenuity has been exercised to introduce Hannah More, the Thrales, Fanny Burney, Lord George Gordon, and many other well known characters, with copious references to Wesley, Rousseau, Garrick, and innumerable books and plays. In addition to all this, there is a romantic tale with tragic episodes. We fear the whole is somewhat oppressive and overloaded with information. It is confused with so many characters that none stands out very strikingly. The religious conversations, though doubtless representative of the style of those days, will seem overstrained and wearisome to a young reader, and we hardly think the book is calculated to inspire a love of Dr. Johnson, or a desire to read more of his life and contemporaries; but, if read with an intelligent elder, it may impart a good deal of historical instruction.

*Iron Heart, War Chief of the Iroquois*. By Edward S. Ellis. (Cassell.)—No boy has ever heard enough about the North American Indians. There is a subtle charm in their wild bravery, their stupendous cunning, and their simplicity of heart, which seems inexhaustible. The present story brings out all these characteristics, and is exceedingly interesting without being blood-curdling or overstrained in any way. The chief *dramatis personæ* are the Iroquois chief and an English boy, a cripple, who knows the woods and the rivers as well as the Indians, but whose main weapon of defence is his Bible; and we think boys will quite as much enjoy his bravery with this as his pluck in the face of privation or death on several other occasions. The book is not too long, and is manly and healthy throughout.

Miss Everett-Green builds one of her pleasant combinations of the historical and the domestic—in *After Worcester* (Nelson & Sons)—on certain incidents of the flight of Charles II. from the field of Worcester, and the events of the following six weeks. Her heroines are Jane Lane and Juliana Coningsby, who actually played the historical parts here recorded; but the heroes are fictitious—which is a little hard on the historical Sir Clement Fisher, who married the actual Jenny Lane.

*In the King's Service* (Blackie & Son), by Captain F. S. Brereton, is a story of Cromwell's invasion of Ireland. The hero is a refugee son of a Cheshire Royalist, who visits his brother-in-law at Castle Driscoll and takes part in the defence of Drogheda. The book is exciting, and has eight good illustrations.

*Adventurers All* (Nelson & Sons), by K. M. Eady, is an illustrated tale of the Philippine Islands in time of war. It is, perhaps, more of an adventure-story than historical. It is a lively story of the "Annabel Lee" craft, bought by an American syndicate and run to the Philippine coast on a private venture by a dare-devil skipper and crew.

*Red Jacket: the Last of the Senecas* (Cassell & Co.) is a story by E. S. Ellis, of adventures amongst North American Indians. It is based on incidents in General Sullivan's expedition against the Iroquois; and the hero is a boy who found his way into danger and adventure as a scout. "Red Jacket" is a crafty Indian, whom the boy and his friends contrive to elude.

#### SCHOOLBOY STORIES.

The subjects of our Christmas books this year include, it seems to us, fewer stories of schoolboy life than we used to look for at this time of year. Still, there are a number of the old sort left, and amongst them is a good one by Harold Avery—*Heads or Tails: the Story of a Friendship* (Nelson & Sons). It is made up, for the most part, of the innocent or mischievous pranks of young boys, ending, as usual, with the more dubious pranks of the older ones.

*Jones the Mysterious*. By Charles Edwardes. A new motive has been struck in this schoolboy tale. A little boy is endowed by an Indian, Nana, with the power of disappearing whenever he is in trouble or difficulty. Placed in an English school, he finds occasions in plenty for such timely relief, much to the bewilderment of masters and boys. One situation follows another with little connexion, and there seems no reason why the gifted Jones should not have carried on his truly chequered career to the University and professional life; but the limit of his masters' endurance is reached when the boy disappears in the middle of a caning. At this awkward juncture Nana returns, and takes away the power he has given Jones, to the "satisfaction of all parties." The story is farcical rather than mirthful, and we half suspect the author intends it to be serious, and even pathetic. It cannot be called a great success on either count, but it is a very readable story for young boys.

*Geoff Blake*, by S. S. Pugh (Religious Tract Society), is a schoolboy's tale somewhat out of the ordinary run. It is supposed to be a man's recollections of his school-days in the early fifties, and it centres in one of his school-fellows. Geoff Blake's moral development is the theme of the story, which cannot be said to have a plot, though there are one or two interesting incidents. There is a good deal of moral introspection

and laboured explanation of the true meaning of "sneak," hardly calculated to affect a boy's notions in this matter. The reminiscences of the intellectual life of the school are of the most meagre, chiefly consisting of the solemn recital of some funny mistakes in examination papers, and, as even these jokes seem to need explanation, the book is, on the whole, a little heavy; but, as the hero quotes in the introductory chapter, "whatever boys do interests boys," and we expect Geoff's fortunes and misfortunes will find many sympathizers.

*Every Inch a Briton* (Blackie & Son), by Meredith Fletcher, is a good schoolboy story, told by an ordinary honest English lad, and full of ordinary, honest, schoolboy incidents. It will hurt nobody, and amuse many.

*Tom Andrews* (Elliot Stock) is a good and genial story of East-end Board-school life, by the Rev. A. Chandler, Rector of Poplar. It is realistic and natural—a simple shifting of the plane from the more familiar kind of schoolboy story.

#### STORIES FOR GIRLS.

Mrs. L. T. Meade, the author of *Seven Maids* (W. & R. Chambers), needs no introduction, for she is an old favourite with the young public. Her new Christmas story is sure of a favourable verdict, being written much in her usual vein. The heroine, Marjorie, strays into devious places from the time when her parents decide to take girl-boarders into the home where hitherto she has reigned supreme, but she is properly repentant in the end. The various steps in her humiliation will be followed with interest. Mrs. Meade writes sympathetically, and Marjorie's character is excellently realized. The American girls, too, whom Marjorie finds it so hard to welcome, are fairly convincing portraits. The dialogue is, perhaps, a little stilted in parts, but we fancy that the average girl reader will not cavil at this in a tale that is likely to engross her interest. Altogether, *Seven Maids*, with its attractive binding and pleasing illustrations, is a very suitable Christmas gift for a schoolgirl.

*Three Fair Maids: or, The Burkes of Derrymore*. By Katharine Tynan. (Blackie & Son.)—The three maids of whom this story tells are, of course, Irish girls, and, in their different ways, all equally fascinating. They have fallen on evil days, as their father had been disinherited by his uncle for not marrying according to his wish. The story is put into the mouth of Joan, the second daughter, and relates how Elizabeth, the eldest and the moving spirit of the family, persuades her widowed mother to take in "paying guests" at Ardeelish, the country house in which they live. The love-affairs of the three girls—not to speak of those of other girls who figure incidentally—the reconciliation with the dreaded Uncle Peter, and the various adventures, more or less exciting, which go to make up this book, we will leave its readers to discover for themselves. The writer knows her Ireland, and writes with sympathetic insight and humour. Her new story is sure to be no less popular than "The Handsome Brandons," which found favour last year, and its undaunted optimism will be, no doubt, an additional inducement to those who desire a suitable Christmas gift. The book is tastefully illustrated and handsomely bound.

*The Schoolmistress of Haven's End*. By Ella Edersheim Overton. (Religious Tract Society.)—A high-born girl who has a mission to teach village children and reform their drunken and unhygienic parents, is no new figure in fiction; but it must be admitted that the schoolmistress of Haven's End is a very taking one. Although the book has a frankly moral and religious purpose, it is not only bright and healthy, but full of dramatic little incidents, and there are no less than four romantic matches made. Some of the descriptions of character and conversation are distinctly clever, and a delicate flavour of humour throughout the book makes it good reading from beginning to end, and suitable to almost any age.

*Sisters Three*. By Jessie Mansergh. (Cassell.)—It is astonishing how much interest can be obtained from the simple record of a commonplace family life, with its trivial hopes, fears, and disappointments. This book does not pretend to be any more, but there is not a dull page from beginning to end. It opens with a description of the motherless boys and girls of a well known novelist—the three girls, in their teens, are wishing that something would happen to break the cold-mutton monotony of their existence. Of course, things do happen—all of them charmingly lifelike and possible (with, perhaps, the one exception of an incident in an underground passage), and we follow the girls' fortunes till they are all engaged to be married. We can heartily recommend the book for girls of any age: younger ones will enjoy the harmless practical jokes and breezy fun of the talk, and the elder ones will enjoy the sensible and healthy love story of the youngest and nicest of the "Sisters Three."

*The Girl Without Ambition*, by Isabel Stuart Robson. (Cassell.)—The moral of this tale is very plain and excellent, and one that needs pressing upon many a girl of the present day. It is, briefly, that there is a great deal of scope, not only for talent and energy, but for pleasure and fun, in the commonplaces of home life to even a lonely girl. Mrs. Robson has succeeded admirably in making her heroine attractive, without a trace of priggishness. More wonderful still, the girl is not compelled to do anything extraordinary or impossible; she is merely good-tempered, jolly, and naturally unselfish, with a wholesome contempt for grinding at examinations; and the worse thing she has to do is to hunt

for lodgings by herself, for her little adventure of singing in the street for coppers is more amusing than distressing. The elder sister who reads at meals, and cares for nothing but her own intellect, makes a good foil, without being overdrawn, and the subsidiary characters provide some romantic interest. There are eight good illustrations by Percy Tarrant.

In *Tom's Boy*, by the Author of "Laddie," "Tipcat," &c. (W. & R. Chambers), "Tom" has a considerably bigger part to play in the story than his "Boy." Tom Bannister makes the mistake of marrying, against his father's wish, a young actress. The story is a sad one, but is neither gloomy nor depressing, and the moral is all that it should be. Mr. Percy Tarrant supplies the illustrations.

*A Sister of the Red Cross*, by Mrs. L. T. Meade (Nelson & Sons) is decidedly a story of to-day. The heroine—Mollie Hepworth, the hospital nurse—goes to South Africa, where she nurses the sick, has various love affairs of her own and other people's to attend to, and a good deal of trouble with her younger sister Kitty. All ends well, and the interest of the story is well sustained from the first chapter to the last.

*Through a Needle's Eye* (Religious Tract Society) is an excellent story, by Hesba Stretton, of two half-brothers who were both, in a sense, heirs to the same estate—one by birth, and the other by will. The latter has the chance of keeping everything for himself; but he has noble impulses, and plays a noble part. There are many well drawn characters in this book, which is not in any exclusive sense a tale for girls, but only a quietly conceived and delicately told romance.

*Celia's Conquest*, by L. E. Tiddeman (W. & R. Chambers) is a very pretty, pathetic little story for girls—a good book, without being the least bit "goody."

#### TALES OF ADVENTURE.

One of the oldest, and still one of the most popular, books of romantic and magic adventure is the "Odyssey" of Homer. Mr. J. M. Dent publishes *The Adventures of Odysseus*, retold in English by F. S. Marvin, R. I. C. Mayor, and F. M. Stawell, artistically pictured by Charles Robinson, with coloured frontispiece and title-page. It is a very delightful gift-book.

*In Far Bolivia* (Blackie & Son) is a story of a strange wild land, by Dr. Gordon Stables. The heroine is carried off by "Bolivian savages," and the hero rescues her—to the accompaniment of some very exciting pictures.

Dr. Gordon Stables has spun another yarn of seafaring life and adventure—*Allan Adair: or, Here and There in Many Lands* (Religious Tract Society). There is humour as well as stir and excitement in all the doctor's stories, and this is, perhaps, one of the best of them. It certainly does not lack movement and variety. The pictures are rather horrible—not in drawing, but terribly exciting for a youthful imagination.

*Gunpowder Treason and Plot* (Nelson & Sons) is one of a collection of short stories for boys; the authors are Harold Avery, F. Wishaw, and E. B. Townshend. There are numerous illustrations, and the stories are well told, and varied in subject.

*Boy Crusoes*, adapted from the Russian by Léon Golschmann (Blackie), is an exciting story of the adventures of two boys in a Siberian forest during a period of three years. There is a decided element of novelty in it, and the incidents are quite unlike those in any other Crusoe story we have come across. The only fault to be found with it is that the author is a trifle prolix; but perhaps this is a criticism which a young reader might apply to the immortal Defoe himself.

*Adventures in the South Pacific* (Religious Tract Society) is a narrative of life and doings in the Tahiti Group, by the son of a missionary. The narrator was born on his father's station, and—being a rebel in his younger days, inclined to chum with the native boys—he had a good share of wild adventure. The book is very readable, and well illustrated.

*A Life on the Ocean Wave* (Nelson & Sons) contains some excellent reproductions—taking into consideration the extremely moderate price of the book—of pictures of ships of all kinds. The letterpress is of varying quality, but is generally suited to the tastes of the young and not too critical readers into whose hands it is most likely to fall.

#### ANNUAL VOLUMES.

Amongst annual volumes we have *Cassell's Saturday Journal*, a large book of nearly 1,100 pages, with many pictures. There are three serial stories, four special series of articles on London and other topics, over a hundred short stories, interviews, with portraits, and a large number of articles, domestic items, anecdotes, and the like.—The year's volume of *Bo-Peep* (Cassell) is a volume for the youngest readers, with a gay binding, eight coloured plates, and many other pictures.—*The Leisure Hour* (Religious Tract Society) is a year's volume, from November to November. It has thirteen coloured plates or reproduced photographs, besides a large number of other illustrations. Sir W. Besant's "Alabaster Box" is the principal serial. There are many exceptionally good articles on subjects of general interest, and the volume is, altogether, a very attractive and satisfactory book.—*The Sunday at Home* (same publishers) is the corresponding annual volume of a favourite magazine. It has more distinctly religious features, but its interest is thoroughly general. It is full of good and quiet reading,

with plenty of variety, and will make a very acceptable present.—We have also *Little Folks* (Cassell) and *The Children's Treasury* (Nelson & Sons), two annual favourites for very young readers.

#### FOR CHILDREN.

*The True Annals of Fairyland*. By William Canton (Dent).—No pains have been spared to make this a most attractive volume for children—a dainty get-up, lavish illustrations, and an abundance of stories. Of the last there are plenty of old favourites, and some fresh ones as well; but the principle of selection seems past finding out. There is something incongruous in such a tragedy as "King Lear" being placed among fairy tales; and the wonderful classical atmosphere that Kingsley created in his "Argonauts" is marred in this collection by a facetious introduction of a baby in long clothes as a tail-piece. The illustrations by Charles Robinson are clever and original, and some of them are very graceful; but many of them present difficulties for the adult mind to decipher, and are, we fear, meaningless to children, who would rather value a few plain and pretty pictures, even if more commonplace. The work of the artist in some cases is too fine for satisfactory reproduction by the engraver.

*Animal Land for Little People*, by S. H. Hamer (Cassell) is a quarto picture-book all about animals, illustrated from photographs and original drawings, with four coloured plates. The animals tell stories about themselves, after their kind.—From the same author and publisher we have *The Jungle School*; or *Dr. Jibber-Jabber Burchall's Academy*, illustrated by Harry B. Neilson. It is a very laughable production, just sufficiently allegorical and satirical to amuse those who can enjoy something beyond a laugh.

*A Noah's Ark Geography: a true Account of the Travels and Adventures of Kit, Jum-Jum, and the Cockyolly Bird* (Macmillan), "is faithfully set forth and pictured" by Mabel Dearmer. It is a thick quarto, giving an ample and delightful account of an imaginary run round the world by little Kit and his Noah's Ark companions—an excellent conception, as one would naturally expect from the name of the author.

*In Pinafore Land* (Ward, Lock, & Co.) is an animal picture-book, with a text of poetry and prose, by Flora Kirkmann. It is full of fairies and odd conceits; and the drawings are very artistic.

Messrs. Nelson & Sons provide for the season a number of oblong picture-books in stiff covers, with coloured illustrations:—*By Rail*, dealing with trains and railway-lines; *The Red, White, and Blue*, all about ships and the sea; *A Week at the Farm*; and *The Dear Old Fairy Tales*, a capital collection of familiar folk-stories.

## MATHEMATICS.

14651. (Professor G. B. MATHEWS, F.R.S.)—Let  $\alpha, \beta$  be any two given complex quantities, and let  $t$  be such that  $(\alpha + t\beta)/(1 + t)$  is real. Prove that, if  $t = x + iy$ , the locus of  $(x, y)$  is, in general, a circle. How is this to be reconciled with the fact that the line joining two imaginary points  $(\alpha, \beta)$ ,  $(\gamma, \delta)$  contains only one real point?

I. Solution by Professor E. B. ELLIOTT, F.R.S.

A "real" line contains  $\infty^2$  points, of which  $\infty$  are real; a "real" plane  $\infty^4$  points, of which  $\infty^2$  are real; and a "real" space  $\infty^6$  points, of which  $\infty^3$  are real.

The connector of two imaginary points on a "real" line is that line, and contains all its real points; that of two imaginary points in a "real" plane, but not on a "real" line in that plane, contains one real point; that of two imaginary points in "real" space, but not in a "real" plane, contains no real point.

First on a "real" line, if  $x + iy : 1$  be the ratio in which a real point divides the intercept between two points whose distances from a real origin are  $a + ia'$ ,  $b + ib'$ , we have, from the reality of

$$\frac{a + ia' + (x + iy)(b + ib')}{1 + x + iy}, \quad \frac{a + bx - b'y}{1 + x} = \frac{a' + bx + by}{y},$$

i.e., the equation of circular form

$$b'(x^2 + y^2 + x) + a'(1 + x) + (b - a)y = 0,$$

as the only relation limiting  $x$  and  $y$ . One of these may be taken at will, subject to the requirement that the resulting quadratic for the other have real roots, and the infiniteness of the number of ratios of division for real points is apparent. The solution  $x + 1 = 0$ ,  $y = 0$  is excluded.

Next in a "real" plane, if  $(a_1 + ia'_1, a_2 + ia'_2)$  and  $(b_1 + ib'_1, b_2 + ib'_2)$  be the coordinates referred to "real" axes of the points, the intercept between which is divided in the ratio  $x + iy : 1$ , we have, for the reality of the dividing point,

$$b'_1(x^2 + y^2 + x) + a'_1(1 + x) + (b_1 - a_1)y = 0$$

and

$$b'_2(x^2 + y^2 + x) + a'_2(1 + x) + (b_2 - a_2)y = 0,$$

which give, besides the irrelevant  $x = -1$ ,  $y = 0$ , which refers to the point at infinity on the connector, a single pair of real finite values of  $x$  and  $y$ , and so a single ratio of division.

And generally in "real" space, referring to three "real" planes, we have three such equations of circles with a common point  $x = -1$ ,  $y = 0$ .

They have as a rule no common second intersection; and so as a rule there is no real dividing point of our intercept.

II. *Solution by the PROPOSER.*

Let  $\alpha = a + bi, \beta = c + di, t = x + yi.$   
 Then  $\frac{\alpha + t\beta}{1+t} = \frac{(a+cx-dy) + (b+dx+cy)i}{(1+x) + yi},$   
 and this is real when  $(1+x)(b+dx+cy) - y(a+cx-dy) = 0,$   
 or when  $d(x^2+y^2) + (b+dx)x + (c-a)y + b = 0 \dots\dots\dots (i).$   
 Suppose now that  $\gamma = a' + b'i, \delta = c' + d'i.$   
 Then  $(\gamma + t\delta)/(1+t)$  is real when  
 $d'(x^2+y^2) + (b'+d')x + (c'-a')y + b' = 0 \dots\dots\dots (ii).$

The circles (i.) and (ii.) intersect at the fixed point  $(-1, 0),$  and at another point whose coordinates are rational functions of  $a, a', \&c.$   
 The first point gives  $t = -1,$  and this makes  $(\alpha + t\beta)/(1+t)$  and  $(\gamma + t\delta)/(1+t)$  both infinite; the other leads to the one real point on the line joining  $(\alpha, \gamma)$  to  $(\beta, \delta).$

14028. (G. H. HARDY.)—Reduce the evaluation of  $\int_0^\pi \frac{\cos(p/q)\phi d\phi}{1+2t\cos\phi+t^2},$  where  $p, q$  are integers,  $p < q$  and  $t < 1,$  to the integration of a rational fraction. Prove, in particular, that

$$\int_0^\pi \frac{\cos \frac{1}{2} \phi d\phi}{1+2t\cos\phi+t^2} = \frac{2}{1+t} \frac{\tanh^{-1} \sqrt{t}}{\sqrt{t}};$$

and deduce (and also prove independently) that  $\int_0^\pi \tan^{-1} \left( \frac{2t \sin \phi}{1-t^2} \right) \frac{d\phi}{\sin \frac{1}{2} \phi} = 8 \tan^{-1} \sqrt{t} \tanh^{-1} \sqrt{t}.$

*Solution by the PROPOSER.*

Since  $\frac{1-t^2}{1+2t\cos\phi+t^2} = 1 + 2 \sum_1^\infty (-t)^n \cos n\phi, \quad t < 1,$   
 $\int_0^\pi \frac{\cos \alpha \phi d\phi}{1+2t\cos\phi+t^2} = \frac{1}{1-t^2} \int_0^\pi \left\{ \cos \alpha \phi + 2 \sum_1^\infty (-t)^n \cos \alpha \phi \cos n\phi \right\} d\phi$   
 $= \frac{\sin \alpha \pi}{1-t^2} \left\{ \frac{1}{\alpha} + 2 \sum_1^\infty \left( \frac{1}{n+\alpha} - \frac{1}{n-\alpha} \right) t^n \right\};$   
 if  $\alpha < 1.$  That is, to say,  
 $= \frac{\sin \alpha \pi}{1-t^2} \left\{ t^{-\alpha} \int_0^1 \frac{t^{\alpha-1} dt}{1-t} - t^\alpha \int_0^1 \frac{t^{-\alpha} dt}{1-t} \right\}.$

[The rest in Volume.]

14473. (W. S. COONEY.)—Construct the triangle, being given any three of the following six points:—the centres of the squares described externally and internally on the sides.

*Solution by the PROPOSER.*

Let  $O_1, O_2, O_3, \omega_1, \omega_2, \omega_3$  be the centres of squares described externally and internally on sides of ABC. By Quest. 13716, or easily from figure,  $O_1O_2$  is perpendicular and equal to  $CO_3,$  for  $CO_2$  and  $C\omega_1$  are proportional to AC and BC, and  $\angle O_2C\omega_1 = \angle C;$  therefore  $\triangle O_2C\omega_1$  is similar to ABC; therefore  $O_2\omega_1 = AO_3.$  Similarly  $O_3\omega_1 = AO_2;$  therefore  $AO_2\omega_1O_3$  is a parallelogram; as are also  $BO_1\omega_2O_3, CO_2\omega_3O_1, A\omega_2O_1\omega_3, B\omega_3O_2\omega_1,$  and  $C\omega_1O_3\omega_2;$  therefore evidently  $CO_3 = O_1O_2,$  and  $C\omega_3$  is also equal and perpendicular to  $\omega_1\omega_2;$  therefore, if  $O_1, O_2, O_3$  or  $\omega_1, \omega_2, \omega_3$  be given, the perpendiculars of the triangles being drawn, the construction is obvious in each case. If  $\omega_1, O_2, O_3$  or  $O_1, \omega_2, \omega_3$  be given, the completion of the parallelogram in each case gives A. If  $O_1, \omega_1, \omega_2$  be given, B and C are known, which disposes of the twenty cases; therefore, &c.

This construction shows that the triangles  $O_1O_2O_3$  and  $\omega_1\omega_2\omega_3$  are so related that the perpendiculars of each bisect the sides of the other, and pass through A, B, C, for  $CO_3$  bisects  $\omega_1\omega_2,$  and  $C\omega_3$  bisects  $O_1O_2.$

14329. (J. A. THIRD, M.A., D.Sc.)—L, L', M, M', N, N' are points on a conic. LL', MM', NN' form the triangle ABC; MN', NL', LM' the triangle A'B'C'; and M'N, N'L, L'M the triangle A''B''C''. The straight line AA'A'' meets BC, B'C', B''C'' in X, X', X'' respectively; the straight line BB'B'' meets CA, C'A', C''A'' in Y, Y', Y'' respectively; and the straight line CC'C'' meets AB, A'B', A''B'' in Z, Z', Z'' respectively. Show that the following are triads of concurrent lines:—

YZ, Z'X', X''Y''; ZX, X'Y', Y''Z''; XY, Y'Z', Z''X'';  
 YZ, Z''X'', X'Y'; ZX, X''Y'', Y'Z'; XY, Y''Z'', Z'X'';

and that the points of concurrence lie on a conic.  
*Solution by the PROPOSER.*

The pairs AB and A'B', BC and B'C', CA and C'A' meet on the same PASCAL line  $u.$  Let P be the point of intersection of AB and A'B'. Join

PX'', PY''. Then, since  $u$  is a diagonal of the quadrilaterals ANA'M' and BLB'N', PX'' and PY'' are harmonic conjugates of  $u$  with respect to PA and PA', and therefore coincide. Thus, AB, A'B', and X''Y'' are concurrent. Similarly, B'C', B''C'', YZ are concurrent, say in Q. Hence the triangles X'Z'A' and QZN are copolar with respect to C'. Therefore Z'X' and YZ intersect on the same line as the pairs A'B', AB and X'A', QN. Thus the first triad consists of concurrent lines. A similar proof holds for each of the other triads.

Again, the triangles XYZ and X'Y'Z' are obviously in perspective. Therefore the six points of intersection of the sides of the one with the non-corresponding sides of the other lie on a conic.

14173. (D. RIDDLE.)—The sides of a triangle being given,  $a > b > c,$  draw a line parallel to one of them, such that the quadrilateral formed shall have the maximum area possible in proportion to its perimeter, and find both area and perimeter.

*Solution by W. C. STANHAM, B.A.*

Let PQR be a triangle whose sides are  $a, \beta, \gamma.$  Parallel to PQ ( $= a$ ) draw P'Q', so that P'Q' =  $\lambda a.$  Then, if  $\Delta$  and  $s$  denote area PQR and  $\frac{1}{2}(a + \beta + \gamma)$  respectively, and if  $a/s = \mu,$   
 area  $PP'Q'Q = \Delta(1 - \lambda^2) \dots\dots\dots (1),$   
 perimeter  $PP'Q'Q = 2s(1 - \lambda) + 2\lambda a \dots\dots\dots (2).$

The ratio which is to be a maximum is therefore  $(1 - \lambda^2)/(1 - \lambda + \mu\lambda),$  which for any value of  $\lambda$  is clearly a maximum when  $a = c,$  the least side. Differentiating, the value of  $\lambda$  which gives a maximum is found to be

$$\left[ \frac{1}{1 - \mu} - \frac{1}{2} \left\{ \frac{1}{1 - \mu^2} - 1 \right\} \right]^{1/2}.$$

Substituting this value of  $\lambda$  in (1) and (2), and putting  $a = c, \mu = c/s, s = \frac{1}{2}(a + b + c),$  the required values are obtained.

14519. (Professor U. C. GHOSH.)—Find the sum of the products of the terms of the geometric series  $a, a^2, a^3, a^4, \dots, a^n,$  taken  $r$  at a time,  $r$  being less than  $n.$

*Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.*

Let  $s_1 = a + a^2 + a^3 + \dots + a^n, s_r = a^r + a^{2r} + a^{3r} + \dots + a^{nr}.$   
 Let  $S_r$  = required sum of products of the terms of  $s_1,$  taken  $r$  together.  
 Let  $X_r$  = sum of terms in  $S_r,$  containing a particular term  $a^r.$   
 Let  $S'_r$  = sum of terms in  $S_r,$  free from a particular term  $a_r.$   
 Let  $\Sigma$  denote summation with respect to  $x.$   
 Here  $s_1 = \Sigma a^x = a \cdot (a^n - 1)/(a - 1),$   
 $s_r = \Sigma a^{rx} = a^r \cdot (a^{nr} - 1)/(a^r - 1);$

and  $X_r = a^r \cdot S'_{r-1}$ ,  $S_r = \sum (a^r \cdot S'_{r-1})$ .  
 Hence  $S_1 = s_1$ ,  $S'_1 = S_1 - a^x$ ,  
 $S_2 = \sum a^x (S_1 - a^x) = S_1 \cdot \sum a^x - \sum a^{2x} = S_1 s_1 - s_2 = s_1^2 - s_2$ ,  
 $S'_2 = S_2 - a^x \cdot S'_1$ ,  $S_3 = \sum a^{2x} (S_2 - a^x \cdot S'_1) = \sum (a^x \cdot S_2 - a^{2x} \cdot S_1 + a^{3x})$ ;  
 therefore  $S_3 = s_1 S_2 - s_2 S_1 + s_3 = s_1^3 - 2s_1 s_2 + s_3$ ,  
 $S'_3 = S_3 - a^x \cdot S'_2$ ,  $S_4 = \sum a^{3x} S'_3 = \sum (a^{2x} S_3 - a^{3x} S_2 + a^{4x} S_1 - a^{4x})$ ;  
 therefore  $S_4 = s_1 S_3 - s_2 S_2 + s_3 S_1 - s_4 = s_1^4 - 3s_1^2 s_2 + s_2^2 + 2s_1 s_3 - s_4$ .  
 The law of formation of each sum ( $S_r$ ) from the preceding ( $S_{r-1}$ ) is now clear, all the terms being of equal weight ( $r$ )  
 $S_r = s_1 S_{r-1} - s_2 S_{r-2} + s_3 S_{r-3} - \dots + (-1)^{r-1} s_r$ .

**14549.** (J. A. THIRD, M.A., D.Sc.)—K is a conic circumscribed to a triangle ABC; P is a point on it; Q is the isogonal conjugate of P with respect to the triangle; R is the point where PQ meets K again; L, M, N are the points where AR, BR, CR meet BC, CA, AB respectively; X, Y, Z are variable points, Y lying on QM and Z on QN, such that the pairs AY and AZ, BZ and BX, CX and CY are equally inclined to the bisectors of the angles A, B, C respectively. Prove that the locus of X is QL, and that the locus of the point of concurrence of AX, BY, CZ is K.

The construction usually given for KIEPERT'S hyperbola (see CASEY'S *Analytical Geometry*, p. 442) is a particular case of the foregoing.

*Solution by Rev. J. CULLEN.*

Taking ABC for the triangle of reference and P to be the point  $(x, y, z)$ , we have  $K \equiv \sum l/x = 0$ . It is easy to see that R is the point

$$ax^2(y^2 - z^2)/l = \dots = \dots \dots \dots (1).$$

Now, if X, Y, Z be the points  $(x_1, y_1, z_1)$ ,  $(x_2, y_2, z_2)$ , and  $(x_3, y_3, z_3)$ , then  $AY \equiv \beta z_2 - \gamma y_2 = 0$ ,  $AZ \equiv \beta z_3 - \gamma y_3 = 0$ , ...

These lines are equally inclined to the bisectors of A, ..., if

$$y_3 y_2 = z_2 z_3, \quad z_1 z_2 = x_1 x_3, \quad x_1 x_2 = y_1 y_3.$$

L, M, and N are given by putting, successively,  $a = 0$ ,  $\beta = 0$ ,  $\gamma = 0$  in (1). Q is  $ax = \dots = \dots$ . Hence

$$QM \equiv \begin{vmatrix} x_3 & y_2 & z_2 \\ \frac{1}{x} & \frac{1}{y} & \frac{1}{z} \\ \frac{l}{x^2(y^2 - z^2)} & 0 & \frac{n}{z^2(x^2 - y^2)} \end{vmatrix} = 0 \equiv p_2 x_2 + q_2 y_2 + r_2 z_2,$$

and  $QN \equiv p_3 x_3 + q_3 y_3 + r_3 z_3 = 0$ , where  $p_3, \dots$ , are the coefficients of  $x_3, \dots$ , when a similar determinant is expanded.

[The rest in Volume.]

**4963.** (W. J. C. MILLER, B.A.)—A king is placed at random on a clear chess board, and then, similarly, (1) a bishop, or (2) a rook. Find, in each case, the chance that the king is in check so as to be unable to take the attacking piece; and find also (3) the chance of check, with or without the power of taking, for any combination of two or three of the pieces. [If we estimate the powers of the pieces (a) by the chances of simple check, as investigated in the solution of Quest. 3314, *Reprint*, Vol. xv., pp. 50, 51, in January 1871; (b) by the chances of safe check, as shown in an interesting paper by H. M. TAYLOR in the *Philosophical Magazine* for March, 1876; (c) by the results given in the *Berliner Schachzeitung*, we have the relative values of the knight, bishop, rook, queen as (a) 3 : 5 : 8 : 13; (b) 3 : 3½ : 6 : 9½; (c) 3 : 3½ : 4½ : 9½.]

*Solution by Professor SANJANA.*

**Simple check.**—1. Knight.—When the king occupies one of the 16 squares marked a, this piece can check from 8 squares; on the 16 marked b, from 6 squares; on the 20 marked c, from 4 squares; on the 8 marked d, from 3 squares; and on each of the 4 corner squares, from 2 squares: altogether 336 squares. Thus the chance of checking the king is  $336 + 64 \times 63 = \frac{1}{3}$ .

2. Bishop.—When the king occupies one of the four squares marked a, this piece can check from 13 squares; on the 12 marked b, from 11 squares; on the 20 marked c, from 9 squares; and on each of the 28 border squares, from 7 squares: altogether 560 squares. Thus the chance of checking the king is  $560 + 64 \times 63 = \frac{2}{3}$ .

[The rest in Vol.]

**14913.** (ROBERT W. D. CHRISTIE.)—If

$$A_n = m^n - n \cdot m^{n-2} + \frac{n \cdot n-3}{2!} m^{n-4} - \frac{n \cdot n-4 \cdot n-5}{3!} m^{n-6} + \dots$$

	d	c	c	c	c	d	
d	c	b	b	b	b	c	d
c	b	a	a	a	a	b	c
c	b	a	a	a	a	b	c
c	b	a	a	a	a	b	c
d	c	b	b	b	b	c	d
	d	c	c	c	c	d	

1. KNIGHT.

for all integral values of m and n, then  $X^{2n} - A_n X^n + 1 = (X^2 - mX + 1)(a_1 X^{2n-2} + a_2 X^{2n-4} + \dots + a_n X + 1)$ , where  $a_n =$  a series allied to  $A_n$ . *Ex. gr.*—If  $m = 5$ ,  $n = 3$ , then  $x^6 - 110x^3 + 1 \equiv (x^2 - 5x + 1)(x^4 + 5x^2 + 24x + 5x + 1)$ . There are two other allied theorems for positive values of  $A_n$  and  $m$ ; it is required to establish them.

*Solution by the PROPOSER.*

Let  $\alpha = m + \sqrt{(m^2 - 4)}/2$ ,  $\beta = m - \sqrt{(m^2 - 4)}/2$ ; then we have

$$A_n = \alpha^n + \beta^n$$

$$= m^n - n \cdot m^{n-2} + \frac{n \cdot n-3}{2!} m^{n-4} - \frac{n \cdot n-4 \cdot n-5}{3!} m^{n-6} + \dots + \frac{n \cdot n-r-1}{r!} m^{n-2r} + \dots$$

(which is the generalized form of the "continuant" series 1, 1, 2, 3, 5, 8, 13, &c.).

$$\text{Also } \frac{1}{n} \frac{du}{dm} A^n = m^{n-1} - n-2 \cdot m^{n-3} + \frac{n-3 \cdot n-4}{2!} m^{n-5} + \dots$$

$$\dots + \frac{n-r-1}{r!} m^{n-2r-1}.$$

(i.) We have to show that  $x^{2n} - A_n x^n + 1 = (x^2 - mx + 1)(M)$ , where

$$(M) = a_0 x^{2n-2} + a_1 x^{2n-4} + a_2 x^{2n-6} + \dots + a_{n-1} x^2 + a_n x^0.$$

On multiplying this series (M) by  $x^2 - mx + 1$ , we find the law of the coefficients, excepting the middle one, is  $a_n - ma_{n-1} + a_{n-2}$ , and for the middle one  $ma_n - 2a_{n-1}$ . Now the values of these are respectively 0 and  $\alpha^n + \beta^n$ . Hence the theorem. [The rest in Volume.]

**QUESTIONS FOR SOLUTION.**

**14733.** (Professor G. B. MATHEWS, F.R.S.)—If  $x, a, b$  are any quantities whatever, and  $n$  is a positive integer,

$$(x+a)^n = x^n + na(x+b)^{n-1} + \frac{n(n-1)}{2} a(a-2b)(x+2b)^{n-2} + \dots + \binom{n}{s} a(a-sb)^{s-1} (x+sb)^{n-s} + \dots + a(a-nb)^{n-1}.$$

ABEL proves this with the help of the integral calculus (see his works, ed. SYLOW and LILJ, Vol. I., p. 102; or *Crelle*, Vol. I.). Can a more elementary proof be found which is not too laborious?

**14734.** (Professor E. LEMOINE.)—Démontrer que, pour trouver la direction des axes de la conique  $lx^2 + my^2 + nz^2 + 2fyz + 2gzx + 2hxy = 0$  (coordonnées normales, triangle de référence ABC), on peut joindre un sommet quelconque de ABC, A par exemple, au point de M du cercle circonscrit qui a pour coordonnées

$$\frac{a}{l(b^2 - c^2) + ma^2 - na^2 + 2ga - 2hab},$$

et que les directions cherchées seront celles des bissectrices de l'angle qui fait AM avec BC. Ce résultat a une certaine utilité parce qu'il spécifie d'une façon symétrique et d'un calcul facile les directions des axes d'une conique quelconque.

**14735.** (Professor MURLEY.)—Given five planes  $a_1, \dots, a_5$ , and a quadric Q, let a quadric  $Q_n$  pass through the intersection of Q and  $a_n$  ( $n = 1, \dots, 5$ ) and the four intersections of the four other planes. Then  $Q_n$  intersects Q in a second plane  $\beta_n$ , whose polar as to Q is a point  $a_n$ . Prove that the line  $a_1 a_2$  passes through the point  $a_3 a_4 a_5$ ; or, reciprocally, that the line  $a_1 a_2$  lies in the plane  $a_3 a_4 a_5$ . Also prove that, if one of the points  $a$  lies on Q, then all the points  $a$  lie on Q. Arrange the proof so as to hold for the analogous theorem in  $n$  dimensions. [The theorem in two dimensions that, given four lines and a conic C, and conics  $C_n$  being passed through the three intersections of three lines and the intersections of C and the fourth line, then, if one  $C_n$  touches C, all  $C_n$ 's touch C, is M. HUMBERT'S, *Comptes Rendus*, Vol. cxxix.; and an elegant elementary proof is given by M. BRICARD, *Nouv. Ann.*, Ser. 3, Vol. xix., p. 369.]

**14736.** (Professor NEUBERG.)—Un quadrilatère sphérique ABCD est circonscrit à un petit cercle de rayon r. Soient a, b, c, d les segments des côtés déterminés par les points de contact. Démontrer que

$$\sin^2 r = \sum \tan a \tan b \tan c / 2 \tan a.$$

**14737.** (Professor E. J. NANSON.)—Show that an  $m$ -circular  $2m$ -ic has  $2m^2 - 2m$  single foci,  $m$  double foci,  $2m^2$  tangents, and  $2m^2$  normals from an arbitrary point  $x, y$ ; and that, if T, N, F are respectively the products of the tangents, normals, and distances of the single foci from  $x, y$ , then  $T = N = FS$ , where  $S = 0$  is the equation of the curve in its simplest form. Also, if  $l, n, f, f'$  be the sums respectively of the angles made with an arbitrary line by the tangents, normals, and distances of the single and double foci from  $xy$ , then  $l = n = f + 2f'$ .

**14738.** (Professor JAN DE VRIES.)—The equation

$$a_{11}x^2 + 2a_{12}xy + a_{22}y^2 + b_1x + b_2y = 0$$

being referred to rectangular axes, the axes are supposed to turn about the origin. Prove that the function  $I = (a_{11} - a_{22})b_1 b_2 - a_{12}(b_1^2 - b_2^2)$  does not undergo change of form, and state the geometric meaning of  $I = 0$ .

**14739.** (J. A. THIRD, M.A., D.Sc.)—M and N are points on the sides CA, AB of a triangle, such that CA . CM = BA . BN. M' and N' are the images of M and N with respect to BC. Through M' and N' parallels are drawn to CA, AB respectively, intersecting in P. AP meets BC in D. The connector of A with the circumcentre of ABC meets BC in E. Show that BD = CE.

**14740.** (Professor COCHEZ.)—Intégrer  
 $(1+x^2)(d^2y/dx^2) - 2x(dy/dx) + (1+x^2)y = 0.$

**14741.** Professor LANGHORNE ORCHARD, M.A., B.Sc.)—Find the mean distance, from the centre, of all points within the oblate spheroid generated by the revolution of the ellipse  $(a-h)^2 x^2 + a^2 y^2 = a^2(a-h)^2$ , where  $h$  is very small compared with  $a$ .

**14742.** (Professor SANJANA.)—In a spherical triangle ABC, P is the isogonal conjugate of O, the pole of the circumcircle. Prove that  $\Sigma \cot OA \cot PA \sin(S-A) = -\frac{1}{2} \sec S \{ \Sigma \sin 2A + 2\Sigma \sin(2S-2A) \}$ , employing the ordinary notation.

**14743.** (Professor N. BHATTACHARYA.)—Find the envelope of the chord of intersection of the ellipse  $x^2/a^2 + y^2/b^2 = 1$ , and the circle which touches it and passes through its centre. Show that the first positive pedal of the envelope is the ellipse  $x^2/b^2 + y^2/a^2 = (1-e^2)/e^4$ .

**14744.** (Professor UMES CHANDRA GHOSH.)—Find the maximum and minimum triangles self-conjugate with respect to a circle, having a given vertex.

**14745.** (D. BIDDLE.)—Explain the following method of factorizing  $N = 1843, 2N = 61^2 - 35^2$  :—

61	62	63	64	65	66	67
35	158	283	410	539	670	803
96	220	346	474	604	736	870 = 29 . 30 ;

$$N = \frac{1}{2} (67-29)(67+30) = 19 . 97 ;$$

and show that, if it had been known beforehand that the factors were of form  $2\Delta m + 1$ , where  $\Delta$  is in this case 3, the first and last columns would have sufficed, or, at most, these and the middle one. In a table of quarter-squares 870 is found against 59 (= 29 + 30).

**14746.** (R. TUCKER, M.A.)—ABC is a triangle. P, Q are taken so that  $\angle PBC = \angle PCB = \angle PAC = \theta$ , and  $\angle QBC = \angle QCB = \angle QAB = \phi$ . Prove (i.)  $\sin 2\theta \sin 2\phi = \sin^2 A$ ; (ii.)  $P^2 Q^2 = R^2 \sqrt{(4R^2 - a^2)(4R^2 - b^2)}$ ; and (iii.)  $(m+l \cos C)(m'+l' \cos C) = a^2 bc/4l'l'$ , where  $l, l', m, m'$  stand for PB, QB, PA, QA respectively.

**14747.** (R. F. DAVIS, M.A.)—If  $a, b, c, d, e$  be the sides in order of a cyclic pentagon and  $x$  the diagonal joining  $bc, de$ ,  $c^2 d^2 \{ x^2 - (a^2 + b^2 + c^2)x - 2abc \}^2 = (x^2 - c^2 - d^2)^2 (ax + be)(bx + ae)(cx + ad)$ .

**14748.** (JAMES BLAIR, M.A.)—If a tetrahedron have its opposite edges equal, its four escribed spheres are equal, and the radius of an escribed sphere is equal to twice the radius of the inscribed sphere.

**14749.** (G. H. HARDY, B.A.)—Prove that  
 (i.)  $\int_{-\infty}^{\infty} \frac{\log(ax^2 + 2bx + c)}{a^2 x^2 + 2bx + c} dx = \frac{\pi}{\Delta} \log \frac{1}{\alpha} \{ (\alpha\gamma + ca) - 2(\beta\beta - D\Delta) \}$ ,

where  $D = \sqrt{(ac - b^2)}$ ,  $\Delta = \sqrt{(\alpha\gamma - \beta^2)}$ , provided the coefficients are real and  $a, \alpha, D, \Delta$  positive;

(ii.)  $\int_0^{\infty} \frac{\cos mx \log x}{a^2 + x^2} dx = \frac{\pi}{2a} \{ e^{-ma} \log a + (e^{ma} \operatorname{li} e^{-ma} - e^{-ma} \operatorname{li} e^{ma}) \}$ ,  
 $\int_0^{\infty} \frac{x \sin mx \log x}{a^2 + x^2} dx = \frac{\pi}{2} \{ e^{-ma} \log a - (e^{ma} \operatorname{li} e^{-ma} + e^{-ma} \operatorname{li} e^{ma}) \}$ ,

where  $\operatorname{li} e^{-u} = \int_{-\infty}^{-u} \frac{e^u}{u} du$  ( $u > 0$ );  $-P \int_{-\infty}^{-u} \frac{e^u}{u} du$  ( $u < 0$ ).

**14762.** (F. H. PRACHELL, B.A.)—Find the equation of the locus of a point which moves so that the square of the tangent drawn from it to a fixed circle is the arithmetic mean between the squares of the tangents drawn from it to a fixed parabola.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

**6729.** (A. J. C. ALLEN, B.A.)—If the centre I of the inscribed circle of a triangle be joined to the centroid G, and if IG be produced to G', so that  $IG' = 2IG$ , show that the inscribed circle will pass through G' if  $3 \sin \frac{1}{2}A \sin \frac{1}{2}B \sin \frac{1}{2}C (5 \sin \frac{1}{2}A \sin \frac{1}{2}B \sin \frac{1}{2}C - 4) + 1 + \cos A \cos B \cos C = 0$ .

**6730.** (J. R. HARRIS, M.A.)—Prove that (1) the pedal of a helix with regard to any point on its axis is a curve lying on a hyperboloid of revolution; and (2), if the pitch of the helix be  $\frac{1}{2}\pi$ , this curve cuts all the generators of one system of the hyperboloid at right angles.

**6732.** (Professor CAVALLIN.)—If each radius of curvature  $\rho$  in a conic be prolonged a length  $\lambda = \mu(A\rho^{\frac{1}{2}} + B\rho^{-\frac{1}{2}})$ , where A and B are constants and  $\mu$  an infinitely small constant, prove that (1) the curve thus derived is also a conic; (2) if  $B = 0$ , the curves are confocal; and (3), if  $A = 0$ , similar.

**6735.** (Prince C. DE POLIGNAC.)—An unclosed polygon is inscribed in one conic and circumscribed about another;  $M_1, M_2$  are two consecutive fixed sides;  $a_1, a_2$  any other pair of consecutive sides taken in the same order;  $a_1$  meets  $M_2$  in  $m_2$ ; and  $a_2$  meets  $M_1$  in  $m_1$ . If the line  $m_1 m_2$  passes through a fixed point, prove that the conics have double contact.

**6742.** (Professor CAVALLIN.)—A random straight line is determined by two points taken at random within a sphere; find the average velocity acquired by a particle in descending the line.

**6747.** (A. J. C. ALLEN, B.A.)—A point P is joined to K, the ortho-

centre, and the line PK produced to meet the sides BC, CA, AB of a triangle ABC in D, E, F; prove (1) that, if

$$\frac{PE}{KE} \cdot \frac{PF}{KF} \sin 2A + \frac{PF}{KF} \cdot \frac{FD}{KD} \sin 2B + \frac{PD}{KD} \cdot \frac{PE}{KE} \sin 2C = \text{a const.},$$

the locus of P is a circle; and (2) find its centre and radius.

6748. (R. A. ROBERTS, M.A.)—Show that any tangent to the cuspidal cubic  $(a+b)y^3 - abx^2z = 0$  is cut in involution by the cuspidal cubics  $y^3 - ax^2z = 0$ ,  $y^3 - bx^2z = 0$ .

#### NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to D. BIDDLE, Esq., Charlton Lodge, Kingston-on-Thames.

**NOTICE.**—Vol. LXXIII. of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.O. Price, to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

#### THE LONDON MATHEMATICAL SOCIETY.

Thursday, November 8, 1900.—Lord Kelvin, G.C.V.O., President, in the Chair. Twenty-four members present.

At this, the opening meeting of the Seventh Session of the Incorporated Society, the Treasurer read his report, the reception of which was moved by Mr. A. B. Kempe, seconded by Mr. W. F. Sheppard, and carried unanimously.

The Senior Secretary reported three deaths during the Session—viz., Prof. Beltrami (hon. member), Mr. J. J. Walker, and Major-General F. Close, R.A. Extra work had been undertaken, in the form of the publication of an index (in three parts) to the first thirty volumes of the *Proceedings* and of a list of names of members from the commencement of the Society (January, 1865) to November, 1899. Prof. Love stated that the number of names on the Society's roll was 252.

The ballot was subsequently taken, the Scrutineers being Messrs. M. Jenkins and W. W. Taylor, with the result that the gentlemen whose names were published in last month's *Educational Times* were declared to have been elected for the Council of the ensuing Session (1900-1).

Lord Kelvin, on leaving the Chair, thanked the Society for their having elected him to the office of President, and for their tolerating so kindly his infrequent attendance at their meetings; a result due to his being so far off—four hundred miles from town. He then welcomed his successor, and expressed his pleasure at Dr. Hobson's election. This latter gentleman, on taking the Chair, thanked the members present, and then called on Lord Kelvin to communicate his address, entitled "On the Transmission of Force through a Solid."

A vote of thanks, with a request that the address might be printed in the *Proceedings*, was then moved by Dr. Glaisher, seconded by Dr. Larmor, and carried by acclamation.

Dr. Glaisher communicated two papers—viz.: (1) "A General Congruence Theorem relating to the Bernoullian Function"; and (2) "On the Residues of Bernoullian Functions for a Prime Modulus, including as special cases the Residues of the Eulerian Numbers and the *I*-Numbers."

Mr. Tucker communicated further notes on Isoscelians, and spoke on the properties of two In-triangles which are similar to the Pedal Triangle.

The President (Dr. Hobson) communicated the following papers by reading their titles:—

"In a Simple Group of an Odd Composite Order every System of Conjugate Operators or Sub-groups includes more than Fifty," Dr. G. A. Miller.

"Prime Functions on a Riemann Surface," Prof. A. C. Dixon.

"On Green's Function for a Circular Disc," Dr. H. S. Carslaw.

"On the Real Points of Inflexion of a Curve," Mr. A. B. Basset.

"On Quantitative Substitutional Algebra," Mr. A. Young.

"On a Class of Plane Curves," Mr. J. H. Grace.

(i.) "On Group Characteristics"; and (ii.) "On Some Properties of Groups of Odd Order," Prof. W. Burnside.

(i.) "Conformal Space Transformations"; and (ii.) "Dynamical and other Applications of Algebra of Bilinear Functions," Mr. T. J. I'A. Bromwich.

Mr. Tucker's in-triangles are the triangles formed by lines perpendicular to the antiparallels of a triangle. If  $\alpha, \beta, \gamma$  are the angular points on CA, AB, BC, and  $\alpha', \beta', \gamma'$  the points on AB, BC, CA, then  $\alpha = \alpha' = 180^\circ - 2A$ , and so on. Parallels through  $\alpha, \alpha'$  to BC, and so on, intersect in the in-centres of  $\alpha\beta\gamma, \alpha'\beta'\gamma'$ . These points and the centroids lie on a line through P, the centre of perspective of the triangles. The intercept  $\gamma\beta' \alpha \sec A$ . The co-ordinates of P are as  $p \cos(B-C), q \cos(C-A), r \cos(A-B)$ , where  $p, q, r$  stand for  $\sin 2A, \sin 2B, \sin 2C$ ; of the in-centres  $q \cos A, r \cos B, p \cos C$ , and  $r \cos A, p \cos B, q \cos C$ ; of the symmedian points  $pq [p \cos A + q \cos(B-C)], \dots, \dots$ , and  $rp [p \cos A + r \cos(B-C)], \dots, \dots$

## THE SHORTHAND REVOLUTION.

An interesting booklet containing valuable information, and Shorthand Alphabet, specimens, &c., gratis.

Rev. J. E. RYAN, Christian Brothers' School, St. John's, N.F., writes:—"Nearly every boy leaves school a *verbatim reporter*. Our boys have the greatest facility in obtaining the most lucrative positions in the city."

Mr. CHAS. W. RERCE, Thomas Street Board School, Limehouse, E., writes:—"Her Majesty's Inspector has reported 'Shorthand shows remarkable success.'"

## FIRST GRAMMAR READER,

By JOHN B. TIMSON, B.A. (St. Mark's, 1875-6).

Teacher's Oral Text-Book (Standards I.-IV.) and Revision Reader (Standards V.-VII.).

For the First Year's Course in English this work contains just what can be well done and no more. Forty Lessons are graduated for forty weeks, with easy Explanations in simple language, and careful Revisions as worked out in many years of actual teaching. No long Exercises and dry lists. Brief Memory Notes.

Large type, strongly bound, 1s. 6d.

JOHN MARSHALL & CO., PATERNOSTER ROW, E.C.  
E. J. ARNOLD & SON, LEEDS.

### STUDENTS' EDITION OF SIDNEY LEE'S "LIFE OF SHAKESPEARE."

With a Photogravure Plate and 4 Full-page Illustrations.  
Crown 8vo, 2s. 6d.

## SHAKESPEARE'S LIFE AND WORK.

Being an Abridgment chiefly for the Use of Students of  
"A LIFE OF WILLIAM SHAKESPEARE."

By SIDNEY LEE, Editor of "The Dictionary of National Biography," Honorary Doctor of Letters in the Victoria University.

\*\* Also the Fourth Ordinary Edition of "A Life of William Shakespeare," with two Portraits of Shakespeare, a Portrait of the Earl of Southampton, and Facsimiles of Shakespeare's known Signatures, crown 8vo, 7s. 6d.; and the Illustrated Library Edition, in 1 Vol. medium 8vo, profusely illustrated with Photogravures, Topographical Views, &c., 16s.

Literature.—"Mr. Lee's work, both for its literary qualities and its scholarship, does credit to English letters, and it will probably be regarded for years to come as the most useful, the most judicious, and the most authoritative of all existing biographies of the poet."

London: SMITH, ELDER, & CO., 15 Waterloo Place, S.W.

Seventh Edition. Crown 8vo.

## BELL'S LATIN COURSE.

FOR THE FIRST YEAR. IN THREE PARTS.

BY E. C. MARCHANT, M.A.,

AND

J. G. SPENCER, B.A.,

ASSISTANT-MASTER IN ST. PAUL'S PREPARATORY SCHOOL.

### From the Preface:—

"This Latin Course is intended to be used for instruction of children who have not hitherto done any Latin. The Course is complete in itself, and may be used without the aid of a dictionary or grammar. The Designers of the method have endeavoured to conform to the golden rule—*Secundum Naturam*. The results of this endeavour are apparent in arrangement of the matter.

1. The method is inductive. We attempt to lead the child from the known to the unknown, from the concrete to the abstract. Therefore our rules follow, instead of preceding, the exercises; the rule sums up what has been practically learnt above it.

2. We make the fullest use of the *eye*, first by employing conspicuous and varied *type*, secondly by employing *pictures*. In practising vocabulary, it will be found useful to place a picture before the child and ask for the Latin names of the details in the design. It will be a revelation to some teachers to find how quickly the child will learn the words.

3. The *subjects* of the Exercises are *interesting*: indeed, we have even ventured to try to amuse, as well as to instruct. *Ridentem dicere verum quid vetat?* is a question to which, in teaching children, it is surely safe and right at times to answer *Nihil*.

4. The Exercises, from the very start, are *coherent* and sensible: we do not attempt to rival *Ollendorf*.

5. Each part consists of two divisions—the one containing the 'Latin into English,' the other 'English into Latin.' These may be used *pari passu*, or separately; and the book can be made into either a reader or an exercise book only, if it is desired. At the end of the first part the learner will know the inflexion of substantives and adjectives of the first and second declensions, the indicative mood of *sum* and of the first conjugation, and the personal pronouns. All the Exercises on verbs are given in the form of letters, dialogues, or stories, so as to introduce freely, all the three persons of the verb. Thus the learner will be able to make simple sentences of considerable length, since he will understand how to employ every word and grammatical form which he has learned.

Believing that the elementary teaching of Latin has made more advance on the Continent than in England, we have examined the most successful German works on the subject. We have also sought the advice of leading authorities on education, both English and American; and it is hoped that our method will commend itself to *training colleges* as well as to preparatory schools."

## BELL'S ILLUSTRATED CLASSICS.

NEW VOLUMES.

GREEK PLAYS. 2s. each.

**AESCHYLUS.—PROMETHEUS VINCTUS.** Edited by C. E. LAURENCE, M.A., Second Master at Blackheath School. [Jan.]

**LEADING DOCUMENTS OF ENGLISH HISTORY.** Together with Illustrative Material from Contemporary Writers and a Bibliography of Sources. By GUY CARLETON LEE, Ph.D., of Johns Hopkins University.

With 83 Portraits and other Illustrations. Imperial 8vo, 21s. net.

**SIDE LIGHTS ON ENGLISH HISTORY.** Being Extracts from Letters, Papers, and Diaries of the past three centuries. Collected and arranged by ERNEST F. HENDERSON, Ph.D.

Crown 8vo, 2s. 6d.

**ROUEN—THE CATHEDRAL AND OTHER CHURCHES.** By the Rev. T. PERKINS, M.A., Rector of Turnworth, Dorset. With 50 Illustrations, chiefly from Photographs by the Author. [Bell's Continental Churches.]

Crown 8vo, 1s. 6d.

**WORCESTER CATHEDRAL.** By E. F. STRANGE. With 53 Illustrations. [Bell's Cathedral Series.]

# OXFORD UNIVERSITY PRESS.

**The Holy Bible: Two-Version Edition.** Being the AUTHORIZED VERSION, with the differences of the REVISED VERSION printed in the Margins, so that both Texts can be read from the same page. With central column References. Brevier 8vo. Prices:—On Ordinary Paper, from 7s. 6d.; on Oxford India Paper, 10s. 6d. Interleaved with Writing Paper, prices from 21s.; or bound with "The Oxford Helps to the Study of the Bible," prices from 18s. 6d.

**Helps to the Study of the Bible,** taken from the "Oxford Bible for Teachers." New, Enlarged, and Illustrated Edition. Prices from 1s. net.

**A Greek Testament Primer.** An Easy Grammar and Reading Book for the use of Students beginning Greek. By E. MILLER, M.A. Second Edition. Extra fcap. 8vo, paper, 2s.; cloth, 3s. 6d.

**The Oxford Book of English Verse.** 1250–1900. Chosen and Edited by A. T. QUILLER-COUCH. Crown 8vo, top edge gilt, 7s. 6d.; extra fcap. 8vo, Oxford India paper, 10s. 6d. And in leather bindings for prizes.

**Demosthenes.—Speech on the Crown.** With Introduction and Notes, by EVELYN ABBOTT, M.A., and P. E. MATHESON, M.A. Extra fcap. 8vo, 3s. 6d.

**Aristophanes, The Peace.** With Introduction and Notes, by W. W. MERRY, D.D., Rector of Lincoln College, Oxford. Extra fcap. 8vo, price 3s. 6d.

**Cicero.** Philippic Orations I, II, III, V, VII. With Introduction and Notes. By J. R. KING, M.A. Extra fcap. 8vo, 3s. 6d.

**Tales of the Roman Republic.** Part I. J. BARROW ALLEN. Extra fcap. 8vo, 1s. 6d.

**A Treatise on Statics with Applications to Physics.** By G. M. MINCHIN, M.A. Vol. I, Equilibrium of Coplanar Forces. Fifth Edition. 8vo, 10s. 6d. Vol. II, Non-Coplanar Forces. Fourth Edition. 8vo, 16s.

**Hydrostatics and Elementary Hydrokinetics.** By the Same Author. Crown 8vo, 10s. 6d.

**Geometry for Beginners.** An easy Introduction to Geometry for young learners. By the Same Author. Extra fcap. 8vo, 1s. 6d.

**The "Junior" Euclid.** Books I and II. By S. W. FINN, M.A. Crown 8vo, 1s. 6d.

\* \* \* Books III and IV. *In Preparation.*

**Euclid Revised.** Ed. by R. C. J. NIXON. Crown 8vo, 6s. Sold separately: Book I, 1s.; Books I, II, 1s. 6d.; Books I–IV, 3s.; Books V, VI, 3s. 6d.

**Elementary Plane Trigonometry.** By R. C. J. NIXON. Crown 8vo, 7s. 6d.

**Introduction to the Mathematical Theory of Electricity and Magnetism.** By W. T. A. EMTAGE. Second Edition. Crown 8vo, 7s. 6d.

**Class-Book of Chemistry.** By W. W. FISHER. Fourth Edition. Crown 8vo, 4s. 6d.

**An Elementary Treatise on Pure Geometry.** With Numerous Examples. By J. WELLESLEY RUSSELL, M.A. Crown 8vo, 10s. 6d.

**Elementary Mechanics of Solids and Fluids.** By A. L. SELBY, M.A. Crown 8vo, 7s. 6d.

**The Collected Mathematical Papers of Henry John Stephen Smith, M.A., F.R.S.,** late Savilian Professor of Geometry in University of Oxford. Edited by J. W. L. GLAISHER, Sc.D., F.R.S. 2 vols. 4to, £3. 3s.

**Elementary Architecture (Classic and Gothic)** for Schools, Art Students, and General Readers. By MARTIN A. BUCKMASTER. With thirty-eight full-page Illustrations. Crown 8vo, 4s. 6d.

**Introduction to Greek Sculpture.** By L. E. UPCOTT, M.A. Second Edition. Crown 8vo, 4s. 6d.

**An Elementary Latin Dictionary.** By CHARLTON T. LEWIS, Ph.D. Square 8vo, 7s. 6d.

**A Greek-English Lexicon,** abridged from the Quarto Edition, chiefly for the use of Schools. Square 12mo, 7s. 6d.

## Forthcoming School Editions in the Clarendon Press Series.

**Demosthenes.—The Speech against Meidias.** With Introduction and Notes by J. R. KING, M.A.

**Thucydides.—Book III.** Edited by H. F. FOX, M.A.

**Euripides.—Hecuba.** By C. B. HEBERDEN, M.A., Principal of Brasenose College, Oxford.

**A French Grammar.** By A. H. WALL, M.A.

**A Historical Primer of French Phonetics and Inflection.** By MARGARET S. BRITAIN, M.A., French Lecturer in Victoria College, Belfast. With Introductory Note by PAGET TOYNBEE, M.A. Extra fcap. 8vo, cloth, 2s. 6d. [Ready.]

**The Three Friends.** A Story of Rugby in the Forties. Crown 8vo, cloth extra, 3s. [Published by Henry Frowde.]

# WINTER MEETING FOR TEACHERS

(JANUARY, 1901)

CONDUCTED BY THE

## COLLEGE OF PRECEPTORS.

(BLOOMSBURY SQUARE, LONDON, W.C.)

---

THE Third Winter Meeting for Teachers will take place at the College of Preceptors in the first fortnight in January, 1901.

The Meeting will extend over two weeks, and the Programme will include Lectures on general principles of education and on methods of teaching various school subjects, with exhibits of apparatus, and visits to educational institutions in London.

The Fee for the whole Meeting is 15s.

Tickets may be obtained from the Secretary of the College of Preceptors, and should be applied for on or before December 22.

Tickets (not transferable) will also be issued AT HALF FEES (*i.e.*, 7s. 6d. for the whole Meeting) to members of the following Teachers' Societies:—The Teachers' Guild (Central Guild and Branches), The Birmingham Teachers' Association, The Liverpool Teachers' Guild, The Training College Association, The Headmasters' Conference, The Incorporated Association of Headmasters, The Private Schools' Association, The Assistant-Masters' Association, The Association of Assistant-Mistresses, The Froebel Society, The National Union of Teachers.

Tickets at half fees will also be issued to candidates at the Diploma Examination of the College of Preceptors (January 1-5).

Members of the College of Preceptors will receive a ticket (not transferable) without charge, on applying for it to the Secretary of the College on or before December 20.

Tickets, price 1s., for any single Lecture may also be had at the College on the day of the Lecture, if the available seats are not already occupied.

C. R. HODGSON, B.A.,  
*Secretary.*

## LIST OF LECTURES.

---

- Principles and Practice of Education.** Four Lectures. By P. A. BARNETT, M.A.
- Discipline and Form Management.** By H. L. WITHERS, M.A., Professor of Education in Owens College, Manchester.
- The Choice of Studies,** with special reference to education in large towns. By J. J. FINDLAY, M.A., Ph.D., Headmaster of the Cardiff Intermediate School for Boys.
- The Development of the Moral Sense in Children.** By Professor EARL BARNES.
- On Observation of Children,** as a guide to the study of educational problems. By Dr. FRANCIS WARNER, F.R.C.P., Physician to the London Hospital.
- The Teaching of Mathematics.** Three Lectures. By Professor HUDSON, M.A., King's College, London.
- The Teaching of Elementary Arithmetic.** By Miss M. E. FINDLAY, Southlands Training College, Battersea, S.W.
- The Visualization of certain Processes in Arithmetic,** by means of metric magnitudes and other apparatus. By ADOLPH SONNENSCHN.
- The Aims of Teaching Foreign Languages in Schools.** By H. W. EVE, M.A., Dean of the College of Preceptors.
- Methods of Teaching Modern Foreign Languages.** By Professor STRONG, University College, Liverpool.
- The Colloquial Teaching of French** (with Demonstration). By S. BARLET, B.Sc., Mercers' School, E.C.
- "Die Neuere Richtung,"** with special reference to the teaching of German. By W. C. BROWN, M.A., F.C.P., Tollington Park College, N.
- A Reading Lesson.** By A. BURRELL, M.A., Principal of the Borough Road Training College, Isleworth.
- The Teaching of History.** By W. M. CHILDS, M.A., Vice-Principal of Reading College.
- The Teaching of Geography.** By EDWIN BARKBY, B.A., Vice-Principal of the Borough Road Training College, Isleworth.
- Ruskin and Education.** By J. L. PATON, M.A., Headmaster of University College School, W.C.
- An Educational Reformer** (the late R. H. Quick). By J. RUSSELL, B.A., Hon. Librarian of the Teachers' Guild.
- On Tennyson's "In Memoriam."** By H. W. EVE, M.A., Dean of the College of Preceptors.

*All the above Lectures will be delivered at the College of Preceptors.*

---

### *Conference on Science Teaching in connexion with the Technical Education Board of the London County Council.*

(UNDER THE DIRECTION OF C. W. KIMMINS, M.A., D.Sc.)

A Conference, extending over two days, and open to all teachers attending the Meeting, will be held at the South-West London Polytechnic, Manresa Road, Chelsea (Sloane Square Station). In connexion with the Conference there will be an Exhibition of Apparatus used in schools for Practical Science Teaching.

---

### *Visits to Educational Institutions, &c.*

Visits (to take place during the afternoons) will be made to Christ's Hospital, the City of London School, the Technical College, South Kensington, the Northern Polytechnic Institute, the Central Foundation School for Girls, Spital Square, E., the South Hampstead School of the Girls' Public Day School Company, and the Passmore Edwards Settlement, Tavistock Place. Instruments for taking the weights and measurements of children will be exhibited by Messrs. Avery.

## DIRECTORY.

A Directory of the Meeting will be issued during the month of December, containing fuller details or brief Syllabuses of some of the Lectures, a list of the Meetings of various Teachers' Societies which are to take place in London during January, and other items of interest to Teachers intending to visit London at this time.

NOTE.—If any alterations are made in the arrangements now announced, the corrections will be found in this Directory. Such corrections will also be announced in a revised issue of this Programme, which will be sent, *after December 20, together with the tickets*, to all who enter their names. The Directory may be obtained, post free, for 6d., from the Secretary of the College, after December 20. Teachers wishing to purchase the Directory should apply for it when sending their fee for the ticket of admission.
